ARKANSAS PROGRESS.—In another column will be found the text of the new Arkansas game law. The law is by no means all that could be desired, but when it is taken into consideration that the sportsmen of that State have been begging, imploring, scheming and working for the past eight years to secure some sort of a game law, however short of perfection, there is every reason to be pleased with the act approved Feb. 28. We understand that a fish law is to be the next thing undertaken; and doubtless when the people are educated to a proper appreciation of protection, the game law will be made more stringent. That Arkansas has a game law is to be taken as one of the encouraging signs of the times.

TEACHING BY PICTURES.—No one who does not visit the Adirondacks to see with his own eyes what has been done there can realize the magnitude of the evil wrought by the lumbermen. The newly-formed State Forestry Association have adopted the very sensible plan of arranging a series of lectures to be given in the principal cities and towns, with stereoscopic views of typical Adirondack scenes. Such a presentation of the Adirondack forestry question cannot fail to prove effective.

THE ADIRONDACK STATE LANDS.—And now it appears that the so-called State lands in the Adirondacks are not State lands, the State having no valid title to them. These lands were bought in by the State at tax sales, but because of the shiftlessness of county supervisors the taxes were levied in an illegal manner and the tax sales were irregular. The lumber thieves can have full swing unless the law be so changed as to perfect the State's land titles.

THE GAME DEALERS should be so squarely sat down upon at Albany that they can make no mistake about the way the public regards their greedy designs. We are told that the gentleman who consented to introduce their bill is not very ardent in its support. The size and frigidity of the game dealers' refrigerators ought to cool the ardor of every sensible and honest man who is approached for a vote.

BATTERY-SHOOTING is a subject of very direct interest to wildfowl shooters. The discussion in our columns is throwing much light on all sides of the question, and before it is concluded the experience and opinion of the advocates of each side will be pretty clearly understood.

"THE PATENT COFFEE MILL."—Having received many applications for the issue containing "The Patent Coffee Mill," and being unable to supply any more copies, we reprint the article. It is just as timely now as it ever was, for the grinding has not ceased.

BARN BURNERS.—One good and sufficient reason why some men who know about game law violations keep as mum as a mummy is that if they do anything else their barns will be burned.

THE CAST OF THE HEAD OF THE MASTIFF ORLANDO is now on exhibition at this office, where it will remain until the New Haven show.

MR. THEODORE ROOSEVELT is preparing a book descriptive of his hunting experiences in the West last fall.

ALWAYS FOLD MANUSCRIPT. NEVER ROLL IT.

THROUGH TWO-OCEAN PASS.

VI.—OVER THE DIVIDE.

To my mind there is no way of traveling so delightful as with a pack train. To be sure one cannot carry quite so much baggage in this way as with wagons, yet this is not a valid objection, for after all if your animals are sufficiently numerous you need not limit yourself in the matter of baggage. Did not a mule in the President's train a year ago carry a gigantic cast-iron cooking stove for over three hundred miles, and have we not seen billiard tables packed across the mountains in Mexico, on the backs of burros?

The advantages of this mode of travel are many. First and most important is its perfect freedom and independence. You are limited by no metes or bounds, but can go precisely where you please. Rugged mountains and tangled forests oppose no barriers that can keep you back. You are free to go and come as may suit your fancy. It is a pretty sight too, to see the white packs winding in and out among the timber, or following one another along a narrow ridge, or zigzaging up and down a steep hillside, each animal stepping carefully in the footsteps of his predecessor, until, when the worst part of the trail is passed, they all hurry along in the struggle for the place of pride near the bell-mare. It is true that with a pack-train progress is a little slower than with wagons, and more time is spent in loading and unloading, but this, I think, is quite compensated for by the directness with which one can travel from place to place.

The intelligence manifested by an experienced pack mule when passing over rough and difficult country or through bad timber, is very surprising, and they display remarkable judgment in selecting a trail through the forest, which will just permit them to pass. The pack usually projects a foot or eighteen inches above the animal's back and almost as much from each side, and as the branches are often low and the trees often grow so close together that an object of this kind will not pass between them, the path winds about a good deal, seldom going straight forward in the direction to be pursued. Usually the chief packer or some other competent man rides at the head of the train to select the path to be followed, and after him come the animals, nose to tail in single file. Often, however, some mule eager to march nearer the head of the procession, will leave its place and attempt to make a cut-off through the forest and will then come back to the trail in advance of its own place and try to crowd into the path close behind the leader. In doing this it is very likely to have to pass through thick timber, yet it is quite unusual to see one "hung up" between two trees. Sometimes, to be sure, this happens, and the animal pushes and strains and twists in its efforts to advance, never thinking apparently of retreating and going around the obstacle. When a mule is caught in this fix, it is necessary to ride round in front of it and by threatening gestures cause it to back out from its position.

"Down timber" is one of the greatest obstacles to rapid travel with a pack train in the mountains. It is not an easy matter to travel through a forest where the trees stand close together, and the ground is rough and rocky and covered sometimes four or six feet deep with dead trees, from which the branches project in every direction. The history of a patch of down timber is usually something like this: A fire has passed over the forest and has killed, but has not consumed the trees. They have stood perhaps for twenty years, and in the meantime a vigorous growth of young timber has sprung up and flourishes. At length, however, the smaller roots of the dead trees, which have been rotting ever since the sap left them, become so weak as to no longer support the tall trunks, and then it happens that with every gale of wind the dead trees come crashing to the ground. Often in its fall some tall trunk may carry with it half a dozen others, and this dead timber lies piled upon the ground in inextricable confusion. It is not always pleasant to ride during a high wind through a forest of dead standing timber where such conditions prevail. The green pines rustle and sigh complainingly, and toss their branches wildly to and fro; the trunks and branches of the dead trees give forth discordant screams and creakings as they are rubbed against each other, and all the while the gale hisses among the bare stems and twigs with the same sound that you hear at sea when the blasts whistle through the ship's rigging. The whole forest is full of a loud but inarticulate moaning that is unspeakably depressing. You can see the trees swaying with every gust of the wind, and at short intervals, from near and from far, comes the rattle and crash of the falling trees, as their roots give way and they are hurled to the ground. You know that the chances are 10,000 to 1 against a tree falling near you, yet you are always just a little bit nervous, for there is always a possibility that some one of those beneath which you are riding may yield and either crush you or give you a shock which will send your heart into your mouth. Once on a windy day, as our train was proceeding down Lewis Fork of Snake River, a large tree fell near the trail, its top striking the ground within twenty feet of the Rooster, and throwing dirt and splinters in all directions. It took Rooster but a very small fraction of a second to make up his mind that this was no place for him, and with head and tail up he simply fled through the woods and ran a long distance before he could be overtaken and driven back. In the Rocky Mountains it is usually possible to pass through the down timber, but on the Pacific coast, in Oregon, Washington and British Columbia I have seen the tree trunks piled thirty feet high, and utterly impassable except for a cat or a bear.

As mules vary in size, and there are small ones as well as great, it will sometimes happen that a log which can be stepped or jumped over by a tall mule will prove a barrier to a small one, so that after a part of the train have surmounted an obstacle, some little mule may doubt its ability to get over the logs and may seek an easier place to cross. Then those behind it strike out for themselves, each selecting his own spot for jumping the logs. The use of mules in down timber has an advantage over pack horses. In going through bad places they will usually follow the bell as far as they can, while horses will often get tired of stepping over logs, and will stop and stand still, refusing to advance unless each one is driven separately over the obstacles before it. The care with which a mule scrutinizes each side of a log before it steps over it is very funny, and when it does make up its mind to cross it, it places its forefoot almost exactly in the print of the hoof of the preceding animal, and you can often see, where a numerous train has passed along, a hole as large as a dinner plate and half a foot deep on the further side of a log, which all the mules in the train have done something to excavate. Some of the old trails made by large government pack trains are worn down eight or ten inches below the surface of the surrounding soil, and thus remind one of the old buffalo roads along the Smoky Hill and Solomon rivers in Kansas. The pack train presented a new phase, and the individuals composing it manifested new characteristics every day.

It was afternoon when the train started from the camp on the lake to cross the Continental Divide. The search for Mr. Hague's horse, lost the night before after getting into the quicksands, had occupied all the morning, and by the time the last lash rope was fastened, and the last jaquimo stem tied up, the sun had passed the zenith. The first day's march was to be a short one, only twelve miles, to the shores of Lewis Lake, which pours out its mighty tribute to form one of the principal forks of Snake River, and after crossing the wind-swept plains of Idaho and Washington, mingles with the Columbia and hurries down past desolate prairies and by rugged mountains, between black walls of basalt and through cool, green forests of redwood, to unite with the maëlstrom of waters ever heaving over the bar at the river's mouth.

The way, for there was no trail, led up a narrow grassy valley, and the slopes on either side were clothed with the dark green forest. As we slowly climbed the hills, a glance backward showed the beautiful lake with its wonderful setting of mountain and forest, a picture so lovely that I think we were all loath to leave it behind us. Then again we entered the forest, and rode quietly along beneath the shadow of the whispering pines. The course by the sun was a little east of south, but before long a considerable body of down timber was encountered, and the train began to wind and twist about, seeking always the spot where the obstructions were lowest. For some time all went very well, and there was no difficulty in finding places where the animals could readily pass. Little by little, however, matters became worse, and at length, in trying to ride the Pinto over a high pile of logs, he caught his foot and almost fell. We dismounted, and by lifting the larger sticks and breaking the smaller ones, soon made a way practicable for the mules. This was the worst place we met with, and just beyond here the down timber ended and an easy ascent soon brought us to the divide. This is very low, only 160 feet above the Yellowstone Lake by aneroid measurement, and is also very flat, being spread out in long park-like meadows, inclosed on either hand by low wooded hills. There is no water here in the late summer, but the drainage from the hills in spring has worn out little gullies, now dry. From either end of these meadows, when the snows are melting, mimic torrents pour down the opposite sides of the mountain, some toward the east to find their way by the Yellowstone and the Missouri into the Atlantic, and others through Snake River and the Columbia to reach the Pacific. In the dry stream beds and water holes were many tracks of elk, all of them made when the ground was soft, showing that in spring this is a feeding ground for these animals. Following the general direction of one of these watercourses, we soon began to descend, and before long were following down the dry bed of one much larger, whose sandy bottom was dotted with great blocks of the black lava everywhere exposed in its high bank, and so characteristic of this region. In many places it had been beautifully glaciated, the ice polishing being remarkably fine. The valley of this dry stream is a beautiful park, the country gently rolling, with timbered knolls and open grassy intervales. Some of the trees were unusually large, the firs and spruces being two feet in diameter at the butt, and some of the pines almost as large. Marching down the valley, we came on to the deeply worn trail made by President Arthur's large party during the summer of 1883, and following it, an hour or two before sunset, reached the lake. Camp was made near the shore in a wide, green meadow, dotted here and there with groups of graceful pines, at the edge of one of which the tents were pitched. Just behind them was a low, wet place, where the grass and reeds grew waist high, and hither the hungry animals repaired, and luxuriated among the abundant pasture.

Lewis Lake is a beautiful sheet of water, three or four miles in diameter and almost circular in form. It is surrounded by bold hills, of which the Red Mountain range to the east are the highest. In many places the waters lap the feet of bold high bluffs, and where the banks are not so steep, the dense forest comes down to the very shore. At its northern end, near our camp, the land was lowest, and here was a wide bay, with a circular sweep and a broad sand beach, on the edge of which grew a fringe of wind-swept spindling pines, the whole reminding one quite vividly of a tropical bay fringed with cocoanut trees. Just back of this beach, which is in fact rather a bar, is an extensive marsh, with many open ponds, large and small, in and about which grow yellow water lilies and high reeds and grasses. It must be a great resort for fowl during the migrations, and there is abundant reason to believe that large game is quite plenty here.

It was blowing hard when we made camp, a fresh, dry, wholesome breeze from the west, which raised quite a sea on the lake, and the big waves tumbled up on the beach after one another so fast that it was not an easy matter to get a bucket of water without at the same time getting a wet foot. Most of us who have lived upon the seashore have seen a little sandpiper feeding along the water's edge upon the matter cast up by the waves; as one of these retreats, the bird rushes after it, wading knee deep in the ebbing foam, and hastily seizing each morsel of food within its reach, and then, as the following surge comes tumbling in, the tiny forager runs as fast as its legs will carry it up the beach to avoid being buried in the white smother. So, backward and forward the bird follows the waves. Somewhat in the same way we followed the water in our efforts to get a pailful that was clear and free from floating particles of wood and other *debris* that was being cast up on this lee shore.

After dinner and as the sun was setting, Mr. Hague and I took a stroll along the shore. It seemed very like a walk by the seaside; the fresh breeze, the dancing white-capped waves, the roar of the surf pounding upon the beach, and the glancing moonlight on the water all brought back memories of evenings spent on the ocean beach, and it was hard to appreciate that we were 7,800 feet above the sea and 2,000 miles from its shores, amid the solemn mountains of the Great Divide.

All along the beach there is worn a path where the elk pass back and forth, from the valley where we are camped to the great marsh, and here and there upon the smooth sand were seen places where two bulls in a fury had charged upon each other, and meeting head to head had pushed and strained against each other until one had yielded and turned to fly. In other places some bull had turned aside from the trail and thrown himself on his knees in the sand and rolled in it. For at this season the bulls are just beginning to feel like war.

The pines which grow along the beach are small and ill-nourished, but are worthy of notice in one respect, for on the side toward the west they are almost without branches, and the few that grow are bent and twisted so that their ends pointed to the east, showing the great force and prevalence of the westerly winds.

Through a gap in the hills we had a glimpse of some peaks of the Teton Range, shadowy and distant to be sure, but superbly grand.

NATIONAL PARK SUPERINTENDENTS.

Editor Forest and Stream:

In your editorial of Jan. 29 on the new bill concerning the Yellowstone National Park, you speak of its guardians in a way that most of your readers would suppose that they were possessed of powers enabling them to make arrests and bring to justice all persons found violating the laws governing said Park. Now if we are supplied with any such powers, I ask you why the Secretary of the Interior in his report to Congress last year should have said that the superintendent and his assistants were powerless to enforce the laws through lack of power to make arrests, and to remedy it why did he petition the Legislature of the Territory of Wyoming to come to his aid?

Our presence has been the only restraint we were able to use for the defense of the Park against the enemies of law and order therein, until the Territory of Wyoming came to the rescue and appointed justices and constables in the Park; and to-day if an assistant superintendent finds a man violating the laws he has to go to the justice, sometimes forty miles away, and enter a complaint, and place it in the hands of one of the two constables in the Park, thereby giving the criminal plenty of time to get out of the way.

I have felt chagrined and disgusted at the thought that the great and potent government of the United States should be unable to govern and protect the Yellowstone National Park reservation and maintain its laws, but must call upon the poor Territory of Wyoming for help, thereby creating a two-headed government. I am confident that the Territory could do it alone without the help of the Interior Department. It is further mortifying that Congress should be so niggardly in its appropriations for the improvement of the roads, trails and the building of bridges in the Park. I contend that the present generation is as much entitled to the benefits of comfortable travel as those will be in the next, and if the State of New York is able to lay out one million a year for the improvement of her pleasure grounds, the whole United States should be able and willing to appropriate half that amount to the opening to travel the curiosities and wonders of this the greatest and most beautiful pleasure ground in the world.

The idea that the Yellowstone National Park is a source of pride to the whole people of the United States, and that our law-makers are too penurious to open it up to the eyes of the world. The petty appropriations thus far have been inadequate (I mean the last two) to make those routes already opened reasonably passable, and in a year or two more it would be barely enough to keep those made in repair. We, the assistant superintendents of the Park, have been very wrongfully accused of inefficiency, and mostly by men who know nothing except by hearsay, like Gov. Crosby, who, because he knew that game had been brought into the Park took it for granted that it was killed on the reservation, when at that time it was almost impossible to find the haunts of

elk or buffalo in the Park, for the reason that their summer range was beyond its present limits.

I am pleased to hear that there is a prospect of the passage of the amended Vest bill, for unless the territory of the Park is extended at least twenty miles on the east, the summer range of the majority of elk that would winter in the Park would be left open to the hunter, who could stand between them and their refuge and slaughter them so fast that it would take but a very few years to make their protection unnecessary. Let me further state that our inefficiency is caused many times more through lack of legal power than incapacity in us.

Excuse me for making this letter so long, but when I think how we have been slandered and abused it would "stir a fever in the blood of age." ICHTHUS.

[Our correspondent has misunderstood our language in the editorial referred to. We have have always known that the assistant superintendents are without the power to make arrests, and it is for precisely this reason that we have so continuously urged the passage of the Vest bill. The utter absurdity of having protectors without power to make arrests is painfully apparent. The Vest bill, however, in Section 7, provides that the superintendent and his assistants shall "have all the powers and duties conferred by law upon the sheriffs and constables" of the Territory under whose jurisdiction it is. The prime reason for the passage of the bill is that the curiosities, the forests and the game may be protected. This cannot be done unless the officers whose duty it is to look after these shall have the power to arrest those who violate the law. We need not assure our correspondent of our hearty sympathy with him in most of what he says. It is a shame and a disgrace that this grand region should have been so long neglected.]

The Sportsman Tourist.

UNCLE LISHA'S SHOP.

X.

THE first warm days of spring had come, when for all the chill of the frosty nights, the sky and the white clouds drifting across it looked soft and hazy as in summer. The voice of the crow had become a familiar sound again; the first robin had been reported; more than one bluebird had sung its short sweet song in the valley; and Lisha had seen a phebe perched on a dry sunflower stalk in his garden, and making thence her unerring swoops upon the flies that, thawed to life again, buzzed about the sunny side of the feuce. The snow was deep in the woods yet, but it had grown coarse-grained, and all the winter litter of branches and twigs and latest fallen leaves seemed to be upon its surface, and it was gray in patches with myriads of ever-moving snow fleas. In the open whole southward-sloping fields were bare and brown except their borders of drifts, and here and there bits of the road were dry and firm, most pleasant to feet long accustomed to the uncertain and slippery footing of winter ways. Here and there at a homestead a man or boy in shirt sleeves was working up the great pile of sled-length wood into fuel, but most of the "men folks" were away in the sap works gathering their great harvest of the year.

Among the tall maples that grew on some hillside of every farm the smoke of the sugar camp drifted upward, and the daily and nightly labors there of all Lisha's friends had for some time prevented their customary visits to the shop. Lisha having, as he said, "got too ol' an' short-winded to waller 'raound in the snow, an' never could git the heng o' snow-shoein'," had hired Pelatiah to do his sugar making, while he attended to his shoemaking and mending. But getting very lonely with his solitary labors, during a slack run of sap he sent his henchman out among his friends with a verbal "invite" to a sugaring-off at his camp on a certain evening. Accordingly at "airly candle-ligh'in'," the guests came straggling in, and were loudly and warmly welcomed by their host. "I'm dreffle glad to see ye, boys! I haint sot eyes on ye for a month o' Sundays, seems 'ough. Make yerselves to hum, an' I'll sweeten ye up to rights." The little open-fronted shanty faced a rude fireplace, a low wall of rough stones inclosing on three sides a square yard wherein burned a rousing fire that shed a comfortable warmth into the furthest corner of the shanty, and lighted up the trees for rods about. To one side stood the "store trough," a huge log hollowed out to hold the sap as gathered. The great potash kettle slung by a log-chain to its monstrous crane, a tree trunk balanced on a stump, was swung off the fire, and the syrup was bubbling in a smaller kettle, carefully tended by Lisha and Pelatiah.

"Wal, boys," the old man said, after testing the syrup for the twentieth time by pouring it slowly out of his dipper, "it begins to luther-apron an' I guess it's 'baout ready. Peltier, you put aout an' git tew three buckets o' clean snow; Samwill ketch a holt o' that 'ere stick an' help me histe this 'ere kittle off. Naow, then, fetch up some seats, the' is sap tubs 'nough layin' 'raound. Samwill, Jozeff, Solon, some o' ye, the' 's a baskit of biscuit in back there under my cut, an' a bowl o' pickles; won't ye jest fetch 'em aout?"

So bustling about, he at last got his guests seated around the kettle of hot sugar and the buckets of snow, and they fell to, each in turn, dipping out some syrup, and pouring it in dabs upon the snow, when it presently cooled into waxy clots ready for eating.

"Pass 'raound them 'ere biscuits, Peltier—ta' keer, don't tip the kittle over wi' yer dummed hommils! Mos' 's good 's wild honey, haint it, Samwill?" Lisha asked, smacking his lips after disposing of a big mouthful.

"I d' know but what it's jist as good t' eat," said Sam, "but the' haint much fun agittin' on it."

"Naow, dew you r'ally think the' is much fun in bee-huntin', Samwill?" Lisha asked.

"Sartinly I dew. 'Tain't so excitin' as fox huntin' an' sech, but it takes a feller int' the woods in a pleasant time o' year, an' it's interestin' seein' the bees aworkin' an' seein' haow clust you c'n line 'em aud cross-line 'em, an' a feller's got to hev' some gumption, an'—wal, I'd a good deal druther hunt bees 'an to lug sap."

"By gol! so 'ld I," said Pelatiah. "My shoulders is nigh abaout numb kerryin' the gosh darned ol' neck-yoke."

"It mus' be tough on that 'ere lame shoulder o' yourn, Peltier," Joe Hill remarked, withholding a paddleful of sugar from his open jaws, while he bestowed a general wink upon the party.

"Honh! I haint got no lame shoulder in p'tic'lar—not naow, I haint."

"Wal naow, boys," Lisha said, after all had plied their paddles silently but diligently for some time, "this is what I call bein' kinder sosherble agin. 'Tain't quite so cozy as the shop, but we've got all aou'doors for room."

"Not inside on us, we haint—leastways I haint"—said Joe Hill, "this 'ere maple sweet is turrible fillin'."

"Take a pickle if y'r cl'yed, Jozeff, an' begin agin," Lisha urged, on hospitable deeds intent, but Joe declined, and soon all but Pelatiah desisted and tossed into the fire the little wooden paddles which had served as spoons.

"This is what I call raal comfort," said Sam Lovel, after lighting his pipe with a coal and stretching himself on the evergreen twigs in the shanty. "The' haint nothin' like an aou'door fire an' a shanty like this an' a bed o' browse for raal genywine restin' comfort!"

"Wal, it haint bad for onct 'n a while in pleasant weather; but for a steady thing, I'd a leetle druther hev a good ruff over my head, an' plarstered walls 'raound me, an' a fireplace or a stove," said Lisha, and then to avoid unprofitable discussion—"Samwill, I s'pose ye don't get much huntin' naow-a-days. Tew late for huntin' foxes an' tew much bare graound for trackin' 'coons. Git a patridge onct 'n a while, though, I s'pose, don't ye?"

"No, sir," said Sam, with emphasis; "haint shot a patridge in a month. I want tho' should be some next year. I killed a fisher, though, t'other day."

"I wanter know! Shoot him? 'Taint often 't a feller gits a chance to shoot one o' them critters. Awfle hard to git a shot at, they be, I s'pose?"

"Yes, and hard to kill when ye du git a shot at 'em. Drive treed this one, an' he went a skivin' through the tree-tops 'baout as spry 's a squirrel. I let 'im heve it on the run—hed in buckshot an' three Bs—an' disenabled him so 's 't he couldn't jump; but I hed to shoot him twict more 'fore he come daown, an' then hommered his head a spell 'fore he'd quit a kickin'. Then I tied his hind laigs together an' slung him on my back an' started for hum."

"Wha'd ye wanter lug his carkiss for? Why didn't ye skin 'im?"

"Oh! I—ah," said Sam, stammering and blushing, "I wanted to show him to—to—some o' my folks 'at hedn't never seen the hull critter; nothin' but the skins."

"H-m. Some o' my folkses' names begins with H-u-l-d-y P-u-r—"

"'N' 's I was a tellin' on ye," Sam broke in hurriedly, "I hed him on my shoulder slung ont' my gun berril, an' hed kerried him much 's half a mild, an' goin' 'long through some little thick secont growth, suthin' ketched an' most pulled the gun off 'm my shoulder, and I'll be shot if 't wa'n't that 'ere cussed fisher come to agin an' ketchin' holt of a saplin' wi' one of his fore paws!"

"Wal, I say for 't," said Solon, "be they so termintious o' life as that?"

"What for you ant tole him he dead, Sam? Dat all what was de matter wid it, he ant know when he dead!"

"Wal, I hed to go to work an' kill him agin, an' then I made aout to git him hum 'thaout any more of his fluruppin' 'raound."

"I haint never hed no chance o' studyin' the nat'ral hist'ry on 'em," Solon observed, "but from what I've larnt 'oraclar, I jedge the name of fisher an' black cat don't no ways imply to 'em. They don't ketch fish, an' consequentially they haint fishers, an' though they be toll'able black, they don't resemblace the cat speshy no more 'n nothin' in the world. Haint I right, Sammywell?"

"Sartinly you be," said Sam. "They don't never ketch fish—as I knows on—as mink an' auter does, but lives on squirrels an' mice an' birds an' rabbits, an' stealin' bait aouten saple traps; they're the beaters for that. An' excep' for their handiness in climbin' an' their hardness in dyin' the' haiu't no cat abaout 'em. They're a overgrowed weasel or saple."

"They're putty scase nowerdays," Lisha said, "do' know 's they ever was plenty. Saple 's gittin' scase tew, but twenty, thirty year ago, they was thicker 'n spatter. A man 'at onderstood it c'ld make his dollar a day easy trappin' on 'em. Ol' Uncle Steve Hamlin uster hev his lines o' saple traps sot for milds through the woods every fall, clear'n to the foot o' the Hump sometimes. Every little ways he'd hev a steel trap sot for fisher that come along stealin' the bait aouten his deadfalls, an' he'd git consid'able many on 'em every year. But game 's a gittin' scaser 'n' scaser. Samwell," he resumed after some moments of meditative smoking, "if I luffted to hunt an' fish as well as you du, I'd go daown to the lake some fall 'long baout the fust o' September, to Leetle Auter Crik an' hunt ducks an' ketch pick'ril."

"I s'pose it's a turrible place for ducks," Sam said.

"Ducks!" cried Lisha, "good airth an' seas! I sh'ld think it was! Why, when I uster be daown that way a whippin' the cat, an' I was consid'arble ten year ago, they was thicker in the marshes—wild oats grows there, ye know—thicker in the fall 'n ever ye seen skeeters in a swamp in July. The' 's a lawyer daown there name o' Pairpint uster go a shootin' on 'em with a feller to paddle his boat, 'n' he'd git a heapin' bushel baskit full on 'em in a day! 'N' they said 't he shot all on 'em a flyin'! Never shot none on 'em a sittin'!"

"Like anough," Sam assented, "I've hearn tell o' folks 'at shot partridges a flyin', but I never was bleeged tu. I c'ld allers git shots at 'em a sittin'."

"An' pickril!" continued Lisha, "I never seen the beat on 'em. I uster go trollin' arter 'em wi' some on 'em, 'n' we'd hev each on us a big hook with a pork rind an' a piece o' red flannel on 't for bait, an' a toll'able long line an' a short pole, 'n' we'd paddle 'long kinder easy on the aidge o' the channel, an' I tell ye we'd yarn 'em aout! Ol' sollakers, tew; four, five, six paounds, an' one 't I seen weighed ten paound 'n' a half."

"By gol!" exclaimed Pelatiah, wide-eyed and wide-mouthed with wonder, "ten paoun' an' a half? He must ha' ben mos' 's big as one o' them 'ere whale fish 't they git lamp ile aouten on!"

"An' mushrats," said Lisha, continuing the relation of the wonders of the lowlands, "I've seen their haousen on the marshes in fall an' winter thick as ever ye seen hay cocks in a medder, most, an' hunderds of acres o' marsh with 'em sot jes' so thick. The' was Benham an' 'mongst 'em uster git as high as three hunderd mushrat apiece, most every spring. These 'ere teamsters 'at hauls ore up here to the forge says 'at ducks an' mushrat an' fish is jest as thick there naow. That 'ould be the place for ye, Samwill! Ducks an' fish for fun, an' mushrat for profit."

"Probly dey bullpawt an' eel dah, ant it Onc' Lasha? Ah wish Ah be dah too, me!"

"Eels! I guess the' is. Why Ann Twine, you c'ld ketch as many o' the dum snakes in a night as you c'ld eat the nex' day, an' that 's a puttin' on it high. Yes, an' the' 's pike an' bass, an' a gret fish 'ats got a bill like a shellduck on'y longer, but they haint good for nothin'. An' the' 's sheepheads an' shad, 'n' more pa'ch an' punkinseeds 'n' you could shake a stick at in a fortnight, but nobody don't make no caount o' them, on'y boys for the fun o' ketchin on 'em. An' the' 's bowfins an' suckers 'n' I d'know what all. They hes gret times a shootin' pickril airly in the spring, an' a spearin' on 'em, tew."

"Wal sah, Onc' Lasha, Ah can shoot it dat moosrat wid spear in winter w'en he'll live in haouse."

"Ketch mushrat with a spear! Oh, naow you go to grass, Ann Twine. You'd ort to hed a spear to git them 'coons."

"You ant b'lieve it dat? You as' Injin if he ant git it moosrat dot way. Bah gosh! Yas! W'en ice all be frozed up, have it spear got on'y but one laig baout so long as two foot, ver' sharp, wid toof on him an' woodle handlin' tree foot, four foot prob'ly long. Den walk slow, slow, ant mak it no nowse, to moosrat haouse. Den push him dat spear in quick! hard! raght in middly of it. You feel it spear shake, you got dat moosrat, mebby one of it, two of it, sometam three of it, prob'ly. Den chawp in wid axe, tek it off, go nudder one jus' de same. Sometam git feefty, seexty all day."

"Wal, I do' know but what ye haint a lyin' for onct, Ann Twine; it saounds kinder reas'nable. You want to git ye thirty forty traps, Samwill, an' go daown there with Ann Twine an' his spear. Then ye'd hev a French cook an' live high-duck, pea soup, an' roast mushrat three times a day."

"Bah gosh! Onc' Lasha, you ant steek you nose up dat moosrat! He pooty good for eat, Ah tole you!"

"Yes, yes; anybody 't eats snakes needn't spleen agin rats, sartin."

"Oh, Onc' Lasha," said the Canadian reproachfully, "eel don't snake, more as you was mud turkey."

"If I hed me a boat an' traps anough," Sam said, after some silent and thoughtful smoking, "I'd jest like to go daown there a trappin' an' huntin' an' fishin'. An' then, arter I got a good shanty built, an' well to goin', hev all on ye come daown a visitin'."

"You jes' du it an' see 'f we don't, hey, boys?" And there was general assent. "Yes, Samwill, we'll tackle up a two-hoss waggin an' all go. We'll go tuckernuck, kerry aour own pervision; on'y mushrat an' fish we'll expeck you to furnish, Samwill. Wal," Lisha continued, hoisting out his porringer of a watch and consulting it by the waning firelight, "it's a gittin' late. Why, good airth an' seas! If 't ain't mos' 9 o'clock! Peltier, 'f you've got that 'ere kittle licked aout, you c'n slick up a little raound an' we'll go hum. No need o' bilin' to-night, the' haint sap 'nough in the store trough to draound a chipmunk. Git the baskit an' Jurushy's bowl an' come along."

Then they filed out of the sugar camp on their homeward way, while far above them in the black growth of the mountain side the hoot of an owl and the gasping bark of a fox voiced the solemnity and wildness of the ancient woods.

Natural History.

GROUND SNAKES OR WORM SNAKES.

IF not too late, and while much regretting such delay, I venture a few words in allusion to Mr. B. Horsford's exceedingly interesting speculations of July 24 last, on the "Worm Snake." His description of its form and habits seemed on first reading to point to a relationship with our little English "blind worm" or "slow worm" (*Anguis fragilis*), as also with the burrowing snakes generally. There appear to be at least two small snakes known as "ground worms" in the United States, viz., the *Rhineüra floridana*, which Dr. Yarrow pronounces the one sent him by "Red Wing" to be, and another the *Celuta amœna*, described by Baird and Girard in their Check List of 1853. Both have short tails ending in a horny point; but while "Red Wing" says the color of the Florida snake is dull gray on the back and white beneath, Prof. Baird describes the more northern species as being of a bright chestnut brown above, and salmon color beneath, which more nearly approaches the color of Mr. Horsford's specimens. "Small head, body very glossy, sub-cylindrical, tail short, tapering into a point," is Baird's further description of *Celuta*, which, he says, is the *Brachyorrhos amœnus* of Holbrooke (1842), but among the many synonyms and apparent varieties it is hardly safe to pronounce upon a specimen without reference to the description alluded to by Dr. Yarrow. Holbrook states that the *Brachyorrhos* is found under the bark of old trees and under rocks in all the Atlantic States, from New Hampshire to Florida, and in Louisiana, while the *Rhineüra*, according to Cope, belongs only to the Floridan district. Still another of the little burrowing snakes, *Carphophiops*, is known as the "worm snake," and its name would imply a stick-like body; but of this I have no description. In their Check List of the specimens at the National Museum at Washington, both Cope and Yarrow name three species of *Carphophiops*, one of which, *C. vermis*, must, from its name, be worm-like.

As among the readers of FOREST AND STREAM there may be many, who, like myself, have not ready access to the published descriptions of these various worm snakes, as given by the American herpetologists, and which would enable us to decide between them with better certainty, I may, pending further accounts of them, offer a word on two on the burrowing snakes generally, in the hope of inducing further observations of these curious little reptiles; and indeed they present many features of peculiar interest. First, the ground snakes proper, as distinguished from tree snakes and water snakes, form one very large group, and the burrowing snakes form another distinct group, notwithstanding some of the latter may bear the vernacular name of "ground snake", or "ground worm", as do those under consideration. As Mr. Horsford observes: "Running under the ground is a very different matter from running upon it;" but the burrowing snakes are especially adapted for their worm-like life. They have for the most part a round compact body, covered with hard, close-set, smooth scales, which form a capital armor against soft earth, sand and dust. Their eyes are usually small; in some families inconspicuous, or only rudimentary. The *Typhlopidæ* or blind snakes are in this latter condition, but the deficiency is compensated by an extremely keen sense of touch and probably of hearing also, for the little reptiles are exceedingly active. A peculiarity of tail is another feature of the burrowing snakes. A great many terminate in a hard point, more or less acute according to the size and form of the snake, but always strong, for they make constant use of their tail as a propeller, or a fulcrum or a support.

The names of some of the snakes are descriptive of their tail, as for instance, *Brachyorrhos* or *Brachyurus*, short tail; *Rhineüra*, horny or pointed snout; (the *rhi* is occasionally used for either word); *Uropeltis*, tail with a shield, etc. This

latter belongs to a remarkable family, the *Uropeltidæ*, which have the appearance of being chopped clean in halves, so abruptly does the body terminate. But the truncated end is protected by the round dish or shield, which probably is of use to the snake to press against the earth in burrowing. This is one of the smooth, cylindrical forms as is also the *Cylindrophis* in a remarkable degree.

The pointed tails of some of the burrowing snakes turn strongly downward, and must also be a useful agent in supporting and steadying them in their underground work. These horny tips are the offending "stings" of ignorant ages, supposed to inflict injuries both to animals and vegetables. There are those, even at the present day, who believe that feeble little snakes can kill trees with these terrific weapons, and few persons will have the courage to handle one with a supposed "sting." The timid reptiles, with their smooth, polished scales, are unable to cling, as can the larger snakes which have ventral plates, and they instinctively press their tails against any surface to assist their movements. The quickness of their actions may have the appearance of anger, but they have neither power nor intention to injure, and use their tails in their own service only.

Most of the burrowing snakes progress with equality facility both forward and backward, an ability which, as in the *Amphisbæna* (going both ways) and some others, with the cylindrical form, and blunt, inconspicuous head, has gained them the name of "double-headed" snakes. Certainly it is somewhat difficult to distinguish head from tail in some of them. But in all these singular features we see an adaptation of form to habit. Large eyes, rough scales, angular bodies, and long, feeble tails, would ill serve burrowers that in their narrow path, or when peeping forth only to espy an enemy above ground, must in self-preservation retreat precipitately while unable to turn. And swiftly they do recede in their subterranean labyrinths, notwithstanding.

Prof. Cope places *Rhineura floridana* under the head of *Lacertilia* as one of the *Ophiosaurians*, snake-lizards, and akin to the *Amphisbænas*, which proves it without doubt to be a relative of our English "blind worm." But unlike the true blind worms (*Typhlopidæ*), *Anguis fragilis* possesses bright little eyes of which it makes excellent use when above ground, as it often is. How its reputed blindness gained belief it is hard to surmise, unless from the fact that "slow worms" are often found hybernating in great numbers, with their eyes tightly closed and the places of them barely distinguishable. This ability to close the eyes, which the true snakes can never do, and the possession of eyelids, is one of the means of distinguishing the lizard-snakes from the true ophidians. They have also a small, non-extensible mouth, no palate teeth, and scales alike all round, instead of ventral scutæ. When Mr. Horsford gives us the result of those more minute investigations, which he was intending to make, he will be able to tell us if he ever discovered any vestige of sternum in the skeleton; for that his "ground worm" was not without ribs and vertebræ we may confidently decide. The progression of these little burrowing snakes is one of the most marvelous and mysterious of serpentine achievements. That they use their ribs in progression, as the true snakes do, we need not doubt. But we cannot distinguish the action of the extremely fine ribs under the skin as we can in snakes, moving in a succession of waves, like the feet of centipedes, and carrying with them the ventral scale to which each pair of ribs is attached. In the smooth lizard-snakes (truly limbless lizards) the progression is a *glissant*, gliding, graceful movement, without any apparent agent. The numbers of pairs of ribs in snakes are easily counted, and are always counted in classification one pair to each ventral plate; but I am not aware that the ribs of a slow worm have ever been counted, or that it and its congeners have received any very flattering attention from snake observers. They are not unworthy objects of study nevertheless.

On first reading of the American ground worm in FOREST AND STREAM, I repaired to the zoological gardens to see if its representatives were in our herpetarium. The smallest snake then living in the collection was an *Ungalia maculata*, from the Bahamas, eight or nine inches long, and a true ophidian. It had not been there long enough for the keeper to know much about it, and it soon died. But there is now another and much larger snake, known in India as the "worm snake." It is *Gongylophis conicus*, the conical snake, the generic name signifying cylindrical, but with a blunt and somewhat pointed or conical head. Singularly, this is not only a burrower but a constrictor, thus uniting two very opposite characters. The head keeper, who may be relied upon as an intelligent observer, says that it remains buried in the shingle with only its head peeping out, watching for prey, and that when a mouse runs by the snake in an instant darts from its lair and has the little quadruped in its coils. It there retains it firmly until dead, when it is eaten exactly as other constrictors swallow their food. At present I have been unable to watch the process, and can see only the head constantly peeping up; but when bright skies again permit of observations, I shall hope to verify this extraordinary habit.

Most resembling the description of your worm snakes is a small *Amphisbæna* with a very worm-like aspect indeed, and about seven inches long. This is a true burrower, and while in my hand it displayed its natural instincts by restlessly endeavoring to push its way through my glove or between the fingers and get out of sight. It has been sharing a cage with some green tree frogs, and the other day it was missing and could nowhere be found. The earth, moss, sand, and every corner of the cage was ransacked in vain, and the melancholy conclusion was arrived at that one of the frogs had made a meal of it. Resolved to "leave no stone unturned," a literal act in this case, the keeper carefully examined the mould in a pot containing an evergreen for the accommodation of the tree frogs. The pot was sunk in a well to the level of the floor of the cage, and there, at the very bottom of the pot, little *Amphisbæna* had hidden itself. After this insight into "its tricks and its manners," the keeper placed it by itself in a box of earth—the stiff clay of the locality—and in a few days, when he was transferring it to a better box and some softer mould, he saw that a great engineering work had been accomplished in that short time. The little creature no bigger than a worm, and apparently with no more backbone than a worm, had tunneled through the stiff clay and made long serpentine subterranean paths in various directions, through which it could glide forward or backward at will. In an eight-inch box there was at least two feet of tunneling. Now we see the meaning of "running under-ground;" and probably if the haunts of the little American "worm snakes" could be carefully examined, other engineering feats would be revealed, and I would earnestly invite such observations, as also such information as may be obtained thereby.

Naturally the chief food of these reptiles is to be found underground; worms, grubs, the larvæ of insects, ant's eggs, etc. Some of the burrowing snakes subsist wholly on ant's eggs, and lay their own eggs in the nest of the ant, their cuirass of hard, polished, close-set scales protecting them from the insects, while the young ones are hatched in the midst of plenty. Harmless and useful little reptiles, doing their part in clearing the ground of injurious insects; let us hear more about them.

CATHERINE C. HOPLEY,
Author of "Curiosities of Serpent Life," etc.

LONDON, England.

THE BIRDS OF MICHIGAN.

BY DR. MORRIS GIBBS.

(*Continued.*)

16. *Parus atricapillus* Linn. Black-capped chickadee; titmouse.

This well-known bird is familiar to all. Almost every child is acquainted with its interesting movements and the characteristic notes, which uttered so plainly, give it its name. From the Sault Ste. Marie to our southern boundary the chickadee is recorded by collectors. Abundant throughout the year, hardy and of pleasing address, the black-capped titmouse, as it is often called, is welcome everywhere and is a favorite with all.

I have yet to visit a locality in summer or winter, where the little fellows were not present. Often in severe weather they withdraw to the deepest recesses of dense forests or conceal themselves in the thick hedges and evergreens of the city, but a careful search will almost invariably reveal the presence of the sharp-eyed midgets. It is quite probable that the birds of this species which appear so tame and to all appearance much at home in our dooryards during winter are from the north, while the summer residents of the past season are in Indiana and Ohio or even further south. The question regarding the so-called residents, winter residents, and migrants remains in many cases yet to be solved, and it may be perhaps doubted if there are over ten permanent residents in any one county in our own State.

As our knowledge of the various species increases, it will be found I do not hesitate to assert that but few birds are actually permanently located. There is also reason to believe that very few of the so-called Michigan transients pass entirely through the State, and many species generally thought to nest in the far north, in all probability remain in our northern counties during the summer months. It is hardly in place to consider the problem of migration as a general theme while writing of the chickadee, but as there will perhaps be no better opportunity in this series of articles, a few lines may not come amiss on the subject. It is our opinion founded on close observation, that but very few species will be found to come within the category of actual residents. Many species there are; as the chickadee, nuthatchers, downy and hairy woodpecker and others usually counted as residents, which are, however, not so. The birds, although found in our State throughout the year generally, are absolutely migrants nevertheless, and few, if any, of those breeding south of 44° lat. winter within our boundaries. The turkey, ruffed grouse, great horned owl and a few others are our only actual residents, and even these are often extremely erratic in movement.

We may safely say that at best the migration of all of our birds is but little understood, and as regards the movements of the so-called residents we are almost absolutely ignorant. However, to return to the subject, the chickadees are found throughout the year in many parts of the Lower Peninsula and appear always at home.

The habits of this species are extremely interesting, and to those interested in our birds the peculiarities of this lively titmouse are an unending source of pleasure and study. Our friend is a veritable acrobat. He will hang head downward while in search of food or inspecting our movements, and will return to an upright posture by apparently the slightest effort. He rolls and circles around a limb much more easily than the most accomplished performer on the horizontal bar, and infinitely quicker. The blackcap's movements are vivacious and erratic. It is impossible for us to tell what our agile friend will do next as we watch his movements; skipping from twig to twig, now clinging to the bark of the trunk of a tree, again dangling head downward at the extremity of a swaying branch, flitting from tree to tree, now high in air, again among the bushes or on the ground at our feet. In its gambols it is ever uttering its simple call notes of two kinds, or giving us its name in clear, decisive tone, *chick-a-dee* or *chick-a-dee-dee-dee-dee-dee*.

It also has a faint but agreeable whistle, which, though not of the nature of a song, is nevertheless very musical. This whistle is rarely uttered earlier than March 15 or later than Oct. 1 in my experience, and is most constant during the nesting season. It is evidently its love song. The notes may be variously described as *pee-weeeeeeee* or *tee-heeeeee*, the first note being about one-third or one-fourth as long as the second, and pitched in a higher key, about three or four notes in the scale. The song, if it may be called so, is quite long drawn out, and is sometimes varied somewhat. It is decidedly mournful in sound and causes one to regret the departure of the summer when heard in the quiet woods in September.

There is also a note or notes only uttered during the time of nest building and rearing of young, and at the time of a gathering of a group of these little birds. The notes *tee tle tee tle* or *teetle teetle teetle*, are uttered in a half whining tone, and are the first adopted by the young in their efforts at mimicry of parental example.

The nest and eggs are so well known that observations would be out of place. A few remarks will be offered on certain peculiarities in arrangement, mode of building, etc. One nest found was placed in an excavation on the under side of a fallen limb in a small oak woods. This was on June 29, 1872, a late date for the eggs of this species. One nest was placed two feet from the ground in an old stump; excavation eight inches deep. Six or seven eggs is the usual number, but one nest contained eight fresh eggs. The species rarely places its nest more than four feet from the ground, and I have yet to meet with an excavation less than eighteen inches above ground.

In two instances I have had to remove the female by cutting into the excavation and forcing her from the nest, blows on the side of stump or the introduction of the finger into the orifice being of no avail. In some cases I have met with nests built in wood so soft that the surroundings could be pulverized in the hands; and again, nests are found in very hard wood, so hard that it is quite surprising that such small birds could bore into it. Often nests are left when half finished; in these instances, as a rule, the birds desert the excavation because of the extreme hardness of the wood, which they probably did not expect when first boring into the soft exterior of the dead limb or stump. Many nests are built in a very shallow excavation just within the bark, and in several instances I have opened them, and not finding the complement of eggs, have replaced the bark and bound it on with vines or string, and later on have secured the full set. I have yet to meet with a nest built in live wood.

17. *Parus atricapillus septentrionalis* (Harris) Allen—Long-tailed chickadee. Entered on the authority of Dr. H. A. Atkins, of Locke, who writes me that he captured it in Ingham county, Mich. Not given by any other authority in the State.

18. *Parus carolinensis* Aud.—Carolina chickadee. Embraced by Dr. Miles, 1860; also by Dr. Atkins. A Southern form rarely seen in the State.

19. *Parus hudsonicus* Forst.—Hudsonian chickadee. Embraced in Cabot's list of "Birds of Lake Superior," 1850.

This completes the members of the family *Paridæ*. The food of the chickadee is principally of an insect nature, and though much vegetable matter is consumed by the birds in the winter, as in the case of the brown creeper and nuthatches, still the food during the warmer months is composed chiefly of insects. My judgment of the habits of the birds in regard to food is not to be fully relied on, as my observations extend no further than the observations of the black-capped chickadee, the other species being too rare to observe during the various seasons.

20. *Sitta carolinensis*. Gmel. White-bellied nuthatch.

This quaint, ever cheerful species is a resident in Michigan. In our cities and villages south of 43° the birds are seen in greater abundance during winter than in summer, plainly indicating that the most of the whitebellies are from the north and not from the immediate vicinity. The species is much more common during March, April, October and November, which leads me to think that a large portion migrate each season, and the fact that during June few specimens are seen in our southern counties is quite conclusive evidence that many are transients as regards Southern Michigan. Some winters very few birds are seen, again the woods are full of them.

Our little friend is an excellent weather prognosticator as regards changes of temperature in winter. If severe weather appears it is rare to see the nuthatch around in any numbers, and they show their good sense in getting in out of the cold as soon as a storm threatens. Where the little fellows go to is as much a mystery as it is in the case of the other species found with us in the winter. On two occasions I have seen the whitebelly emerge from a hole in a dead limb in winter, and in one instance the space between the clapboards and lath in a house was occupied. It is reasonable to suppose that such situations are frequently occupied by many of the smaller species of birds which are found with us in winter. During a light flurry of snow, when the temperature is not below 20°, many nuthatches remain in sight and feed unconcernedly with the creepers, but if a severe storm comes on, not one is to be found. I feel confident from my own observations, and the fact has been mentioned by several authorities, that the whitebelly stores up its little supply of provisions for a snowy day. A bird may frequently be seen working around a dead tree in which is concealed quite a stock of nuthatch provender, and in one small stub which I crushed to the ground, there were found large quantities of small seeds and some acorns, undoubtedly *cached* there by the colony of the little fellows which infested the place.

If a thaw is about to take place, the birds report it in advance, generally from one to two days before it occurs, but often quite a week before it fairly sets in. The thaw is prophesied by them in an unusual effort in chattering. The species is far from being gifted in a musical point of view, but the notes, of three kinds, are always interesting to the listener. The birds make a special effort in anticipation of a thaw, and are quite noisy at times. That the species occasionally errs in its judgment regarding the expected thaw is certain; which, however, is not to be wondered at, when we consider that our best so-called weather prophets are often, even generally, mistaken in their prognostications. But such mistakes seldom occur with the nuthatches, and in the large majority of the cases when their notes are heard repeatedly during the day, a thaw may be looked for with absolute certainty.

During December last I noticed a number of birds actively engaged in exploring the crevices in the bark of some city trees, gables of houses, roofs of sheds, fences, etc., and all were uttering their notes in the agreeable manner usual to them. A thaw was little to be expected during such cold weather, the mercury indicating 0, and during the week had been as low as —15°. Upon intimating to an acquaintance that a thaw was about to occur, I was offered great odds to the contrary, on this, to him, preposterous assertion. My friend laughed and said that the chances for a thaw were never as poor, considering the extreme, severe weather. It continued cold for three days, and my belief in the prophesies of the nuthatches was somewhat shaken, when rain began to fall, and in seven days from the time the birds began to get noisy, we had lost our two feet of snow entirely, and the ground was as bare as in summer.

The nuthatches are very interesting birds, and with their quaint ways are extremely attractive to those who delight in the study of our feathered friends. In many respects they differ from all other families, and are perhaps more nearly allied to the titmice and creepers of any of our birds. A pair of whitebellies can give no end of amusement to an observer, and are incomparably superior as an attraction to the poor caged parrot, around whose gilded house people will stand in order to gaze on its absurd movements and listen to its discordant articulations in imitation of a few words. The antics of our active little friend are something surprising, yet all of the peculiarities and comical actions are presented evidently with the greatest gravity, and in no way during his actions does he evidence his knowledge of our presence, excepting by an occasional side glance at the observer and a few decisive notes, not, however, of alarm. We pause in our walk in the city and watch a pair of these birds, and within five minutes they have assumed every conceivable position possible for a bird to take; now on the trunk of a tree head downward, the next moment on the ground or the gate post, in another instant exploring the shingles of the roof or the eaves, and creeping or flying to the gable. It is safe to say that a nuthatch, when foraging for food, is upside down quite one-quarter of the time, and is rarely level in his perch, excepting when feeding on the ground, which is not a rare occurrence. However, although flying about in an apparently aimless manner, the erratic little fellow is doing his best at filling his crop. Like all other birds, he is nearly always hungry, and continues his search for food no matter what the condition of his stomach. If insects are scarce he searches perhaps more dili-

gently; if plentiful he still shows his inclination to feed. From early morning to twilight hour the nuthatches are ever on the move, and I do not remember ever having seen one quiet for thirty seconds at a time. Our most restless family of birds with the exception of the warbler, and many species of warblers are not nearly so lively as the white-bellied nuthatch.

The nuthatch differs from the creeper in its manner of covering ground in its search for food, otherwise they are much alike in habits and nature of food. The creeper will almost invariably begin at the base of a tree and work upward spirally until, reaching a limb (it generally selects the largest), it follows it almost to its extremity and then drops to the base of a neighboring tree, or, as is frequently the case, begins again on the same trunk over which it has just traveled. The white-bellied nuthatch, on the contrary, is quite as likely to begin on one of the limbs and work toward the trunk, and I have seen them searching on the trunk head downward from the top, that is, from the fork down to the base of the tree. This is a peculiarity not often observed, but occasionally seen in deep woods. The nuthatches do not use the tail in the manner of the creeper and woodpeckers, but when pressed for want of proper support, frequently use it as a supporter. In clinging to brick walls the tail is used when the delicate claws are not strong enough. In one instance in which I shot a specimen, it flew to an adjoining tree, and clinging to the bark braced itself with its tail, and died in this position with its head dropped. It required another shot to dislodge it.

The notes of the whitebelly are *ko at, ko at, ko at* or *no at, no at, no at.* This is their song if they have one, uttered in a sharp decisive manner, the syllables being repeated a dozen times or more, occasionally twenty times, and sometimes only once or twice. These notes are uttered generally when the bird pauses from its search, but are sometimes heard while it is actively engaged in looking for food. The call notes are *tow it, tow it, tow it,* in a much lower key. Both the song and call notes are very agreeable, and heard, as they usually are in March or October, when few birds are present, are quite cheering. There are other notes also which I fail to remember at this writing, and so cannot describe. The song is more often heard in March and April during migration, but is heard occasionally during summer and autumn, and often during the winter months, when warmer weather may be expected.

The nest of this species is invariably, so far as I have heard, placed in an excavation of some kind. One nest that I discovered was all of sixty feet from the ground, and was placed in an excavation in a dead limb of a live tree. Several nests have come to my notice placed in the gables and cornices of houses. One was not over two feet from the ground, placed between the clapboards and lathing of a house, and was reached by the old birds through a knothole two feet above the nest. The birds are like the house wren in their selection of a nesting site, and the size of the interior is not regarded provided it is reached through a small orifice. Sometimes a peck of rubbish is carried in to fill or partially fill a too roomy home. The nest is composed of a large variety of material, when built in the cities where a large excavation is chosen, and the body of the structure is warm and compact. The lining does not differ materially from rubbish chosen for other parts of the nest, and the old bird's aim is evidently to secure as much warmth as possible, regardless of appearances. The nests found in woods differ from those taken nearer civilization, in that they are not composed of so many varieties of rubbish.

The eggs are usually six in number, occasionally only five, sometimes seven and rarely eight, are white and finely dotted with pink spots, distributed generally over almost the entire surface. The eggs are very pretty and easily distinguished from all other birds' eggs.

The white-bellied nuthatch is well distributed in Michigan and is reported in all lists. It is common in all localities that I have visited, and may be considered as one of our most generally distributed species in the State.

VIRGINIA RAIL WINTERING ON LONG ISLAND.—The very remarkable fact of five Virginia rails being shot on Long Island during February appears to be well established by the following notes which Mr. Robert B. Lawrence has kindly placed at our disposal. At least two of the birds were sent to Wallace's shop to be mounted, and are reported by the assistant who did the work to have been fresh killed. The birds were taken by Adam Geipel of this city, and in a reply to a request for particulars by Mr. Lawrence, his son gives the following details: "He [Adam Geipel] went out gunning on Friday, Feb. 6, 1885, in the swamp called Traine's Meadows, in Astoria. On that day he shot three of the birds, but he did not know what they were. When he got home our family doctor was there, and he asked my father what he had there. He replied that he did not know what kind of birds they were, and the doctor, on seeing them, said those are what are called Virginian rails. On the 13th of February, he [the father] went out gunning again, and shot two more of the Virginian rails near the same place where he shot the others.—PAUL GEIPEL, JR. (919 Second avenue, New York)." The rails are generally regarded as quite sensitive to cold, and disposed to retire southward early in the fall. The occurrence of these specimens on Long Island in the middle of winter, and especially of such a winter as this one has been, is a very interesting occurrence. It is not without parallel, however, for if we mistake not, there is in the National Museum a specimen of *Rallus virginianus* secured at Walla Walla, W. T., in January, 1879, by Capt. Chas. Bendire. It may be said, however, that the climate of Walla Walla is much less severe than that of New York. Although the specimens were not identified by any ornithologist, the testimony brought forward as to the identity of the species and the time of capture seems to establish the facts as given beyond any reasonable doubt.

ALBINO QUAIL.—Vicksburg, Miss., Feb. 25, 1885.—A darkey last week killed and brought to the city a white quail, the only perceptible dark on it anywhere being a small clouded place on the left side of the upper beak, the rest of it being purely white. Its legs were a very pale pink to the ends of the "toes," and its size and shape the same as in other birds of its species. The darkey said the covey contained four birds, the three others being also white. My brother and I will try and capture them, as they are located only about a mile from the city. This one has been mounted by a local taxidermist.—BURR H. POLK.

AN AGED REDBIRD.—Columbus, O., Feb. 4.—A redbird, kept in the family of a friend, recently died at the age of fifteen years. Is this not an unusual age?—O. N. G.

CARIBOU HORNS.—Colebrook, N. H.—I find the female caribou of this State not carrying horns in as large a proportion as those of the Provinces. But the males' horns contain more material here than those killed further north. I have on hand six taken near Valcartier, P. Q., and comparison with specimens taken in Aroostook, Me., shows a like difference of weight; color of hair very light in the Canada specimens. Horns of females taken in Canada are larger than any I have ever seen here.—NED NORTON.

SNOWSHOEING.—Hackensack, Feb. 24.—The Oritani Snow Shoe Club held its third annual meeting Feb. 25, after their regular tramp. The following officers were elected: Geo. M. Fairchild, Jr., President; Norman R. J. Neilson, of Three Rivers, Canada, Vice-President; Wakeman Holberton, Secretary; Hon. J. U. Gregory, of Quebec, Canada, was unanimously elected an honorary member.—W. HOLBERTON, Secretary.

Game Bag and Gun.

ADIRONDACK DEER HOUNDING.

Editor Forest and Stream:

A sense of duty impels me to contribute what I may to the cause your paper is so ably advocating, viz., the suppression of a great wrong in the Adirondacks, in the outrageous slaughter of deer, the extermination of trout, and devastation of the forest. I have read with amazement the declarations of some of your correspondents that, while they have frequently visited that magnificent and picturesque region, they have never seen deer killed wantonly or out of season. If they were the sportsmen they claim to be, they were either blind or in a somnambulic condition; for no frequenter of the Adirondacks in the close season could have failed often to hear of, and taste if he pleased, "lamb" or "mutton" to his entire content, unless his visits were so early in the season that skin and bones alone constituted the deer even then to be often seen and too frequently slain. No honest man acquainted with the practices in the forest will attempt to deny that deer are killed as soon as there is flesh enough on their haunches to part the skin from the bones, or that the slaughter is continued from that time almost until the next season opens. This is when multitudes of fawns are destroyed by the death of does—a cruel as well as great sacrifice, only second in its consequences to the barbarous and very unsportsmanlike practice of running dogs.

I am of those who would provide a heavy penalty for the killing of a doe before the 15th of August, for night shooting or "floating," and a heavier one for the use of dogs in any month of the year. More than this, I would provide a penalty for the taking into or the keeping of a hound in the woods, and offer a reward for the killing of any so found. It is summer shooting and hound-hunting that is surely exterminating the deer, to the regret of guides as well as true sportsmen. There are few guides that cannot be prevailed upon by their employers to hunt out of season; but their defense is—and there is human nature in it—that all do it. There are still fewer guides who will not hunt with hounds, and yet there is scarcely one in fifty of them who would not gladly see dogs banished from the forest.

What is required is a stringent and impartial law, with ample provision for its enforcement, to effect a much needed reform which would be received even by the guides most cordially. Let them understand that it would be universally enforced, that all would share and share alike in the results of such legislation, and there would be no resistance.

How enforce such a law? Let the Legislature authorize the appointment of a chief game keeper, with headquarters in a central locality of the forest and be aided by as many assistants as might be required, each one to give bonds for a faithful performance of his duty and receive the compensation of a faithful servant. The regulations to govern them could hardly be made too rigid, or proofs of their dereliction of duty too well rewarded. They should be appointed by and be under the direction of a commission of three citizens of ability and high character, who should serve without compensation. Some of the drippings from the wastefulness of every Legislature would amply provide for the compensation of the protectors; but the State owes it to itself to make annually a liberal appropriation for such a purpose, not only the deer of the forest, but also the fish and the timberlands from devastation. It is possible and not difficult to effect a reform in this respect which the entire people of the State would hail with joy, for they cannot afford to have their magnificent forest prostituted by the hands of vandals.

With reasonable protection the great forest can be made to teem with deer and trout, enough for all and easily obtained. If it be said that money so expended would be for the benefit only of the thousands of people who now annually spend vacations in the forests, I answer that the amount of money required is much below the amount the same number of people pay as taxes for objects and purposes in which they are not personally or directly interested, but which taxation is for the benefit of all and the common welfare. But all the people of the State are interested in the preservation of the forest, its timber, waters, game and fishes.

It is a fact too apparent to every observant frequenter of the forest who has a taste for hunting and fishing, that deer and trout are rapidly decreasing, and that the time is not far off, unless the State stays the wanton killing of both, when deer will be quite as scarce as the moose is now, and when lakes and streams will no longer respond to the lines which the angler would drop to them. As already stated, the guides would be among the strongest supporters of a practical movement to preserve the deer, fish and forest, which means the preservation of their occupation also. Many hours have I spent with many of them in different places in discussing this subject, and in making the above declaration I know whereof I affirm.

Lest it may be inferred that this communication favors legislation so stringent as to prohibit even the killing of a buck for camp purposes in the month of July, the opinion is expressed that nobody would carry protection to such an extent. But even in such cases as at all times, a camp cook should be banished who does not know how to save and make palatable not only the saddle, but every part of a deer. It is wanton killing and waste, and unseasonable marketing with the aid of hounds, that works such terrible destruction. With a sufficient number of protectors properly discharging their respective duties, every camp would be under a wholesome code of regulations, especially if the protectors could have the assistance of informers working for share in penalties.

SYRACUSE, N. Y., March 1, 1885.

THE PATENT COFFEE MILL.

[From the Forest and Stream, April 19, 1883.]

THERE is a certain ingenious little contrivance sometimes employed in grocery stores which is known to the initiated as the patent coffee mill. The machine is fastened to a partition of the wall, and into it is poured for grinding the coffee just purchased by the customer. The clerk turns the crank and the buyer sees, or thinks he sees, his pure Old Government Java or Mocha coming out of the mill again. The product which he beholds is, however, only one-half or one-third pure coffee. The rest is browned beans, parched peas, burnt bread crusts, or whatever else the economical merchant may have put into the concealed compartment of the mill, on the other side of the wall. The genius who devised this mill is said to have reaped a rich reward as the fruit of his ingenuity, and is reputed to be worth as much as the Connecticut quarry owner who ships his stone to manufacturers of granulated sugar.

Unfortunately the principle of the patent coffee mill is not confined to the humble cross-roads grocery. Its workings on a more magnificent scale may be studied at the respective capitals of the several States, when the wise heads there assembled come to the annual grinding of the game laws. That which ostensibly goes into the mill as pure and honest game protection is, when ground out again, only one-sixteenth protection and the rest destruction.

The mill under the big dome at Boston some years ago gave out such an adulterated product; and Boston markets have since then been receivers of what is equivalent to stolen goods, namely, Maine game illegally killed and shipped out of season. The process of grinding is now in active operation at Harrisburg, where the Philadelphia marketmen are attempting to open their stalls for the same ill-gotten merchandise. At Springfield, Ill., the crank has of late been vigorously turned by the Chicago game dealers, chief among them a professed sportsman game dealer, whom we recently showed knowingly to be a receiver of contraband goods in the form of Minnesota geme illegally killed and shipped out of season. Neither at Albany do "the grinders cease because they are few;" nor yet is "the sound of the grinding low." Quite the contrary; the grinders are many, and the grinding is loud.

Among the bills, amendatory of the present statute, introduced this year at Albany, is one known as the O'Connor bill. This provides for summer shooting and (by opening the game market) for winter shooting up to Feb. 1. In other words, the public is given to understand that the result of the passage of this bill will be game protection, whereas, in truth, it will be game destruction. Mr. O'Connor, we understand, does not occupy a position corresponding to the proprietor of the grocery store; he simply acts the part of the clerk, and turns the crank of the mill "by request." He doubtless means well enough. The public, however, will not consent to be duped by such a shoveling in of burnt crusts from the other side of the wall as this is.

Another piece of legislation on the patent coffee mill principle bears the name of Mr. Grady. Whether he is the responsible party, or, like Mr. O'Connor, merely the clerk, we are at present uninformed. Neither position is an enviable one, for in this Grady bill, which was introduced into the Senate week before last, is embodied a heterogeneous combination of preposterous abominations. The responsibility for this would be a grievous burden to be borne by one pair of shoulders. The Grady bill, like the O'Connor bill, permits summer shooting, and by extending the selling season to Feb. 1, insures the destruction of game in this State and at the West for two months after the legal killing season has expired.

The radical trouble with much of the attempted game legislation of the country is that those who dabble in it are, like the framers of the Grady bill, either so lamentably selfish or so blissfully ignorant that it would be far better for the public did they let the matter entirely alone. It is an unfortunate fact that ninety-nine out of every one hundred in the community care little or nothing about the game law, and the hundredth man is apt to be imbued with the overpowering conviction that the first, last and only thing needful to protect the game is to amend the law so far as it concerns his own particular little duck pond. Selfishness all too often rules the day; game protection means the bringing of the game lawfully within reach of one special gun just when the owner of the gun wants it there.

The mills are grinding on; and the grinding is said, in a small way, to be profitable to some one.

A NIGHT SHOT AT EPHRAIM.

LAST November, when on a surveying trip in Northwestern Wyoming at the foot of the Big Horn Mountains, I was stopping at a cattle ranch where we slept in a log house sixteen feet square. The logs for a similar house had been laid up adjoining this one, endwise, as nearly as the projecting logs of the roofs would allow. We killed a steer for beef, quartered it, and hung the quarters up between the two houses. One morning the cook discovered that a forequarter was gone. Bear tracks were discovered, and were followed 300 yards, where the remains of the quarter were found buried. Although we looked carefully over the bare ground, there was no sign of the bear having allowed the beef to touch the ground while in transit.

The next night we put our dog outside the house for a guard and retired after the usual evening game of casino. Between 12 and 1 o'clock I was awakened by a slight noise between the houses. Of course I thought of the bear, arose very quietly, put on a pair of old slippers, took down my rifle from its hooks, took two cartridges from the belt hanging on one of the hooks, and gently opened the door. The wooden hinges creaked a little, and as I stepped outside I saw an unusually large bear backing out from between the houses just ten feet from me. My gun was unloaded—fortunately—and the bear deliberately ambled off to the further corner of the new house, just forty-five feet from where I stood; and as he turned to go around the corner stopped, with his left side toward me, and quartering a little from me, and turned his head to take a good look at me standing there in the chilly night air clad in my briefest costume.

By this time I was ready for him, quickly bringing my sights in line against the sky I dropped the gun upon him and blazed away. The roar of that old Sharps, in the perfect stillness of the night, was terrific, but the bawl that the old bear gave discounted it. For an instant I was "scared silly," but the next I saw the bear headed my way, and in about one second I was inside the house and had the door barred. Glancing out of the window, beside the door, I saw the bear go on around the house. By this time the boys were all up and we cautiously went out, but could see no

bear, and in fact we didn't go very from the house. I was chaffed a little by the cowboys about shooting steers, and having nightmares, and so on, but I was content to wait for daylight for my vindication. I had used a .45-75 Sharps, the shells loaded by myself with 80 grains of powder and 420 grains of lead; and in a pretty lively experience of fifteen years on the plains and in the mountains I had never heard any animal make a noise such as the bear had made, except when mortally wounded.

At daylight we went out, and just 150 yards from the house found my game dead—a very large male grizzly, shot clean through, the ball having hit him center on the left side, and on account of his position, having passed out just behind the foreleg. His weight was not less than 1,000 pounds. His coat was perfect, and we carefully skinned him, leaving the claws on. I brought the skin home with me, and had it tanned and lined, and the head half-mounted, and it makes an unusually fine robe or mat, which, of coure, is highly prized.

I will just add that if my gun had been loaded when I stepped out of the door, I would have fired at once, and being so close could not have retreated inside nor anywhere else before the bear would have caught me, in which case I think it would have been my hide instead of his that ornamented the fence. As it was I call it a lucky shot.

Our dog got back after daylight the next morning, and the bare sight of the bear skin sent him yelping into the sage brush again. W. A. R.

Colorado Springs, Col.

FRENCH POACHERS AND MAINE GAME.

Editor Forest and Stream:

A letter of "Stanstead's" in one of your late issues brings up in my mind the peculiarities of the back-country French Canadian. The average French Canadian is lazy when any work is to be done; but let him know of a chance to kill a few head of game, in or out of season, his laziness disappears, the love of the chase, which he inherits from his ancestors, comes to the fore, and he is in his element. You may go into the backwoods of Canada wherever you will, and when least expecting to see a habitation of man, there a cabin will be found, occupied by a French Canadian and his numerous family. I have found them in places where it would be impossible for the average poor man to live upon the products of the soil, no matter how economical he might be, yet they seem to thrive and are happy. He is a natural born woodsman, lumberman, raftsman, trapper, pot-hunter and fisherman. He has studied and understands the habits of all our game, and when and how to get it easiest and cheapest. Moose, caribou and deer are trapped, crusted, or shot at salt licks. Ruffed grouse, hares, etc., are snared. Ducks and geese are netted and shot. Fur-bearing animals are trapped or artistically poisoned. He could give many a knowing one a lesson in the ways that are dark in fishing. In short he has all the knowledge an experienced woodsman can acquire, and this combined with disregard of all game laws makes him dangerous.

He is hardy and strong and can endure cold, hunger and fatigue better than most men, and is patient and persevering in pursuit of game. He is a ruthless destroyer as long as the occupation puts a few cents into his pocket. No pity is shown the poor doe heavy with young, nor the mangled moose or buck chased through the crust. Notwithstanding his love of hunting which I admit he possesses, the prevailing and in fact only inducement to engage in these pursuits, is the love of money, and he finds this the easiest way for him to obtain it, when game is plentiful enough. As soon as hunting or fishing ceases to be remunerative he stops. This applies to a greater or less extent wherever he is found.

This is written to show that the despised *habitant* is an element not to be overlooked in the attempt to enforce game laws, and the Game Commissioners of Maine have their work cut out, if they mean to prevent lawlessness, as the whole northern frontier of Maine is lined with these people, to say nothing of the number employed in the lumbering districts of the State. I do not mean to cast a slur upon the French Canadian, as I do not think he is any more unscrupulous than the average back-country settler of any nationality, but he is certainly more dangerous, from his knowledge of woodcraft and his adaptability to the pursuit of game. In our settled districts the game has been driven off through the non-observance of the law. I speak now more particularly of wildfowl, etc., and we of the Province of Quebec must wake up to a sense of our duty and find some other occupation for the hundreds of families who now eke out a precarious living from our streams and marshes.

I have spent many days among these people and found them honest and hospitable, but their innate love of indolence makes them undesirable neighbors in any locality where it is necessary to protect game, as with the *habitant* to see is to kill, if he can. One example made of these skin-hunters along the Maine border would be reported far and near, and a wholesome respect engendered for a State that would and could enforce its laws. We are endeavoring as far as we can to punish offenders, but not one in a hundred is caught. We have no men whose business it is to catch the fellows who go skin-hunting in the early spring, so game is being slaughtered at a rate that threatens extermination.

Our Fish and Game Protection Club is doing a good work but its efforts are to a great extent rendered futile by the senseless tinkering of the game laws by our Legislature. Instance the fact, that a law was passed practically prohibiting spring shooting, but owing to some petty local influences this was repealed the following year, and the spring slaughter was continued. What a pity that all States and Provinces cannot agree to pass laws preventing spring shooting. Another instance of our progressiveness. The law was actually amended so as to permit of ruffed grouse being snared. You see our *habitant* is a powerful factor, and cannot be ignored when he can give such an account of himself and his influence. Sportsmen of the United States growl about their game laws, but have you a State that permits snaring of ruffed grouse?

I hope your crusade against hounding of deer in New York State may be successful. I remember years ago when game was plentiful in the Adirondacks, but have not hunted there for years, but even then hounding was killing them off wholesale. Caribou.

Quebec, Canada.

Editor Forest and Stream:

I know the country all along from the Megalloway, on the border, to Calais. It is a fact that hundreds of moose are slaughtered crusting by the Canucks, Indians and New Brunswickers, and some by Maine residents. It is in those far-back camps where the meat is mostly used, although not 10 per cent, of that killed is utilized, being so far from camps. Two men near Patten butchered over twenty moose a year ago last spring on the east branch of the Penobscot. Warden McLain got evidence, had them indicted, and then let them off on their promising not to do so again. About that time he intercepted Indians at Musardis with a raft loaded with moose pelts, yet allowed them to go scott free. Is this the way to stop slaughter? Ask men who worked in the camps on the Upper Penobscot and at the headwaters of the Aroostook and they will tell you they had moose meat plenty. Why, freight is $25 per ton from Hamilton to the nearest of these camps, and more from Mattawamkeag to Upper Penobscot. Thus there is a market for meat that doesn't pay freight. It is no use for Mr. Hardy to deny it. Men do hunt Sundays from the camps. Last spring some moose were killed not twelve miles from here by the choppers one Sunday, and the hides were carried out in plain sight as they went out to their homes in New Brunswick. In the Rangeley country there was always to be had plenty of evidence of the Canucks coming over on the Maine side skin-hunting. They made their brags they would clean out the Maine side. These fellows will make wonderful long tramps, lie out nights, almost starve, even, to find a moose yard. Any of our folks would die under such strain.

Now our commissioners and warden know all about this; but they are content to stop at the spiggot and waste at the bunghole. The Maine men who hunt and trap know all about this thing, and they probably will not deny that once in a while they themselves get some meat out of season when it is really needed, but as a class the hunters despise above all things those who kill for hides alone.

It is against their interest to have this done. It may be asked why the hunters and right-thinking lumbermen don't expose the guilty ones. There are obvious reasons that apply to this or to other affairs of like kind. But we have men appointed whose business it is, and for which they are paid, yet they do not enforce the law except as against some outsider of means and respectability, men who seldom kill more than one and leave a big lot of money. The cost of travel is as nothing to what they spend otherwise. I don't allow that this is right; but would ask the commissioners to do their duty elsewhere and where it would count most. I would give this to the public and very much more, but it would not avail. Such men as Mr. Hardy, whose business is involved, would contradict me. If you want to get at the truth, come up here and go out where I send you and you can have it if you go the right way about it.

One Who Knows.

Portland, Maine.

A "DEER HUNT" ON THE OSAGE.

About the middle of November a party of four of us started for the Osage River and a deer hunt. None of us had ever killed a deer, but there was not one in the party who didn't consider himself buck-fever proof and competent to knock over any deer that should come within fifty yards of his stand. Each was armed with his favorite breech-loading shotgun, and there were shells enough in the party to load a pack mule.

We got an early start, intending to make Riffle's Hotel by night. Slippery Tom was "met up with" about 10 o'clock and consented to bear us company as far as Riffle's. Time passed merrily with song and joke. Dining at Rocky Mount, we reached the beautiful limpid Gravoix late in the afternoon, and soon pulled up at our stopping place, having made the Riffle nicely. The host, Old Riffle, was a character—Pennsylvania German, big and fat, ample "bay window," dark as an Indian, and swore like a trooper. "Oldt man" and "oldt 'oman" were a good talking team and talked a race for our benefit during supper. Frank bet on the "oldt 'oman" and Bill on "oldt man," but when we finished supper the race was declared a dead heat. After listening to some of Riffle's yarns and Chuck's songs we retired.

We got a daylight start the next morning, and bidding Tom farewell, were soon out of hearing of the old man: "Oh, yes, but I likes dem poys!" About ten o'clock we overhauled a darky blacksmith, who was known to Frank, who stated that Arnholtz's, which was our objective point, was overrun with hunters, who had been hounding deer for three weeks, and that he would advise going in toward Lew and Henry Smith's, where there had been no hunting. Frank and Elmer, fortunately, were well acquainted with the Smiths and being sure of a welcome, it was decided to take Blacky's advice and head for Smith's, and we arrived at Uncle Lew's, as he is called, in time for dinner. Uncle Lew and his wife gave the party a hearty welcome. "So boys, ye came down to git a deer, did ye?" said Uncle Lew, "Well, I'm dad busted if I aint been a workin' too hard, lately; an' I'll jest lay off a spell an' go with ye, an' if we don't git a deer—well by gum, we'll call the gals in an' have a dance anyhow!"

As there wasn't time to go over to Henry's for the dogs and have a drive that afternoon, all hands started for the "marsh pond" after ducks, but the water was so low that although there were plenty of ducks in sight on the open water near the center of the marsh, we were unable to get within shot of them. It soon commenced raining as though for a second flood, and before we got back to the house we were soaked; but we were soon in humor to listen to Uncle Lew's fiddle, while we wiped our wet guns and got ready for the morrow's deer.

Uncle Lew fiddled the boys to sleep, and came into the room the next morning before we were awake to give Frank a tune that he had forgotten to play the evening before. He finally fiddled us to breakfast, and then consented to leave his fiddle for a few minutes while he made an attack on the ham and eggs. After breakfast we started for Uncle Henry's, where we arrived just in time to escape another soaking. The rain continued to pour down, and soon drove Uncle Henry's boys from the coal prospect they were developing. When all were assembled there was a "gut scraping" such as I never again expect to hear.

Uncle Henry had six boys and each boy had a fiddle, besides which there reclined against the wall a bass viol and an accordeon. The boys, all put together, couldn't play one good tune; but what mattered that? Uncle Lew was in his element as leader and instructor, and the boys hadn't so goodly an audience for a 'coon's age. So everything was ripe for a grand concert, and they had it. The catgut screeched and shrieked until dinner time, shortly after which the rain ceased and we prepared to have a drive. Unfortunately the hounds were out of kelter; one had gone off with Wells's pack and Old Jack had a friend of the gentler sex visiting him whom he could not be prevailed upon to leave; so we decided to have a short drive with the old yellow cur. But we jumped nothing except one skunk and a bunch of wild turkeys, which Bill shot at but failed to score.

Upon returning to the house one of the boys was dispatched to secure Wells and his pack of hounds and another was sent after a second pack, so as to guard against disappointment on the morrow. Directly after supper the fiddling was again in full blast, and we were soon glad to escape by going to bed.

We were up betimes in the morning, and eight bold hunters were soon stationed on the runways, anxiously awaiting the music of the hounds. Again we were disappointed. The reinforcements sent for failed to put in an appearance. So the drivers again used the "yaller cur," but failed to jump a deer. We then went back to Uncle Lew's and as we drew near the house Frank says: "Well, Uncle Lew, if you can't get any other kind of deer we must have woolly deer," and with that he blazed away at a sheep running past and killed it. So we had fresh mutton for supper. In the afternoon we all went squirrel hunting, and secured a nice bunch of gray and fox squirrels. Runners were sent out to secure hounds for the next day's drive, but returned without success.

After being fiddled to sleep, as usual, we arose in the morning with the thought that this was our last day, and no prospect of a deer. Frank and Bill rode the mules to Linn Creek, and brought back Wells, the "king of Osage fiddlers;" and the rest of us secured a fine bag of squirrels. While after squirrels we saw where a deer had been feeding in the cornfield, and tracked him to the river's edge, where he probably swam across. That was as close as we came to getting a deer. The afternoon was put in fiddling and shooting targets. Invitations had been sent to the "gals" and boys for the dance Uncle Lew had promised us, and by six o'clock the dancers began to arrive.

By seven the dance was in full blast, and as Jack Crabtree remarked, "The way Wells and Uncle Lew shook up them 'ere fiddles was a caution ter 'coons." We enjoyed the dance immensely, and kept it up until the early morning hours. Frank made a conquest of the girl in the velvet dress, and from a few remarks I overheard between two girls, I judged Bill was "a great feller fer kissen."

Next morning we bid Uncle Lew and household good-bye and headed for home, with a week's fun to our credit but no deer. Osage.

High Point, Missouri.

ARKANSAS GAME LAWS.

The new Arkansas game law, approved Feb. 23, 1885, provides: Section 1. That it shall be unlawful to catch, kill or injure, or pursue with intent to catch, kill or injure, or to pursue or chase with dogs, without such intent, any wild buck deer, doe or fawn in this State between the first day of February and the first day of September in any year; and it shall also be unlawful to catch, kill or injure, or pursue with intent to catch, kill or injure, any wild turkey, between the first day of May and the first day of September in any year, and it shall also be unlawful to catch, kill or injure, or pursue with intent to catch, kill or injure, any pinnated grouse (commonly called prairie chicken), between the first day of February and the first day of September in each year; or any quail (sometimes called Virginia partridge), between the first day of March and the first day of October in each year.

Sec 2. It shall be unlawful at any and all seasons of the year to take, catch or kill, by means of any partridge-net, or other net, or by traps, pens, pits, or other devices of any kind, any pinnated grouse (commonly called prairie chicken) or any quail (sometimes called Virginia partridge), or any wild turkey; provided that nothing in this section shall be construed to prohibit any person, or the minor children of any person, from netting, trapping or otherwise killing or catching any of the birds aforesaid, on his or her own premises, in the open or unprohibited season; nor shall it prohibit any person from killing, on his own premises, any of the birds aforesaid, in the act of destroying fruit or grapes.

Sec. 3. It shall be unlawful to destroy, disturb or rob the nests of any wild birds whatsoever, except those of crows, blackbirds, hawks, owls, eagles and birds of prey.

Sec. 4. It shall be unlawful for any person to purchase, have in possession, or expose for sale, any of the birds or game mentioned in Section 1 of this Act during the season when the catching, killing or injuring thereof is by this Act prohibited.

Sec. 6. It shall be unlawful for any railroad company, express company, steamboat company or other company or corporation, or private person, to have in possession, or receive for transportation or carriage, or for any other purpose whatsoever, any of the game or birds mentioned in Section 1 of this Act during the season when the killing, catching or injuring the same is hereby prohibited.

Sec. 6. Any person violating any of the provisions of this Act shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be fined in any sum not less than three nor more than ten dollars for each bird killed, caught or injured, or had in possession; and not less than ten nor more than twenty dollars for eack buck deer, doe or fawn caught, killed or injured, or chased, or had in possession; and not less than three dollars nor more than ten for each nest of eggs destroyed as aforesaid, together with the costs of prosecution.

Sec. 7. Any violation of this Act may be prosecuted before any officer or court having jurisdiction to try cases of misdemeanor, in like manner as in other cases of misdemeanor; and it is hereby made the duty of all sheriffs, constables, coroners, marshals, market masters and police officers to arrest all persons found violating any of the provisions of this Act.

Sec. 8. That this Act shall take effect and be in force from and after its passage.

SOME REMARKABLE SHOTS.

Editor Forest and Stream:

The Doctor took his .32-caliber rifle, went out on the lawn, found a bottle and stuck it up fifty yards from the house, came back to the piazza, carefully raised the rifle and fired. A puff of dust was the only result. Again and again he tried it with no better success. At last, probably to stop my laughter and sarcastic remarks, he invited me to try it. This didn't suit my views in the least, as my skill with the rifle is not of the first order. However, there was no help for it. I took the rifle from him, determined to do my best, but I had hardly leveled when puff! bang! away she went. My first impulse was to claim another trial, but happening to glance in the direction of the bottle I saw that the ball had struck it; so I quickly handed the gun back, and said, "Pretty good gun, Doc." Chip.

Englewood, N. J.

BATTERY-SHOOTING.

Editor Forest and Stream:

I read with much interest your criticism on my article on the above subject, also the remarks of "Sagamore" and "Ten-Bore." In replying to your criticism I will first say that you mistake me when you say that I attribute your opposition to battery-shooting to a selfish motive. This is not the case with you, for, in the first place, the FOREST AND STREAM has always shown the utmost fairness in all discussions, regardless of the views advocated by itself; and, in the second place, the surroundings are different when batteries are used in your local waters. I suppose the bays and sounds along Long Island are similar in character to those of New Jersey, that is, surrounded by large bodies of marsh lands, the points and bars of which are open to those who rise earliest in the morning. If this be the case, and I know it is along the New Jersey coast, you could not be accused of selfish motives in advocating the abolition of battery-shooting. In regard to what you say (and the same reply will answer "Sagamore") about stopping battery-shooting "because it is the most successful way of killing wildfowl," you might request, with equal justice, that all the best shots should give up shooting, or only shoot once a week or once a month, as they kill more ducks than the poor shots.

Now in reply to "Sagamore." In the first place, one might suppose from his description of batteries (as well as yours) that they were some terrible instrument of destruction, something in the nature of a gatling gun that only had to be put out in the water to slay poor fowl by tens of thousands, being wound up to run a certain time, killing and driving off all game where used. "Sagamore's" description of the tender is also very amusing. Although drawing almost entirely on his imagination for his points, he has done well in the story line; but as he says of my suggestion of having "all shooting put a stop to except battery-shooting," he is of course joking, as in the first place it is not the habit to "tend" the battery with a sailboat, the use of which would prevent many fowl coming near the battery while the crew were picking up the "thousands" of birds killed by these "infernal machines." Often, indeed, when the best shooting is to be had, there is not wind enough to sail to advantage, consequently row-boats are used almost universally to pick up the dead fowl. The yacht or scow, as the case may be, is occasionally sailed round to break up the large beds of ducks when they form too near the box, or in the line of flight, and this does no harm when the fowl are not shot at from the yacht, nor is the abuse of this practice of sailing up the ducks necessary to the use of sinkboats, indeed I have never seen really good shooting result from it, and I know it is only practiced in this section when the fowl will not fly, which is often the case on fine days. It is accusing the box-shooters of lacking the commonest kind of common sense to accuse them of keeping the fowl so continually harassed as to drive them entirely off the feeding ground.

Finally, in regard to this matter, let me tell you what took place no later than last week. One of our most invetcrate point-shooters was in the "narrows" I spoke of in my last letter, with a man in a canoe, sailing up the ducks in the river so that they might show him shooting in the narrows. I suppose, though, that a boat sent out by a point-shooter does not scare the ducks away. How different would it have been if it had been a box-shooter's boat. The ducks would doubtless have flown entirely out of the river never to return.

"Sagamore's" statement that the single ducks fly over the points, and the flocks go to the boxes is so diametrically opposed to not alone my experience, but that of every box and point shooter with whom I have conversed on the subject, that I am inclined to think he must be joking on this subject, as he accuses me of doing, in regard to confining the shooting to batteries alone. It is so rare for large flocks of ducks, except early in the fall, to come to the box, as to be a matter of surprise when they do come. I do not mean to say they never do, but that it is the rare exception, whereas, in flying by a point, or over a bar, if the wind is blowing hard enough to set the single ducks on the point, it does the same for the flocks.

"Sagamore" makes a general statement of the destructiveness of box-shooting, while I have shown that in this vicinity at least no bad results have followed the use of boxes. In the cases I cited shooting from the shore was almost entirely abandoned, and this, remember, when there were no boxes in our waters, it being unlawful to use them. It was a case of trying some other way of shooting or giving it up altogether. The law was repealed and boxes came into use. We have been using them here now some eight or ten years, and have now and have had for the last three or four years more ducks in our waters than we had before the boxes came into use. Knowing these to be facts, I deny "Sagamore's" statement that if I have been shooting for thirty-five years I must know "that the use of boxes drives away the fowl." It seems to me that the decrying of box-shooting as destroying the greatest number of ducks is simply nonsense. Taking the whole number of shooters, those who use boxes are in a very small minority, and while it is true that out of a given number of shooters those using batteries doubtless kill more fowl than a like number who do not, yet out of the whole number of fowl destroyed comparatively few can be charged to the box-shooter, on the principle of why do white sheep eat more than black ones? the answer to which is obvious.

"Sagamore" was unfortunate in his illustration of the shooting in Sandusky Bay, if his real object is, as he would have us to suppose, the protection of wildfowl, as, after the boxes had reduced the number of birds killed to 1,200, I should have supposed he ought to have encouraged them to continue. But what does he do? Stop the boxes and then kill 9,000 But this doesn't injure shooting, I suppose he thinks, as they were killed from the shore. If the facts are as he states about the number of ducks thrown away at Norfolk and on the canal from Currituck, it was a sinful waste of game; but it seems to me to argue that the shooting commences too early in that locality. But it can hardly be used as an argument against box-shooting, as the abuse of a thing is no argument against its use; and is he sure that none of the aforesaid thousands were killed by other means than by the use of boxes? "Sagamore" asks me if I have ever heard of "riparian rights." I ought to know something about them, as I have all my life been interested in property in the water and now own about a mile of water-front. His allusion to riparian rights is amusing when spoken of in connection with sinkboat-shooting. I wish he would explain himself. If he means that any property owner has any control of where a shooter may anchor his box in waters where it is lawful to use them, I would like to see his authorities.

ON THE RUNWAY.

From a Sketch by R. H. S.

"WELL, I HEAR THE DOGS AT LAST, BUT THEY ARE A GOOD WAY OFF YET."

It is evident to me that "Sagamore's" knowledge is like that of many men who write against battery-shooting, not derived from practical experience but only from hearsay. His description of the discomforts incident to the use of boxes, as well as "Ten-Bore's," might lead one to think that they had been using boxes as the most industrious market gunners do. A doleful picture can be drawn of any kind of wildfowl shooting. What can be more uncomfortable, for instance, than a northwest point on a cold winter's day with a gale of wind going, spray flying all over the blind, and making ice as fast it touches one? Or a muddy point on a rainy day? I think my box a paradise by comparison.

The whole truth about box-shooting I think is this, that boxes, as a rule, are used by those who shoot for market, and the amateur sportsman can see no good in them for this reason, but imagines everything evil of the boxes and of those who use them, and, in respect to the latter, I am afraid too often with truth; but we must remember that all game laws to be successful must meet with the support of a majority of the community. In framing game laws it seems to me that we ought to consult those who live in the cities and who are fond of eating game, but have no chance to kill it, and if the chance were offered, have not the desire. These people as members of the community have a right to their share of game, and admitting, for the sake of argument, all you bring against battery-shooting, it, even you will admit, is a far better way of supplying the market than the use of swivel guns, night, light shooting, netting and such abominable practices. That was why I said in my former letter that the fact that a man sold his game should not be used against him so long as he got it in a legitimate way.

The over-killing of ducks from boxes is an evil that soon corrects itself, as instead of falling into the trap, as you seem to think they do, the fowl soon learn to take good care of themselves, and an old canvasback or redhead can tell a "layout" as soon as you could. Boxes are only used when other means fail. Where fowl can successfully be killed from the shore no one would wish to shoot out of a box for amusement. This is true here. We have no other way to kill fowl; boxes have been introduced here, remember, after other means have failed, and shore-shooting did fail here before boxes were used. Now if it be necessary for the good of the fowl to limit the number of shooting days, treat all alike, and say that no manner of shooting shall take place on the off days. Advocate this and you will see how the shore-shooters will oppose it. "Sagamore" shows how sensitive he is on the subject when he talks about communism in connection with what I said about throwing the points open if box-shooting is to be stopped, and which I repeat he ought in all fairness to consent to before he can claim to be disinterested in his opposition to battery-shooting. While I have admitted that a majority of boxes are used by market-shooters, such is not the case in this vicinity, for out of the fifteen or twenty boxes owned in this and the two adjoining counties, not one is used by market-shooters. We do not "lie in water, snow and ice," nor with the "rain and snow beating in our faces." This is, no doubt, what those do who shoot for a living, and who, if they were in a point or bar, would lie out in the rain and snow and have the cold water freeze on them, exposing them to "pneumonia, consumption and rheumatism," as they do in the box. As we shoot for amusement, when it storms too hard up goes the gun, held across the head, soon the yacht is alongside, and in a comfortable cabin with pleasant companions, a nice hot punch or some similar comfort, we manage to wait until the storm is over.

On this point I said before: "Of course, where good shooting can be had from the shore over decoys, as is the case, I am told, in the Rush, Gunpowder and other rivers in that vicinity, it is very well not to use boxes, as there is no comparison between sitting in a comfortable blind on the shore and the hard work necessary in setting and taking up your box on a cold day. But here the case is entirely different, and I would and do much prefer all the work and discomfort necessary to box-shooting, to sitting in ever so comfortable a blind on the shore and getting nothing. As to point and bar-shooting, as compared to decoy-shooting, to my taste (and of course it is all a matter of taste) there is just the difference between going into the field with dogs and being without them. In other words, a great deal of the pleasure, to me, consists in seeing and working the ducks up to the decoys."

In regard to what you say about the proposed move to open the waters of North Carolina to non-residents, I have only this to say, that in any law allowing the use of boxes, there ought to be a clause preventing their being anchored so as to interfere with the shooting points. This can easily be done by specifying that they shall not be used, say, within a quarter or half mile of any known shooting point; but I imagine that the North Carolinians will take care of themselves in this matter.

In conclusion, if I am only to kill a certain amount of game during the year, I prefer to have a few days of good sport to going out every day during the season and killing two, three or half a dozen ducks each day, as the case may be. For this reason I advocate box-shooting, and there are many like me in this locality. I will add that to write disinterestedly on this subject one ought not to advocate the abolishing of all ways of shooting but his own, and that not to be interfered with.

SINKBOAT.

EASTON, Md.

PHILADELPHIA NOTES.—Philadelphia, March 2.—Open violation of the game law is being carried on here without fear or restraint, the dealers evidently knowing there is no active organization to interfere with them. The bays on the Jersey coast have been frozen up since the middle of January, and the black ducks which remain with us all winter have had a hard time of it. They are extremely poor and unfit to be shot, but notwithstanding this they are killed by the baymen who send them to market. There is no species of game that has not suffered greatly this winter. A duck shooting friend of mine received a dispatch to-day from Franklin City, Va., as follows: "The flats are covered with ducks and geese, come." Thus it may be seen the fowl are beginning to move north. Their stay in southern waters had better be delayed, as in many of our rivers in places, it is said, the water is frozen solid to the bottom. We are all hoping for a gradual thaw, which at this writing is taking place.—HOMO.

VERMONT DEER—Colebrook, Feb. 23.—*Editor Forest and Stream:* Snow is three and one half feet deep in the north of this State and the crust-hunters have begun as usual up there. Last year at least seventy-five deer were killed by crust-hunters in the North, and the prospect is fair for another spring as favorable for the skin-hunters. Vermont law makers would delay the date of the extermination of deer in that State and aid New Hampshire in the enforcement of game laws if some one is sent to look after the game on the broad waters of the Nalheghan River. Venison found in New Hampshire that is killed in Vermont is not considered bad eating, as their law now reads.—NED NORTON.

MISSISSIPPI DUCK SHOOTING.

DUCK shooting in the harbor here at Vicksburg has been very poor this season. Last winter it was exceptionally fine. It was then an easy matter for a couple of gentlemen in a half day's shoot or less to bag forty ducks. One morning, just in front of the wharf boat and within gunshot of the landing, my young nephew and I bagged seventy-five by 10 o'clock, and quit the sport because we ran out of ammunition. The afternoon of the next day Mr. E. H. Raworth and I got sixty-five after three o'clock, the intervals between our shots being barely sufficient to allow our guns to cool. Others had about as good success. It appeared that the active little greenwings rather enjoyed the sport themselves, as no amount of pounding, even in their roost as they came in to rest for the night, would drive them away.

When I came down here from Nebraska early in December, I expected much pleasure during the winter among the ducks. I have been greatly disappointed. There were comparatively no ducks in the harbor. In the first place, the river was quite low, leaving large bare places between the water and the willows, and offering no shelter for the fowls. In the next place, the high water of last summer continued so far into the season that, when it finally declined, it was too late for the grass to grow and mature its seeds on the lower flats, so that this fall there was nothing upon which the ducks could feed until the river reached a point some twenty-five feet above low-water mark. When this did occur the rise was so rapid and so great that all these lands were submerged in a twinkling, as it were; the swamps filled up where the acorns lie in great abundance, and where the ducks hied to quack and quack and stuff themselves to their heart's content without much danger from the sportsman. During the period I have mentioned, W. L. P. and I went out four times with all the paraphernalia necessary to a successful pursuit of the ducks, and during those four trips bagged only five, so distributed that we were not able to secure a mess at any time.

On December 31 this brother and I, having concluded to try some of the lakes tributary to Steele's Bayou, loaded our skiff, tent, bedding, two dozen of the decoys, and other necessary traps upon the steamboat Tributary, and that night at 11 o'clock, were landed alongside a big raft at the mouth of the bayou, our skiff being lowered into the river, and our half wagon load of plunder placed therein, when we laid to the oars and by moonlight, against a crisp north wind, pulled four miles up to the right fork, then one mile to the mouth of Goose Lake, and thence into that about a mile, where we turned into shore, unloaded, pitched our tent, built a rousing fire, made down the bed and at half past two laid down to rest for an hour. At the end of an hour we got up, and after a hearty breakfast of fresh bread, jam, canned tongue and hot tea, we pulled across the lake to a point where we had aroused great numbers of ducks on coming in, and putting out our decoys in water six or eight inches deep, built a temporary blind by moonlight in time for the morning flight.

The location proved a bad one, no ducks to speak of coming our way, so we towed our decoys by the line to which they were tied to a new place, and built another blind, where during the day we killed twenty-six ducks. The next morning we scored a failure, and after rowing to the upper end of Goose Lake and back, we pulled out into the right fork of Steele's and up that four miles to Burge's Lake, where we found ducks in great numbers lingering in their old feeding grounds, the grass on the flats just being covered by the back water from the Mississippi. Here we located, but again getting in the wrong place, and having to make a change. We got the second blind built and decoys out by half-past 2 o'clock, and from that till sundown had fine shooting, bagging fifty-one ducks. Leaving our decoys out we pulled the five miles back to camp through the narrow and crooked channel, overhung with forest trees, that made the way as dark as a stack of black cats.

Went next day back to Burge's and got left, the ducks having sought other quarters, the water having risen nearly three feet since our arrival there the day before. On returning to camp early in the forenoon, and finding Goose Lake deserted, except by flocks of hooded mergansers, and being fearful that our game would spoil on account of increasing warm weather, we concluded to turn our faces toward home. After a hearty dinner we broke camp, loaded up, and set out on our journey, one mile out to the right fork, one mile down the right fork, four miles down Steele's to the Yazoo River, two miles down the Yazoo to Old River, thence two miles to the head of McKee's Pocket, where we unloaded, pulled the skiff over the bar into the Pocket rather than take the two-mile row around the foot of the tow-head, and carried the plunder to the only small patch of high and safe ground in that vicinity for camp that night. Before making camp we located in the big willows with our skiff, and the decoys in open water in front of us, for the night shoot. Just before dark ducks trooped in there by the thousand but passed out of range and settled down in open water two hundred yards in front of us. A few straggled in near the decoys and we managed to knock down seven of them. After this shoot we set up our tent, had supper and early to bed, it being our hardest day's work, including twenty-one miles of solid travel.

We had left out the decoys and the next morning took position over them as the evening before, and before the flight was over bagged five. We then packed up and again turned our faces homeward, there being fifteen miles yet before us. At noon we reached the mouth of Old River and saw what we thought an elegant place for a successful shoot and unloading most of our plunder on the mainland, again set out the decoys and ran the skiff into thick willows near them, where we staid till near dark, scoring only six ducks. On our return to the luggage we found some thief had relieved each of us of a coat and besides had the queer fancy to steal our can of coal oil. We both felt he had dealt gently with us in not walking off with more.

The pull down to the city of Vicksburg was an easy one, but wind and current being in our favor. On passing the elevator at the lower landing we ran alongside the Government gauge, struck a match, and looking at the mark, found that the rise during our absence had been eleven and a half feet. Up to the present time the entire rise from the lowest stage in December has been over thirty-four feet, the gauge now reading over thirty-nine feet above low-water mark. It may readily be understood how, in a low and level country, a rapid rise of that extent destroys all successful duck hunting.

The bag we made during the trip just narrated consisted of ninety-five ducks, all large ones, except one stray greenwing teal, in fact, mostly mallards, the greenhead males largely predominating. Under the circumstances we regarded it as rather a successful hunt, and as the weather was dry and cold, we certainly enjoyed it. It is in all probability our last this season, as duck hunting hereabouts is practically over. If we were required to go out and kill a mess, we do not know where we could go to do it.

BURR H. POLK.

VICKSBURG, Miss.

TO HOLD WADS IN PLACE.

Editor Forest and Stream:

I send you a device of my own to prevent the loosening of wads in a shell, particularly in metal shells over the shot, where the trouble most frequently occurs.

It is simply to use a good, firm, stiff pasteboard wad, under which place a circular disc of cotton cloth large enough to come up over the edge of the wad and project above the same, say from a sixteenth to an eighth of an inch.

The manner of using this and the principle upon which it operates is precisely similar to that produced in the loading of an old-fashioned muzzleloading rifle with a patched bullet. You first lay the disc of cotton centrally over the mouth of the shell or loading tube, a good stiff pasteboard wad exactly on top in the center and drive it home. My word for it, you have it secure against any reasonable amount of jostling. For like a tightly-patched bullet in the muzzleloader, you can drive it down, but the instant you attempt to move it in the opposite direction it meets the resistance of the thicker part of the material or patching, so to term it, above which, operating as an inverted wedge, only forces itself the tighter.

This may seem a little troublesome, but it is ten times more troublesome and vexatious to have your wads slipping off of shot, either causing an entire loss of the charge or having the same rattling around loose in your pockets, contributing to the loosening of still others, which I have had happen many a time, until I by accident fell upon the device here described, since which I have had no trouble.

A still better way to manage this arrangement is to fasten your cardboard wad centrally to the larger cotton or thin cloth disc, with a touch of good flour paste. Having thus prepared a lot of them, should you prefer a lubricant, take an even roll of them, dip the projecting cloth edges in a little melted tallow, you then have a lubricant exactly where you want it, in advance of the charge of shot.

I have used this home-made contrivance for some time, and put it to the severest tests, and have yet to see one of them slip.

Any of our wad manufacturers could manufacture them at a very small percentage above the cost of ordinary cardboard wads.

BACKWOODS.

DEER IN CONNECTICUT.

Editor Forest and Stream:

A short time since I heard that a deer had been killed near Stony Creek in this State. Determined to hunt the matter up, I wrote to Capt. W. F. Davis of Stony Creek, and received the following in reply:

"The animal you speak of had been seen and chased several times during the past winter, but had managed to elude its pursuers until the last occasion. A hound started him and three boys followed. He took to the water at a point between Stony Creek and Pine Orchard, swimming first to Roger's Island. Here the boys, joined by several others, fired at him and drove him into the water again; he swam near Flying Point, as if intending to land, but changed his course on seeing some children at play, and describing a right angle made for Gove Island, but the tide being strong he drifted by, and the boys overtook him near Crib Rock. They put a rope around his neck and attempted to haul him in, but one of the boys got nervous and shot him. On the following evening they took him to Branford, where he was kept on exhibition several days. He was finally served up at the Island View House in Stony Creek at a supper shared by the hunters and their friends.

"This deer was a three year old buck. He has been about here in a large timber tract and swamp between here and Guilford since last summer. It is reported that a doe and two fawns have been seen in that vicinity, and there are other wild animals there, as otters, raccoons, minks and foxes. Three theories exist as to the appearance of deer in this locality. First, that they have been driven from the north by dogs, but this is improbable. Second, that they are descended from some four liberated some time ago by the Rev. W. H. H. Murray. This is possible. Third, that they have come from a pair let loose by the Hon. S. B. Chittenden, of Guilford, some time last summer. This is very probable.

"This one was in good condition, and I believe they would thrive here if protected. Several thousand acres of timber and uncultivated land lie north of here, abounding in grassy swamps, springs and streams."

This letter of Capt. Davis is so complete that I have nothing to add, save that even if his last conjecture is the right one, it is remarkable a deer should remain six months at large in Southern Connecticut.

PERCYVAL.

NEW HAVEN, Conn., Feb. 21, 1885.

SNOW IN A GUN MUZZLE.—Milbury, Mass. Feb. 26.—Mr. John W. White of this town had a narrow escape to-day and his experience should be a lesson to sportsmen. He was on the trail of a fox when he stepped into a hole and pitched forward, his gun slipped from his hand and stuck up in the snow. White had hardly recovered himself and his gun before he saw Mr. Fox within easy range and he fired, discharging both barrels in quick succession. He knew that his gun recoiled more than usual, but that he did not notice as much as the fact that the fox was unhurt. Mr. White, a crack shot, had hardly recovered from his first surprise before he discovered that about six inches of his gun barrels had disappeared. The snow was damp and had packed the end of the gun so solid that the explosion, such as occurred, was the inevitable result. The gun was a double barrel twist gun, made by Parker Bros. of Meriden, Conn. Mr. White was so well pleased with the results of his adventure that he has ordered two new guns of the same make.

GAME EXPORTED FROM CONNECTICUT.—Center Brook, Conn., Feb. 28.—Game of all kinds has been fairly abundant and some very good bags have been made. Ruffed grouse, quail, woodcock, and numerous wildfowl are shipped from this vicinity to the New York markets by way of the Hartford boats. Center Brook is situated within one mile of Essex, the greatest locality for rail in the State. Hundreds are sometimes shot in a day throughout the open season.—YELLOW LEG.

ANOTHER JERSEY HUNTER GONE.—Princeton, Feb. 16.—At Rocky Hill, a little village in Somerset county, noted as one of Washington's stopping places during the Revolution, Vandyke Cruser died yesterday. He was ninety-one years of age. He was noted for his skill in shooting and fishing, and was often in demand to guide parties in the woods and mountains.

NEW YORK GAME LAWS.—We have the New York game laws compiled under the supervision of the Commissioners of Fisheries. They will be sent, post-paid, on receipt of twenty-five cents.

Sea and River Fishing.

DECREASING FLOW OF TROUT STREAMS

IN the year 1857 we spent a few days with a friend on our first trouting trip to one of the larger streams in the Catskills. The season was one of prolonged drought, and it was in the middle of August, and yet there was an abundant flood of water, and novices as we were, we had good sport and filled our creels.

With very few exceptions, we have visited the same stream every year since, and have observed that under similar conditions, as to rainfall and drought, the flow of water in this stream has uniformly become less and less every year.

This gradual decrease in the waterflow of this stream is not an isolated case, but every trout stream in the same region has been similarly affected.

In other wooded sections the greatest fears as to the near future have been expressed for some years, not only by anglers, but by those who have large pecuniary interests at stake, unless some means can be devised by which the constant diminution of the water in the streams can be checked.

The note of alarm has been sounded in our Legislature, where it has been proposed to acquire for the State, as far as possible, the Adirondack forests, and the public-spirited citizens who are now earnestly engaged in endeavoring to ascertain the cause of, and devise a remedy for, the evil.

In all discussions of the subject which we have seen, especially those in the Legislature, it seems to have been conceded that the running down of the streams heading in the North Woods, and in fact everywhere, has been caused solely by local influences.

Attention has constantly been called to the gradual destruction of the forests by absolute owners of the land; by those who have acquired a temporary possession as purchasers at tax sales; by squatters, who have robbed the woods of much of the best timber, and by fire. The drainage of swamps and natural reservoirs of water, which, if left untouched, would more slowly discharge their waters into the streams, has been alluded to as one of the principal causes of the evil.

These causes, which are purely local, it is alleged, produce the following results:

First—By the drainage of the swamps the waters supplied by every rainfall are immediately precipitated into the streams.

Second—Through the destruction of the timber the springs and rivulets, which feed the larger streams, are permanently dried up.

Now if these, which no doubt have their effect, are the sole, or even the main cause of the evil, then it would follow, first, that the total amount of surface water flowing into and through the streams would in every case be in precise proportion to the amount of rainfall; the discharge into the streams being more or less rapid in proportion to the artificial drainage of the land.

But is this true in fact? Do not the drained swamps and lowlands become dry from causes other than drainage, and so absorb a large portion of the water precipitated in every rainfall? Is it a fact that the aggregate amount of water, annually discharged through the streams during the last few years, is equal to that discharge through them twenty-five or thirty years ago, the rainfall of course being the same?

Second—It would also follow that if the destruction of the timber causes the springs to dry up, then the failure of water supply from this source would be in precise proportion to the amount of land cleared or timber cut. That is, if the forest remains untouched, the sources of water would remain unaffected. If the land is cleared in part the sources will be ratably affected. But is this true in fact?

Is it not a fact that the water supply from springs, rivulets and streams, in the woods and mountains which remain in their original condition, is diminishing steadily and uniformly every year? These questions are perhaps best answered by giving a few facts.

In the State of New York there are two great water sheds. The Adirondacks or North Woods constitute the upper water shed. In the mountains in this region are many of the main fountains of the streams which flow into the Hudson River.

The Catskill, or Blue Mountain Range, constitutes the lower watershed. The heart of this watershed lies in the county of Ulster; Slide Mountain, its highest peak, being 4,205 feet in height. Clustering around this mountain are many of nearly equal height, all covered with only hard wood and absolutely untouched by the axe.

Way up in the very heart of this range, many of them beyond every trace of civilization, are the source of the following noted trout streams, whose names are familiar to every angler: The Rondout, which lies about thirty miles west of the Hudson, into which it empties. The Neversink, which lies about ten miles to the west. The Willewemoc, ten miles further west, and still further west, the Beaverkill, and further north Mill Brook and Dry Brook, all of which unite with the Delaware and Esopus Creek, or Big Indian, which empties into the Hudson. The sources of several of these streams are singularly close to each other, and are in the most inaccessible parts of this nest of mountains, where the original forest is for miles and miles absolutely unbroken.

No timber has been cut for many miles from the sources of the Rondout, Neversink, Beaverkill, or Esopus. On the other hand, the lands along the Willewemoc, Mill Brook, and Dry Book, have been more or less cleared far up toward their sources; and the land along the lower portion of the Esopus has been thoroughly cleared and cultivated.

The waterflow in all these streams has been steadily diminishing during the whole of the twenty-five years that we have known them. To what causes is this diminution to be attributed? If they are purely local, or in other words, if the diminution is the result of the cutting of the timber, and the clearing of the land, then the streams would first be affected at the point where the causes originated, and they

would be affected in proportion to the amount of the timber cut, or land cleared.

But this is just the reverse of the fact. The decrease in the waterflow has been substantially uniform in all of these streams.

It has been as marked and uniform between the sources, and the points where the adjacent lands have been cleared, as below. The Beaverkill, for instance, has suffered as much in its first few miles of unbroken forest as below.

The decrease in the streams where the land is but partially cleared, is precisely the same as that in those where the land is fully cleared. It has not been hastened by any unusual cutting of timber or clearing; nor has it been retarded by the absence of cutting or clearing. And the most marked feature in this respect is this, that the annual decrease of the waterflow in these streams has been uniform with that of streams of the same size and character in the adjacent counties, where the land has been fully cleared, and under full cultivation for years.

If it is desirable to know the condition of any of these streams at any time, it is only necessary to look at any stream in the cultivated portion of Dutchess or Orange counties, and you will see its counterpart.

If we have stated the facts correctly, and we think that every angler will corroborate them, to what cause is this change in our streams to be ascribed? Can it be wholly, or even principally local? Is there a subtle connection between the springs and fountains in mountain and valley, scores of miles apart, or must we look elsewhere for the real cause?

We suggest (it is only a suggestion) that the cause is purely atmospheric. Commencing at the western slope of this watershed, the land has been gradually cleared and drained westward for hundreds, almost thousands of miles. The prevailing winds are from the west. Before the forests were destroyed the atmosphere was supplied by natural evaporation, with sufficient humidity to keep it in its normal condition.

The reverse is now the case. The cleared land, and even the lowlands and swamps, which, through ditch and drain, have sent into the streams the water which they should have retained, become parched and dried by the sun; and instead of supplying moisture to the air, rather draw from it that which it already contains; and thus the air from its increased affinity and capacity for moisture, takes it up with all the greater force and rapidity, from every stream, lake, swamp, spring and forest over which it passes.

Thus the region of which we have spoken is robbed, by unnatural and excessive evaporation, of the moisture which would otherwise find its way through spring and streamlet into the larger streams, which, after all, are only aggregations of springs and rivulets.

If the streams in the upper watershed have been affected in a manner similar to those in the lower one, as to which, however, we are not sufficiently informed to make any positive statement, then that fact lends strength to the above suggestion as to the cause.

If this theory is the true one, we fail to see any remedy for the evil. Looking at the streams from an angler's standpoint, we fear that some are ruined forever; and that as to many of the rest "their days are numbered."

J. S. Van Cleef.

Poughkeepsie, N. Y., Feb. 18.

VARNISH FOR RODS.

Editor Forest and Stream:

"Wig Wag," Feb. 12, speaks of hard oil for rods. I think he must mean hard oil finish. I have a very fine rod of lancewood that is as good, if not better, to-day than when it came from the maker. When I put my tackle in working shape about this time of year I take the rod and clean all the metal parts with rottenstone and sweet oil, but never touch the male ferrules. Then with a piece of old fine felt, a little extra fine pumice-stone and raw linseed oil I rub it down thoroughly, being careful in the wiping not to chafe the silk; wipe off very clean and let it stand for a day or two to get dry. Then take a fine-haired flat brush and with hard oil finish give one coat, suspend the rod by strings for one or two days and give the second coat, and suspend again for five days or more and let it get hard. Now take old felt, raw oil and rotten-stone and rub it lightly but thoroughly; wipe off with an old rag and you will have the handsomest finished rod you ever saw. Water will not affect it. You may (as I have done and hope to do again) stand out from morning till night, in rain and sunshine, no matter, it will still have that beautiful dead gloss. Again, when you quit fishing wipe the rod dry, and when you get home or to camp rub it well with raw oil on a rag and oil the male ferrules with a drop of good gun oil, polish your mountings, place in a partition bag and hang up in a cool place. If you tie the bag tie it very loosely. I have always done this to the letter with my rods, for I know it is best. No shellac for me. W. S. S.

Lake Linden, Feb. 16.

BASS FLIES AND GAME BASS.

Editor Forest and Stream:

I wish to express my appreciation of the very valuable series of articles now appearing in your journal on the subject of flies, fly-tying and the most killing flies, and to contribute a little from my own experience. I wish to speak only with reference to fishing for bass.

Years ago when first beginning, the dealers recommended only gaudy flies, like the scarlet ibis. Experience taught me, however, that the best results in this section of Central New York were uniformly obtained by darker and more sober flies. Early in June, when the water is still high and discolored, the Reuben Wood is an excellent fly, as it is during the season on cloudy days, or when the water is not clear. But the only bright, gaudy fly, which is uniformly good throughout the season, is the silver doctor. Bass take it at all seasons, and it is a favorite with pike as well. Many fly-casters in Syracuse have caught pike in Onondaga Lake within the past two seasons on this fly.

The brown turkey feather for wings of flies, dressed with orange, yellow, red, green or peacock hurl body, is a very killing fly at almost all seasons. But upon our local waters the most successful fly with all anglers throughout the season is the magpie, made with wings and tail of the white-tipped black tail of turkey, black silk body and black hackle, or black and white coch-y bon-dhu. The bass constantly rise to this fly when no other will tempt them, not only during the day, but long after sundown, when it is too dark to see the flies drop.

I have recently forwarded patterns of this fly to Mr. Chas. N. Orvis, who has tied me some samples, which are all that can be desired. At my suggestion he tied them upon short double-twisted loops, which I believe to be the only correct manner of tying flies for bass fishing.

And now one word as to the almost worn out subject of the relative merits of large and small-mouth bass. Dr. Henshall and Mr. Mather have had wide experience on many waters, and both seem firm in the conviction that the large-mouth is as gamy as the small-mouth. No one who has ever cast a fly in Central New York could hold such an opinion for an instant. The habits of the two fish here are utterly unlike. One lives in sluggish water on mud bottom, the other in deep, clear water, on sand or gravel bottom, or on rapids with rocky bottom. The large-mouth rarely rises to the surface to meet the fly, but generally takes it under water as it is trailing, and when caught he sulks near the bottom until he finds that won't do, when he comes just to the surface and gives an ugly shake like a bulldog with a cat in his mouth. He never makes bold leaps for freedom nor desperate runs. The small-mouth, on the contrary, is all game. The instant he strikes he goes for deep water to enjoy his morsel in peace, but when he feels the sharp sting of the hook, as though suddenly realizing his danger, he makes a grand leap for life and freedom, frequently rising three, four and five feet clear of the water. If that fails, he rushes for deep water with an energy and power that thrills and delights the fly-caster. And he gives up only after a desperate struggle. I have known small-mouth bass to leap clear of the water five or six times before submitting to be netted. Did any large-mouth ever do as much? The small-mouth, again, fights with his mouth shut, while the large-mouth comes to the net with jaws gaping like a pickerel on a trolling line.

Anglers in sluggish Florida waters are welcome to the joys of fishing for the large-mouth, but give us the royal black bass, pure and simple. Rob Roy.

Syracuse, N. Y.

COMMUNICATION AMONG FISHES.

Editor Forest and Stream:

Having derived much pleasure from your paper for a number of years, I feel in duty bound to relate a little incident in regard to trout fishing that as yet I have never seen noted. For a number of years with a fellow medico, we have belonged to the family of outers, and when we can get away from our patients long enough to let them get well, we hie away to the woods and lakes of Maine, and oh, what a relief to be able to get away from poor suffering humanity and to go where all is abounding in health. I know from experience that my life has been prolonged by the month that I take in these glorious wilds—but to my story.

We belong, I am glad to say, to the class of fishermen that do not kill any more trout than we can eat; but sometimes we cannot forego the pleasure of casting a fly for the sake of the extreme pleasure of playing a good fish, and we frequently have gone to a favorite pool, and for, say the space of half an hour, had a rise for every cast we would make. We always landed our fish gently and with care returned them to the pool, but after half an hour of fun we are never able to get another rise in this particular spot, although we know that the fish are still there, as they will rise, but not to our flies, no matter what fly we may offer them. The only explanation we can give is that perhaps those fish we catch and let go tell the others.

We have had built a new camp this winter in the Dead River region, and perhaps, if agreeable, may at some time or other drop you a taking fly or line if it would be acceptable. Medico.

Brooklyn, N. Y.

SIZE AND WEIGHT OF BLACK BASS.

Editor Forest and Stream:

It very often happens that correspondents differ on questions because they do not fairly understand each other. This was lately exemplified in your columns by the discussion on barbless hooks, where one writer meant a hook without a barb, a needle-pointed hook, and the other referred to a patent contrivance with a "snap and catch 'em" attachment. I do not pretend to say that such a misunderstanding exists between the gentlemen who have been writing on the comparative size and weight of black bass, and giving their tables of weights and measurements, but it seems possible, and I will show how it is possible, and also probable, before I close this letter.

In your issue of July 24 last, Vol. XXII., p. 510, I gave a table of weights from half a pound to 3 lbs. 8 oz., of fish measuring from 8 to 15 inches. This was followed, Feb. 5, Vol. XXIII., p. 32, by "Woodcock" whose fish were much lighter than mine of the same length, his 15-inch fish weighing only 1 lb. 8 oz., or just 2 lbs. less than mine. In your issue of Feb. 19, "N." agrees with "Woodcock," and "M." comes nearly to him, his 14½ inch fish weighing 1 lb. 12 oz., while Dr. Sterling's list is nearer to my table; his 15-inch fish scaling 2 lbs. 14 oz.

Now for the possible cause of the differences which appear so great. I stated that my fish were measured from the nose to the end of the caudal fin, and so say "M." and "N." On looking over my memoranda again I find that I did not so measure my fish, but from the nose to the end of the tail proper, which does not include the fin. This is the usual mode of measurement adopted by the naturalists, of which Dr. Sterling is one, and would make our 15-inch fish full 3 inches longer, according to the measurements of the others. Really the tail fin should not be included in the length any more than the dorsal and anal fins should be included in the depth or girth. Anglers often speak of the caudal fin as the tail of the fish, but I believe the ichthyologists call the muscular part of the body between the anal fin and the caudal fin the tail, or technically, the caudal peduncle.

To give a hard and fast rule for weight by measurement is impossible, because of the different conditions of depth and thickness in individuals. Doubtless a cubic inch of the flesh of one black bass will weigh the same as that from another, but a large fish with a 4-oz. chub in it will weigh just so much more than if the stomach be empty, still we would all like to be able to approximately tell the weight of a fish by its length.

Even though we measured our fish differently, I cannot help thinking that "Woodcock's" fish were light in weight for their length, and agree with Dr. Sterling in saying that "my impression is that they were not well fed." "Woodcock's" bass weighing 2 lbs. 6 oz., measured 17 inches (to end of caudal fin) while one of that weight in Dr. Sterling's table measured only 14 inches. If the Doctor followed the rule of leaving out the caudal fin in the measurement the fish would agree very well in length.

Poke-o'-Moonshine.

[The stuffed black bass in our office caught by Chas. Gilchrist at Rice Lake, Ont., which weighed 6 lbs. (see Forest and Stream of Aug. 18, 1881) measures 17 inches without the caudal fin, or 20 inches including it.

Editor Forest and Stream:

In your issue of Feb. 19, "U.," of Esperance, N. Y., asks to hear from us in regard to weight and size of black bass, he agreeing with "Woodcock." Like Dr. Sterling, of Cleveland, O., I think "Wookcock's" fish were very gaunt. I only measured one last spring, it measured nineteen inches and weighed four pounds one ounce. Jay.

St. Joseph, Mo.

NOMENCLATURE OF ARTIFICIAL FLIES.

THIS subject, which has occupied the attention of some of our correspondents of late, is in a somewhat confused state in this country, owing to the fact that fly-tiers do not always follow patterns exactly, and also to the constant introduction of new forms to which new names are given, only few of which ever attain popularity. Practically the combinations of wings, bodies, hackles, tails, etc., are almost endless. It is easy for any person to take a standard fly and slightly change it by the introduction of shade of color somewhere and christen it anew. This has been done to such an extent as to have become a source of bewilderment, if not an evil, and to have given rise to all the articles lately published under the head of "Vagaries of Fly Nomenclature." These articles have done much good, not only in attracting attention to this subject, but in throwing some light on the origin of some of the flies and their names.

We do not think that in England, which is the country where fly-fishing had its greatest growth, if not its origin, there exists the confusion in nomenclature which we have here. Ronald's "Fly-Fisher's Entymology," published first in 1836 and running through eight editions to 1877 is, with its nineteen copper plates of the natural fly and its imitation side by side, still used as a standard, notwithstanding it is known to contain a few errors. Other writers, among whom are Bainbridge (1812), Clark (1839), Fletcher (1851), Blacker (1855), Froggott (1861), and Ogden (1879), have also added to the literature, but they appear to have consulted and followed those who have gone before, and thus have avoided confusion

We learn that Mr. Charles F. Imbrie, of the well-known fishing tackle house of Abbey & Imbrie, is preparing an illustrated work on this subject, which will include not only every standard trout, bass and salmon fly, but also their variations. Mr. Wakeman Holberton, the celebrated fish artist and fly-tier, who can probably name more flies at sight than nine dealers out of ten, has carefully drawn and colored over two hundred and eighty flies for this work in his careful manner. These flies will represent over twenty variations of the well-known "jungle cock," as called for in different parts of the country, with their differently colored bodies, and some five or six variations of the black palmer, etc., therefore they will not all be radically different flies. The work will be a very expensive one and will not be published this year.

No doubt there is a great deal of nonsense in the multiplication of flies with but slight differences in their coloration, but it serves to make our fly-books bright, while if we try to follow their numerous names it will work an opposite effect on our brains. It serves the dealer's purpose in offering a great variety, and this is about all. We hope to see a good, authoritative work on the subject, which will be so complete and exhaustive that it will be accepted by all as a standard, and then, should Congress pass a law making it a felony to add a new combination of wing, body and hackle and burden us with a new name, we will bow to the majesty of the law and say so mote it be.

THE VERMONT FISH LAW.

Editor Forest and Stream:

I have no disposition to take up the cudgels in defense of my position against one who has done the State such good service as "H. A." has in the cause of fish protection, and I confess that I have no figures to support my statement that a bass weighs a pound whose length is under ten inches. I only wrote of them as I remembered them, and I must confess, too, that I am not a scientific, or greatly experienced, or lucky angler. But "convinced against my will, I am of the opinion still." That whatever he may weigh, a bass whose length is a half inch more than the width of these columns of this paper (and may they never be narrower, nor shorter, nor fewer), will give the not too ambitious angler excellent sport, and has "lots of good meat in him."

If it can be enforced, the law as it now stands will doubtless tend greatly to the increase of bass and pike-perch, but the trouble with it is that in these features it is unpopular with the majority of those who have been friendly to and active in the enforcement of the fish laws; and though very few such will violate the laws themselves, they will not be very forward in prosecuting a neighbor who catches with hook and line a few pike-perch in May or the first half of June, or fails to let go a bass falling a portion of an inch short of the legal standard. And so in my humble opinion, the last fall's tinkering of the fish laws will result in very little good.

I have no more inclination to engage in a controversy concerning the Vermont fish laws than "Stanstead" has, but if, as "one of that class of fault-finders," I said nothing in reply to his communication, it might be thought that I admitted his charge of standing aloof and doing nothing but grumble.

When "Stanstead" asked in your columns that Vermonters should give him their views respecting the changes that should be made in our fish and game laws, I gave him mine and those of my friends here who are interested in protection. Early in the session of our Legislature a meeting of our club was held and a gentleman was chosen to draft a petition asking for the amendments that we thought desirable, but he failed to perform his allotted duty, and when it became evident that he was not likely to do so, I wrote, as secretary of the club, to the chairman of the Fish and Game Committe, stating the action of our club and the instructions given the gentleman who was appointed to draft the petition. I have never heard that the slightest attention was paid to it, and I have no reason to suppose that any more attention would have been given to the suggestions had we made them in person, for none of us have any political influence whatever. Yet we claim to know a little of the habits of pike-perch and bass in the streams where we fish We know that pike perch do not come into Great and Little Otter and Lewis creeks to spawn, whatever may be their habits at the north end of the lake, and that their spawning

time is long past when they visit these streams, and that then they are as fit for food as ever they are.

Certainly bass and pike-perch do frequent the same grounds at certain seasons, and so do almost all the food fish of Lake Champlain.

Pike-perch are frequently taken in the streams named during the spawning time of the bass; but they are there in quest of food, not a spawning ground. The season given by "H. A." for making the close time for both fish the same is much better than "Stanstead's."

I very freely acknowledge that I was probably in error as to the weight of a ten-inch bass, as I wrote only from memory.

"The Selectmen of each town shall appoint and remove at pleasure a person to be fish warden," and then what? Is the person so appointed likely to spend much time in looking after violators of the law without a better prospect of remuneration than lies in the uncertainties of arrest and conviction, and the more uncertain collection of a fine? Some time I will give the last season's experience of the Vergennes fish warden.

In my humble opinion, which I have the honor to share with some intelligent persons who are zealous supporters of protection, our fish laws do not need to be made more stringent. They need to be made as liberal as is consistent with the object in view, and as plain as possible, and then, to be enforced. AWAHSOOSE.

Addison County, Vt.

THANKS FOR "CAMP FLOTSAM."

MY promised letter, telling of some bass fishing in the Taskio, easy of access, with good accommodations at reasonable charge, that was to create a furore among the fishermen of our State lies all untouched. I can do nothing but read and read "Camp Flotsam." Who is he that goes a-fishing, catches fish, and tells of it so charmingly? So charmingly indeed, that it rivals the trip of the White Wings around Colonsay, Ornasay and Islay, so tender and touching that it reads like him who gave us Leonard Fairfield leading sweet Helen Digby up to London, resting by the Brent, a beautiful clear running trout stream, where big-hearted John Builey was fishing, ever fishing for his one-eyed perch, so feelingly, that it carries one back to his boyhood days, to the Saturday fishing in the deep pool below the mill, were the bass and the red-eye were caught; then up past the mill and around the bend where, in the swift water below the dam, the chubs were found; then above the dam in the still water under the big sycamore where the croppie lived, and then on through green fields and grassy meadows to the old home, to a fond mother, rejoiced at the safe return of her boy. The Forest and Stream is now omnipresent in our home, it covers up and hides from view the "Littell," "Harper," "Tommy Upmore," etc., and as our good friend Mrs. M. enters, the madam begs her to excuse the room as the "Major can do nothing now but read those old fishing papers." "Hold on, madam," I say, "let me read you some short extracts from "Camp Flotsam;" and then I read them several, closing with this:

That day we lived over again our youth. The shadows drifted as of old across the water, which mirrored back the ghostly forms of birches and the somber pines; a muskrat was angling along the shore below, and a pair of squirrels were chattering in the trees above. The blue and green dragon fly poised in air and settled on our tips and floats with all his olden persistency, the wild bee hummed about us, while now and then the festive mosquito piped his song in our ears. We sat the long afternoon through, and until the croak of the frogs in the coves warned us of the supper hour, called back the memory of the homeward tramp across the pasture, through the swale and the open meadow to the farmhouse, with its cheery light gleaming through the open door, called up the vision of boyish hands holding aloft the string to new sainted mothers; of the welcome kiss, the royal supper, and—we lifted anchor and moved campward, a couple of graybeards, two boys once more. The fountain of youth is no vagary, though Ponce de Leon found it not.

She admits that it is most charming; and then I tell her how lovers of the gentle art have always been considered the best and most honorable of men, have always been first in devotion to and admiration of her noble sex. This conquers her and she avers that when her "French Spoliation" claim is allowed the Major shall have a good outing; we will go, taking the children, and with headquarters at Cape Vincent or Ogdensburg, we will find some lovely lake, perhaps pay Sabattis a visit, establish Camp Jetsam, and, with Cæsar to cook for us, the fishing exploits of "Camp Flotsam" shall surely be eclipsed, but never, never the telling of it. If Senator Beck only knew how much was depending upon that claim, he would call in the services of Senator Vest and Professor Baird and search every strong box, vault and deposit company in Washington City for our long lost papers, said to have been left with the Great Commoner many years ago.

But this letter is simply a missive of thanks to "Wawayanda" for his history of "Camp Flotsom," thanks that while still locked in the icy embrace of a vigorous winter we can read of so pleasant a trip, that while seated before a cheerful fire smoking and dreaming of outings past and outings to come, we see "Wawayanda" emerge from his tent, Sabattis stand silently by—symbolical of his race, George ready with the coffee, the fish, the eggs, etc. Breakfast over, with good-bye to the Madam, "W." steps into his boat, and under a sky as soft and blue as ever hung over Capri's enchanted shore, he is off to the moss beds, the big logs, or to Sabattis's fishing ground; can hear the welkin ring with the Editor's joyous shout as he reels in bass after bass, all the bitterness of political strife gone from his heart, as he stands there over the blue waters and under the blue skies exclaiming, "Here is peace, here is contentment, here is happiness."

I have not seen one letter of last summer's fishing in the Maine lakes nor in the Adirondacks; can't some one in the fall write up their trip, so those of us who cannot get out can read them in the Forest and Stream next winter?

Now, as I was closing my letter, comes the Forest and Stream of the 19th with the last of "Camp Flotsam," no, not the last by any means for me, for it has been transferred in its entirety to my scrap book, and its myriad beauties and sweet thought "will enable many of us to live over again, in memory, our forest life," and for you, "Wawayanda," may many such pleasant trips come to you before the soft green leaves of spring or the crisp red ones of autumn are blown across your silent tent in the happy camping ground of the blest. JAY.

St. Joe, Mo.

The Theresa (N. Y.) Fish and Game Club is giving its attention to the care of Indian River, and calls for contributions from those interested in the fishing of that neighborhood. The secretary is Mr. B. W. Chapman.

TROUT FLIES.

Editor Forest and Stream:

I think I know something about fly-tying, having begun to tie flies about the year 1828 or before, under the directions of my father, who was an expert fisherman and when a boy had fished the famous streams of Devonshire. There was another gentleman, Mr. Penwarne, who fished in Cornwall and Hampshire. We made all the then known flies, even to gut and India rubber bodies. In 1829 I went with my father to Devonshire, and once we went to the moors from which the Dart and Plym have their rise. In fishing in the Plym, the trout would only take one fly out of our lot of some six or seven dozen; that was on a No. 5, like a round bend carlisle; it had a yellow silk body with about three turns of a light-red hackle. When we lost them it was difficult to get a rise, so we gave up and returned. I afterward went into Plymouth and found the same fly for sale. Now from that and after experience I cannot agree with some of your writers that trout when on the feed will take almost any fly.

In the spring of 1840 I came to the Eastern Townships of Canada, about twelve miles north of what is called Derby Line on the Vermont side and Stanstead on the Canada side. I found the streams full of trout, and there was a Scotchman who lived on the next farm who used the Scotch flies and did pretty well with them; but I found that the flies I brought from England did not seem just the thing, so I tried brighter colors. All the book I had read was "Walton's Angler," and that did not help me. I first used different shades of scarlet for the bodies and the brightest red hackles; then I dyed them scarlet, orange, yellow and green, and also the wings; but the three best flies that I made were drake wings made with two feathers, and I think I invented the reversed wings in 1841—scarlet body with gold tinsel (they call it Lama now), scarlet hackle and tail. It had no name then, but since I came to Milwaukee I have named it C. Simonds, after a renowned fisherman here, who took a great fancy to it. The next was same pattern but all yellow; the next was darker scarlet body with tinsel, red hackle, and wings from the shoulder of a red cock; named it Gen. Hamilton. I have used these feathers dyed in various colors; they make a very pretty wing, and I have never seen a fly made by anybody else that had them. The hooks that I used then were Nos. 5, 4 and 3, but when we fished the Magog they were as large as 1 and 0. I have caught trout there as heavy as 4 pounds, and I saw one that was caught there that weighed over 5 pounds. In 1849 I commenced making flies for sale, and supplied the fishermen and the stores of the surrounding country with them; latterly I sold them in Montreal. In 1852 or '53 there was a fair at Sherbrooke. I showed a box of flies, about twelve dozen and about eighteen varieties, and took the first prize, against some Scotch flies which were some of the best used there.

What are called Montreal and Canada I made from my own fancy, never having seen anything like them. In that part of Canada there are very few ducks, and I had to get the feathers off tame drakes, the wood duck used to leave before it moulted, so I never saw the feathers until I came to Milwaukee. I think they are a better feather than the drake for small flies, especially the grizzly king and C. Simonds, the spoonbill has a very nice feather for a darker wing, as also the brown fish duck.

In 1856 I came here, but not until 1869 did I make any flies for sale. It happened thus: I was asked to go with Gen. Hamilton (I gave the flies that I brought from Canada to Gen. Hamilton, and they will show the reversed wings) and Mr. Easton, P. M., of Chicago, and their wives to catch brook trout somewhere in the northwest of the State, and I made three dozen flies—Simonds, Hamilton and grizzly king (or green drake)—but when I saw the place where the trout were I said, "You can do all the fishing." You had to push the brush away with your foot to get the worm down to the water. There were plenty of trout there and one half day in another creek, and a day at a brook running into Beef Slough, and another half day at another creek they caught over 250, some of which Mr. Alexander Mitchell had for breakfast the next morning. As I had my dog and gun I went shooting, but although it was the 22d of August the pintail grouse were fully grown and I only found one covey that would lie to the dog, of which I shot six, and I picked up three stragglers. They have a feather something like the jungle cock, but not quite as glossy. Of course I brought the three dozen flies and asked our gunsmith to sell them for me. Some party took them all, and two years afterward I started the fly-making again. W. J. C. F.

Rock Bass and Black Bass.—Philadelphia, March 2.—The movement to stock the Schuylkill and its tributaries with rock bass, or the red eye as it is sometimes called, is a commendable one. There is no reason why every stream not too much affected by dye water should not be stocked. The Wissahickon Creek should be attended to as I believe now the mills situated above the streams have arranged it so that their refuse dye stuff does not flow into it. It is very strange that the black bass placed in Black's Pond, Swedesboro, N. J., fifteen years ago, came to naught, while in other ponds within five miles, where the fish were put, they have thriven and are now taken by pike fishermen through the ice. Will the correspondent who wrote of bass taken in Washington Pond write you what he knows of the Black Pond fish? A number of anglers took advantage of the fine day yesterday and went pike fishing to the near Jersey ponds. —Homo.

Blackford's Trout Opening.—Mr. E. G. Blackford, with his usual taste, has issued a handsome invitation to anglers to inspect the many species, varieties, and forms of trout from all parts of the country on his slabs in Fulton Market, New York, on April 1, the legal opening of the trout season in the State. The outside of the cover is a sketch by Gillam, of *Puck*, of an angler swinging up a trout which another is vainly trying to induce to come into the landing net. We infer from the scene that Gillam does not handle the rod. Inside is the invitation, with a glimpse of a lake, a leaping trout, and a kingfisher, but opposite this is a gem. It is an elegant reproduction of one of Kilbourne's trout, a small one with the parr marks showing and resplendent in rich color. This plate is perhaps the finest of the many to which Mr. Blackford has treated the lovers of trout.

A 10½ pound salmon was landed a few days ago by Mrs. Judge Rice. The fish had ascended a small stream that runs through her chicken yard. She saw, caught him with thumb and fingers in gills, and fresh fish for the family was the result.—*Santa Cruz (Cal.) Sentinel.*

Fishculture.

THE AMERICAN FISHCULTURAL ASSOCIATION

THE executive committee held a meeting on Monday last, at the office of Mr. E. G. Blackford, Fulton Market, to determine the time and place of the next meeting, Mr. Geo. Shepard Page in the chair. Mr Mather raised the question whether the committee met as the executive committee of the American Fishcultural Association, or the American Fisheries Society. Mr. Blackford thought that notice of the change of name should be given, inasmuch as several members think that the meeting on board the steamer last year, after adjournment, where the name was changed, was somewhat irregular, and that the next meeting should be called under the old name and then action could be taken by the Association in regular session on the proceedings of the meeting on the steamer. It was decided to issue the call under the name of the American Fishcultural Association. Letters of regret were read from Hon. Theodore Lyman, president of the Association, Prof. G. Brown Goode, and Dr. W. M. Hudson, but none expressed their views as to the time or place of the future meeting. Mr. Blackford referred to the success of the last meeting at Washington in attendance and the character of papers read and thought that the U. S. Fish Commission would be glad to have the meeting held there again. It was decided to hold the meeting in Washington, and May 5 and 6 temporarily appointed as the time, subject to the approval of the officers and members resident in Washington. The secretary was instructed to correspond with them and report at the meeting of the committee on March 16, at Fulton Market. Col. M. McDonald, chairman; Prof. G. Brown Goode and Mr. R. E. Earl were appointed a committee of arrangements.

THE MASSACHUSETTS COMMISSION.

WE have the nineteenth annual report of the Commissioners of Inland Fisheries of Massachusetts for the year ending Dec. 31, 1884. A full page view of the fishway on the river Sire, Norway, is the frontispiece, and is described in an appendix. Shad hatching was continued, but not many spawning fish were captured, only twenty ripe females being secured. Carp from the U. S. F. C. were distributed, and 125,000 trout eggs from Plymouth, N. H., were hatched. Lake trout eggs from Lake Superior to the amount of 100,000 were also hatched and sent out.

The distribution of young salmon is detailed in a report by Mr. E. B. Hodge, Commissioner of New Hampshire and superintendent of the works at Plymouth, carried on jointly by the two States.

The effort to stock the Merrimac with California salmon, mainly on account of the cheapness of the spawn and the more rapid growth of that fish, was a failure. This, with the large number of breeding fish unlawfully destroyed by the fishermen below Lawrence, four years ago, retarded the stocking of the river for several years. This has now been bridged over, and a much more rapid increase of salmon may be expected hereafter. There have been three seasons of remarkably low water in the river, which has greatly interfered with the salmon reaching their spawning grounds. According to records kept at Lowell, it is probable that this drought will be followed by three or four years of abundance.

The fall run of salmon last year was unusually large, indicating an increased run for next season. The works at Plymouth are being extended and greatly improved.

Much attention is given to the lobster question, and quotations from reports of Mr. Venning, of New Brunswick; Mr. Rogers, of Nova Scotia, and the U. S. Fish Commission are given, showing that in the Provinces the close season does not cover the best part of the spawning season, and other facts.

The importance of specific knowledge of the salmon and trout of the country, in connection with the many questions that arise in relation to the determination of the several species and varieties in the New England States, have led the Commissioners to request Mr. Samuel Garman to prepare a paper on the subject for publication in this report. Mr. Garman is an assistant in the Museum of Comparative Zoology, and has charge of the collection of fishes belonging to the museum, and thus has been able, in his studies, to use the large amount of material in the museum. He has been aided also by specimens sent him by the Commissioners of New Hampshire, and from the hatching houses at Plymouth. His paper is given in the appendix, under the title of "Notes and Descriptions of the Salmon and Trout of North America," with notices of the introduced species. The eighteen full-page illustrations accompanying the paper were made under his personal supervision by Mr. Denton, and are considered to be accurate delineations of the several species and varieties native to or introduced into New England waters.

In the appendices we find the address of Hon. Theodore Lyman to the American Fishcultural Association, which has appeared in our columns, an article on the black bass from the Philadelphia *Ledger*, credited to a paper which copied it, the laws relating to fish, and much more of interest.

FISH PRESERVATION IN LAKE ERIE.—A convention of fishermen and others interested in the protection of the fish in Lake Erie, will be held in Cleveland on March 15, and Mr. John Kingeborough, of that city, will furnish further information regarding it, if desired, and he will be pleased to receive names of those who will attend the meeting. Some of the questions to be discussed will be State legislation: propagation and its results; best mode of protecting whitefish. Pound nets, how to fish and the seasons, comparison with Canadian fish laws, gill nets, decrease of whitefish and black bass, summer fishing. Rights in setting nets encroached on others, discrimination between east and west ends of Lake Erie, spawning seasons, hook and line fishing, salt fish interests, c. o. d. customs evils, protection to shippers. Whether this meeting is supplementary to, or in accord with the recent inter-state meeting of Fish Commissioners and others, held in Detroit, we do not know. The Cleveland *Sun* says: "The subject of protecting the fish of Lake Erie and the streams of Ohio from the devastating inroads that are constantly being made upon them by unscrupulous fishermen, is one that deserves the earnest attention of all classes. It is not generally realized to what extent pound, seine, gill-net, and other styles of fishing are carried on in Lake Erie and the streams leading to it, nor how rapidly fish of all kinds are being exterminated from the lake and streams. Laws governing the taking of fish have been made from time to time, and still adorn the statute books, but, in the main, they are so poorly constructed as to be easily evaded or so negligently enforced as to become almost inoperative, and hence the work of extermination is allowed to proceed. At the islands of Lake Erie tons and tons of fish are yearly killed to no purpose. Kelly Island, for example, is surrounded by a perfect spider web of pounds, extending miles from its shores, so that few fish escape their meshes. These are managed by men who pay no heed to the preservation of fish. Those taken out of season, or when the demand is light, are not thrown back into the lake as they should be, because this would involve a little labor, but they are dumped into the pound boats where they soon die, and then they are taken to the shore, where such as are desirable are taken out and the others, by the thousand, are thrown into the lake to float about till decomposition takes place. It is no uncommon sight, when out of season, to see thousands of dead herring piled on Kelly Island dock waiting to be thrown overboard."

The Kennel.

FIXTURES.

BENCH SHOWS.

March 5, 1885.—World's Exposition Dog Show, New Orleans, La. Entries close Feb. 23. L. F. Whitman, Superintendent.

March 18, 19 and 20, 1885.—Second Annual Show of the New Haven Kennel Club. E. S. Porter, Secretary, New Haven, Conn.

April 7 to 10, 1885.—First Annual Dog Show N. E. Kennel Club, Music Hall, Boston. J. A. Nickerson, Secretary, 159A Tremont street.

April 21, 22 and 23.—Annual Dog Show of the St. Louis Gun Club. W. A. Albright, Secretary, St. Louis, Mo.

April 28, 29, 30 and May 1.—Ninth Annual Dog Show of the Westminster Kennel Club at Madison Square Garden. Entries close April 14. James Mortimer, Superintendent, 48 Broad street, New York.

May 5, 6, 7 and 8, 1885.—Second Annual Dog Show of the Cincinnati Sportsman's Club, Cincinnati, O. W. A. Coster, Superintendent.

May 13, 14 and 15.—Third Annual Dog Show of the Toronto Dog Show Association. W. S. Jackson, Secretary, Toronto, Ont.

June 2, 3, 4 and 5.—First Annual Dog Show of the Illinois Kennel Club. John H. Naylor, Secretary, 3,182 Archer avenue, Chicago, Ill.

THE DOG SHOW RULES.

IT is satisfactory to observe that the common sense way of looking at the championship rules of the A. K. C. is prevailing. The Westminster Kennel Club have had the good judgment to adopt the rule as originally advanced, ignoring the Cincinnati construction. With the influence of two such important shows as New York and New Haven on the right side, it may be taken for granted that the others will adopt the same ruling, and that we shall have no more blundering about this rule and no further attempts to follow the absurdities of the supposed Cincinnati meeting.

NEW HAVEN DOG SHOW.

THE entries for this show will close next Saturday, March 7. We understand that the entries already received are sufficient to insure an exhibition of high character. Many of the cracks will be there. A large number of valuable special prizes have been offered, and nearly every class will receive one or more of them. Many of the specials are cash, and range in value from $5 to $25.

The secretary's address is Mr. E. S. Porter, P. O. Box 657, New Haven, Conn.

NEW YORK DOG SHOW.

THE premium list of the ninth annual dog show of the Westminster Kennel Club is now ready for distribution. The premiums offered are the same as last year. There have been some changes in the classification; the berghund classes have wisely been omitted, the black and tan setter puppies have but one class instead of two. A class has been added for English retrievers, and the champion Irish water spaniel class is omitted. The second prize for wire-haired fox-terriers is a medal instead of $5, and in the two fox-terrier puppy classes there are two prizes, $10 and medal, instead of only a medal. The same change is also made in collie puppy classes. There is a class for champion bull bitches added and one for bull puppies, with medal for prize. The bull-terriers have two more classes than last year, a champion and open class for bitches over 25 pounds. The Bedlington and Skye terriers have separate classes for bitches. The poodles have two classes for black and one class for other than black. The total number of classes is 123, against 119 last year. The show will be held under the rules of the A. K. C., which have been added to, modified and altered to suit the occasion. The club has shown good sense in omitting the extra champion class and ignoring the "construction" of the champion rule.

BOSTON DOG SHOW.

Editor Forest and Stream:

As we have no miscellaneous classes in our premium lists, we have decided that when we receive two or more entries of dogs of a recognized breed not provided for in our premium list, we will make a separate class for them.

In addition to our regular prizes, we shall give special prizes to the value of at least $1,000. These special prizes are being donated by friends of the club, and as soon as the list is completed, probably next week, will advise you. Entries are coming in, and judging from letters received from many exhibitors, our selection of judges has proved a lucky hit. With the permission of Mr. J. F. Kirk, we have transferred the black and tan terrier and Chesapeake Bay classes to Mr. James Watson. Judges will be appointed for classes not provided for when the entries are all in.

The dies for our medals are in the hands of the engraver, and we feel safe in saying that these medals will be the finest ever given in this country, both in design and workmanship. Our diplomas will stand on a par with the medals, the design being unique, and the engraving being done by one of the best artists.

I would particularly request exhibitors when making entries, to state their preference for money prize or medal; in the event of their dogs winning, this will enable us to promptly settle with exhibitors, and will prevent faultfinding at the prizes awarded. J. A. NICKERSON, Sec'y.

THE SIZE OF BEAGLES.

Editor Forest and Stream:

Assuming that all hounds, whether fox, harrier, basset or beagle, are strictly dogs of the chase. That those who do their special work in the most satisfactory manner are the ones we seek. That the purpose and object of this discussion in the FOREST AND STREAM is to show which dog is best suited for the work, *i. e.* rabbit hunting, and that the question is one to be considered solely from the hunting standpoint. All sentiment, hobby or fancy bench show attributes being an outside issue.

Having thus stated the case, I am in full accord with "Houndry" in his last article on "Size of Beagles." After a patient trial of the small beagles, extending through several years, I have given him up as being entirely unfit for hunting our American hare or rabbit. Their first defect is that they are not true runners as a rule, have too many checks, and when they make a loss, are too much inclined to puzzle and tongue in the same spot. Even if they make the run straight away, they do not drive fast enough for our extensive covers, causing the sport to become tedious, affording few shots, or if hunted without the gun, rarely running in on their game.

Another drawback is their want of stamina both in field and kennel. In distemper the whelps seem to have no powers of resistance, and fade away and die apparently from sheer inanition. I have come to the conclusion that for rabbit hunting in our extensive woods and branches with all the natural difficulties of hills, rocks, brambles, bushes and what not, our American beagle (?), a dog of harrier appearance and of dubious origin, but with a strong suspicion of foxhound in his ancestry (judging from his size and other departures from beagle character) is the dog after all. Many are the times I have seen such a dog pick up a trail when the little beagles were hopelessly out on a loss, hit it off full cry, leaving the pack in the lurch, and driving the hare to a double, bring it back to the gun.

Dwarf beagles look very pretty in a pack and make nice pets, but there their mission ends. Sportsmen can respect and love the dog that meets all the requirements of the hunting field, even if only ordinary in looks, but the pretty, useless one is a nuisance and a disappointment. If, like "Houndry," our hound men would tell us through the columns of the FOREST AND STREAM of their honest experience on the beagle question without fear of treading on the toes of beagle breeders and speculators (many of whom never hunted a hound in their lives), they would truly serve the interests of sportsmen.

SEDGE.

DELAWARE COUNTY, Pa.

JUDGING AT NEW HAVEN.

Editor Forest and Stream:

I am sorry that I cannot bear Mr. Mortimer out in his assertion in your issue of last week. On the 20th of January I wrote Mr. Mortimer, asking if he would continue judging, and intimating, as he states, that he probably could select his own classes, but the letter was not an official one in any sense, and I had no idea but that the classes eventually assigned him would be his choice. In answer, Mr. Mortimer wrote that, "In regard to judging, of course, I shall not judge again at New York, but will superintend shows given by the W. K. C. At the same time, there is nothing that I know of to prevent my judging at other shows outside of New York." Not a word about the Westminster dogs. I telegraphed Mr. Mortimer, asking if he would take the deerhounds, greyhounds, terriers, etc., when we had the lease of the Armory assured. Mr. Mortimer replied by letter declining the classes, and stating in this letter that the "W. K. C. intended showing, in which case he would prefer not to judge at all." A little further on in the same letter he says, "In judging at shows like yours when there would be other judges, I would only undertake the following classes: Mastiffs, St. Bernards, collies, fox-terriers, bull-terriers, had I these classes, I would be willing to take greyhounds or any other classes the committee might wish."

Since Mr. Mortimer has asked me to explain I have done so.

E. S. PORTER, Secretary N. H. K. C.

NEW HAVEN, Conn., Feb. 26.

BENCH SHOW RULES.

Editor Forest and Stream:

The bench show committee of the New England Kennel Club, while willing to credit you with all kindly feeling toward the club and good wishes for the success of the coming show, feel that you have strangely misrepresented them in your remarks about Rule 8.

In the first place, the committee have made no construction of the rule, but have simply inserted the rule, verbatim, as adopted at the Cincinnati meeting. At the same meeting it was decided that a club might use its own judgment about having an extra champion class; the committee decided not to. You will therefore see that all your remarks about the New England version, construction, interpretation, etc., were not only uncalled for, but decidedly at fault.

The committee have no sympathy whatever with the so called Major Taylor construction of Rule 8, nor can they see how any man or body of men in their senses could so construe it, or for a moment doubt as to the original intention of the adopters of that rule, but believing in the majority rule, and having no evidence that the meeting at Cincinnati was not legally held, and all the parties represented at that meeting who were claimed to have been, could not see any other course for them to pursue than to insert the rule as it appears in the premium list, and have seen no reason thus far for making any change.

If the FOREST AND STREAM can prove to the committee that there was anything done at the above meeting which was not strictly legal or regular, the proper alteration will be only too gladly made. T. C. FAXON,

For the Bench Show Committee, New England K. C.

BOSTON, March 2.

[Rule 8 of the New England Kennel Club rules as published is a portion of Rule 8 as constructed by Major Taylor, but it is not the rule verbatim at all. A part cannot be the whole. It is not the business of FOREST AND STREAM to hunt up evidence for the New England Committee. They must manage their own affairs, and we must comment on matters as we find them. The committee of the New England show will have seen by this time that they stand quite alone in their following out of Major Taylor's interpretation of Rule 8, and feeling as they do about this "construction," we do not quite see why they should cling to it longer. We think that they had much better even now fall in line with the other clubs and repudiate the Cincinnati meeting. The New Haven Club and the Westminster Kennel Club have come practically to the conclusion which we recommend. We know that the New England Club is made up of gentlemen who are enthusiastic lovers of the dog, and who are anxious to do everything within power to raise dog shows to their proper place in the minds of the public. That they have made an error of judgment seems clear, and we are convinced that if they believe this, they will have no hesitancy about acknowledging it and doing what they can to repair it. It scarcely seems necessary to allude to the committee's remarks about our feelings toward them and our wishes for the coming show. If they have as good a show as we hope for, then there will be no complaints at 159 Tremont street the week after the exhibition closes.]

CLUBS AND SHOWS.

Editor Forest and Stream:

Look at the men who constitute the W. K. C.; do they not represent wealth, influence and honor? If we cannot place confidence in these people, then in the name of common sense whom can we trust? Perfect institutions and perfect people (except in their own estimation) are scarce, if not entirely absent in this world. And to show Mr. Mason that even he is not free from inconsistency, I will here relate some facts. The first time I ever saw the now most familiar signature of C. H. Mason, was under a criticism of "Dogs at the New York Show," in FOREST AND STREAM about four years ago. Talking of the pointers shown there, he said: "A weedier, seedier lot it was never my misfortune to behold;" and Gregory's Belle, unplaced (I bred her), was one of that same lot. Since this opinion of Mr. Mason's was published, he gave that same Belle first prize. I believe it was at Washington; and from his letter in FOREST AND STREAM of Jan. 29, 1885, I quote as follows: "Vision (Croxteth—Vinnie), though by no means a bad bitch, did not deserve second, and was clearly beaten by Gregory's Belle."

There is nothing improper in criticising the rules of any show, and I know the managers of the New York dog show are anxious to get their rules as near perfection as possible; but I hate abuse or slander, particularly when personally applied, and I fail to see the absurdity of Rule 12 of the W. K. C. If charges cannot be brought forward during the show, how can the managers, who are all professional and business men, be expected to be forever ready to devote time and attention to the settling of real or imaginary troubles? The well-known rule adopted by all the clubs in the country, which excludes from running or showing dogs, all persons who have been proved to have acted dishonorably in any way in connection with dogs, dog shows or field trials, I think should suffice to meet all difficulties as far as can be expected, that might originate from fraudulent entries, etc. The readers of the FOREST AND STREAM are tired of hearing charges and insinuations against the W. K. C., and as one of your readers, I respectfully ask for an editorial comment on the subject. I think such is due your readers, due to the members of the much-abused club, and due to justice.

If Mr. Mason has been badly treated, is there not a paper in the country fearless enough to defend him in an editorial? If he has not been unfairly dealt with, then why allow so much abuse and such serious insinuations against not only the W. K. C., but against private individuals, to pass through your columns without a comment? Does the FOREST AND STREAM by its silence indorse all that Mr. Mason has advanced? This question has occurred to my mind forcibly, as it probably has to many others, and there is no doubt but an editorial remark from the FOREST AND STREAM on the subject will be of interest to all its readers. I have no personal dislike to Mr. Mason nor prejudice against his dog Beaufort, and am sorry that he has made it impossible for me to remain silent by his persistent and unjustifiable attacks on those whom I know to be honorable and above board. LUKE W. WHITE.

THOMASVILLE, N. C., February, 1885.

[Mr. White is evidently sincere and his inquiries therefore merit attention. 1. No insinuations against the private character of any members of the Westminster Kennel Club have ever been made in these columns. When persons have been mentioned by name it has only been when reference was made to them in their official capacity. 2. The actions of the club and of its officers in connection with public shows have been criticised; and these are perfectly legitimate and proper subjects of criticism, no matter how dazzling the wealth, prodigious the influence and exalted the honor of the individuals who compose the club. 3. In regard to Rule 12—no persons have any business to voluntarily incur responsibilities that they cannot afford to discharge. In the particular case in question it is charged that at a public dog show a certain fraud was perpetrated. Having provided the occasion for such alleged fraud, the club managers are bound to inquire into it and determine justice. They can decently shirk this responsibility neither on the business and professional plea made for them by Mr. White, nor by such an Owleglass stratagem as was the club secretary's written reply to the individual who charged the fraud and called for the investigation. 4. The FOREST AND STREAM has not editorially defended Mr. Mason because it has not presumed him to be in need of any defense. He is not the defendant in the case, he is the plaintiff.]

WHO IS "LILLIBULERO"?—Time is a mighty breeder of mysteries; she is constantly giving birth to "burning questions," and still in embryo she hides her dread children of the future that make us rather bear the ills we have, etc. No, dear reader, I have not made a mistake in gender. It is not Old Father Time I refer to, "the ill-natured loon," as the song calls him, but Mrs. Time, still more meddlesome, mischievous, and provoking. "Were things never sae rightly, she'll not let them be," and with her confounded clack is always proposing fresh conundrums to poor humanity, and giving the world new nuts to crack, which, after crippling curiosity's jaws, are left in the mouth like Dead Sea apples. Just think how our grandfathers racked their brains, and our grandams wagged their tireless tongues, to answer the simple question, "Who was Junius?" Compare—nay, contrast—such a trifling, paltry, insignificant issue as that question raises with the pregnant one: Who is "Lillibulero"? Verily, when I have answered for you, oh reader, you will see and feel the full significance of it. All sorts of guesses have been made as to who "Lillibulero" is and who he is not; and I feel it is quite time the mystery was unraveled, so here goes. I have been informed on high authority that the "Lillibulero" letters are the joint efforts of "W. K. T.," "Franco-American," and "F. G.," the diction touched up by "Sprint." High authorities are so generally wrong, I cannot accept the above opinion. Far nearer the mark was the quidnunc who suggested the Rev. Charles Spurgeon; but that cannot be right, for "Lillibulero" does not make weekly collections, and was never known to have the gout. From the pithiness and lucidity of style, the sparkling piquancy of expression, the marvellous causticity of his wit, the biting bitterness of his sarcasm, and the dogged, determined way in which he "blocks" nincompoops who pretend to know, it has been with a show of reason assumed that Mr. Warton, M.P. for Bridport, is the true and only genuine "Lillibulero." "Porcupine," in the American *Sporting Life*, says Dalziel is not "Lillibulero," for the latter cannot write Scotch. Bah! Mr. "Porcupine," can you say Auchtumuchty, giving it the true Scotch flavor? I know you, Mr. "Porcupine," although you use the strange oaths of your adopted country, and they tell me you are now "bearded like the Pard." At a séance I attended the medium declared for the spirit of "Lillibulero," and a well-known voice from the vasty deep replied, "I am the man." "Get out," said I, "you are too modest to be 'Lillibulero,'" and the spirit that killed nineteen lurcher dogs at one shot vanished, and from the dim unknown we could hear a chorus of laughter, and I—divinely favored—caught a glimpse of a natty little hand twirling the end of a charming mustache with a remarkably self-complaisant air which I remember to have seen before. "Lillibulero" is not a "chucker out," he is a "knocker down." He knocks down lies set up by doggy men; he does not knock them down auctioneer fashion, he knocks them down and squelches them; and it is fortunate he is a Hercules, for the cleansing of the Augean stable was nothing to the present task he has undertaken—more power to him.

So give each knave the whipping your wit well affords,
Lillibulero, bullen, a la!
And in place of smooth phrases, the truth in man's words;
Lero, lero, bulleu, a la!
Make each dotard and dastard beware of your sword,
Lillibulero, bullen, a la!
Whether sneak from the alley or malapert lord,
Lero, lero, bulleu, a la!

But who *is* "Lillibulero"? you ask impatiently. We are just coming to it. He is——Oh, confound that P. D., who has come to tell me, "Please, sir, clicker says he can't take no more o' your stuff this week."—*Corsincon in Stock-Keeper.*

"Corsincon" has been making guesses in the *Stock-Keeper* as to who "Lillibulero" may be. No, Mr. "Corsincon," it won't do. *You* know quite well who he is and so do I, so don't put any one on the wrong track.—*Scottish Fancier.*

MALICIOUS FABRICATIONS.—As an example of the extraordinary and baseless slanders which are being used against several of the judges at New Haven is the following, which alludes to the "pointer protest" lodged last spring by Mr. Mason. The individual who has attempted to "break down" Mr. Davidson, Mr. Watson and Mr. Mason, wrote: "The club [New Haven], in the press, publicly repudiated Mr. Mason's use of its name, and stated that he had signed its name without authority." When the pointer protest was printed Mr. Porter, secretary of the New Haven Kennel Club, was in Europe, and the assistant manager, Mr. G. E. Osborne, sent a letter to the FOREST AND STREAM, in which he said: "By Mr. Mason's explaining how and where he obtained the signature of the club he would greatly oblige." The reply from Mr. Mason to Mr. Osborne's request was as follows: "Mr. E. S. Porter, secretary of the New Haven Kennel Club, told me that he would, in the name of his club, sign a protest against the judging, which he said was infamous. I did not think it necessary to send the protest on to New Haven for indorsement after getting the word of a gentlemen in Mr Porter's position." This explanation was neither questioned by the N. H. C. nor contradicted by Mr. Porter. We have within a day or two seen a letter from Mr. Porter, in which he says: "I never did deny having given the use of my name to the protest, or that I thought the judging anything but 'way off.'" In view of this, the question may be fairly asked, Whither are we drifting?

A CARD FROM MR. PIERCE.—Peekskill, Feb. 28.—*Editor Forest and Stream:* I notice resolutions passed by the Philadelphia Kennel Club, published in your issue of this week. With your kind permission I will reply to the same through your columns in your issue of March 12.—W. H. PIERCE.

EASTERN FIELD TRIALS CLUB.—There will be a meeting of the board of governors of the Eastern Field Trials Club at the St. James Hotel, New York, on Tuesday evening, March 10. A full attendance is desired.

DOG LOST.—A liver and white ticked pointer bitch puppy, seven months old, disappeared at West New Brighton, Staten Island. It is feared that she may have been stolen. Any one knowing of this animal will confer a favor by addressing Chas. H. Mason, 255 West Twenty-second street, New York.

KENNEL NOTES.

NOTICE TO CORRESPONDENTS.

Kennel notes are inserted in this column free of charge. To insure publication of notes, correspondents MUST GIVE the following particulars of *each animal:*

1. Color.
2. Breed.
3. Sex.
4. Age, or
5. Date of birth, or breeding or of death
6. Name and residence of owner, buyer or seller.
7. Sire, with his sire and dam.
8. Owner of sire.
9. Dam, with her sire and dam.
10. Owner of dam.

All names must be *plainly* written. Communication on one side of paper only, and signed with writer's name.

NAMES CLAIMED.

☞ *See instructions at head of this column.*

Black Knight. By Patrick Cullen, Salmon Falls, N. H., for black cocker spaniel dog, whelped Oct. 7, 1884, by Obo II. (A.K.R. 432) out of Darkie (A.K.R. 250).

Black Bess. By Patrick Cullen, Salmon Falls, N. H., for black cocker spaniel bitch, whelped Oct. 7, 1884, by Obo II. (A.K.R. 432) out of Darkie (A.K.R. 250).

Trudo. By P. Moeller, Nyack, N. Y., for blue belton English setter dog, whelped Feb. 7, 1885, by Glen Rock (A.K.R. 166) out of Nellie.

Dulier Boy. By Albert Wylly, Savannah, Ga., for blue belton English setter dog, whelped Jan. 16, 1882 (Druid—Princess Draco).

Alpina. By C. P. Emory, Loveland, O., for rough-coated St. Bernard bitch, whelped Nov. 13, 1884, by Duke of Leeds (A.K.R. 1535) out of Abbess II.

BRATTLEBORO, Feb. 28.—There was a small attendance at Oak Grove Range, but some very good scores were made by the local club, the shooting being 200yds., off-hand, Massachusetts target:

Cobb	11 11 11 12 12 10 12 10 11 12—112
Re-entry	12 11 11 11 12 11 11 11 10—111
French	11 11 11 11 10 11 11 11 12—110
Re-entry	11 12 12 10 12 9 10 10 12 11—105
Hone	12 11 11 10 10 11 10 11 12 12—110
Re-entry	12 9 11 10 12 11 11 11 10 9—106
Hannon	11 10 11 11 12 11 10 11 11 11—108
Nichols	11 10 11 11 10 10 10 7 10 12—102

THE TRAP.

Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

THE CLAY-PIGEON TOURNAMENT.

ALTHOUGH the great clay-pigeon tournament ought to have afforded a grand opportunity for the attendance of Southern sportsmen, comparatively few turned up. The Eastern and Western representatives, however, being numerous. The weather was generally unfortunate, only two good days appearing during the entire shoot. The scores below will show that the shooters were far from being idle. The great achievement of the whole meeting was the formation of the National Gun Association, in which all seemed to vie with the best of feeling to help toward a successful organization.

FIRST DAY, WEDNESDAY, FEB. 11.

Match No. 1. Seven single clay-pigeons, 5 traps, 18yds.:

H W Eager	1101100—4	A Erichson	1001001—3
O R Dickey	0101111—5	H McMurchy	0101101—4
W S Perry	0111011—5	T Gastright	0110110—4
Wm Mayronne	1111000—4	A Bandle	1010101—4
W L Davis	0111010—4	H A Penrose	0110001—3
DeFuentis	1000111—4	J R Stice	1101101—5
C M Stark	1010011—4	F A Cousen	1001011—4
E Voris	0110100—3	Scott	0011011—4
W W Holland	0000000—0	B Tiepel	0111101—5
F L Chamberlin	1001101—4	L E Russell	1110110—5

Ties of 5: Dickey and Tiepel 3 and divided, Perry 1, Russell 1, Stice 0. Ties of 4: McMurchy and Cousen 3 and divided, Mayronne, Stark and Gastright 2, Eager and Bandle 1, others 0. Ties of 3: Penrose and Erichson 2, Voris 1; second tie, Penrose 2, Erichson 1.

Match No. 2.—The Von Lengerke Sweepstake, 7 single clay-pigeons, 5 traps, 21yds. rise, break with second barrel to count ½:

Dickey	½ 0 1 0 ½ 1 1—4	Stark	1 0 1 1 0 1 1—5
Eager	½ 0 1 1 0 1 1—4½	Cousen	1 0 1 0 1 0 ½—3½
Perry	0 0 1 1 ½ 1 ½—4	Parmelee	1 0 1 1 0 0 1—4
Bandle	1 0 0 0 1 1 1—4	Folsom	1 1 ½ 1 0 1 1—5½
Gastright	0 1 1 1 0 1 0—4	Stice	0 ½ 1 0 1 1 0—3½
McMurchy	1 1 0 0 0 1 ½—3½	Tiepel	1 ½ 1 1 1 1 1—6½
Meaders	1 ½ 0 1 ½ 0 1—4	Penrose	0 ½ 1 1 1 1 1—5½
Russell	1 1 1 ½ 1 0 0—4½	Erichson	0 1 1 1 1 0 1—6

Vergis, 3½; Harcourt, Scott, Holland and Davis 2; West and Watkins, 1½; Voris, w. Tiepel first, Penrose and Folsom divided second, Stark third, Eager and Russell divided fourth.

Match No. 3.—The Merino Elastic Felt Gun Wad Match—5 singles and 2 pair double clay-pigeons, 18yds. rise, 5 traps, all shells to be loaded with the merino elastic felt gun wad, shooters using wood powder to be allowed the privilege of using a thin card board wad next the powder. The special prize in this match was a magnificent gold medal, presented by the Merino Elastic Felt Gun Wad Company for best score:

Elliott	0111010101—7	10 11 11 11 11—	9—16

Ties of 10, shot off at 5 singles, 2 pair:

McMurchy	00111 11 11—7	Dickey	00111 01 10—5
Meaders	10011 11 01—6	Carver	00111 10 11—5
Tiepel	11111 10 10—7	Elliott	00010 10 w—

Second tie: McMurchy, 00111 11 11—7; Tiepel, 11111 11 00—7.

Third tie: McMurchy, 01111 11 11—8; Tiepel, 11011 11 11—8.

Fourth tie: McMurchy, 10101 00 w.; Tiepel, 11100 11 10—6. Tiepel won first and medal. McMurchy second, Meaders third. Tie for fourth and fifth: Carver, 11111 10 10—7; Dickey, 01110 01 w. Carver fourth, Dickey fifth.

Match No. 19.—Von Lengerke team match, open to any team of two men, 5 singles, 18yds. rise, break with second barrel to count ½:

Meaders	½½½½11—3½	Bandle	1 0 ½ 0 0—1½
Stice	1 1 1 ½—4½—8	Gastright	0 1 1 1 0—3 —4½
Eager	½ 1 1 0—3½	Watkins	1 1 1 1 1—5
Dickey	0 1 1 ½ 1—2½—6	Stubbs	0 0 1 1 ½—2½—7½
Tiepel	1½½1½0—3	Perry	1 0 1 1—3
McMurchy	1 1 1 1 1—5 —8	Bookout	½ 1 1 1 1—4½—7½
Linneman	1 1 ½ 1 1—4½	Cody	0 0 ½ 1 1—2½
Voris	½ 1 1 1 0—3½—8	Bogardus	1 ½ 1 1 1—4½—7

Carver 00100—1 and Stark 10100—2—3. Ties on 8: Meaders 1½1—2½ Stice ½11—2½—5 and took first. Voris 101—2, Linneman 0w, Tiepel 0w., McMurchy 00w. Ties of 7½ divided second, Cody and Bogardus third.

Extra.—No. 32—5 singles, 18yds. rise, 3 traps: Eager 4, Vergis 4, Bogardus 3, Gastright 4, Linneman 4, Dickey 4, Bradley 5, Davis 2, Elliot 5, Chamberlin 1, Perry 4, Judd 4, Stark 4, Erb 4. Ties on 5 for first won by Stice with 3. Ties on 4 for second won by Gastright with 6.

No. 33—5 singles, 18yds., 3 traps: Sawyer 3, Eager 3, Bogardus 4, Cody 1, Nichols 3, Davis 1, Stark 3, Gastright 2, Bandle 5, Meaders 4, Tuttle 3, Leavens 4, White 4, Dickey 1, Chamberlin 4, Stice 5. Watkins 4, McMurchy 5, Vergis 4, Linnemann 5, Elliott 3, Tiepel 4, Erichson 4, Downey 2, Judd 5, Carver 5, Cook 2, Callahan 1, Cardona 2, Ackerman 3, Penrose 4, Bradley 3, Perry 3. Ties of 5: Bandle, Linneman and Carver divided on 3. Ties of 4: Out of 14 Tiepel broke 13, Meaders 11. Ties on 3 won by Perry.

No. 34—7 single clay-pigeons, 18yds: Eager 6, Gastright 7, Vergis 5, Stark 7, Perry 5, Linneman 5, Dickey 3, Judd 5, Stice 6, Bradley 5, Davis 2, Bandle 5, Chamberlin 3, Erichson 4, Downey 4, McMurchy 5, Elliot 5, Tiepel 6, Bogardus 7, Cody 4, Essig 5, Meaders 7, Watkins 5, Carver 5. Shoot off: Bogardus won on ties of 7, Eager, Stice and Tiepel on ties of 6, Linneman and Watkins on ties of 5.

No. 35—5 singles, 18yds., 3 traps: Meaders 3, Shirley 5, Bandle 4, Eager 5, Watkins 3, Tiepel 4, McMurchy 4, Bookout 5, Dickey 3, Perry 2, Stark 5, Stice 5, Vergis 4, Sawyer 2, Light 3, Elliot 4, Chamberlin 3, Carver w, Gastright 3. Ties on 5 for first won by Stark and Shirley. Ties on 4 for second won by Bandle, McMurchy, Tiepel and Elliot. Ties on 3 for third won by Chamberlin.

Extra Event, Feb. 12—Match for $50 between O. R. Dickey, of Boston, Mass., and Capt. E. E. Stubbs, of Gainesville, Ark., at 25 single clay-pigeons:

Stubbs	0011011111000111001011111—16
Dickey	1111111101111111111101110—22

NATIONAL GUN ASSOCIATION.

Editor Forest and Stream:

At the second meeting at New Orleans the following were appointed a Committee on Organization, one from each State and Territory, who shall be Second Vice-Presidents of the Association: Maine, Col Farrington, of Portland; New Hampshire, Dr. C. H. Gerrish, Exeter; Massachusetts, C. M. Stark, Winchester; Connecticut, C. M. Spencer, Windsor; Rhode Island, E. W. Tinker, Providence; New York, J. Fisher, Buffalo; Pennsylvania, W. H. Bradley, Bradford; New Jersey, Al. Hertzog, Jersey City; Delaware, E. Von Culin, Delaware City; Ohio, Al. Bandle, Cincinnati; Illinois, B. B. Organ, Chicago; Indiana, Ed. Voris, Crawfordsville; Missouri, R. W. Main, Fulton; Michigan, E. S. Holmes, Grand Rapids; Wisconsin, Mr. Phillipps, Chippewa Falls; Texas, C. Erichson, Houston; Louisiana, J. K. Renaud, New Orleans; Tennessee, A. Meaders, Nashville; Kentucky, J. Barbour, Louisville; Mississippi, D. N. Hebron, Vicksburg; Arkansas, Geo. Read, Sunnyside; Florida, E. A. Crawford, Tallahassee; Alabama, Judge Randolph, Montgomery; Georgia, Wm. G. Cooper, Savannah; South Carolina, E. Gibbes, Columbia; North Carolina, J. W. Jordan, Asheville; Virginia, S. R. White, Norfolk; West Virginia, Capt. West, Parkersburg; Minnesota, W. H. Skinner, Waseca; Nebraska, F. S. Parmele, Omaha; Kansas, F. A. White, Topeka; California, J. K. Orr, San Francisco; Colorado, Geo. B. Dougan, Leadville; Dakota Territory, Mr. Rublen, Ellendale; Utah, W. D. Howe, Ogden; New Mexico, J. W. Virgin, San Marcial; Washington, D. C., W. Wagner; Wyoming Territory, Paul Bergerson, Cheyenne; Iowa, Walter Chambers, Davenport; Maryland, Ed. Colston, Baltimore.

From the Committee (of 21) on Rules, Dr. Russell, of Springfield, O., reported the following rules, which were duly adopted, to take effect from date, with the exception that for the balance of this tournament the 10 per cent. from purse rule shall govern

RULES FOR TRAP-SHOOTING.

Rule 1. Referees and Judges—The shooters shall choose two judges, whose duty it shall be to elect a referee. The referee's decision shall only be required in case of the disagreement of the judges, and his decision shall be final. There shall be no appeal from the referee's decision. If, however, the referee does not see the shot, or, from any other cause, is in doubt as to what his decision should be, he shall consult the judges, or such other competent persons as he may select, not being less than two in number, and having no pecuniary or other interests of any kind whatsoever in the referee's decision, either in regard to bets, stakes or shooting score. This proviso applies equally to the judges. The referee may allow a contestant another bird in case the latter shall have been interfered with, or may, for any reason satisfactory to the referee, be entitled to it.

Time at Score.—Each participant in a shooting match shall hold himself in readiness, and come to the score prepared to shoot when his name is called by the scorer. If he be longer than three minutes it shall be discretionary with the referee whether to allow him to shoot or not in the match.

Scoring.—The judges shall each be provided with a red and white flag or guidon. They shall raise the red flag to indicate a broken or killed bird, and they shall raise the white flag to indicate "lost" bird; they shall raise both flags to indicate a "no" bird or an "imperfect" bird. The scorer shall promptly repeat his score in a loud tone of voice.

Rule 2. Cartridges—It shall be the duty of the referee to examine cartridges, to ascertain the amount of shot used by each shooter at any time during a tournament, when requested to do so by a contestant.

Rule 3. Traps—Five shall be used, set in an arc of a circle, level with the ground, five yards apart, numbered from left to right; the fourth notch, or a velocity equivalent thereto, shall be used (excepting for trap No. 3, where the third notch shall be used) with the projecting arm of the trap not elevated over 15 degrees.

Rule 4. Traps Nos. 1 and 5 shall throw across the line drawn from the shooter to trap No. 3, the crossing point being not over 25 yards from the shooter; trap No. 2 shall throw left-half quartering; trap No. 4 shall throw right-half quartering; trap No. 3 shall throw straight away.

Rule 5. Double birds shall be thrown from traps Nos. 2 and 3; ties from traps Nos. 3 and 4. Trap No. 3 shall be set at about 15 degrees elevation; traps Nos. 2 and 4 at about 20 degrees elevation.

Rule 6. Double Birds—1. In case one be a fair bird and the other an imperfect one or no bird, he must shoot at a new pair; both birds must be sprung at once, otherwise they shall be "no birds." 2. A shooter firing both barrels at one bird, in succession, shall be scored lost birds. 3. If both birds are "killed" by the first shot or barrel, they shall be scored "no birds;" if by the second barrel, they shall be scored first "lost," second "dead."

Rule 7. Ties on single birds shall be thrown from traps Nos. 1, 3 and 5.

Rule 8. Screens—No screens or netting shall be used; "back stops" may be provided for trappers, not to exceed ten yards from the end traps, and not to exceed three feet in height.

Rule 9. Broken Birds—No clay-pigeons shall be examined for shot marks; birds shall be scored lost unless broken distinctly in the air.

Rule 10. Imperfect or no Birds—If a bird be broken by the trap, it shall be optional with the shooter to accept the same; if accepted, the result shall be scored. Birds—The shooter shall be allowed another bird under either of the following contingencies. 1. In single bird shooting, if two or more birds are sprung instead of one, and the shooter does not fire (but if he fires he shall be scored). 2. If the bird is sprung before or at any noticeable interval after the shooter calls "pull," and he does not fire at it (but if he fires the bird shall be scored). 3. If the bird does not fly 30 yards from its trap, passing over a line (imaginary) at a distance of 10 yards from the traps and 4 feet high, and the shooter does not fire (but if he fires the bird shall be scored). 4. If in the judgment of the referee the shooter is baulked by accident or otherwise. 5. If the shooter's gun, being properly loaded and cocked, does not go off at any cause whatever, excepting through the fault of the shooter.

Rule 11. Pulling—When shooter calls "pull" the trap shall be instantly sprung, or the bird may be refused. If pulled without notice, or more than one bird loosed, if the shooter fires he must abide the consequences. If he fails to shoot when trap is properly pulled it must be scored a lost bird. The trap puller shall stand from four to six feet behind the shooter, and shall use his own discretion in regard to which trap shall be sprung to each shooter.

Rule 12. Purses—To be divided in fifty, thirty and twenty per cent., unless otherwise agreed upon.

Rule 13. Bribing Trappers or Pullers—Any shooter convicted of an attempt to bribe, or in any manner influence the trappers or pullers, to be barred from all further contest during the tournament.

Rule 14. Rise—Shall be 18 yards for singles and 15 yards for doubles; ties at 3 yards additional up to the limit of handicap.

Rule 15. Handicap—All winners or dividers of first money shall be handicapped two yards; winners (or dividers) of second money shall be handicapped one yard; maximum handicap 22 yards. If a shooter shall win at the maximum handicap, all others handicapped shall step in one yard.

Rule 16. Ties shall be shot on singles at three birds each; on doubles at one pair.

Rule 17. Position of Gun—The gun shall be held below the armpit until the shooter calls "pull;" otherwise, if challenged, it shall be declared a "lost" bird, whether hit or missed.

Rule 18. Loading of Gun—Charge of powder unlimited; charge of shot not to exceed 1¼ oz. Dixon's standard measure, No. 1106 or 1107, struck off. Any one using a larger quantity of shot shall forfeit all entrance money and rights in the match, and shall be subject to further action by the management, as provided in the Constitution and By-Laws.

Rule 19. Handicap of Gun—No guns larger than 10 bore shall be allowed. Guns of 12-gauge, weighing 8 pounds or under, shall be allowed two yards.

Rule 20. Misfire—In case of misfire through no fault of the shooter another bird shall be allowed.

Rule 21. Entries—All entries shall close at the firing of the first gun. In large international or interstate tournaments, all entries shall be made before 6 P. M. of the day preceding the shoot, by depositing 10 per cent. of the entrance fee, which shall be forfeited to the management if the entry is not completed before the firing of the first gun.

Rule 22. Challenging—None but contestants in a match shall be allowed the right of challenging.

Rule 23. Danger—If the bird is thrown so that to shoot in proper time it would endanger life or property, the referee shall allow another bird.

Rule 24. Closing a loaded gun before going to the score, or failing to remove a loaded cartridge before leaving the score, shall subject shooter to fine of $1. On single birds one barrel only shall be loaded; should more than one barrel be loaded in single bird shooting, the bird shall be scored lost.

Rule 25. Class Shooting—All sweepstakes shall be class shooting, unless otherwise specified.

Rule 26. In all tournaments conducted by the Association 5 per cent. shall be deducted from all purses for the benefit of the Association; clubs shall deduct 2 per cent. in club matches should the club so elect.

Rule 27. Fines—A fine of one dollar to be added to the pool, shall be rigidly enacted for any of the following acts of negligence: A. Pointing a gun at any one under any circumstances. B. Firing off a gun, except when the shooter has been called to shoot and is at the mark. C. Closing a gun with cartridge in before arriving at the mark, or when in the act of closing it pointing it toward the shooter or spectators. D. Quitting the mark without extracting a loaded cartridge unfired. E. Having a loaded gun anywhere on the ground except when at the mark. F. Should any contestant attempt to take any undue advantage of a shooter when at the score, in order to confuse him to lose a bird, or should any contestant create or participate in any disturbance, or loud, boisterous wrangling during a shoot, he shall be fined $5 or expelled from the Association in the manner provided for in the constitution and by-laws.

Rule 28. Paying for Birds—The price of birds shall be deducted from the amount of each separate pool or sweepstakes, unless otherwise specially agreed beforehand.

Rule 29. Live Birds.—All birds shall be shot from ground traps, which shall be set 5yds. apart. Rise 25yds. Use of one barrel. Boundary unlimited. In case of challenged bird the shooter shall be allowed three minutes to gather the bird.

Rule 30. Birds on the Wing—In double bird shooting, the birds shall be on the wing when shot at. A bird shot on the ground shall be scored lost. Double birds to be shot at 21yds. rise, boundary unlimited; 3 minutes allowed to gather birds if challenged.

Rule 31. Ties—On single birds, 25yds. rise; doubles at 21yds.

Rule 32. If a bird is shot at by any person except the man at the score, the judges and referee shall decide whether it shall be scored lost or the shooter allowed another bird. When traps are sprung, should bird refuse to fly after a reasonable time, the shooter may call "no bird."

Rule 33. Gathering Birds—It shall be optional with the shooter to gather his own birds or appoint a person to do so for him. In all cases the birds must be gathered by hand, without any forcible means, within 3 minutes of the time it alights, or be scored a lost bird. All birds must show shot marks if challenged.

Rule 34. Team Shooting—The teams, in team shoots, will be called to the "score" in the order designated by the Executive Committee; said order will be determined by the dates of original entry, teams being allowed to choose accordingly; the members of the team will be called to the "score" in the order designated by their respective captains, each man shooting at singles 5 birds in succession, and then (when all teams have finished shooting at single birds) the members will, in a similar manner, finish their scores at the double birds.

Rule 35. Teams—In team championship matches teams of four must be residents of the same State, and in twin-team championship matches both must be residents of the same county or parish. Any State or county can enter as many teams as they see fit.

It was voted that the Association accept the celebrated Bogardus cup, offered to the National Gun Association to be shot for as an individual championship cup at all tournaments given by the National Association in the next two years. Conditions, 50 singles, 25 doubles, National Gun Association rules to govern. The winner the greatest number of times during the ensuing two years to keep it permanently.

Articles of incorporation of the above Association were duly filed in Covington, Ky., Feb. 28, said incorporation to date from March 4, 1885. The requisite papers were drawn by T. H. Mackoy of this city, counsellor at law, at the suggestion of the well known sportsman "Gloan." The committee on organization, on rules, and on constitution

are requested to send their acceptance or declination, also their opinions and suggestions as to changes in rules, etc., at an early date to the undersigned. Dr. Carver suggests the following important modification of Rule 25, viz.: "In handicap sweepstakes there shall be no class shooting. In championship matches there shall be class shooting and no handicap of previous winners."

Suggestions are invited as to the best places for holding a series of twelve inter-state tournaments—guaranteed purses—under the auspice, of the National Gun Association, beginning at Cincinnati, May 5, with wild pigeons and clay-pigeons, guaranteed purses $500. Stock certificates will be ready for delivery March 15.

Subscriptions should now be sent to me, either by payment in full, of $5 per share, or 10 per cent. ($0 cents per share), and the balance in monthly installments of $1 or 10 per cent. when more than one share is taken, beginning April 1 next. Annual dues of $1 are payable May 1, 1885. The first inter-state tournament will be given by the Association May 6 to 10 in this city. Total subscriptions, thus far, 210 shares, $1,050. Full prospectus will be published about April 1 next. When incorporated, the treasurer must furnish a $5,000 bond.

J. E. Bloom, Treasurer pro tem.

Box 1292, Cincinnati, O.

WASHINGTON HEIGHTS VS. KNICKERBOCKERS.—Match between the Washington Heights and Knickerbocker Gun Clubs. Teams of 11, 10 live birds, 5 traps, 16yds. rise, 80yds. boundary. The day being fine there was a good attendance.

THE AMERICA CUP.

THE long-expected challenges from Genesta and Galatea have at length been received and accepted, and it is now a certainty that there will be one if not more contests for the Cup next September. As the challenges did not arrive on the Aurania with Com. Bennett, he had cabled to London, and in return received the challenges given below. At the meeting of the N. Y. Y. C., on Thursday, Feb. 26, Com. Bennett presided, a large number of members being present. The challenges were read and Genesta's was accepted, and a committee, consisting of Messrs. Philip Schuyler, J. F. Tams, Jules Montant, C. H. Stebbins and J. R. Busk, were appointed to attend to all the business of the race. Galatea's challenge was also accepted and referred to the same committee, so that if Genesta fails to win the Cup a race or races will be made at once with Galatea, the six months' notice being waived.

Mr. Geo. L. Schuyler, the only survivor of the original owners of the America and donors of the Cup, spoke of the fair treatment that the America had received when in England, and gave some incidents of her races there, expressing a wish that their representatives might meet with a similar reception here.

The full text of the challenges was as follows:

18 Cranby Gardens, S. W., London, Feb. 26.

To Charles Minton, Secretary of the New York Y. C.:

Dear Sir—Referring to my letter of the 6th of December last, I now beg to challenge on behalf of Sir Richard Sutton, Bart., and Lieut. Henn, R. N., for the America Cup in accordance with Mr. Schuyler's letter of Jan. 4, 1883, embodied in your letter of Feb. 15, 1882. Sir Richard Sutton challenges on behalf of the Royal Yacht Squadron, of which he is a member, and Lieut. Henn on behalf of the Royal Northern Y. C., of which he is a member. The regatta courses of both these clubs are on the sea or upon the arms of the sea, and are practicable for yachts of 330 tons. I inclose letters from the secretaries of the Royal Yacht Squadron and the Royal Northern Y. C., authorizing Sir Richard Sutton, Bart., and Lieut. Henn, R. N., to challenge as representing these clubs.

Sir Richard Sutton's Genesta is cutter rigged, and her dimensions are, length on load waterline, 81ft; beam, 15ft.; depth moulded, 11.75. Her tonnage, according to the Yacht Racing Association rules, is 80 tons. It is not possible to comply literally with paragraph 11 of the conditions, as there is no such thing in this country as a Custom House certificate of measurement, but I inclose a certified extract from the ship's register in which her dimensions and tonnage are stated. The register itself, being the title to the vessel, obviously cannot be sent. The Genesta's dimensions are also given in Lloyd's Yacht Register for 1884, which register is deemed official.

Lieut. Henn's yacht, the Galatea, is to be cutter-rigged. Her dimensions are: Length on the load waterline, 86.80ft.; beam, 15ft.; draft extreme, 13,50ft.; depth moulded blank in copy. A certified copy of her dimensions is inclosed. It is intended that Sir Richard Sutton's challenge shall take priority of Lieut. Henn's challenge. Therefore if Sir Richard Sutton's yacht is fortunate enough to win the Cup, Lieut. Henn's challenge, under the conditions of the contest paragraph, necessarily falls to the ground; but should Sir Richard Sutton's cutter yacht be beaten, it is proposed that the match with Lieut. Henn's vessel shall take place as soon as practicable after those with Sir Richard Sutton's vessel. It is further proposed that the matches with the Genesta shall be sailed between Aug. 20 and Sept. 1, and those with the Galatea before Sept. 16, the latter date being within seven months of the date of this letter, as required by the eighth paragraph of the conditions. It is also proposed that each match shall consist of three races over the same course on different days, with at least one intervening day, either yacht winning two out of the three races to be the winner. As it was the intention of the donors of the Cup, as expressed in Mr. Schuyler's letter of Jan. 4, 1882, that the contest for its possession should be sailed over an open sea course, it is the wish of the challengers that an ocean course should be selected free, so far as practicable, from all complications as to tides and shallow water. The challengers further suggest that the time allowance between the competing yachts should be the mean of the time ascertained by the New York Y. C. and the Y. R. A. rule of measurement and time allowances.

It is very important that the details of the races should be settled under the ninth paragraph of the conditions, because in the following paragraphs there is a condition which might give advantage to the holders of the Cup, namely, the condition which would enable them to name their representative at the time of the start, and then to select their vessel according to the weather. The challengers themselves do not attach much importance to this condition, but it is obviously desirable to avoid anything in such contests which might have the appearance of giving the advantage to one side. The challengers therefore respectfully suggest, for the purpose of settling the details referred to in paragraph nine, that each party should name a representative with a referee mutually chosen. The challengers think that Mr. G. L. Schuyler, the surviving donor of the Cup, would be the most appropriate person, if he would undertake the office, to act as referee; and if this suggestion meets with the concurrence of the members of the New York Y. C., the challengers name J. M. Woodbury, Fleet Surgeon of the Seawanhaka Y. C., as their representative.

In conclusion, I am to add that the challengers, desiring that these contests should be a true test between the American and English types of yacht, will do everything in their power to insure that result, and they feel satisfied that their views will be fully appreciated and re-procated by the members of the New York Y. C.

I shall be happy to furnish any information that may be required. I remain, dear sir, for Sir Richard Sutton, Bart., and Lieut. Henn., R. N., yours faithfully, J. Beavor Webb.

Mr. A. Cary Smith was present with the model of a new sloop which he had prepared at the request of the flag officers, and from which they proposed to build. The dimensions of this boat are: Length on waterline 25ft., beam extreme 22ft. 5in., draft 7ft. 9in. She is, of course, a centerboard boat, the handsomest model Mr. Smith has yet designed. She has the plumb stem and sternpost of Mischief, but a longer and lighter counter, and it will be noticed that her proportion of length to beam is very nearly four to one. Her rig will be by courtesy a sloop, but with mast well aft and double head sails. The details of her construction have not yet been decided on, but she will probably be of iron. The plans and specifications are ready, and the work can be commenced at once. The New York Y. C. has shown every disposition to meet the visitors in a fair and sportsmanlike manner, and to accord them every opportunity for a fair race. It is possible that other sloops may be built by members to compete for the Cup, and Boston also is anxious to take a hand in the fight. Should other boats be ready in time, a series of trial races would probably decide who shall defend the Cup, but the chances now are that Mr. Smith's boat will have that honor.

Editor Forest and Stream:

I read in yesterday's *Commercial Advertiser* that Cary Smith has got out the design of a cutter-rigged boat of four beams to be used to defend the America's Cup. Great heavens! Can yachting in America have come to this? What can the New York Y. C. be about?

We don't want any such boat, or any new-fangled foreign rig. Cutter rig forsooth! Give me a good, wholesome jib and mainsail, such as the old Maria had, and a boat that will sail on top of the waves instead of dragging fathoms of useless bottom through the water, and above all let her have plenty of beam And just think of it! Victory by chance in such a boat as Mr. Cary Smith's would mean defeat; for would we not have taken a leaf out of the foreigner's book? Go to!

New York, March 3. Punchbowl.

THE CRUISE OF THE TAME GOOSE.

THE hay seed, which sailors claim sticks a long time in a landsman's hair, was pretty thick in mine when I undertook a cruise in the Tame Goose, and it was natural that it was so, for I left the hay field where with the men I had harvested a big crop, and with two stout, middle-aged friends went off for a few days' cruise. My friends the Politician and the Legal Luminary, were entirely inexperienced in the art of sailing, so in blissful ignorance trusted implicitly in me, and were unsuspicious of danger. They expected a jolly good time, free from care, and full of lazy enjoyment. They pictured bright summer skies, gentle, favoring breezes and smiling waters, and as we jogged along over the miles of road that led to the bay in a wagon loaded with our outfit, many a bright picture did they conjure up in their fertile imaginations of the delights of open-air life, and a cruise on the water in the lovely summer weather.

The sight of the bay reminded me of an occurrence I had seen there a few weeks previous. Two gentlemen, one a lawyer from a large city, the other a professor in a school, obtained permission of a friend to sail his yacht, a sloop-rigged craft some twenty eight feet long. I suppose they deemed themselves sailors in theory, at least, if they were not in practice, for they relied entirely on themselves in their operations. In fact, they were rather distant in manner. They got the boat from its moorings to the wharf, and set all sail. There was a fair sailing breeze blowing, but a little puffy as it dipped down from the bluffs to the water. The wind was from the west, and the two professionals headed the yacht due east. As they sailed away, the trim of those sails was a sight to behold. The port jib sheet was trimmed down and the mainboom hung over the starboard quarter and held there by the main sheet firmly fastened to a cleat. The gods smiled on them for a while, for they went safely straight across the bay about a mile. There the shore stood in the way and they must needs turn. They choose to go north, and shifting the helm without touching the sheets, brought the entire surface of the large sails square to the wind. A wandering puff came along just then, and over they went. At this the boys on the wharf who had been watching the performance without much comment, as if under a kind of restraint, awoke to the ludicrous view of the situation, and indulged in a hearty burst of merriment.

"Oh Lordy," said a kind, looking old lady, "them men are upset and they'll drown, why don't you hurry out and save 'em."

A good-natured captain of a tug steamed leisurely out and towed the craft in, with the two amateurs, who were really not wet above the knees.

My boat was of the same type. Built for use on rather contracted and landlocked waters; built for smooth waters and puffy winds; broad, flat, low, unballasted and air-chambered, whichever side up she wouldn't drown one in such waters. She was 16ft. long, 6ft. beam, 2ft. deep, had centerboard and jib and mainsail. But now we were to take her out for a cruise on the great lakes, and—well, if I had misgivings I didn't share them with my companions.

We completed our preparations on the first day, but the morning of the second found us on a sandy beach at the mouth of the bay. Our course down the great lake was nearly due east, and we intended to hug the shore pretty close. It is a bluffy shore with deep water close up, and no shelter from an incoming storm, except in the harbors where ships go in. The wind was off shore on our starboard quarter and a fine, strong morning breeze. All sail, and the way we skipped down that shore for two or three hours was exhilarating. The bluffs moved behind us in a steady, solemn procession. My crew lounged forward in high spirits, then they lit their pipes and smoked, and finally, as the sun got higher, took a nap. But the wind strengthened with the sun, and pressed the outspread wings of the Tame Goose hard. She began to show her distress by efforts, when hardest pressed, to turn and face her tormentor. Once or twice she ran her lee rail down, and my crew were uncommonly quick in placing their heavy weights on the weather side. It was a clear case of shifting ballast.

"Look here, captain," cried R. from his perch on the weather rail, "can't you take a tuck in this canvas? It draws powerful, and it's most too far to swim ashore."

"I guess I can," I answered, and let up on the tiller, and she came round until her head was square in the wind, the sails shaking and she bobbing up and down and spanking as if mad on the choppy waves.

"Now," said I, "you fellows lay along that boom and tie down the reef points lively," and I started to slacken the halliards.

I've held the opinion ever since that time that the Tame Goose saw a good opportunity to shake some of the afore-mentioned hay seed out of my hairs. And she did it too. The crew scrambled into the cockpit to tackle the boom, but the boom met and tackled the crew. A heavy puff caught the jib with her sheet fast, causing the yacht to pay off on the port tack, the mainsail filled, and the boom went over to starboard with the swing of a sledge hammer. I ducked and escaped with the loss of my hat, R. got a blow on his ear that made him think night had come and the stars were out, and the Luminary's shoulders and head were pressed down on the starboard rail as the swinging boom went over him. Before he recovered position a wave struck the boat with a vicious thud, and sent about a barrel of water square into his face. When I recovered the tiller we were tearing along square before the wind, heading straight for Canada 80 miles distant across the lake. The Luminary was snorting and sputtering, and I caught a side look from him with an expression such as I have seen him bestow on an adversary in a court room.

"By the life," said R., using a favorite expression of his, "that was a stunner. It appears to me we are run away with, and we'll bring up in Canada if you can't halter break this critter we are riding."

"We'll halter her yet," I answered, "if you'll obey orders; but if you two stout fellows are going to act a light pine stick, that you could walk off with on one shoulder, beat you, why, I think the sooner we run ashore the better."

You see I didn't propose to give my reputation as a sailor away to that crew.

On the deck forward lay snugly coiled a light line thirty-five or forty feet long. One end was securely fastened to the knightheads and to the others was attached, by three cords of equal length, a hoop of round iron two feet in diameter. When shaken out a strong canvas bag, four feet long and terminating in a point, depended from the hoop, and there was a lighter line somewhat longer than the first, fastened to the point of the bag. It was a drag or water anchor.

I explained the use of this to R., and sent him forward to handle it. Then I directed the Luminary to let go the jib sheet. His eyes turned aloft as he stooped in the cockpit out of respect to the mainboom, and scanning the canvas he ejaculated: "If you mean me to let go any of those sheets up there I'd respectfully inform you I haven't got 'em to let go."

Proper explanation at last induced him to cast off the jib sheet close to his hand, and bringing the Tame Goose once more to the wind R. let go the drag, the mainboom was lashed amidships, and we put reefs in the sails without further trouble.

We got the drag and stood on our course again and made very fair weather of it, though the wind strengthened till past noon. Then it grew fitful and shifting. Now we would rush along at a tremendous rate for a few minutes, then the sails would flap and the boat toss without way on her. We had run by a couple of harbors and none were within several miles of us; we were hungry and the heating of the hot July sun was fierce. Down on the shore a strip of sandy beach in front of a few cool-looking trees caught the eyes of the crew and they were bent on landing there for dinner. My proposal to take the oars, as it had become dead calm, and row a few miles to a harbor where we could anchor for the night, was rebelliously rejected. They didn't propose to work on this trip. If the wind blew we could sail, if it didn't we could lie still. That beach was a good-looking place for a picnic, and they had been in the boat long enough for one time.

We made a landing easily enough, for, with the centerboard up, we drew only one foot of water and there was nearly a dead calm, and set about getting dinner. It proved a genius at camp cookery, and by the aid of a small, snug fire, made of driftwood, of which there was plenty, we had a dinner that we dubbed good enough for anybody. There is a charm about this open-air cookery and eating that forms one of the finest pleasures of a trip. Only those who have experienced it can appreciate it. It is of too subtle a nature to be conveyed by description to one who has no experience in camping, and he who has, doubtless would rather remember his own good times than read of others'. The Luminary summed up a logical discourse on the subject with this conclusion: "The pleasure," said he, sententiously, "arises from a sense of manly independence. In addition to what we could do before, we are conscious of having conquered the domain of the kitchen." Lucky for his peace that his wife didn't hear that.

We determined to camp for the night. There was no wind on the lake, the high bluff behind us cast a cool shadow on the beach, and a spot of the smooth sand was picked out on which to pitch our wall tent. To my suggestion that there was no shelter for the boat in case an incoming storm should arise, the reply was that such a storm was not likely to arise in this pleasant summer weather. They were tired, and here was delicious rest to be had and no mosquitoes. But "it is the unexpected that happens." Observing my anxiety about the boat, R. offered to draw it on to the beach, and we set to work under his direction. Among the driftwood near by were some smooth, round sticks, and we took three of these for rollers to be put under the boat as she came up on the sand. Stretching a line from the knightheads to a tree a hundred feet distant, R. took another round stick four feet long and about three inches in diameter. At about the middle of the line he got two or three turns of it around the stick and wet and sanded the coils to keep them from slipping. Then a couple of handles were lashed to the ends of the stick at right angles with it, and R. had a really powerful windlass, by which two men could easily draw the boat on to the beach if it was kept on the rollers and on an even keel. This was the work of the Luminary, and we soon had the boat up where it was thought safe in any event.

The Luminary selected the spot whereon to set the tent. The sand, he observed, would be soft to lie on; it had the proper slope to slightly elevate the head; it was an easy spot to drive the tent pins in; it was close to the water and a gentle air even would fan the mosquitoes away. The pipes were smoked out, the blankets spread, and three tired men sought rest. But the Luminary tossed and moaned. "Dum this sand," he broke out, "I can't make it fit my body any way. I thought it a soft bed to lie on, but I believe I could rest better on a rock. There's no give to it." He learned for the first what old campers know, that a bed of sand is about the worst one can spread a blanket on.

As the Luminary afterward expressed it, "Somnus must have roosted with us that night and shadowed us with his wings till the storm god drove him away."

It was about half an hour before daybreak when I awoke. There was a sullen roar of surf in the air. Surges of rain beat on the tent, which was flapping and swaying to the strong gusts of wind. A tremendous northeaster had sprung on us out of the stillness of the night, and our camp was exposed to its full fury. It happened that I had thrown myself across the rear end of the tent, and consequently occupied higher ground than the other two, who lay up and down the slope of sand with their feet to the lake. So when a monster wave, that had gathered its strength out on the lake, rolled on the beach, it rose to the front of the tent, glided under, and with soft but chilling embrace engulfed to the hips the half-awakened R. and Luminary. What might have been said by them the reader must imagine, for another catastrophe choked their speech. With the powerful wave came a gust of equal strength, and in a twinkling the tent lay flat on the sand, burying us all under its folds. A few seconds later three scantily dressed men stood on the beach, in the gray daybreak, exposed to the pelting storm, two of them perhaps querying where the fun of a cruise was to come in.

But our uncomfortable plight was soon reversed. The tent was speedily pitched again on a spot where some bushes and rocks afforded shelter to windward: the leeward end was thrown open, and a rousing fire of driftwood cast its genial warmth and cheer inside. We made a pot of coffee, boiled some fresh eggs, and warmed some rolls in an oven consisting of a tin pail turned down to the coals, and once more warm, dry and comfortable, feasted and smoked, and looked on our situation with composure.

The northeaster lasted all that day, but on the morning of the next the heavens were filled with sunshine, a balmy land breeze was playing over the bluffs, and the level surface of the lake covered with flashing ripples. We were soon under sail, standing down the lake. It was a day long to be remembered by us for the pleasure it afforded. The wind just right, off shore, the water smooth, and the air, the finest tonic that ever braced and soothed tired nerves. The storm had washed and purified it. At noon we made a landing on a shaded beach and got dinner, then set sail again. A couple of hours after we ran into the port of the city at the mouth of the river. Our stay there was brief.

As I watched the boat while the crew were away for supplies I saw a life saved by prompt action and the presence of mind of a tug captain. Seventy-five or eighty yards below me a rowboat was moored close to the wharf by a short line, and a boy seven or eight years old playing near by took it in his head to get into the boat, and going to the stern began a gymnastic performance which terminated in his pitching overboard twenty or twenty-five feet from the wharf. I observed his maneuvers, and though I did not feel that it was my duty to exercise paternal care over all the youngsters that reckless natural guardians choose to let peril their lives on the wharf, I started toward him just before he tumbled overboard. He went down and came up, struggled and again went down. I am no swimmer, and I knew that a plunge for him by me was out of the question, and it was doubtful if I could avail myself of the rowboat in time. But a tug was approaching the wharf obliquely, and the wheelsman took in the situation. A sharp scream of the whistle, a quick word to a man, who threw off his hat and boots and stepped to the bow of the tug, the throttle was thrown open, and the boat seemed to spring toward the drowning boy. Within a few feet from where he had gone down probably for the last time, the tug sheered and the boatman plunged. The tug swung round in a circle and headed again for the spot, and the diver broke the surface of the water and grasped the rowboat with the rescued boy in his arms. The boy was unconscious, but soon recovered. It was neatly done. In the crowd that quickly collected no one claimed the boy. The tug left directly, and it is doubtful if the rescuers received even a "thank you" for their deed.

A crowded port did not please us at all, we seemed to be in everybody's way when we were coming in and going out. I guess the hay seed in the captain's hair showed plainly. He couldn't exactly tell when he had the right of way and when he hadn't. On the whole, he tried to dodge every craft he met. Once he was stubborn and the crew were scared, and a mutiny was imminent. We had cleared the harbor outward bound, and were on our course. But the wind was light and there was just way on the boat. A large steamer was coming in, and we were precisely in her path. She advanced straight on us with a majesty and power that threatened our destruction.

"What are you going to do, Captain?" cried R., as he watched the monster advancing straight on our port side.

"Do?" I answered, "what can I do? The wind won't send us out of his way: we are on our course; we've a right here; we can't get out of the way, sue can; let her, then. That's common sense, and I guess it's law. We won't touch a line or move the tiller a jot; we'll try bluffing. R. you know how that works sometimes."

"By the life," said R., "our hand is too plain for that game, and it ain't good enough."

"If she runs us down," remarked the Luminary, "we'll sue her; it will be a fine case to take before a jury."

The steamer drew nearer, and my crew stood up and were about to begin very vigorous speeches, when I observed the huge, oncoming

mass deviate from her direct line. Gracefully she swerved to starboard and passed us without comment at a safe distance.

I see I must reel this yarn in a little faster, or its length will bear no just proportion to that of the cruise of the Tame Goose.

Our further cruise eastward was of that nature which is extremely enjoyable to those interested, but nothing occurred worth description. We were favored with fair land breezes, smooth water, bright days, could easily make landings for midday meals, and found comfortable camps for the nights. It was a rare bit of out-door life.

But our road had to be retraced. Our boat was too large to be shipped by rail with convenience, and it was too small to venture across the lake to sail up the opposite shore. Besides we liked the mixture of tent and boat life, we were not travelers in search of the new and marvelous but leisurely strollers enjoying the commonplace by the way as we met it. One way was as good as another for us, and who ever looked nature steadily in the face but saw a new expression there. So we turned and sailed for home, but we speedily met a new experience. The westerly winds were no longer fair for us but the most obstinate head winds. They seemed to spite us, too, for they hauled square to the west and tumbled up a little sea. We tried beating, we sailed and sailed and sailed, stretched out into the lake and tacked down to the land. The Tame Goose went through water enough to have made half the circuit of the lake, yet the identical bluffs we looked on in the morning would disgust us with their sight at noon, and at night, as the Luminary remarked, they still put in an appearance. The Tame Goose wouldn't go to windward, her grip on the water was too light, the choppy waves beat her to leeward.

Once we ran several miles out in the lake, thinking we could make by long stretches. We intended to run in and make a landing for dinner, but got becalmed and lay there, taking the fierce blaze of the July sun. The crew became tired gazing at the waste of water and the distant shore glaring in the hot, bright sunshine, and took a nap. I nodded and dozed, too, but with not quite the childlike confidence which the others displayed. I opened a weather eye now and then, and in one of these glances I caught a view to the westward which brought me to my feet, wide awake in an instant. "Tumble up, men, tumble up lively and make things snug; there's a roaring lion coming down on us from the windward," I shouted to the sleepers. It was a July squall, short but fierce, sweeping down from the west, blackening the water as if the shadow of night had fallen on it, and rolling in front a light line of foam that indicated at once its power and speed. A deep, powerful boat might not have humored it with more than a reef or two; but the small, corklike craft we were in needed careful handling. The sails were lowered and snugly stowed, the main boom lashed firmly amidships, and the drag dropped overboard. The first movement of the wind swung the boat head to the storm and fast to the drag, and she rode out the squall, which lasted about half an hour, without shipping a pint of water or turning a single hair of the crew white. We took advantage of a light wind which lingered behind the squall and ran down to the shore and camped.

These persistent headwinds were annoying. Besides, they took time which we could ill afford. We observed that a land breeze usually set in at night, which would be for us a favoring beam wind, and at last we concluded to take advantage of this and sail by night. It was rather pleasant. The temperature was about right for comfort. The sky was mostly clear and the moon fairly bright. We jogged along at the rate of four or five miles an hour, without starting the sheet, though we kept drawing off from land. I thought after a time I would make a short leg and stand down to the shore. My crew were inveterate sleepers and by midnight they were snoring. Soon after the moon set I could hardly trace the bluffy shore in the dim light. The wind drew more ahead, broke into baffling puffs and died away. It was still and gloomy. The canvas hung at rest. Now and then a fish broke the surface of the water. My pipe went out and I nodded and dreamed, and the boat was without a watch.

Something awoke me. Perhaps it was the boom, for it swung idly over my head. May be it was the pitching of the boat, for though there was no wind, there was a long, smooth swell on the lake.

R. awoke and hailed with, "Well, Captain, how are we getting along? Got wind enough, I guess, by the way we're pitching."

"Get up," I answered, "and see what you think about it."

"By the life," said he after a brief pause, "this looks nasty. There ain't a breath of air stirring yet. If my eyes don't deceive me she's poking the end of the jibboom into the wet pretty often."

"It looks dark to the westward," said I, "though there's so much fog on the lake that I can't distinguish a cloud. Look!"

A flash gleamed in the west as I spoke, and revealed for an instant a mass of black clouds, and we heard the low, prolonged roll of distant thunder.

"Captain," said R., "this is the worst scrape we've got into yet. I'd give something handsome to be set down on the shore yonder before this storm breaks on us; I would be willing to pay for the boat if we couldn't save it."

"We couldn't row to the shore in two hours with this swell on," I replied. We've got to fight it out on the lake."

It was very dark and the air so still and dense with fog as to be oppressive. Thunder and lightning rolled and gleamed over a wide stretch of the western horizon, and indicated that the storm would be one of broad sweep. It was decidedly an unpleasant outlook for us. The treacherous lake had lured us three land-men to its bosom only to pour out its fiercest wrath on our heads. It would toss and fill our cork-like boat like a feather. If our boat were only 10ft. longer, flush decked, deep, and weighted low down, we might even laugh at this, bad as it looks. I made an inward vow if ever I sailed the great lake again, it would be in a lighter boat and close along shore, or in one built to brave its worst fury with safety, and make a comfortable home in besides.

The Luminary held the lantern, and R. and I put things in shape. I rejected the plan of holding to the drag, for I judged the storm might not be a brief one and that it might set us shoreward, and I had no taste for a plunge in the breakers on that rocky, bluffy coast. Once to the drag and we could not cut loose and run. We furled the mainsail and lashed the boom over the quarter out of the way of the tiller. The jibboom was short and the jib was set up on its luff, not running on a stay. I went out and cut the lashing at the tack, and the sail swung inboard to the mast. We then close-reefed the jib and passed a lashing through the clew and around the mast, untied the jib sheets and fastened them to the tack. Thus wehad rigged in a short time a snug storm sail to scud under. Lines were coiled down and all made snug on board.

We had not long to wait in suspense. A heavy peal of thunder was followed by a down pour of rain. For twenty minutes it was a falling sheet of water and not a puff of air with it. The storm sail hung dripping from the mast. But I noticed that the dead swell did not subside; somewhere there was a force that kept it heaving. It was getting near time to break, and had the sky been clear we might then have seen the first flush of morning in the east. The rain slackened and it seemed to brighten to the westward.

"I hope," said R., "this is the worst of it. The storm slackens and there's no wind yet."

While he spoke another sound came over the water. It was like the rain beating on the leaves of a forest or on a thousand roofs. A puff struck us and the storm sail filled, and the boat gathered way and turned her prow to the eastward. The roar of the oncoming wind deepened and up to the westward I saw a patch of clear sky with a star set in it, and beneath a waste of water white with foam.

The first blow of the tempest was tremendous. It seemed to press the boat into the water as though it would force it under. Foam seethed around us and over us. The boat quivered and strained, but at length she felt the tug of the little storm sail and rose on the surges and fled away before the wind light and buoyant. Lucky it was for us, then, that we had no main boom swinging over the waves. It would surely have brought disaster to our low craft. The sea rose fast. The gale came from a little north of west, and was one of those summer storms that last but for a few hours, but are very strong. Daybreak was at hand and we welcomed the light. It showed a wild scene to us; the shore, five or six miles distant, white with breakers, and the lake a waste of foam-capped waves rapidly increasing in height. The wisdom of scudding instead of hanging to the drag was apparent. With the wind as it was, we should have been in the breakers off a dangerous headland in two hours if we had drifted, but with steerage way we could keep off enough to run the whole shore down if we could live.

About a dozen miles away was a harbor, two piers running from the outlet of a bay into the lake. We steered for that and directly sighted the lighthouse. Coming down from the windward I thought we could make it. If we missed the channel we would run on the sandbar under the lee of the piers. But we rounded the lighthouse in fine style, stood up the bay and got a good camp, and if ever three men enjoyed a day of rest in a snug camp we did.

After the storm we had a fair wind home, and though a good sailor will find plenty of hay seed in my hair yet, a good deal was blown out in that cruise in the Tame Goose. RED TOP.

SILVIE.—Com. Chas. V. Whitten, Hull Y. C., has just bought the old Silvie, from Mr. Jerome Cartey. The Silvie was originally built as a sloop in 1851, by Geo. Steers, of New York. In 1857 she was altered to a centerboard schooner and again rebuilt in 1868. In 1883 she was thoroughly overhauled and rebuilt at Provincetown, being made keel at that time. Her dimensions are 82ft. 9in. over all, 74ft. 7in. waterline, 24ft. 3in. beam, 6ft. 6in. depth, and 8ft. draft Old tonnage 106.2 tons, and new 52.19. In 1883 the Silvie, then fitted with two centerboards, crossed to England and back. Com. Whitten will probably refit her inside and increase her hoist.

EARLY VOYAGES AROUND THE HORN.

OUR list of yachts that have gone to San Francisco, in the FOREST AND STREAM of Feb. 19, has brought to light another one, as will be seen by the following letter. One of her crew, we believe, was the late Capt. L. F. Zimmerman. Perhaps some of our older readers can supplement Mr. Stevens's letter with further details of the Bettie Bliss, or other vessels that have made the passage. Mr. Stevens writes: "In your article on American yachts that have rounded the Horn you have not mentioned the one which I believe claims to be the first to have attained that honor. I refer to the schooner Bettie Bliss. She was owned by Mr. Geo. B. Rollins, the first corresponding secretary of the Y. C. I understand that Mr. Rollins was ordered to the Pacific for his health. Whether Bettie Bliss was built for that voyage I cannot say. She was a narrow, deep keel vessel, well suited to the purpose. I do not know the date of her leaving New York. She was at San Francisco at the time of a great fire. I do not know the date of this event, but merely that it happened early in the history of California. After a long, exciting cruise in the Pacific, Bettie Bliss was lost in Valparaiso in a norther. Can any of your readers remember any of the incidents of her career? I have heard some of her adventures told, and they made a most exciting and interesting tale. I wish I could recall them with sufficient clearness to give you an outline of them, but I fear I cannot. Cannot some one give the readers of the FOREST AND STREAM an account of this vessel, which deserves a more illustrious place than has been given her?

FEB. 21, 1884. E. A. STEVENS."

LECTURES ON YACHTING.

LAST winter the Knickerbocker Y. C. held several meetings at which Mr. John Hyslop lectured on yacht designing, and not only members of the club, but a fair number of outsiders attended them. This winter the Harlem Y. C. have undertaken a similar series of lectures, two of which have been delivered by Mr. Chas. J. Fagan, an honorary member of the club. In his first lecture, delivered on Feb. 16, Mr. Fagan spoke to a goodly assemblage of yachtsmen, on "Cutter and Sloop," explaining the radical differences in the types, with diagrams showing a comparison of their stability, and the positions of centers in the different types. He also mentioned the various systems of measurement and their effect on both types, and compared the sloop and cutter rig to the advantage of the latter. Mr Fagan's conclusions were in favor of a bulk rule in preference to length.

On Feb. 26 Mr. Fagan delivered a second lecture on yacht designing. Mr. Fagan in speaking of the difference between modelers and designers of yachts gave great credit to the very few successful members of the model school who, unfortunately, when they die, take with them to the grave whatever knowledge they possessed on the subject, if, indeed, that knowledge has not sought a resting place before them; while on the other hand the designer after thoroughly investigating the laws of gravity and buoyancy proceeds to examine and compare the successful and unsuccessful yachts and taking notes of the location of the various centers he is at once in a position to point out the cause of success or failure, while the modeler, still in darkness, is only able to "guess" the reason why. After explaining Simpson's rule for measuring irregular areas and solids, the speaker applied it to the measurement of areas of a plan for a 30ft. yacht. He also explained the various curves of areas in use quoting such eminent authorities as Chapman, Scott Russell, Nystrom, Colin Archer, Griffiths and others.

A NEW CUTTER ON LAKE ERIE.

Editor Forest and Stream:

By looking over the map you will see we have a fine bay one and one-half miles wide by about seven long, of variable depth. Vessels can enter drawing fifteen to sixteen feet of water, yet I can safely say we have scarcely a safe cruising yacht in the bay. There are some very good open catboats (as such craft go), but I can and do cross the bay in all weather in my 12ft. sneak or duck boat, as quickly and as safely as they do. At last, however, we are to have a veritable modern yacht in our harbor, the first, I hope, of a fleet of staunch little ships, as you will see by the following from the Erie *Evening Herald* of the 23d inst.:

"Erie is to have another sailing yacht, and perhaps in time there may be enough persons interested in the sport to organize a yacht club. With our pleasant harbor and facilities for sailing, a yacht club would be an appropriate addition to the organizations here. The new yacht will be a novelty in Erie, and is being built by John Fairbairn, Jr., of this city. She will be constructed after an English model, and will be 35ft. over all, 7½ft. beam, and will draw 8ft. of water. She will be copper fastened and fitted with an iron keel of 4 tons weight, with flush deck and cabin below."

We already have cats, sloops, ketch yawl, gafftopsail sharpies, any and everything but the cutter, and I never saw but one in the bay, her name was Verve, and she came from Scotland last season, on her way up the lakes. But it is safe to say Mr. Fairbairn will have the full rig, as he never does things by halves. He already owns and sails a fine catamaran of about 25ft. in length, very wide, but not wide enough to venture outside the harbor in, and a good sneakbox would drown her; and as all wide seems not to be good in our short jumpy water, Mr. F. is going to try depth with outside ballast. I sincerely hope that more of our wealthy young men may follow in his wake, and that we may see the day when our beautiful waters may be covered with good, sensible pleasure yachts as plentifully as they now are with sturdy fishing craft. HEADLIGHT.

SEAWANHAKA C. Y. C. MEETING.

A MEETING of the S. C. Y. C. was held at Delmonico's on March 2, at which Com. Rogers presided. Mr. D. B. Fearing, Jr., was elected a member. The annual report of the sailing committee was read and accepted. The question of rig allowance, introduced at the previous meeting, was brought up by Mr. Lee, in the absence of Mr. A. Cary Smith, who made the calculations. Montauk had been taken as the standard, and her times over various courses had been compared with those of the sloop, under the usual allowance for size. In England, where mixed rig races have long been known, the allowance that a schooner receives from a cutter of the same tonnage, is two-fifths of her tonnage, or the schooner is rated at three-fifths of her tonnage, and time allowed on that rating. The measurement of the S. C. Y. C. being linear and not cubical, it was necessary to change the form of the expression, and as similar bodies vary as the cubes of their similar dimensions, the sailing length is first cubed, three-fifths of the result is taken, and the cube root is extracted, or expressed algebraically, the formula is $3\sqrt{4.5}\ L3$. For yawls the allowance would be four-fifths in place of three-fifths. Mr. Hyslop spoke of the present method of measuring the sail area of schooners, pointing out that a large portion of the sail area was not measured at present, which amount was in itself an allowance, when competing with single stick yachts. Mr. Elton called attention to the measurement of yawls, which is not provided for in the rules.

The motion was carried to appoint a committee to consider the measurement of schooners and yawls, which, with committee on rig allowance, will report at the next meeting. The date of the June regatta was discussed, and June 13 suggested. Some discussion occurred over the question of a time limit for races, following a motion of Mr. Tams to strike out Rule 32, removing the time limit from all races, but no action was taken. Mr. Tams also presented a motion to add to the rules the clause, "In all races yachts are amenable to rules from the time the preparatory signal is given. The motion to change the classification to a basis of actual length on waterline, instead of sailing length, will come up for action at the next meeting. The secretary read the report of the trustees, in which they recommend that the club keep in commission a yacht of 50ft. length for the use of non-owners, which was referred to the trustees with power to act. Mr. Tams introduced the subject of a squadron cruise, moving that a date be set in advance, but no action was taken.

YACHTBUIDING AT BAY RIDGE.

IN spite of dull times Mr. Mumm has been busy this winter at his yard at Bay Ridge with new work and repairs. Last fall he commenced a sloop yacht which is now nearly completed and has lately been sold to Mr. Thos. Howe, of New York. This yacht measures 46ft. on deck, 41ft. waterline, 15ft. 6in. beam, 6ft. 6in. depth, 5ft. draft, with a good rise to her floor, and shows in many points a marked improvement on the centerboard sloops of a few years since. She will be rigged with jib and staysail, but fixed bowsprit. Her frame is of oak and hackmatack, sided 2½in., moulded 5 and 3½in., spaced 18in., with planking of 1½in. yellow pine. She is well fastened throughout, and shows excellent workmanship. The deck is of 2in. square white pine laid with sideline. The cockpit is finished in mahogany and is of good size. The cabin house gives standing height below over a roomy cabin, out of which opens on starboard side of the trunk, the owner's stateroom, while to port is the pantry and galley. This arrangement leaves the forecastle, which is necessarily very small in this type of boat, entirely to the men, while it gives ample room for cooking in comfort, the ventilation being provided for by a hatch over the galley. All below is finished in pine, varnished. The top of the house is constructed in the manner described last week, of three thicknesses of wood, a method followed by Mr. Mumm in a number of his boats, the upper and lower layers run fore and aft and the middle one thwartships, there being no carlins. The three are well screwed together, with canvas between the two upper layers while the seams of the top are caulked. The absence of carlins is very noticeable inside, adding to the headroom materially, and also to the apparent height.

The frame is now ready for a similar but larger boat for Mr. J. R. Maxwell, owner of the schooner Crusader, to be called Daphire. This yacht is 51ft. on deck, 46ft. waterline, 6ft. 9in. deep, and 5ft. 6in. draft. Her stem and sternpost are sided 6in. Keel 13×13in., frames sided 3in., moulded 5 and 3½in., spaced 18in., with 1¾ planking of yellow pine, and deck of white pine 2×2in. She will be sloop rigged.

The sloop Ideran has also been altered, being raised 8in. in bow, 12in. midships, and 6in. aft, with new deck and topsides, cabin and interior fittings, the latter of mahogany and ash.

The alterations on the schooner Republic are nearly completed. She has been cut in two and lengthened amidships, her board removed and a keel 2ft. 6in. deep substituted, and refitted inside, making really a new keel boat. Side by side with her lies the little cutter Daisy, as well as a number of the Atlantic Y. C. boats.

Mr. Mumm has begun work on a new set of ways just north of the Basin, on the property he has purchased, and will move his yard there shortly. He will have a basin with a good depth of water, which will be a great convenience to New York yachtsmen.

THE STEAM YACHT CORA.

IN the steam yacht now building at Poillon's yard in Brooklyn for Mr. John A. Morris, her modeler, Mr. Phillip Elsworth, starts out in a new direction, as his former yachts have all been sailing vessels. The requirements of this boat are hardly compatible with the best all-around qualities, her draft being limited, while it was desired to secure large accommodations. Mr. Elsworth has turned out a boat resembling very much his yachts, with the straight stem and long wedge-shaped bow; but aft is a notable exception, as being hampered by no rule of measurement, the stern is not sawed off, but finishes in a long and graceful counter. The midship section is well aft, making a short after body. The sheer is quite straight, and the effect is increased by the absence of a bowsprit, there being nothing outside of the plumb stem. Dimensions are: Length over all, 137ft. 6in.; length on waterline, 122ft.; beam, 23ft.; depth, 11ft. 2in.; draft, 7ft.; displacement, 220 tons. The keel is of white oak, 12×12in., with bilge keels and engine keelsons of yellow pine. The frames are double sawn, sided 4in., moulded 8in. at heels and 6in. at head, and spaced 16in. They are of oak, chestnut and hackmatack, with floor knees of the latter wood. The planking is of yellow pine, 2½ and 3in. thick, with ceiling of the same, and treenails are used throughout, with Muntz metal below the waterline. Two pieces of yellow pine, each 4×6in. are worked to form a shelf 4×12in., being bent in and through fastened. The deck beams, also of yellow pine, are 6×6in., with a white pine deck 3×3. The stanchions are of Long Island locust, with rail of oak, the bulwarks at bow and stern being solid, with netting amidships.

On the deck, which is flush, will be a pilot house and smoking room, all of mahogany to match the companions and skylights. Below there will be a collision bulkhead in the bow, and two others, forward and aft of the engine room, making four compartments. The cabins will include a ladies' saloon 13×16ft., quarters for owner and guests, with lavatory, etc., officers' cabins, and forward a forecastle for crew. The headroom below will be 7ft. 6in.

Her engines are double compound, similar to those put in the Sentinel by the same builders, Messrs. L. Wright and Son, of Newark, N. J. There will be two high and two low pressure cylinders, 15 and 28 by 16in. mounted on 8 tapering wrought-iron columns. These columns are nearer at their tops than at the bases, thus acting as braces, while they allow free access to all parts. The crank shaft and screw shaft are of hammered steel, and all working parts are also of steel. The propeller will be 7ft. in diameter. A Gannon's patent surface condenser and a Knowles's pump will be used, the feed and air pumps being attached to the engines. The two upright tubular boilers will be of ⅛in. steel, tested to 125 pounds to the inch. They will be placed side to side athwartships, and so arranged that one or both of them may be used. Her bunkers will carry sixty tons of coal.

The Cora will be rigged as a schooner, with pole masts, and will be enrolled in the Southern Y. C. She will be launched in a short time and will go to Newark for her engines. She will carry a steam launch and three boats.

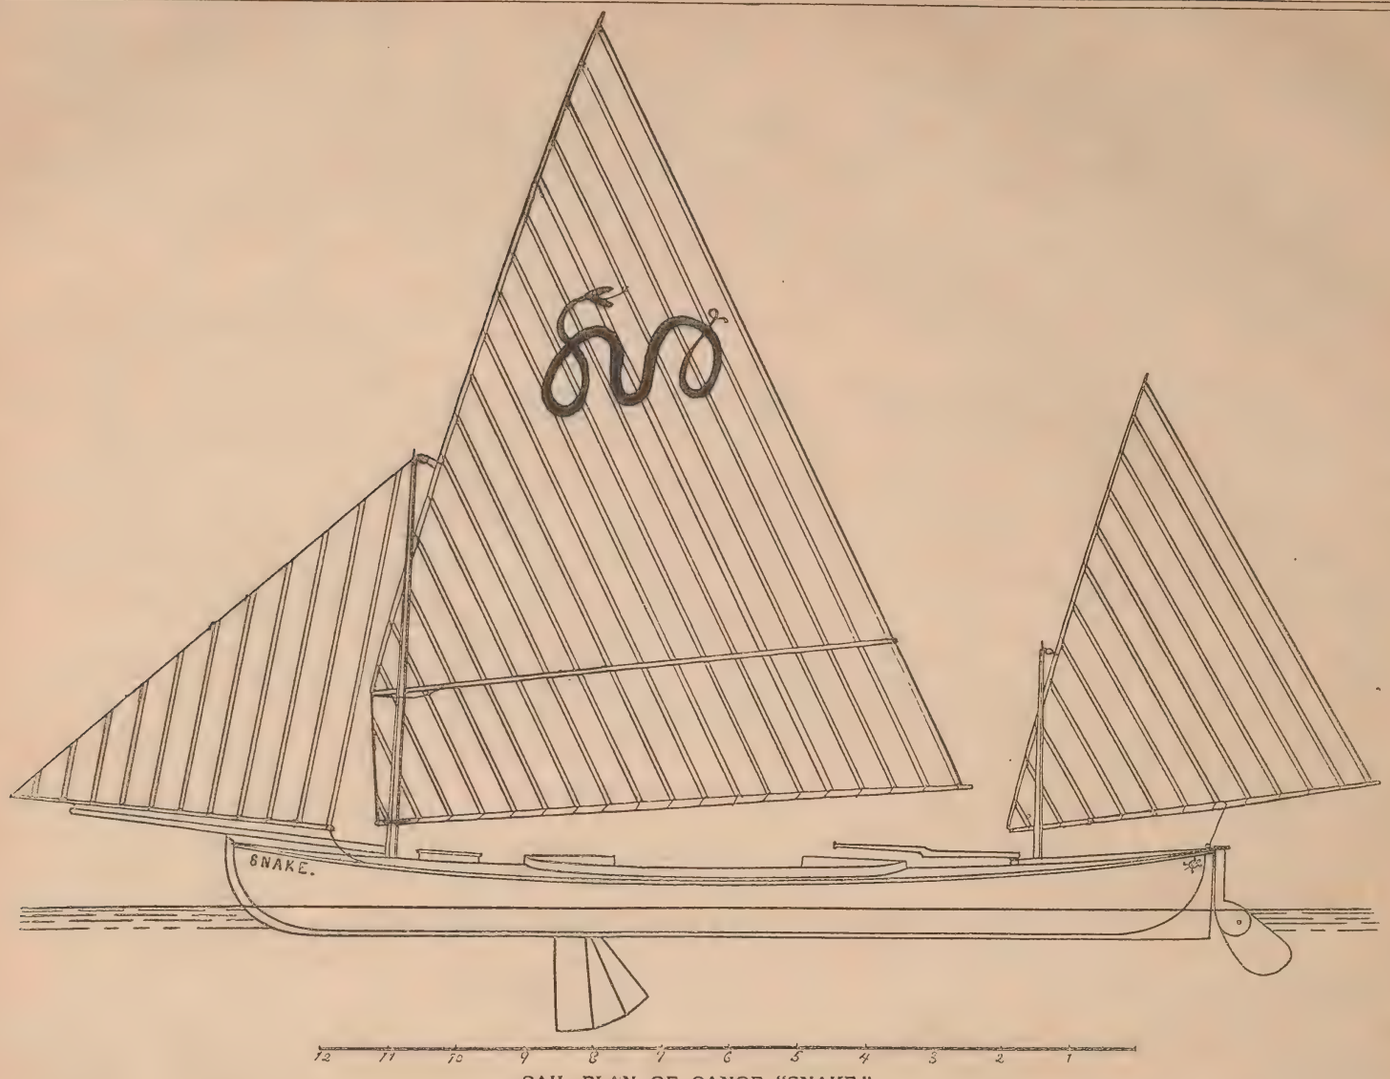
CRUISES OF SMALL CUTTERS.—Mr. Rose, who has command of the Whydah, 26 tons, which left England on Jan. 12 and arrived at Gibraltar on Jan. 28, was the skipper of the famous little 5-tonner Alowette, on her voyage from England to Oran, Africa, and also took out the Zingara yawl, 18 tons, to Marseilles; the Fatima, 5 tons, to Bordeaux; the Sandfly, 14 tons, to Cadiz. He sailed one of the five torpedo boats sent from England to Brazil. The Whydah is a cutter 45ft. long and 11ft. 9in. beam. Her master makes the following report of the run from Dartmouth to Gibraltar: "Left Dartmouth at 4 P. M. on Jan. 12, with a fine breze N. E., got past Ushant the next night, wind freshening from N. E. until it blew a gale with very heavy sea. On the night of the third day out, I hove to, there being too much sea to run, having shipped a sea over the bows when hove to, which made a rush aft washing the grating overboard. The weather moderated the next morning so that I filled on again, and sighted land near Coruna, which was a very fair passage, four days. From the time of getting in with the land I have had nothing but head winds, and frequent gales from the south, on the Portuguese coast, where we usually get the winds from the opposite direction." The Whydah is bound for Cette.

AN ANCHOR FOR SMALL YACHTS.—The folding anchor described in the FOREST AND STREAM of Jan. 1, is now for sale by H. C. Squires, No. 178 Broadway, New York. We have inspected these anchors, of which several sizes, from a small canoe anchor up to one of 16 pounds weight are kept in stock, while they can be furnished up to 25 pounds, and can recommend them to the attention of canoeists, fishermen and yachtsmen. Their compact form when closed allows them to be laid anywhere out of the way, without danger of fouling lines or being knocked overboard. It is claimed that they will hold much more than an ordinary anchor of greater weight. Its holding powers have been tested by a board of naval officers, and has been adopted by the Navy Department and Fish Commission.

IRON BOLTS IN LEAD KEELS.—The danger incurred by fastening lead keels with iron bolts is well shown by the state of the iron bolts lately taken from a small yacht in this vicinity. After three or four years' use the iron, where it passed through the wood keel, was so corroded that it could almost be cut away with a knife, its texture being entirely destroyed. The corrosion seemed worse in the wood keel than in the lead itself. This state of affairs was only discovered in taking out the bolts to add more lead. How many more keels, through ignorance or bad workmanship of the builder, are in the same condition. Under no circumstances should iron be used in contact with lead, but copper or Muntz metal can be always relied on.

A FINE LITTLE CRUISER.—Mirimichi, N. B.—*Editor Forest and Stream:* I have read with great interest the articles in your paper about cutter vs. sloop as well as many other things in it that are to my taste very much. I have always owned a yacht of the sloop or centerboard pattern, which are in vogue about here, but am now going in for a regular cutter for cruising, small size, 22ft. L. W. L. 6ft. 8in. beam, 4½ft. draft, with lead, two tons all on keel. As our local boatbuilders know nothing about the cutter, I have designed my lines and made the model myself, I will not venture to say anything more about it, till I see how she works.—M.

FROM LARGE TO SMALL CRAFT.—The schooner Crusader is advertised for sale, and her owner, Mr. J. R. Maxwell, is building a sloop of moderate size to take her place. Although boats of large tonnage are decreasing in popularity to a great extent there is no reason to mourn over the decline of yachting, as their places are taken by half a dozen small craft for each big one laid up.



BOSTON.—Straurare is the name of Mr. Geo. C. Broome's new cutter yacht now being fitted out at Charlestown, Mass. She is to be 24ft. long, 8ft. wide and 4½ft. deep. McManus & Son are to furnish her sails. Capt. Fred Clayton, of Chelsea, Mass., is to give his sloop yacht Mabel a complete new outfit this season. New mast and spars, and a new suit of sails also by McManus & Son.

CARMELITA.—In spite of mud and snow there was a goodly number of visitors present on last Friday at the screw dock to inspect the Carmelita. Her bottom has been scraped and painted, and she is now ready to start. She is commanded by Captain W. G. Snow, an experienced sailor, and will probably reach San Francisco about the end of June.

FALL RIVER Y. C.—Fall River, Feb. 26.—*Editor Forest and Stream:* The Fall River Y. C. will hold their regatta for cat-rigged boats and sloops under 50ft. waterline, on May 30, 1885. It is to be an open race, the course from 18 to 20 miles over the club course on Mount Hope Bay. Will send sailing rules and particulars later.—S.

BEVERLY Y. C.—At the annual meeting held on Feb. 28, officers for 1885 were elected as follows: Commodore, Gordon Dexter; Vice-Commodore, Howard Stockton; Secretary, W. L. Jeffries; Measurer, F. Elliot Cabot; Regatta Committee, G. H. Richards, W. L. Jeffries, John Dane, Walter Abbot and C. F. Adams.

A VISITOR NEXT SEASON.—Mr. Barlow Moore, the English marine artist, whose yachting sketches are so well known, will visit this country next summer to witness the Cup race.

SAIL PLAN OF CANOE "SNAKE."

PHŒNIX Y. C.—A new yacht club was organized in Chicago, Ill., Jan. 28, under the name of the Phœnix Y. C. The following officers were elected: Commodore, T. M. Bradley; Vice-Commodore, Oscar Krause; Rear-Commodore, Edward Hennessey: Secretary, J. J. Wilson; Treasurer, Chas. E. Brown; Measurer, Isaac Canney. The following yachts were represented: Ina, J. M. Bradley; Zephyr, Hennessey Bros.; O. K., Oscar Krause; Clara B., Chas. E. Brown; Frolic, McCarty & Larson; Peri, R. P. McDonald; Clio, Martin & Sonnewend; Wasp and the cutter Verve imported from England last season.

ULERIN.—Mr. E. M. Padleford, of the S. C. Y. C., former owner of the Mona, 10-tonner, has lately purchased the famous 10-tonner Ulerin. She will be shipped across on a steamer.

SCHOONERS FOR SALE.—Besides Crusader, both Montauk and Fleetwing are for sale through the deaths of their owners, Rear-Commodore Platt and Mr. R. S. Elliott.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

H., Columbus, Miss.—There are no collies registered in the "National American Kennel Club Stud Book."

H. B. W.—We doubt if you can purchase a bark canoe in Philadelphia. For other canoes see our advertising columns.

L., Brooklyn, N. Y.—What preparation can I use to preserve landing nets? Ans. Nets are often tanned with hemlock bark; take them to a tannery. Do not use tar as it makes them too stiff. Mr. W. A. Wilcox, of the American Fish Bureau, Gloucester, Mass., has some preparation for waterproofing nets; write him.

REX, Volusia Co., Fla.—What specimen of bass are the inland lakes of this country stocked with? We take them from three pounds to twenty pounds in size. They are light on the belly and dark green on the back, very large mouth and very gamy. Some call them black bass, some Oswego bass, and "Crackers" call them trout. To me they are identical with the Oswego bass. Please enlighten me. Ans. The fish are black bass of the big-mouth species, which is miscalled Oswego bass in some places.

J. S. R., Philadelphia.—It is impossible to fix upon any one pattern as a standard by which to gauge the shooting qualities of individual guns, because of so wide a diversity in the degree of choke. We have therefore selected the two extremes, a cylinder bore and a very full chokebore, and give below such patterns as good guns of each class (12 and 10-bore) should make. Between the limits of 110 for cylinder and 240 for extreme choke most of our readers will probably find their records to accord with the divergence of their guns from these two bore. A cylinder bore gun loaded with 1¼oz. No. 7 shot should put 110 pellets into a 30-inch circle at 40 yards. An extreme chokebore gun, loaded with 1¼oz. of No. 7 shot should put 240 pellets into a 30-inch circle at 40 yards. A good chokebore, for general shooting, should put between 180 and 200 pellets into the same circle under the same conditions. The patterns given above are with the following charges of powder:

Twelve-Bore.	Ten-Bore.
6½ lbs. to 7 lbs. ...2½ dr. to 3 dr.	7¾ lbs. to 8 lbs.....3½ dr.
7 lbs. to 7½ lbs.....3 dr. to 3½ dr.	8 lbs. to 8½ lbs.....3½ dr. to 4 dr.
7¼ lbs. to 8½ lbs...3½ dr. to 4 dr.	8½ lbs. to 9 lbs.....4 dr.
	9 lbs. to 10½ lbs. ...4 dr. to 5 dr.

PUBLISHER'S DEPARTMENT.

CRUISING AND BLOCKADING. By W. H. Winslow. Pittsburgh, Pa.: J. R. Weldon & Co. This is a story of life at the Naval Academy and of experiences on a man-of-war during the Rebellion. The hero, who achieves a lieutenancy for meritorious conduct, is, we take it, the author himself. The chapters are capitally well written, giving very graphic pictures of how officers and crew acquitted themselves in engagements and in uneventful weeks of blockading. There is a refreshing quality of truthfulness and honesty about the book; it is written because the author had something worth writing, and he keeps up the interest to the end. This is a volume to be cordially recommended to boys (old and young). There is none of the demoralizing "Oliver Optic" nonsense about it. Much of the time was spent on the west coast of Florida, and several of the chapters contain descriptions of shooting and fishing there.

Canoeing.

FIXTURES.

July 24 to Aug. 8—A. C. A. Meet, Grindstone Island.

SAIL PLAN OF THE SNAKE.

AFTER being used from the days of Macgregor on canoes of all models, the jib practically disappeared from use about 1879. The newer rigs of lugs and lateen were all used without it, and when, in 1883, the Snake first sailed under a yawl rig, and made a high record with it, some surprise was created among canoeists at the apparently retrograde movement. In order to carry any area of sail on the Snake it was necessary to use a jib, as her mast tube was so far aft. With this rig Snake has raced successfully for two seasons.

The mainsail, of 50ft., is a Mohican settee, rigged as described in the FOREST AND STREAM of Nov. 13, 1884. The dandy is a lateen of 12ft. and the jib contains 18ft., making 80ft. in all. Mr. Gibson has decided to abandon the jib this season, as it is useless before the wind, and will use a Mohican settee of 60lt., mast 19in. from bow, and a lateen dandy of 15ft., both being fitted with bonnets to lace on for light winds. As he has sailed the Snake so long as to know her perfectly, Mr. Gibson will be able this season to compare closely her performances with and without a jib, and to add some valuable facts to our knowledge of sails and rigs.

A SCHEME FOR CANOE PILOTAGE.

Editor Forest and Stream:

Frequently we read of complaints that all A. C. A'ers are thinking of racing and that little is thought of the cruiser. Now I want to ask you to give me a little space in the interest of cruisers.

I think that there are very few who will question the statement that a knowledge as to trains, condition of rivers, cruisable or not, best season of year to cruise, distance of station or train depot from river, etc., etc., are important to every canoeist contemplating a trip and also that few people, except canoers, really know much about small streams which may be canoeable or the reverse. For some time plans have been suggested and tried to provide for the gathering of this information in the publication of cruises, etc., but nothing of practical utility has thus far been devised.

As suggested in a note to you in June last I feel that I have a plan which will systematize the gathering and dispensing of this information and be a boon to all cruisers.

My idea is that at the next annual meeting of the A. C. A. to have an officer elected to be known as chief canoe pilot or some similar title, whose duties might be to have charge of the pilot bureau of the A. C. A. After this was done, or before at the camp, let the different clubs hold State meetings, the Hartford, New Haven, etc., clubs for Connecticut, the Rochester, Albany, New York, Knickerbocker, etc., clubs for New York State, and so on, and each of these State meetings elect a State pilot, whose duties would be to have charge of the pilots of the State, and also he would appoint in certain districts in different parts of the State district pilots.

Now this may seem to be a great trouble but I am sure such a supposition is a mistake, for in New York State where there would be more districts and pilots than anywhere else, the total number need not be more than twenty. In a rough way I send you herewith a list of canoe pilots in New York State as an example. The use of the names is unauthorized, but I have taken the liberty to put them in as they are mostly well known in canoeing circles, and by so doing better illustrates the system.

Now, in conclusion, Mr. Editor, I want to say that such a system as I here have formulated if applied to a united American Canoe Association, there would be very few places either in Canada or the United States that all particulars could not be gotten by letter in a few days.

I have only one point to add and that is in States where there were no representatives present at the A. C. A. general or local camps I would have the chief canoe pilot appoint a State pilot who would then serve as any other State pilot duly elected.

To the cruising canoeists I wish to present this simple method to assist them and I am anxious to hear the views of others more competent than I, on this subject, in criticism. ROBERT J. WILKIN.

BROOKLYN, Feb. 25, 1885.

LIST OF CANOE PILOTS IN THE STATE OF NEW YORK, WITH THEIR DISTRICTS AND ADDRESSES.

Town.	County.	Pilot.	District Streams.
Amsterdam	Montgomery	Chas. E. Bell	Mohawk R., Schoharie Creek.
Albany	Albany	B. Fernow	Hudson R., Mohawk R., Erie Canal, etc.
Clayton	Jefferson	Rev. O. P. Meeks	St. Lawrence R., Black R., 1000 Islands, etc.
Chateaugay	Franklin	S. L. Hushion	St. Lawrence R., Oswegatchie R., Raquette R., etc.
Glens Falls	Warren	E. W. Hyde	Hudson R., Champlain Canal, Lake George.
Hamilton	Madison	R. K. West	Chenango R., Chenango Canal, Lake George.
Keene Valley	Essex	J. W. Parker	Au Sable R., Adirondack Lakes.
Long Island	Queens Suffolk Kings	J. F. Newman	All the waters of Long Island.
Lake George	Warren Washington	F. A. Wilson	Lake George.
Malone	Franklin	F. S. Cooley	Salmon R., Trout R.
N. Y. City	New York	L. L. Coudert	N. Y. Bay, Hudson R., etc.
Newburgh	Orange	H. R. Knight	Hudson R.
Oswego	Oswego	C. K. Pious	Oswego Canal and R., Onondaga L. and L. Ontario.
Port Jefferson	Suffolk	H. Chickman	Hudson R.
Rondout	Ulster	H. S. Chickman	Wallkill, Rondout, Hudson R., D. & H. Canal.
Rochester	Monroe	F. F. Andrews	Genessee R., Irondequoit L., Canandaigua L., etc.
Sing Sing	Westchester	J. K. Hand	Hudson R., Croton R. and Lake.
Schuylerville	Saratoga	Rev. G. A. Neild	Hudson R., D. & H. Canal, Battan Kills, etc.
Staten Island	Richmond	W. P. Stephens	N. Y. and Newark Bays, Kills, S. I. Sound, Raritan R.
Willard	Yates	Dr. W. E. Sylvester	Seneka L., Cayuga L., Keuka L.
Watertown	Jefferson	J. C. Wilson	Black R.

N. Y. C. C. AFLOAT AGAIN.—The heavy ice in the Bay and Kills has prevented the Marmalade Lodgers from paddling this winter, except one or two trips, but the warm weather of last week cleared the Kills of ice. The season of 1885 was fairly opened on Saturday night, by Dot and Siren in the Jessica, and Jersey Blue in the Lark, who started from the Lodge between 11 and 12 P. M., and enjoyed an hour's paddle by moonlight up the Kills. The new See Bee will come out with a suit of balance lugs of a novel shape, new steering gear devised by her owner, and several other new features. She will be paddled down as soon as the Bay is free from ice, and will be rigged at Marmalade Lodge. The Tramp has a new suit of balance lugs, 105 and 40, the latter a roller mizzen. She will probably have an after centerboard added, as well as airtight tanks. The Mime, late Mosquito, will be practically a new boat, and Guenn, besides being made smaller, has been changed inside, her floor being raised about 6in. above garboards, another air tank added, and a suit of Mohican sails.

THE A. C. A. IN THE WEST.

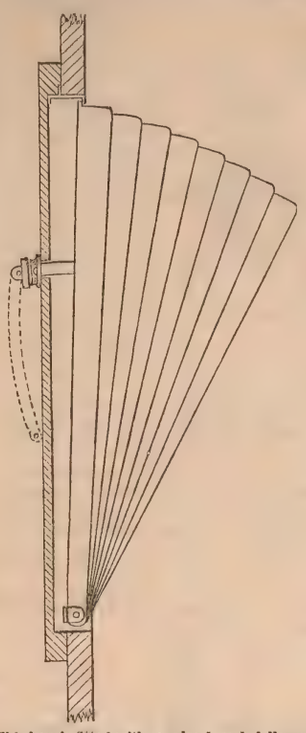
Editor Forest and Stream:

Let me second the Commodore's idea as to the A. C. A. in the West. I believe that more is to be gained for the paddlers of the East and West, individually and collectively, by forming one unbroken association, than by dividing up into the Western Canoe Association, the Order of Cruising Canoeists, etc. "In union is strength" applies here. There might be twenty separate clubs in as many different cities, and the railroad companies would perhaps never know it or respect them; but when these separate parts coalesce and form an amalgamated body, this body has a weight and an influence. By all means, Western men, come into the association. The advantages are many. I do not know what the objections are that cannot be overcome. I am heartily in favor of the plan proposed, and second the motion.

I also approve of the plan of officering the A. C. A., a commodore and three vice-commodores for the West, Canada and East, and possibly later on another one for the South.

The great advantages to be gained number among them, of course, first in importance, unity of action on any subject of interest to our sport, and with a united association, a power can be given by such action which will carry all respect with it. Another point would be the excellent opportunity of working out a thoroughly practical system of "canoe pilots," and thus solve the problem so long discussed.

I shall endeavor to go to Put-in-Bay this summer, and for one would like to hear any objection, if any may exist, to the carrying out of this excellent idea of Commodore Oliver. ROBERT J. WILKIN.



BROOKLYN, N. Y., Feb. 23, 1885.

THE CHILDS FOLDING CENTERBOARD.

THE first attempt to sail a canoe to windward brought out the fact that some radical addition was needed to prevent her sliding off rapidly to leeward. The requirements of cruising, light draft, a floor on which the boat could rest upright when ashore, made a deep keel objectionable, while on the other hand, the center of the boat, near which a centerboard must be placed to be of advantage, was required for sleeping purposes and also to give room when seated. An ordinary trunk in the proper position entirely filled the well, and left no room for the crew. To obviate this has long been a study with canoeists, and many plans have been tried. The centerboard has been moved forward, in some cases a dagger board being used, but this has affected the sailing power of the canoe. Two boards have been used, one forward and one aft, with space between for crew, at the expense of extra weight and complication, besides increased first cost, and finally fan boards of various degrees of merit have been tried.

The board here shown, made by Childs & Co., 114 Water street, New York, has within two years come largely into favor with canoeists, as it enables them to have a thoroughly efficient board for sailing without any interference with the room in the boat, either amidships or forward.

In construction, the board itself is composed of eight leaves, like a fan, all hung on a pivot at the forward end. The lowest leaf is of a single thickness, and to it is hinged a flat rod, ¾x5-16in., by which it is raised and lowered. The other leaves are in pairs, the first pair being above and outside of the lower leaf, and the second pair outside of them in turn, so that when raised they fold together closely. Each pair is united at the after end by a piece of brass, which causes them to descend together, and also keeps out dirt. When raised, the depth of the board is but 2ins., which will allow it to house entirely in the keel, or in a canoe with a keel of but 1in., a trunk is placed inside. This is simply a piece of oak, about 3in. wide, 1¼in. thick, and a little longer than the board. The ends are riveted with copper, to prevent splitting, and a wide groove is cut in the bottom by a circular saw, in which the board houses. This trunk is firmly riveted to the keel, serving the double purpose of stiffening it where weakened by the slot, as well as making a covering for the board. On top of the trunk, at its after end, is a stuffing box through which the lifting

rod runs. This box is fitted with a gland and follower, in which is packed cotton wick, making a perfectly watertight joint, through which the rod works easily. The latter is jointed close to the box, and folds down on the floor when the board is raised. In most canoes as now built, the floor is not only above the top of trunk, but above the rod and stuffing box as well, leaving an unobstructed space for sleeping. The entire board is made of brass, thus avoiding the rusting and clogging inevitable with an iron board. The usual weight is but nine pounds for a board of 1¾ft. area, or sufficient for any ordinary canoe. Larger boards have been made for special boats, and the idea is applicable to sailboats and skiffs as well as canoes.

For several seasons past it has been the custon to build the larger canoes with flat keels from 3 to 4in. wide, and these are excellently adapted for the Child's board, but for the older boats with outside keels, a special form is made which may be fitted entirely outside of the boat, projecting 3in. below garboards. This form of board will be admitted by the A. C. A. to the races, although not technically within the limits. Messrs. Childs & Co. have furnished boards to many of the leading canoeists, and this season a large number are being put into boats of all makes. They seem to have solved perfectly the problem that has so long vexed canoeists, and they have made it possible to combine a high degree of excellence as a sailing boat, with the qualities essential to all cruisers.

The workmanship of the board is noticeably excellent, the mechanism being simple, strong and well designed. Besides centerboards, Childs & Co. are dealers in canoe rigs and fittings of all kinds, and purpose to furnish everything required by canoeists.

PITTSBURGH C. C.—On Feb. 27 was held the annual meeting of the Pittsburgh C. C. and the following officers were elected for the ensuing year: Captain, Reade W. Bailey; Mate, W. Howard Nimick, Purser, William P. Lawrence. Committees were appointed to select a new design for a burgee, to select a club uniform and to arrange for the annual dinner. A trophy was offered by Messrs. Howe and Nimick to the canoe making the best record this season in certain contests, the details of which are to be decided upon later. Other business was transacted not of general interest. This club is looking forward to a lively season, and its interest in canoeing is as strong as ever. Several new canoes will be put in commission and it is probable that the club will be represented at all the local meets in this section as well as at the A. C. A. meet.

CRUISING OUTFITS.—*Editor Forest and Stream:* Some of your readers are no doubt wondering why "Senorita" does not practice what he preaches, and send his promised cruise, but in the meantime I send a list of the outfit taken by a party of seven. Seven canoes, 3 rifles, 1 shotgun, 3 revolvers, a stove (a piece of sheet iron 12×24in., with 3 holes, to be laid on a few stones), 3 tin pails, 2 kettles, 2 frying pans, 1 coffee pot, 8 knives and forks, one dozen each tin plates, tin cups, large spoons and small spoons. We also carried about 100 pounds of provisions, mostly canned goods. The cruise cost us $105, or $15 each. Our outfit next year will be better, as some useless articles will be left behind. Our ridge pole for the large tent was jointed and could be lengthened.—SENORITA.

COASTING CANOES.—Mr. F. Joyner, of Glens Falls, New York, has given this name to a large boat, which he builds for two or more persons, of canoe model, but outside of the Association rules, being 16×36. This boat is similar to Mr. Stoddard's Atlanta, but is smaller. One of these boats, the Rambler, has been owned for some time by Mr. L. R. Ingraham, of the Hartford C. C., and has proved herself very speedy, having made a number of trips on the Connecticut River and Long Island Sound. She is fitted with a centerboard and drop rudder, and rigged with two of Joyner's settee sails and rowlocks, as she is too large to paddle comfortably. She also has deck hatches fore and aft.

PERSONAL.—Mr. Chas. Penrose, R. C. C., writes us from Sydney, N. S. W., under date of Jan. 24. He says that the waters there are suitable for canoeing, but that little is done, open boat sailing being more popular. Mr. Penrose may return to England by way of San Francisco and take a look at American canoeing by the way.

HUMPHREYS' HOMEOPATHIC VETERINARY SPECIFICS

For the Cure of all diseases of

Horses, Cattle, Sheep

DOGS, HOGS, POULTRY.

Used successfully for 20 years by Farmers, Stockbreeders, Horse R.R., &c.

The chart is 20x30 inches, printed on Government survey paper and **mounted on cloth.** Sent postpaid on receipt of price, $1.

FOREST AND STREAM PUBLISHING CO.
39 Park Row, New York.

THE

This important work, now for the first time offered to the public, contains full life histories of all the quadrupeds of this State. These biographies are as different as possible from those too often found in scientific works; instead of being dry and dull

MAMMALS

they breathe the very fragrance of the woods and fields, and give us a close insight into the every-day life of their shy inhabitants. To the lover of nature the work commends itself by its title. The hunter will need it for the complete account it gives of the habits of the deer, the hares and the

OF

squirrels. The farmer should read it because it tells him all about his enemies, the shrews and field mice who devour his crops, and about their enemies whom he would like to protect.

NEW YORK.

This interesting work is published in two volumes, the first taking the reader from the *Carnivora* (flesheaters) to the *Cervidæ* (deer), and the second concluding the subject.

BY

C. H. MERRIAM, M.D.

The volumes are superbly gotten up and are printed in large, clear type on heavy tinted paper.

We offer a few copies for sale at the following prices: Single volumes, paper, $2 each. The two volumes, paper, $3.50. The two volumes, cloth, $5.

Forest and Stream Pub. Co.,

39 Park Row, New York.

The Field Trial Winners of America.

ADMISSION, 50c. CHILDREN HALF PRICE.
OPEN ALL DAY LONG.

Explanatory and Suggestive.

FOR THE CASUAL READER.

Arma virumque cano—"Arms and the man I sing." And, indeed, it would take the genius of a Virgil and the roll of Latin hexameters fitly to tell the deeds of this man, whose arms are shotgun and fishing rod. Go where you will, he is there. You run into him on the crowded city street, encounter him on cars and steamboats; he perches atop the country stage, bestrides the burro, and doubles up like a jacknife in the kanim. Seek out the most distant, most tortuous streams, his line has been wet in their waters; penetrate into the wilderness, the tin can of the sportsman's camp is yet further on. He goes for game—if the fates shall send anything within reach of his ammunition; for fish—if by good fortune a trout shall rise to his fly or descend to his worm. But, good luck or bad luck, game or no game, fish or no fish—fun always, fresh air, ozone, quicker pulse beat, brighter eye, more elastic step, all the multitudinous rewards, which, after all, outweigh the biggest "bags," and tip up the longest "strings." Is it not true that only a poet could tell his deeds as they ought to be told? Perhaps so. Perhaps not. He can usually tell them himself. And he does, with a thousand different pens, in a thousand different ways.

You may read it in the FOREST AND STREAM.

And that is better than if it were put into verse between book covers.

One who does not understand these things might imagine that after being told so often, this story of the man—him with the rod and gun—might in the end become hackneyed. But it is not so. Why? Well for pretty much the same reason, we venture to say, that the fields themselves and the woods and the lakes and the streams never become hackneyed. However that may be, one thing is certain. Our columns every week, and month after month, give ample proof that there is still an abundance to tell of what is seen and what is done afield and on angling waters; and that hosts of people still delight to read the telling, our subscription books show with ever increasing emphasis. The FOREST AND STREAM is in the best sense

A Journal of Recreation.

It tells of the recreation found by busy men, in out-door, open-air life. It *is* recreation to these same men and to others. Explain it how you will, this recreation found in the pages of the FOREST AND STREAM is different from the diversion afforded by other papers. Why? Because (it may be answered again) the recreations of field and stream are always ten times more potent for good than are those found in almost any other way.

Look through the pages and you will see that the departments include a pretty large field. It is a wide scope of subjects. But if you look carefully you will see that the paper, from front cover to back cover is homogeneous. What is in it belongs in it. There is not the mistake of trying to foist upon the reader, who is interested in angling and shooting, a lot of stuff about horse racing or base ball or prize fights. There is no sawdust-ring odor. Everything is redolent of the woods. There are plenty of other papers devoted to the other subjects. If you are interested in them, you need hardly spend time to read the rest of this explanatory advertisement. The FOREST AND STREAM'S field is broad, but it is not broad enough to take in all creation. The editors are perfectly contented with the scope of the paper as it is at present. And now

A Word About 1885.

For fifty-two weeks of the year 1885 we propose to publish the FOREST AND STREAM, and to fill each number with the same rich abundance and variety of reading that may be found in this present number or in any one of the five hundred numbers that have gone before it.

There will be the same delightful accounts of the adventures and misadventures of the *Sportsman Tourist*, and whether the "tour" be across a continent or only across the pasture lot into the woods beyond, the story in either case will be well worth the time it takes to read it. We shall have, now and then, a description of such excursions in foreign lands, but for the most part these columns will deal with what is seen and done in our own country, for that, after all, is what the readers of FOREST AND STREAM are rightly presumed to be most interested in.

The *Natural History* columns will give attention to varied forms of animal life, more particularly such as may come under the observation of sportsmen in their rambles. This department of the FOREST AND STREAM we believe to hold a place altogether unique. It is neither the dime-museum sort of un-natural history affected by the newspapers, nor the abstruse, fine-spun and terribly dry lucubrations of the scientific associations. It is intelligent talk about animal life, intended for intelligent readers.

In the *Shooting* and *Angling* columns (we need hardly say it) will be accounts of hunting excursions and fishing trips—with luck, good, bad and indifferent; discussions about matters mechanical, ethical, sentimental, fanciful and practical; some, after much debating, will be settled; others will be left (and the reader with them) at the end just where they were at the beginning.

The *Kennel* will give in 1885 (as it has given in 1884) the earliest, most accurate and the only unbiased reports of shows and trials, and it will be the endeavor of the editors to maintain for the FOREST AND STREAM in this special branch the position it now holds away in advance of anything else published in this country.

The *Yachting* columns are in charge of an expert, whose highest ambition will be to keep these departments in the place already won for them in the recognized lead of journalism. Though the *Canoeing* interest of the country is of comparatively recent growth, the FOREST AND STREAM fully appreciating its importance, has provided for those who sail or paddle a (pretty generous) corner, which is so full of practical suggestions and recountings of cruising experiences, that a canoeist might almost as well try to get along without a paddle as without the paper in his mail every week.

In a word—this is what we started out to say—in 1885 the FOREST AND STREAM will be newsy, bright, wholesome—a journal of out-door recreation.

Terms:—$4 per year, $2 six mos., 10cts. per copy. Sold everywhere. Make orders payable,

PETER HENDERSON & CO.,
35 & 37 CORTLANDT STREET, NEW YORK.

New Publication.

CANOE

THE FOREST AND STREAM began a year ago the publication of a series of papers on canoe construction, by Mr. W. P. Stephens, of the New York C. C., widely known as an expert on canoe design and building. These papers, having appeared through the year in our columns, have since been rewritten, and with numerous additions are now published in a handsome volume under the title of "Canoe and Boat Building for Amateurs." Mr. Stephens is peculiarly fitted for the preparation of such a work, beginning as an amateur, and having after a long experience of the difficulties attending a learner, taken a prominent place among canoe builders, due both to the model and workmanship of his canoes. Realizing fully the difficulty of explaining to a novice an art in itself far from easy,

AND

and with which he is entirely unfamiliar, the book begins with a description of the various classes of canoes in general use, with their main features and dimensions, and definitions of the terms used in connection with them. Numerous examples of canoes are given, and in connection with them, such plain instructions in designing as will enable the beginner to select intelligently the proper craft for his pur-

BOAT

pose, and to plan her dimensions, details and fittings. To this end designs of all classes of canoes are given, with full dimensions and details. The object has been not merely to enable the tyro to build one boat as described, but to teach him the principles of designing and building in such a way that he may construct such a craft as he desires. Following the chapters on designing, the construction of a canoe is taken up in detail, the tools and appliances being first clearly described, as well as the various materials, after which follows the actual work of building. Every operation is taken up in order, from the selection of the keel to the varnishing of the finished boat, and illustrated with numerous diagrams.

A chapter on sails describes all the varieties in use by canoeists, down to the new Mohican settee, with directions for making, rigging and measuring them, while the method of proportioning the sails to the boat is clearly explained, all the calculations

BUILDING

being worked out in detail. The many minor points of a canoe, paddles, steering gears, rudders, aprons, and camp outfit are also described at length, while a chapter is devoted to canvas canoes.

The subject of boat building is fully treated, a rowboat of the usual construction being taken as an example, and described in all its parts in such a manner as to make clear the principles involved, and their application to any form of boat, either lapstreak or carvel build. Each of the numerous technical terms belonging to the subject is defined clearly when it first occurs, and as the index is full and complete, the book is in itself a glossary.

In addition to the numerous diagrams in the body of the work, twenty-four large plates are printed on bond paper, containing the working drawings of canoes for paddling, sailing, cruising

FOR

and racing, with their sail plans, rowing sailing boats, large canoe yawls, and various boats for special purposes, such as gunning boats, yacht boats, and the widely known sneakbox.

The canoe yawl, a boat between a canoe and a yacht, is illustrated by examples of various craft from 17 to 20ft. long, and suitable for a crew of two or three on a cruise. This class of boat, while little known among us as yet, is admirably fitted for cruising, and will meet the wants of many who object to a canoe as being too small, and yet desire a boat with the same excellent qualities. The boats and canoes illustrated are in all cases among the best of their class, the list of canoes including English, Scotch and American craft, and are all drawn

AMATEURS.

to scale, so as to be available as working drawings. The plates, for convenience in using, are placed loose in a tough manilla envelope and accompany the book.

Pp. 168, with 24 plates of working drawings. Price $1.50. Address,

Forest and Stream Publishing Co.,
NEW YORK N. Y.

STUD FOX-TERRIER
Champion Raby Tyrant,
(K.C.S.B. 11,179.)
Pupped October, 1880. Weight 16½ pounds.

Raby Tyrant is a white dog, with an even marked rich black and tan head. He is a thoroughly game and stylish terrier, possessing a beautifully shaped long punishing head, with perfect drop ears, small eye, rare neck and shoulders, deep chest, well ribbed and muscular quarters, short, straight legs, excellent feet, great bone and substance, with an exceptionally hard and dense coat.

Raby Tyrant is without doubt one of the most successful terriers of the present day. He has been exhibited 67 times, 33 different judges having adjudicated upon him, and has won 47. First 10 cups and specials; 12 second and 2 third prizes. His breeding is undeniable, combining as he does the choicest and most valuable blood that can be obtained. At the stud Raby Tyrant is proving himself eminently successful.

Fee, $15.00.

JOHN E. THAYER, Hillside Kennels, Lancaster, Mass.

Stud Dogs Proper.

ANSWERS TO CORRESPONDENTS.

IT FAILED TO PASS.

THE Yellowstone Park bill, from which so much was hoped, failed of becoming a law. After being amended in the House of Representatives, it went back to the Senate, and a conference committee of both Houses was appointed to agree upon the form it should finally take. This was necessary partly on account of a blunder which occurred in amending the bill in the House. The amendment of Section 1, making the Yellowstone River the boundary on the northeast, was to have been inserted after the words "thence due east to a point," but the words "on said meridian within ten miles of the eastern boundary of the Park as now established, thence due south five miles" were not stricken out. The section, therefore, so far as the northeast boundary of the Park is concerned, was meaningless. The conference committee had several meetings, the last being on Tuesday, the last day of the session, but no agreement was reached, and the bill consequently lapsed.

This is a great disappointment to those who have worked so hard to secure for the Park a law which should efficiently protect it. It leaves the reservation to be neglected for another year. The delay will cost the Government something in money, and the people who visit the Park something in enjoyment. It is a shortsighted piece of neglect on the part of Congress, which is on all accounts to be regretted.

But we have not done with the matter as yet. At the next session of Congress we hope to see another and a better bill for the protection of this region introduced and passed. The people are in earnest about the matter, and are not willing that the Park should be longer neglected. There is reason to believe that the National Park Improvement Company has only been scotched, not killed, and that by devious ways and underhand methods it is trying to regain its hold on the public domain. Although we have had little to say recently about this company we have not altogether forgotten it, and shall watch its doings with a good deal of interest.

The new Superintendent of the Park will have an opportunity during the season that is coming to show what stuff he is made of. He may be sure that his actions will be scrutinized closely. If he does his duty he will be applauded, but if he fails it will soon be known.

It is a satisfaction to know that the public interest in the Yellowstone National Park is now greater than it has ever been, and we believe that the efforts to be made for its protection will have the support of all the best classes of the community.

We intend before long to outline a plan for protection, which we hope may commend itself to those who are especially interested in the Park. If this plan meets their approval it will serve as a basis for future work—work which we are sure will not be without results.

THE SPRINGFIELD ROD AND GUN CLUB.

WE regret to learn that the Rod and Gun Club of Springfield, Mass., has practically committed *felo-de-see*, by an application to the Legislature for authority to change its corporate name to the Winthrop Club. When we first learned of this fact we refused to believe it; but it appears that the club, having grown rich and luxurious, with largely augmented membership, has lapsed into a social club, and the new element has now drowned its original purpose and objects.

The Rod and Gun Club of Springfield has, from its organization, occupied an original and most enviable place in the history of such organizations, and has had a high reputation, not only in this country, but in Europe. It has been second to none as an organization and in the *personnel* of its members. Unique in name, ambitious, with its performances in all it undertook equal to its ambitions, it has stood at the head and has carried itself most honorably and well through all its history.

Started, we believe, in 1872, by such men as the late B. F. Bowles, with Wm. Patton, E. H. Lathrop, S. T. Hammond, R. O. Morris, Wm. M. Williams and others, it has never faltered until now. It has been copied in name and character, but never excelled. Its pledge has always been equalled and surpassed by performance. When it held bench shows, none were better managed, and to none did kennel owners resort with so much genuine pleasure and good will. Attendants upon its exhibitions always relied upon its prospectuses and upon its splendid receptions and entertainments. Exhibitors always felt as if they were leaving home when they left Springfield, carrying with them vivid remembrances of royal care; and leaving, clamored for a "show next year." A genial good fellowship has always clung to it, and its treatment of its patrons has never degenerated into commercial interests. It was always known that a good time awaited visitors at Springfield, and they never felt that their entrance money was what was being reached for. We only wish that some of the kennel clubs who now manage shows would emulate the old-time courtesy and animate their social atmosphere with a measure of the good fellowship that has always prevailed at Springfield.

Lost in these reminiscences, we had almost forgotten our regret, our impatience even, at the great mistake which the club is making. Is it too late to recall this fatal error? The club has made history. Even if it chooses to abandon its activity in a field formerly occupied by it so well, it could live and be honored by its past. Why abandon its history and its achievements by plunging its earned position and reputation into a meaningless name, justified by nothing except newness?

Don't do it, gentlemen.

PENNSYLVANIA is talking about imposing very heavy fines for game law misdemeanors. This would be a mistake. With a heavy fine it will be found almost impossible to secure a conviction; the sympathy is with the culprit if the punishment appears out of all proportion to the gravity of the offense. This is not theory but practical experience; we know of an instance where with heavy fines it was almost impossible to secure conviction, but when the penalty was reduced, arrested persons were convicted and punished, and the law proved effectual.

ON A RUNWAY.—By inadvertence we omitted to give credit for the illustration in our last issue, "On a Runway," to Dr. E. Sterling, who sent the sketch with a pleasant personal reminiscence of an incident in his experience, which suggested the drawing.

WILD RICE.—Of the numerous plantings of wild rice, some have been attended with success and others have come to nothing. The Springfield (Mass.) Rod and Gun Club some years ago sowed wild rice seed in the Connecticut River, just below Springfield, and now there are acres and acres of the cereal lining the river banks clear down to the Sound. The club had greatest success with the seed that was sown in the fall, though that put out in the spring did well. The rice should be sown in shallow water. The experiment of raising the rice has failed in many instances, sometimes because tried on an insufficient scale. We would advise both spring and fall planting, and a liberal sowing of the seed. Care should be taken to secure fresh seed. The results of wild rice culture are so well known, and so many ducking waters have been improved by the introduction of the food, that the enterprise has passed the experimental stage.

HOW TO EXTERMINATE THE STARFISH.—Fish Commissioner Blackford has prepared a bill for the protection of oysters, and it has been introduced at Albany. One section provides for paying a reward of twenty-five cents per bushel for starfishes taken from the oyster beds. The starfish is the greatest enemy of the oyster, and if the fishermen can be induced to gather these marine vermin for twenty-five cents a bushel, the proposed law will do much to keep the supply of oysters up and the price down. But there is a better, surer, speedier and wholly inexpensive way to get rid of the starfish. Let feminine fashion decree that a starfish or a band of starfishes on the hat shall be the style. That will accomplish the desired end. The starfish will follow the song birds.

THE AMERICA CUP.—In spite of the many rumors of new boats to meet the challengers, no orders have yet been given to go on with the work. The plans and specifications are all ready for Mr. Smith's new sloop, but the contract has not yet been awarded. As all the details have been settled, it is expected that the boat can be built very quickly, and that when the hull is ready, the spars, sails and gear will also be complete, so no time will be lost. It is now the middle of March, and over two weeks of the half-year have elapsed without any work being done. To build, rig and test a new boat, even under the most favorable circumstances, requires time, and six months is little enough, without losing part of it in preliminaries.

LET THE BEST BE CHAMPION.—In all other branches of competition where the title champion is used, it signifies the best, the one that excels over all others. When applied to a dog, the term has no such meaning. Usage should be changed so that the champion dog will be known as the best dog, and no dog but the best one known as champion. Last week we gave the outline of a simple method to award the title to the dog that deserves it and to let him wear it only so long as he can maintain his claim against all comers. The plan there mentioned is commended to the attention of all who support dog shows and trials and to the special consideration of the American Kennel Club.

THE MASSACHUSETTS FISH AND GAME PROTECTIVE ASSOCIATION propose to send out to the newspapers of the State notes on natural history, game birds and animals, and shooting and fishing, with the purpose of enlisting the sympathies of the community and diffusing information about the subjects in which the Association is interested. This is a practical and sensible way of increasing respect for the game laws. Such efforts are sure to be attended with good results. There is no more powerful lever than the "country newspaper." An editor whose sympathies are with game protection is a host in himself.

THE DEER-HOUNDING BILL is in the Senate in charge of Mr. Fassett, and the probabilities are that the tourist who contemplates braining a buck on some Adirondack lake next summer will find himself denied that "sport." The exception noted last week provides that in Suffolk and Queens counties deer may be hounded for the first ten days (exclusive of Sundays) in October.

THE MAINE GAME LAW AMENDMENTS are printed elsewhere in this issue. As will be seen several changes have been made, but they have all been in the direction of greater stringency, and a most important amendment is the measure putting jurisdiction into the hands of police and municipal judges.

THROUGH TWO-OCEAN PASS.

VII.—DOWN LEWIS FORK.

ALL night long the wind howled over the lake and among the trees, and when we turned out next morning it was still blowing a gale and the lake was in a turmoil. A few drops of rain had fallen during the night, but not enough to seriously wet anything. Now, however, it was quite cold, and to wash was a serious mortification of the flesh. The train moved out about 8 o'clock and a little later we followed. The trail led south through an attractive open country, full of streams and springs and dotted with clumps of thick willow brush, while upon the higher land appeared the ever present pines. On the left was the lofty ridge of the Red Mountain range, down which half a hundred beautiful cascades hurry toward the river. To the right, beyond the stream, was the steep face of the Pitchstone Plateau—so called from the black, glossy fragments of the decomposed rhyolite of which its soil is largely made up. In the early summer it would seem that this trail must be almost impassable, for it is so low and wet that, except at the dry season, it must be very miry and difficult.

About six miles from our camp is the ford, where Lewis Fork of Snake River is to be crossed, and just before reaching this we had a glimpse of some beautiful falls but a short distance below the lake, and about forty feet in height, as we estimated. The ford was a long one and rather deep, the water coming more than half way up the horses' bodies. We therefore tucked our feet up behind us on the saddle, and rode along with some anxiety lest a false step on the horses' part, or a stumble over some great boulder, should throw one of the animals on his knees, and so wet either the pack or the rider. On the right bank of the river, just above where the ford came out, is a high precipice, partly broken down and its base obscured by a talus of huge fragments of lava, among which old Granny turned off and wandered about for a few moments to the great peril of her legs.

At this point the trail left the river and ascending the hill entered the green timber, and continued for a long distance over the ridges and away from the stream, though at times glimpses of its dark water or of a stretch of foaming rapids were seen from some hilltop. There was considerable fallen timber across the trail, but nothing that gave any trouble. Here, as almost everywhere in these mountains, the fire has destroyed previous forests and their debris now lies thickly strewn amid the living tree-trunks. It is quite curious to observe the different courses taken by the trunks of certain trees. Most of the pines are straight as an arrow, but there are some which are curiously bent. The commonest form is that where the trunk is sharply bent at right angles to the vertical, and then again a foot further on changes once more to an upright course. Or the curve may be less than a right angle, and the trunk from vertical may turn toward the earth, and then by another sharp curve again take a vertical direction, thus forming a rough letter S lying on its side. These curious curves in trees which are in habit so straight as the pines, require an explanation, which it is not easy to give unless the circumstances for observation are favorable. The manner in which they are formed is, however, very simple. They are always found in forests which have been burned over, and there is nearly always an intimate connection between this burning and the bent trunks. As has been said before, the fire which passes over the forest kills but does not consume the trees, and among their dead but standing trunks a young growth of pines springs up. After a while the trees begin to fall, and as they fall they strike more or less of the young trees, which have not yet become stiff and brittle, but are still very springy and readily bent. A certain proportion of the young growth thus overwhelmed is crushed and destroyed, but there are some young and vigorous plants which are caught beneath the tops or branches within a foot or two of the ground and not materially injured, but merely held down. Such trees are sometimes pressed flat to the ground, in which case they usually die before long; but more often they are bent at right angles a few inches above the ground and held there. As time passes, the top of the tree so held tends constantly to grow toward the light above it, and in the course of a few years, if the injury to the plant is not sufficient to kill it or materially retard its growth, all of it which is above the portion imprisoned by the dead tree, will be found to be growing vertically like its neighbors. After a while the dead stick which holds the young tree becomes rotten and finally moulders away. The injured plant increases in size, and there is then nothing to explain how the great forest tree, perhaps a foot or more in diameter, should have grown in such a curious fashion.

The wind still swept over the mountain side in furious blasts, and the forest was still vocal with its strange, weird complainings, an inarticulate murmur of sighs and moans and wild screams, that seemed to be all about us but that we could not trace. At frequent intervals we could hear on the Red Mountain Range, on the other side of the river, the loud snapping and crackling of roots and branches, and then the final thundering crash which told of some ancient tree overthrown by Æolian power.

At length, after a descent of seven or eight hundred feet in about twelve miles, we passed out of the forest into an open park-like country of great beauty. On the broad level meadows the grass grew thick and rank, and on the rolling uplands, though less luxuriant, it was not less nutritious. The trees were beautifully grouped, and the view, though limited by the high hills on either hand and by the turns of the valley to the southward, was very charming and picturesque. But while so attractive to the eye at this season, there were many signs that this was the best time of the year for visiting this valley. In winter the snow falls deep and the weather is severe.

Springs and marshy places are numerous, and in the early summer travel would no doubt be difficult. During the afternoon we passed two lakes—Beulah and Herring—on which great flocks of ducks and geese were seen. Numerous tracks of elk were observed, but they had all been made earlier in the season, at a time when the ground was soft, so that the hoofmarks were deeply imprinted in the soil. As we advanced down the valley the mass of the Teton Range began to appear, and before we had reached camp numerous lofty and snow-covered peaks were in sight. They are wonderfully majestic and imposing, more from their massiveness and abruptness than from any other characteristics, for the needle-like sky-reaching pinnacles of the principal peaks of the range were still concealed from our view by the extremity of the Red Mountain Range. Even at this distance the glacial carvings were beautifully shown, and in many of the ravines on the northern slopes of the mountain, there are still ice masses, which, when examined through the field glass, appear to have all the characteristics of true glaciers.

Camp was made on the west bank of Snake River, in a little clump of pines close to the water's edge. On the west was the broad valley from which rose beautifully terraced hills finally crowned with the stately pine forest, into the depths of which glimpses were given by little glades and openings running back into it. To the south, where the great river makes its turn to run parallel to the Teton Range, the hills draw nearer together, and, at first low and then higher cones and ridges, all sculptured and eroded into curious and sightly shapes, and set off by the dark green of the pines, rise one after another as if to prepare one for the mighty mass of the mountains beyond them. This preparation is, however, in vain, for as the eye rose above the tops of these lower hills, it was still unprepared for the height and grandeur of those beyond.

At this point Snake River is already an important stream and carries the drainage of a very large area. It abounds in trout of great size and beauty, and of superb energy and fire. Enough were caught by the anglers of the party to furnish several meals, and among these was one giant, secured by Saddlemeyer, which I estimated to weigh between three and one-half and four pounds. While I was earnestly occupied in endeavoring to capture a similar one, two great shadows passed over the water near me, and on looking up I saw within a few yards of my head a pair of huge sandhill cranes They manifested not the slightest fear, and alighted on the meadow only a few hundred yards from the camp, where they remained, stalking about for an hour or two in the dignified manner peculiar to their kind.

The wind still blew furiously, and sweeping down from the summit of the Teton range, was laden with the chilling breath of the snow drifts that we saw so far above us. It was very cold, and although we built a roaring fire after dinner was over, this helped us but little, for it was almost at once scattered by the blast. By rigging a canvas manta over the line of aparejos, we made a wind-break, between which and the fire we shivered for an hour or two, and at length turned in.

The next morning while the train was being packed, I took my rifle and started on ahead to see if I could not kill a deer or an elk, for, although the trout were very delicious, it was thought that some good fat ribs would be an agreeable variety to our fare. The trail crossed the river just below camp, and following down the bottom for two or three miles passed over some low hills, and then turned south into Jackson's Hole, always skirting the river valley. On the riffle where the ford crossed, the water was scarcely above the Pinto's knees, and I rode on through the wide willowy bottom and entered the timber, pushing directly up the hill so as to cross the extremity of the Red Mountain Range. Down-timber and marshy spots made progress rather slow and difficult, and everywhere the vegetation showed the greater precipitation of the western slope of the main range.

The mountain side among the green timbers is covered with a thick, tangled undergrowth of plants, from three to ten feet high. Willows grow along every little creek and on each depression or ravine.

Often it was difficult to force one's horse through the underbrush and at the same time retain a seat in the saddle, for the willows and alders made a vigorous resistance. Neither the Pinto nor I liked it much; but at length, after some hard climbing, most of which was done on foot, dragging after me the unhappy horse, the upper edge of the timber was reached. This was perhaps half a mile from the summit of the mountain, though the forest had once extended quite to the crest of the ridge, as was shown by the great charred and rotting tree trunks, long ago killed by the fire, which now covered the ground. By zigzagging my horse up the steep ascent, and winding about among the low ridges that run out from it, I at length reached the summit of the highest peak to the west. Two or three great pines crown the summit, and dismounting here, I paused to survey the country through which we had come, and that toward which we were going.

To the eastward the Red Mountain Range cut off the view, but to the northeast was the valley of Snake River, broad at my feet, but narrowing a few miles further off, until the mountains, closing in, concealed the silver ribbon of the stream's course. To the west was the sombre gray and white mass of the Teton Range, low and rounded toward its northwestern end, with long easy ridges of moderate steepness, and crowned with tremendous fields of snow. The mountains became more and more abrupt to the southward, till the peaks culminated in the Grand Teton and then gradually sank away again, becoming lower and lower in the blue and misty distance. East of the range and directly to the south of my perch on the mountain top, was Jackson's Hole, for many years a spot unknown to white men and one about which fabulous stories were told; by miners of rivers paved with nuggets of gold; by trappers of streams and forests abounding in fur; by hunters of game so abundant and tame that it could be secured without effort. The white man came. The miner washed the sands of the rivers, but they did not "pay"; the trapper caught the beaver and the martin, but did not find the supply inexhaustible; the hunter found that it did not take long to drive away the game. But as it is to-day Jackson's Hole is a lovely spot. At its upper end lies the lake shining like a sheet of silver in the sunlight and dotted with low pine-clad islands. On the west its waters kiss the feet of the frowning mountains which form its shores, but on the other three sides a belt of forest encircles the water, and then back of this belt lie broad meadow lands with groups of trees and low rounded clumps of willows—a veritable park. Still further to the eastward lie low bare ridges, the foothills of the main range, over which the fire has swept, and now rough and difficult with fallen timber. Further still to the east and southeast rises the massive range of mountains, which seems low only by comparison with the stupendous altitude of the Tetons, and in which lies the Continental Divide. Looking down from where I sat on the lake with the tremendous snow-clad mountains rising directly above it, I was forcibly reminded of some of the Inlet scenery in British Columbia, where, as on Jervis Inlet, similar conditions prevail.

The rock of the mountain which I had climbed is a brownish-red rhyolite, which weathers down with a square fracture, forming broken precipices on the sides of all the higher hills. Crossing the ridge and starting down the south side of the mountain, great quantities of drift pebbles of red and white quartzite were noticed within two or three hundred feet of the summit. In descending toward the lake I kept along the mountain side where it was quite steep. Below and to the left was a wide valley, at the head of which was a considerable body of green timber, and a good deal more that was dead. I was riding along slowly, letting the Pinto pick his way among the loose rock, when I caught sight of an animal standing tail toward me, in a little opening among the trees. For a second I thought it was a "buckskin" horse, and the idea flashed through my mind that there was a camp down there, but almost before this thought had taken form, the animal moved its head, and I saw that it was an elk. To slip off my horse on the side furthest from the animal and lead the Pinto out of sight behind a clump of pines was the work of a very few seconds. Then divesting myself of my spurs I crept back to the ridge. In the opening were a bull and two or three cow elk, and further off, moving among the dead timber, could be seen a number of others. Those in the opening were within one hundred yards of the muzzle of my rifle, and I could readily have killed one or two of them. I considered, however, that as I had probably twenty-five miles further to go before reaching camp, it was scarcely worth while to kill a full-grown elk. If I did that, I should either have to load my horse down with meat and walk to camp leading him, or else leave the carcase where it fell, taking only the sirloins. I did not care to do either, and so waited about in the hope that a calf might show itself, for the meat of a calf I could pack behind the saddle and still ride. For ten or fifteen minutes I watched the animals without seeing the one I wished to shoot at. The band were not at ease, but moved about in a nervous fashion, as if they had been recently alarmed at something and had not yet recovered from their fright. They did not feed, but wandered about among the timber, and sometimes two or three of them would take fright and trot a few yards and then stop and stare in all directions. Notwithstanding all this restlessness the band did not move much and still remained within easy range, several of them being always in the open, though most were seen indistinctly through the trees. Suddenly, without any apparent cause, the elk all threw up their heads, seemed to listen and look for a moment, and then plunged into the dense timber. I could hear them for quite a long time as they trotted through the forest, making the dead sticks crack and rattle in their reckless haste, and at length saw them climb the steep ascent near the head of the ravine and pause huddled together on the bare hillside. There were about twenty-five of them, the bull, half a dozen yearlings, as many calves, and the rest old cows. Most of the calves still wore the spotted coat. After standing for a while, looking about to ascertain the cause of their alarm, they turned away again, and slowly clambering up the slope disappeared over the ridge. I was content to have them go. Life—even though it be only that of a beast or bird—is too sacred a thing to be taken except for some good reason. There are enough who are ready to kill; too few who are willing to hold their hands.

The Sportsman Tourist.

UNCLE LISHA'S SHOP.

XI.

IT WAS fairly spring; almost summer as the months go. Some patches and jagged lines of snow yet gleamed among the black growth on the northward steeps and in the gullies of the mountains, but the lower deciduous trees were in a green mist of young leaves, the woodside shade was dappled with the white moose-flowers, and the grass was green in the valley fields. The evenings had grown so short that to make anything of a visit before bedtime, Lisha's friends were obliged to come while daylight lasted. By that light, when the hylas were beginning to ring their shrill curfew, the old man was mitigating some customer's prospective torture by rasping the pegs on the inside of a boot, but to see the contortions of his face, turned aside as he bent over his hidden field of labor, one would think that he was inflicting self-torture, and that every scrape of the float was tearing the shoemaker's own tough hide. He made such a noise with his rasping that he first became aware of visitors when the forms of Joe Hill and Antoine darkened the open doorway. Then came Pelatiah and the Questioner, followed by Solon Briggs, and last of all Sam Lovel came across lots from Beaver Meadow Brook, bringing a dozen fine trout strung upon a birchen twig.

"Wal, Samwill, ben a traoutin', hey?" said Lisha, emptying the scrapings out of the boot, and making an examination of the interior with his hand while he looked admiringly on the handsome fish. "Wal, they 're neat ones, I swan! Ketched 'em in Beav' Medder Brook, did ye?" Yes, Sam caught them there. "Wal, they du say 't fishin' 's oncommon good this year; most everybody 't goes gits a good string on 'em. O, dear me suz! n' I haint ben yit, nor tasted no fish but salt ones son last summer."

"Bah gosh! Ah wish Ah ketch some bullpout or eel, bosc of it, Ah don' care which, me," cried Antoine.

"Wal, Uncle Lisha, you shan't say that to-morrer night," said Sam, seating himself on the cold stove and filling his pipe, "for I'm goin' to take these in to Aunt Jerushy, an' you c'n hev your sheer on 'em for breakfus. Ben to supper, I s'pose?"

"Why, Samwill, I'm a thaousan' times 'bleeged tu ye, but you'd orter keep half on 'em. You'se a robbin' yerself."

No, Sam was "cl'yed wi' traout, an' ketched these a puppus for Aunt Jerushy 'n' you."

"Wal, thank ye a thaousan' times. Yes, I ben to supper. I was makin' gardin to-day, an' the smell o' the airth made me hungrier 'n a bear, so Jerushy got supper airly."

"Yes, Lisha," Solon remarked, "for a pusson of your sedimentary ockypations tho' haint nothin' more beneficient 'an a gittin' aou'door," and then, turning to Sam, "Did ye ever ketch traout with a fly, Sammywell?"

"No, I didn't never, but I hev wi' bumble bees."

"Not a ra-al fly I don't mean," Solon explained. "That 'ere artist feller 't was raound here summer 'fore last—boarded to Joel Bartlett's a spell 'n' fixed up a paintin' shop in his barn, 'stewed Joe,' he called it—he, uster go traoutin' with a whipstock of a pole 'at took to pieces, an' hed a little brass windlass onto it to wind up his line, an' a mess o' feathers stuck on a hook for bait, 'at he called a arterfishual fly. He'd skitter it top of the water, an' onct in a while the' 'd be a traout fool 'nough to grab it. Then he'd wind him up, an' then he'd let him scoot, 'n' then wind him up agin, an' so continner on till he got him all fattygued aout."

"O, yes! I seen him at it," said Sam. "I went a fishin' with him tew three times. 'N' he was toll'able lucky tew; ketched half as many 's I did. He'd tost them little feather contraptions turrible handy when the brush wa'n't tew thick. I sh'ld like to try it if hed the rig. He hed a hull wallet full on 'em, all on 'em named, 'green ducks,' an 'hatchels,' an' I d'know what all. It uster tickle me tu see him when he come tu a still-pond hole, or a place where the brook tumbled over the rocks, or suthin' n'uther 't he liked the looks on. He'd lay daown his pole, an' back off, an' get fust one side o' the brook an' then t'other, or like 'nough on a stun right in the middle on 't, an' then aout with a lead pencil an' a little blank 'caount book like, 'n' begin to draw it off. He'd squint an' mark an' whistle an' mark a spell, 'n' then into his pocket with book an' pencil an' go to fishin' agin. A clever little creetur he was, an' took lots o' comfort bein' in the woods, an' a fishin'. He tol' me 'at they ketched gret big salmon up Canady way wi' them feather flies."

"Bah gosh!" cried Antoine, pricking up his ears at the mention of his native province. "Yas, Ah'll see Anglish officy ketch dat so! O, big, big big!"

"O, yes, sartinly," said Lisha, as he tied the straps of the completed boots together with a thong of leather, "I 'xpected you hed. Seen 'em ketched 't 'ould weigh a hunderd paound, haint ye, Ann Twine?"

"Wal sah, Onc' Lasha, not quat so big dat. Ah don' goin' tol' lie 'f you want it Ah do. De bigges' one Ah'll see ketch dat way he'll weigh jes' 'zackly nanty-nan paoun' an' fiftin ninches, dat's all."

"Hmph! A minny, wa'n't he?" said Lisha. "Wal, we're gittin' all of a color, white folks an' Canucks, 'n' I guess we'd better hev a light," whereupon he lit the candle, which sputtered for some minutes before it made itself visible in the twilight.

"Wal, folks," said Sam, breaking the silence that prevailed while the company watched the struggles of the feeble light, "the's suthin' in these woods 'at I never seen in 'em afore."

"Why, what on airth is it, Samwill," Lisha asked.

"'Taint a wolf, cause you seen one time o' the big hunt four year ago. 'Taint a painter?"

"No, 'taint a wolf nor a painter—I seen both—'n' 'taint no four-legged critter—it's Injins!"

"Good airth an' seas, you don't say so!" cried Lisha, "hev ye got the' skelps in yer pockit, Samwill?"

"No," said Sam, laughing, "they've got 'em on their heads, an' hats a top on 'em, tu, for they haint wild ones, but c'n talk English as well as Antwine here, but not ekal to Solon quite. Raal clever, candid sort o' fellers they be, an' c'nsid'able sosherble arter you git 'quainted with 'em."

"Haow many on 'em be they? A hull tribe on 'em? He ones an' she ones, an' poppooses on boards? Where be they, an' what they drivin' on?" so Lisha strung out his questions without waiting for an answer till he finished with the demand, "Tell us all baout 'em."

"Wal," said Sam, "ter begin 't the beginnin', I was fishin' Beav' Medder Brook 't other day an' come acrost a mocker-sin track in the sand, 'n' think, sez I to myself, Antwine 's a fishin' ahead on me, 'n' then thinks, sez I, he don't wear 'em sen he got to be such a Yankee, 'n' a little furder long I seen tracks o' tew wearin' mockersins, an' putty soon I smelt smoke, an' then come slap on to tew dark complected fellers settin' by a fire a smoking an' watchin' a woo'chuck roastin' on a stick stuck through end ways an' int' the graound, an' behind of 'em was a gret roll o' suthin' 't I thought fust sight was luther, 'n' 't they'd ben a stealin' from you, er less was goin' to give ye a job. Then I seen 't was birch bark. I says haow de du, 'n' so 'd they, but they didn't talk none till I soddaown an' loaded my pipe an' giv' 'em some terbarkar. Then one on 'em says, 'ketch um plenty fish,' lookin' at my string, an' 't was a putty good un, 'n' I gin 'em a dozen to piece aout their supper. Then they begin to git toll'able sosherble, an' we hed quite a visit."

"Wal, I'll be dum'd! Samwill Lovel visitin' 'long with Injins!" cried Lisha, holding up his hands.

"Wal, he was," said Sam, "an' got c'nsid'able thick with 'em, 'n' I don't deny it. They said haow 't they 'd come clearn up from Gret Auter Crik on to Hawg's Back to git bark 'at suited 'em to make a canew, an' was going right back nex' day. I wanted turribly to see 'em make a canew, 'n' tried to coax 'em to du it here, 'n' I'd git some o' the teamsters to kerry it daown to Vergeens for 'em when they was goin'. But they thought their fam'lies 'at was camped daown there would be wonderin' if they stayed away so long. I tol' 'em 't we'd send word by the teamsters to their folks, 'n' it come inter my head what you was tellin' 'baout huntin' an' trappin' daown there, 'n' 't this was a gret chance for me to git a boat made. So I dickered with 'em to make me a canew, an' they talked an' talked together—I tell ye, their'n 's the language to talk in the woods. It don't make no more noise 'n a little brook a runnin', 'n' I don't b'lieve 't 'ould skeer a fox. Wal, fin'ly they 'greed to, an' nex' day they went at my canew."

"Shaw!" said Lisha. "Why, Samwill, them Injin canews is tottlisher 'n a board sot up aidgeways! You can't du nothin' in one on 'em, only tip over. You haint uster no kinder boat, say nothin' baout them aigshell consarns. 'D ye ever see one? I hev, but never ondertook ridin' one on 'em."

"No, I never did, but I'm goin' tu in a few days. I guess I c'n navoygate it. I 've crossed the Notch Pond stan'in' up on a saw lawg with my gun, more 'n onct, 'n I guess a canew haint much tottlisher 'n a rollin' lawg. Wal, I've hed a good time watchin' on 'em make it for three days, 'n' I tell ye its curous to see 'em. Furst thing they made a frame the len'th an' shape the canew 's goin' to be on top—jes tew strips of ash fastened together to the ends, an' bars acrost, so"—illustrating his description with a diagram drawn on the floor with a bit of coal while all gathered about him. "Then they laid it daown on a level place they'd fixed an' drove stakes clus to it agin the ends o' the cross bars all 'raound, an' one to each end o' the frame. Then they pulled up the stakes an' took the frame away, keepin' the stake holes clear of dirt very car'f'l, an' spread the bark daown on the place, an' then sot the frame back on jest ezackly where it was afore, an' put some cedar strips on 't, an' big stuns top o' them. Then they slit the bark from the aidge up to the frame every onct in a little ways, so, all raound' an' bent up the bark an' sot the stakes back in the holes, an' tied a bark cord acrost from top to top. Then they sewed up the slits, lappin' the bark over, ye see, an' sewin' it wi' black spruce ruts peeled an' split intew, 'n' they're jest as tough as rawhide; luther-wood bark haint no tougher. That's as fur as they've got yit, but nex' thing, 's nigh 's I c'n make aout, they cal'late to raise the frame to the top 'an put some raves on aoutside and fasten 'em together an' then line the hull consarn wi' flat strips o' cedar drove in tight. 'N' then when they git the seams all daubed wi' spruce gum an' taller melted together it 'll be all ready for me to——"

"tip over," said Lisha, completing the sentence for him.

"Waal, now, I guess not," Sam drawled, "but 'baout the fust o' next week you c'n all come over to the Forge Pond an' see."

"Wal sah, Sam, Ah tol' you," said Antoine, "you wan' git good big lawg, an' Ah'll mek it you a canoe was good for sometings, me. Dat was damn sight gre' deal better for you as dot negg shell Injin mek it."

Lisha snorted a contemptuous "Hmph! 'T would be a putty-lookin' thing, Ann Twine. Guess 't 'ould look 's much like a stun boat 's anything. But 't 'ould be comp'ny for ye, Samwill, for I ha' no daoubt 't 'ould laugh and talk."

"Wal sah, he look lak stun boat, he look good deal lak de boot you mek it, Onc' Lasha. Den prob'ly you call it ver' han'some, don't it?"

"O, shet up, you——" cried Lisha, shaking his hammer at the grinning Canadian. "I could make a gre't sight better boat aouten luther 'n you can aouten wood, I'll bate ye. I've hearn tell 't the Injins way aout West makes boats aouten luther, er bufflo hides anyway."

"Uncle Lisher," said Joe Hill suddenly, "is the' anything o' this story 't I hearn 'em talkin' over 't the store t'other day? Lemme see, was 't Wednesday or Thursday last week, or was 't Friday? Yes 'twas Friday, I know, 'cause M'ri sent by me for a codfish, an' they hedn't got none, 'n' so we didn't hev' none for dinner Sat'day, 'n' hed t' eat traout. Wal, they was tellin', some on 'em, haow 't you was a talkin' o' sellin' aout 'n' goin' t' the 'Hio."

"Hey?" cried Lisha, giving a great start. "O, sho! Ye can't tell nothin' by what ye hear over to that 'ere dum store. When they haint talkin' 'baout hosses, 'n' when they be, they're a lyin' an' gossipin' wus 'n a passel o' women to a quiltin'."

"Onc' Lasha, if you goin' on 'Hio, Ah wan' you show me de way Ah'll fin' dat Conchety Point you tol' me good whal 'go. Ah wan' go dar den."

"When yer time comes you'll go there, Ann Twine, 'thaout me showin', jist the same as spirits finds their way to heaven an' t'other place. Say, Samwill, where d' ye keep yer Injin show? Der ye 'low anybody to see it?"

"O, yes," said Sam, "you c'n see 'm for nothin'; but I wouldn't go all to onct, if I was you fellers. I kinder guess they don't like bein' gawped at no better 'n we du. They're camped daown on Beav' Medder Brook, a little ways 'bove the swamp. They'se a makin' a few baskits, an' bow-arrers for boys, evenin's, an' most likely they be raound peddlin'on 'em 'fore long." Then, going over to light his pipe at the candle, he whispered, "I'll come over in the mornin' an' you 'n' I'll go an' see 'em, if you're a min' tu." Then aloud, "Wal, boys, I'm a goin' hum. Any on ye wanter ride 'long wi' me?"

By this time the candle had burned down until the wick fell over the edge of the holder, and it flickered and left the shop in darkness before the rumble of Sam's wagon had died away.

CAMPING IN CALIFORNIA.

FEW residents of the Eastern States would care to go as far as California for sport, the trip being quite a long one and the expense very considerable. But for any one who contemplates such a trip and who is fond of sport, it would be well to select that season which will permit the use of the rod and gun in addition to the pleasures of mere sight-seeing. Winter is the time usually chosen, but unless upon the score of ill-health, it is by no means the best season. The only attraction the winter months offer the sportsman is ducking, a sport affording much excitement, but accompanied by so many discomforts, that it is not to be compared with upland and mountain shooting either in its benefits or its pleasures.

The season for ducks closes March 15, and from that time until July there is no shooting of any sort. With the opening of summer the valleys and mountains are opened to those who wish to ramble amid nature's most charming scenes with gun in hand. Indeed, it is during the summer months that one sees by far the most attractive feature of California life. During that season the mountains are filled with campers of both sexes. The Yosemite Valley presents the appearance of a great camp ground, while all through the Sierras and the Coast Range campers wander in great numbers, pitching their tents near some crystal spring, or upon the banks of the wild streams that rush down from the snow-capped Sierras.

Our Eastern mountains can in no way compare with the Sierras in beauty or grandeur. They seem but ridges and hills, and their forests appear stunted in growth when contrasted with the mountains of the far West. One who has wandered through the mighty forests of the Sierras and gazed in awe upon the giant trees that are clad in deepest green, can never again find that charm in the Eastern mountains which they once possessed for him. Whether we are climbing the steep trail up the sides of the vast cañon, standing by the torrent that is lashed into foam in its mad descent, or wandering amid the deep solitude of the forest, it is ever the same, nature greets us in her grandest and most sublime forms, and we may commune for a time with something higher and nobler than the frivolous world we have left behind.

Added to the charms of scenery, which no pen can paint, the Sierras possess a climate exactly suited to outdoor life. The air is salubrious and fragrant with the grateful odor of the pine. Rain storms are exceedingly rare in summer, and it is in this particular that the climate is so much superior to that of the Alleghany and Rocky Mountains, where thunder storms are of daily occurrence. In the Sierras one may camp out for weeks without fear of rain or dampness.

But the sportsman demands something more than all this; he must have game. The writings of Van Dyke have made us familiar with the beautiful quail of California. Though not so desirable as our own species, he is much handsomer and affords fair sport. Grouse and deer are abundant, and should the camper wish to interview a grizzly he will be able to do so. I may say to such a one that all the old hunters I talked with seemed to be very unanimous in the sentiment that grizzlies were very unpleasant customers to meet with. As for myself, I had not lost any bears and, therefore, did not look for any. Trout streams are numerous and well stocked.

The most charming mountain resort it was my fortune to

visit was the Calaveras Big Tree Grove. The trip from San Francisco is a very pleasant one, including a stage ride of thirty miles from Milton to the grove. This route crosses the Salt Spring Valley, famous as the scene of San Joaquin's operations in gold dust. The lookout of this daring robber is still pointed out. Fifteen miles from Milton is Murphy's Camp, once a thriving mining town and still bearing some evidence of thrift. Fifteen miles up the slope from Murphy's and the grove is reached.

Passing by the great natural beauties of this region, and also the very tempting theme of the Big Trees, I will say a few words in regard to the special attractions for the camper. Grouse are quite abundant, as are also blacktail deer. Grizzlies are not very numerous, but are sometimes met with most unexpectedly. A party of ladies who were fishing within a few miles of the hotel a few summers ago, were startled by a grizzly stepping into the stream for a drink. It is needless to say that it was scared nearly to death by the screams which greeted his appearance.

There is a very pretty little trout stream only a mile from the hotel, but it is constantly fished by the Indians. Three miles off is Beaver Creek, and one mile further is the Stanislaus River, both affording fine sport. The Stanislaus is one of the most rugged streams in the Sierras. It is narrow at this point and its descent is very rapid. Over the huge boulders which obstruct its course, the waters rush with a deafening roar, and are lashed into foam. From many points on the trail leading down, its snow-white track is visible for miles. Above this point there is excellent fishing for trout. From one to two hundred trout have been taken in a day by a single rod, some of them weighing three pounds.

There can be no better camping ground in the world than upon the banks of this beautiful river. At a distance of ten miles from the grove game could be found in great abundance. Add to this a glorious atmosphere and nature's grandest scenery. What more could the sportsman want? Nothing but the services of the genial old guide, trapper Smith, who makes his home at the Grove. The trapper is a '49 man and looks it every inch. He comes nearer to Cooper's ideal backwoodsmen than any mortal I have met with. SYCAMORE.

THE BUCKTAIL IN FLORIDA.

ONE year ago, while suffering from severe trouble with respiratory organs, I said that another winter must find me south of the snow belt, or I might as well throw up the sponge. I hated to do that. The world, even the northern world, seemed so bright and green (in the summer time), there were so many thousands of bright lakes, ponds and rivers to cruise, such sweet, cold springs and lovely camping grounds to take in, so much fauna and flora to look after, that—well, I felt like asking the Grim Rider to let his pale gnaw-post go a little slow on the track for a few years, until I could finish up some cruising, and get into line for a final adjustment, and I turned my thoughts to Southern California, and the gulf thereof. But my favorite style of cruising would hardly be possible there.

The Bucktail turns her beautiful nose up—more in fear than anger—at broad waters and crested waves. Like Barkis, she "is willin'," but her skipper thinks too much of her to swamp her in rough water, miles from land, and the wind off shore, how could she make the beach? (To say nothing of the skipper.)

From June till October I cruised and camped, mildly, on the upper waters of the Susquehanna, getting such benefit as I might from out-door life in a piny, hemlocky region. When the sharp November frosts set in I had certainly gained a good deal in health, but hardly enough to tide me through the slushy, snowy, thawy and freezing season from the middle of January to the middle of May. That is the trying time for Northern invalids. More people meet sickness and death during those four months than in the other eight months of the year; at least in Northern Pennsylvania, and in fact in most of the Northern and Eastern States. Note it and see if I am not right.

Just when I was undecided where to go I received a letter from "Tarpon" (Capt. S. D. Kendall), whom I knew by reputation as the man who had cruised the Solid Comfort from St. Johnsbury, Vt., to the Anclote River, in Southern Florida, only making one carry by rail, *i. e.*, from Buffalo to Olean, to reach the upper waters of the Allegheny. The letter contained a cordial invitation to Tarpon Springs, and to his house as long as I liked to make it my home. Such a letter from such a man is worth something, and I wrote at once, briefly asking of game, fish, possibilities of cruising, and, more than all, health. The answer was such as to settle me down to bearings for Florida. When the chest was finally locked and lashed, the shanty-tent and the little frying pan were left out.

Then December came and a cold snap with sleighing, and the thermometer at 22° below zero. I had spoken of passing Christmas with the Captain, but delay succeeded delay, until the New Year was past, and the cold snap had changed to rain and slush, with the mercury at 50°. It was not until Jan. 14 that I climbed the stairs to the office of FOREST AND STREAM, and was taken charge of by Mr. H., on the part of the paper. From that time on, barring some difficulty in locating the camps in Park row, my lines were cast in pleasant places so long as I stayed in the city. It was not for long. On the Tallahassee, at ten minutes before midnight of the 15th, I was off for Florida.

On Friday night the gale came on, and we rounded Cape Hatteras in it at 5½ o'clock the next morning. I will add that Capt. Fisher said it was the heaviest weather he had experienced in two years, and he thought the breakers on Hatteras were uglier than he had ever seen them. Of course the passengers were thinned out some. I think there were only five who had appetites for a hearty meal, and about a dozen who tried to make a brave show of it, but soon went in for a reconsideration. From Friday forenoon until we reached smooth water at Savannah they were mostly conspicuous by their absence. As for myself—have not been so hungry in ten years. A thrash outside seemed to be the very thing I needed. Arrived at the wharf in Savannah the crew commenced unloading at once, and as I was in my berth asleep, the canoe was "transferred," as they put it, without my having seen her since the morning we passed Hatteras. And she was gone from the wharf, no one could say where. My ticket called for passage to Fernandina by water. But the connecting steamer was "knocked out" by the gale, and the Bucktail had disappeared, no one could tell where. I spent two days trying to hunt her up, and then went to the office of the Ocean Steamship Company. They thought she had gone on to Cedar Keys, and offered to send me to that place by rail, which was fair, and I closed with the offer.

But I had not got through with delays. At Callahan there was a lay-over of nearly a day, and worse yet, the canoe was not at Cedar Keys. As I would go no further without her, I lost the steamer down the coast; but the next day, blessed sight, there lay the Bucktail in her loveliness, as sound as the day she left Wellsboro. And the schooner Sunrise lay at the wharf, to sail that very day for the Anclote. I engaged passage, and at once placed the canoe and big chest in the hold of the little 11-ton schooner. She did not sail that day, nor the next; but on Sunday, the 25th, at 3½ P.M., the Sunrise went off to the southward with flowing sheet and a stiff northerly breeze. She was a boat of the broad, shallow type, 32ft. over all, 11½ft. beam, and a powerful centerboard. I mention these facts because between 8 and 9 P. M., as she was running ten knots an hour under mainsail, foresail and jib, she was struck by the worst squall I ever saw at sea. It was like striking a rock, and in two seconds she was nearly on her beam ends. Luckily the jib took care of itself by carrying away the sheet, and the young wrecker at the helm sprang to the main sheet and eased it off in an instant, catching the helm and putting it hard down without losing a second. And sooner than I would have thought possible the captain and mate had the foresail down by the run. Then came the mainsail, and in no time we were flying before the squall under bare poles. There are no quicker or better small-craft sailors than the coasters and wreckers of the western coast. And, with considerable experience of dangerous weather at sea, I think that knock down on the little Sunrise the worst racket I ever saw on salt water. Only that the sea was comparatively smooth we should have been fairly capsized.

When we were running before the wind with just the head of the foresail up, the captain began to heave the lead; and when we shoaled to ten feet both anchors were let go and we rounded-to handsomely, in shoal water it is true, but out of sight of land. Then the wind went down and a heavy fog came on which held us till 9 o'clock the next morning, for these coasters will not run in a fog.

And so, with a light wind, we came at last to the Anclote Keys, where more than thirty spongers were lying at anchor, waiting for better weather; but the captain, instead of making the wharf, as he should have done, anchored two miles off and sent his boat in with five passengers and the Bucktail in tow. The mate in charge of the boat contrived to ground her half a mile from land, and I got into the canoe, put the double blade in form, and made for shore on my personal curve. The rest managed to get within forty rods of shore, but had to get out and wade at last. I ran the canoe to the beach, asked a few directions of a native, and started up the Anclote for Tarpon Springs.

I had started from Wellsborn on the 13th, and should have made the trip in five days. It was late on the 26th when I entered the mouth of the Anclote and started up stream for Tarpon Springs. I could have reached California in half the time, and the chest, with two guns, two rods, and all my clothes and camp duffle, was left on board, with a solemn promise from the captain that it should be landed the next day, which it wasn't, as the sequel will show.

They are not particularly hurried in this region.

It happened that I paddled up to a point within eighty rods of the landing I wanted, and then, seeing neither bridge, house nor landing, turned back. It was uncertain cruising. We can usually tell down stream by the current, but it happens that there is a strong tide which backs up the water for some ten miles, and the Anclote is so tortuous that you take nearly all points of the compass in cruising either way, whereby it happened that, by the dim moonlight, I was liable to get fogged. And I was tired; it was getting along in the evening, and time to make camp. In coming up the river I had passed a fine grove of pines, and about midway of the grove a motherly cow was tinkling a bell of fine tone and far-reaching volume. I recollected that I left the bell over the port quarter coming up, and made for it at once. When opposite the music I took it on the starboard quarter and worked away from it in the direction of a red sunset glow that still lingered in the west, and soon sighted a sawmill that I had passed an hour or two before. A small schooner and several small boats were moored near the mill, and beyond, among the ever-present pines, dusky forms were flitting about bright lightwood fires. I landed the canoe and made for the fires on a bee-line. It was the quarters of the mill hands, who were all colored, and they were busy cooking rations for the next day. One muscular young fellow who was baking biscuit had a check book protruding from the pocket of his blue shirt, and I judged him to be a sort of foreman, which was correct. He was clad with good nature as with a garment (and he was clad with little else), and was friendly and communicative, with little of the negro idiom in his speech. He said the canoe was perfectly safe at the mill, and it was only a hundred rods to a good hotel, two of them for that matter. And he left his cooking to put me on the right path. In five minutes I was seated by a good fire in the Tropical House. And a very welcome thing was a good fire in Florida all through January. There was no time after reaching the Georgia line that I did not need all the winter clothing I wore at home with the thermometer below zero. People here do not prepare for cold weather, and a long, stormy norther strikes them hard.

There were fires at the Tropical, however, with warm, dry rooms and comfort and quiet. The fare was good and prices moderate. Another and larger house, the Tarpon Springs Hotel, is a fine large building, with excellent fare and attendance, built by "the company" in anticipation of what the town is to be rather than to supply present wants. For the white population of Tarpon Springs is less than one hundred, and two years ago there was no such town. Now there are two very fair country stores, a post-office and two good hotels. More of the Springs in the long, leisurely days to come. When they found at the hotel that I had come a long distance to visit and cruise with the canoeist who had paddled and sailed from St. Johnsbury, Vermont, to Tarpon Springs in Florida, they insisted on treating me as a vistor; and it was pleasant to know, after a long, vexatious journey, that somebody had been wishing and waiting for me.

It was pleasant, almost touching, to be met at the little wharf by a sailor-like man with a hearty grip of both hands and a "God bless you, 'Nessmuk,' we've been looking down river for you the last two months; come right up to the house. Or, hold on, I must have a ride in the Bucktail first if it's only to beat Mrs. K."

So the Captain deftly stepped into her with his 170 pounds avoirdupois and found her quite as capable of his weight as for mine, while he sent her along much faster than her skipper can.

Mrs. K. was almost vexed at not being first in the small canoe, as she rather prides herself on canoeing. But she made amends after dinner by paddling the Bucktail down to the springs and back. (*En passant*, she once made a cruise of 1,000 miles with the captain, from Olean to Cincinnati.) She trims my canoe better and sends it along faster than I do myself.

I was glad that Capt. K., like myself, had the use of both hands. He had a 24ft. sharpie ready for her sails, and he has another of 38ft. in length and 8½ft. beam, ready for sea. She is able for outside work, and will cruise the Gulf coast under the name of Nessmuk, which is about as neat a compliment as has ever been paid me—though several of my friends have named their offspring in my honor; and I am proud to say that said namesakes have mostly turned out finely, proving apt scholars of the Boone and Walton type, while one or two of them have learned to read and write very fairly. (This goes to show that reading and writing need not necessarily interfere with the more manly branches of a boy's education.)

The Captain, Mrs. K. and the writer formed rather a sociable trio until two bells of the morning watch. Then the captain led the way to the little stand-up bunk that had been waiting for me nearly two months. It was a berth to please a canoeist. The southwest corner of a loft 22ft. long by 16ft. wide. One large unfinished skiff occupied the middle of the room, another smaller one on one side of the room, a big work-bench on the other, and my corner, the southwest one, snugly curtained off with a home-made writing stand beside the bunk, and the latter neatly upholstered with clean sheets and plenty of soft woolen blankets. It was a cold night, for Florida, and I crept under all the blankets I could master, bade the Captain a sleepy good night, and slept the sleep of the tired canoeist.

Running over shoals between Anclote and Kendall's landing I had seen large schools of mullet and redfish, some of the latter more than a yard long, and I promised myself some good sport with them in the near future. But, on that 27th night of January I was too tired and sleepy to care for anything, but sleep. NESSMUK.

P. S.—It is due the weather clerk of Florida to say that the beastly weather of this present January is quite unprecedented, so far as the oldest inhabitant may be credited with truth and memory. True, January is the rough, stormy month of the year on the Gulf Coast. But they say that a constant succession of cold northers is quite exceptional. Some bad weather may occasionally be expected at this season, but the fine, clear days usually have the majority. And I have already seen two or three of them—days when the mercury reached 82° in the shade. Bright blue skies, birds, flowers, and all the blandishments of a Northern summer; an earnest of what is to be when the wind shifts to the southward. A promise of long, sunny days in the woods and on the waters, and of bright, starry nights by the campfire in the land of flowers. *Alabama.* N——K.

P. S. 2.—A letter has just reached me from Pennsylvania containing some hair and fur from a red bear that was killed within a few miles of my Pennsylvania home. An account of the same bear appears in your issue of Jan. 22, in which the writer says, "Eureka! here is 'Nessmuk's' cranberry bear." Well, perhaps so, to a great extent, but not entirely. The light weight, the color and the fox-like nose are all in line with the cranberry bears I have seen. But the latter had a mixture of white hairs, and the fur was not fine. Making allowance for difference in location, temperature and food, however, I rather incline that the animal was a genuine cranberry bear. And he was much more than two years old. A bear's teeth do not commence to get blunt and square on the ends until he is past his sixth year. Has any man seen a black bear six years old with a fox-like nose and weighing only ninety pounds? Albinoism and rufusism will not account for these features. I send you the letter and red fur. "Logic is logic." NESSMUK.

Natural History.

THE BIRDS OF MICHIGAN.

BY DR. MORRIS GIBBS.

(*Continued.*)

21. *Sitta canadensis*, Linn.—Red-bellied nuthatch.

We may consider this more completely a migrant than the last-named species, but as yet comparatively little has been learned concerning its movements. This arises, I think, from the fact that the migrations are very irregular. Both species of nuthatch are reported from the Upper Peninsula, but while the white-belly is frequently found with us in winter, the red-belly has yet to be reported south of 43° within our boundaries during January, although found to the north throughout the year. A few notes will give a good idea of the peculiarities of this species in its peregrinations. The following observations, selected at random, were taken in Kalamazoo county: 1873—April 1, "Shot a good specimen;" May 13, "Still here, shot two;" 1878—Aug. 15, "Saw one to-day in an oak woods; this is the first specimen I have ever seen here in summer;" May 11, 1884—"Heard one to-day in woods." The following notes, taken in Montcalm county, will be of interest as compared to those taken further south: Feb. 8, 1881—"Common in pine trees;" May 16, 1882—"Heard the first of the spring migrants, although they remain in some numbers throughout the winter, I think;" April 27, 1883—"Heard several in deep pine woods;" May 18, 1883—"Still common, undoubtedly remain to breed, as I have frequently observed them here in July and August. In Wexford county I observed a number of specimens in June, 1882."

From these notes we can draw but one conclusion as regards the migration of the red-belly; as a rule, he migrates probably in early September, lingering within our boundaries until November or even December; appearing again from the south in later March he loiters in the lower counties until nearly June, and then goes well to the north to breed. But many remain within the State during quite severe winters, and the date (Feb 8) given above clearly indicates that the birds were residents of the county for that winter, for certainly migration from the south was not then in order, as the snow lay two feet deep on the ground.

I am positive that the species does not nest in Kalamazoo county, 42° 20', and I am equally positive that they breed in abundance in Montcalm county, eighty miles north. The species prefers pine lands, and is most at home apparently in pine forests, where it may be found undoubtedly at all times of the year, excepting perhaps in severe winters.

The red-belly, as a rule, keeps well in the tops of the trees, and is more strictly arboreal in its habits than the last. I have never seen one on the ground, nor perched on a fence or building. It is a retiring species, and seldom seen near

the habitation of man, and only during migration is its presence known to the ordinary collector. In its accustomed haunts it is found to be very tame and unsuspicious, and can be readily approached to within a very few yards. During migration it is also extremely tame. When a boy I used to kill specimens with a sling shot made of rubber, fastened to a crotch, and I distinctly remember securing two specimens perched on a cone of an evergreen at one shot, being then less than ten feet from the birds, and using three buckshot in my deadly weapon. Of the breeding habits of this species I know nothing, and I fail to find any information on this point in any of the lists at hand. The species undoubtedly nests abundantly in the dark pine forests of Central and Northern Michigan, but from the retiring nature of the birds it is a difficult matter to find the nests.

The notes of this species are very curious, and consist of the syllables *quaint, quaint,* but generally more drawn out, *q-u a-a-i-n-n-t.* Very pleasing and readily remembered. They are easily distinguished from the notes of all other birds. Only one other note, a soft, low call note has reached my ears. The note *quaint* appears to be their best effort at song, and repeated from six to eight times, as it usually is, is quite agreeable.

The nuthatches are faithful workers in their efforts at keeping the various orders of insects within bounds. They are excellent citizens, and though rather inclined to be set in their ways, and possessed of many peculiarities, are still extremely serviceable as insect destroyers, and rank high in this respect as compared with other families of birds.

It has not been my fortune to secure many fresh specimens of the redbelly during the active season of insect life, and so I have but little to offer on the subject. Enough has been seen, however, to convince me that the species is highly beneficial in its capacity as an insect eater. The whitebelly is probably not far removed from the redbelly in the nature of its food. As it is quite abundant with us during eight months of the year, a favorable opportunity has been offered to study its habits in this respect. I find that the food of *carolinensis* is chiefly of insects of the orders *Coleoptera* and *Diptera* during the warmer months, and that there is a decrease in its insect food during the colder months. During at least three of these, the species feeds largely, if not almost entirely, on vegetable matter. The nature of the vegetable food I have been unable to fully determine, but it appears to me much like young buds. Blossoms are often eaten in the spring. I have seen them eating the petals of the apple blossoms. The species also frequently feeds on a variety of lichen, which I have examined, as I did the blossoms, with the expectation of finding insects concealed, but failed in every case.

When obtainable, however, insects are preferred, and the crops are more often found filled with insects of the various orders, principally in the larval stage, than of any other kind of food. It is very interesting to observe a nuthatch feeding from a large piece of fungus upon the insects contained therein. The bird flies to the tree with joyous chirps, and with almost constant twittering which usually calls a friend to share in the repast, it dives at once into the crevices and perforations in the toadstool, and drags forth the insects, usually beetles. If the fungus is old and has become hard, only those larvæ or imagos are secured which lie near the surface; but if the fungus is young and still soft, the spot is rarely left until it is completely destroyed and all of the insects eaten. When the birds finish, the toadstool is totally demolished, and broken down fungi found attached to trees in the woods are frequently the work of these birds, I have no doubt.

The following dimensions are taken from Michigan specimens: White-bellied nuthatch—Average length, 5.84; average extent, 10.63; average wing, 3.53; average tail, 2.01; avarage tarsus, .79; average commissure, .90; longest specimen, 6.00; longest wing, 3.77; greatest extent, 11.50; shortest specimen, 5.60; shortest wing, 3.10; least extent, 9.80. Red-bellied nuthatch—Average length, 4.45; average extent, 8.24; average wing, 2.54; average tail, 1.60.

22. *Sitta pusilla* Lath.—Brown-headed nuthatch.

Dr. Atkins writes me that he is acquainted with this bird as a Michigan species, and I therefore enter it in this list. As to its validity as a Michigan bird I have nothing to offer. It is embraced by no other authority in the State.

CAPTURE OF A WHITE SHARK.

FROM reports by different scientific leaders in England, as well as in this country, it appears that previous to 1883 the great "man-eater," white shark (*Carcharodon carcharias*), was represented in natural history collections by the jaws alone of one of the species preserved in the Smithsonian Institution. The specimen from which this significant portion was saved, and which had been taken at Monterey Bay, California, measured thirty-two feet in length.

By a fortunate chance a smaller, but very fine, specimen was secured about two miles off Great Point Lighthouse, Nantucket, Mass., somewhat over a year ago. This was taken on Aug. 4, 1883, by C. B. Herrick, Esq., and Dr. W. G. Stevenson, of Poughkeepsie, and subsequently presented by the latter gentleman to the Vassar Brothers' Institute, where it is exhibited. As its identity is now well determined from expert examination, it is unhesitatingly spoken of as a prize; and it may be concluded that a luckier cast never marked the pastime of angling as engaged in by scientific men. So rare is the species that its existence in Atlantic waters has been hitherto next to unknown to experienced fishermen, as well as to the best informed ichthyologists. The statement has appeared in the Boston *Transcript* that, while the fins of the "man-eater" shark surpass those of all other varieties in an epicurean estimate, the kind does not exist in our waters. It was, therefore, a complete surprise to the holiday party when the present specimen tugged mightily at the line, tearing loose some timbers within the bottom of the boat around which the end was passed. When stunned by being beaten on the head, and with life next extinguished by means favorable to a perfect condition of the specimen, the fish became a safe and precious cargo. It was not of maximum size, being but ten feet in length from the snout to the end of the caudal fin, and with the greatest circumference of fifty-eight inches.

What renders the discovery of most importance is the fact that early descriptions of the species were radically imperfect, even to the extent of confounding this with a different genus. As stated in a letter by Prof. D. S. Jordan to Dr. Stevenson, "There is no good description of the animal extant. The earlier writers spoke of it without knowing it, and all had more or less confusion between it and *C. lamia.*"

From careful examination it is distinguished as the *Carcharodon carcharias* of Jordan and Gilbert. Through confused previous diagnoses, as observed by Dr. Stevenson, it has also been described as *Squalus carcharias* (Linnæus), *Carcharias lamia* (Cuvier), *Carcharias verus* (Agassiz), *Carcharodon rondeletti* (Müller and Heule), *Carcharias rondelettii* (Gunther), *Carcharodon capensis* (Smith), *Carcharias atwoodi* (Storer), and *Carcharodon atwoodi* (Gill).

In his diagnosis of this specimen, its discoverer has followed the general analysis of Professors Jordan and Gilbert in their "Synopsis of the Fishes of North America," published under the direction of the Smithsonian Institution in 1882. According to the adopted classification, the three genera of the family *Lamnidæ—Isurus, Lamia, Carcharodon*—are distinguished from each other by the form and construction of the teeth, and this newly-studied specimen is excluded by the dentition from the first two genera, the teeth in both jaws having "the form of an isosceles triangle, compressed, with the inner surface slightly convex, and the margins rectilinear and markedly serrated. They have no basal cusps and stand a little obliquely inward. The upper are larger than the lower teeth, and in both jaws the largest teeth are in front. In the upper jaw the teeth measure seven-eighths of an inch at the base, and one and one-quarter inches on each side,

and in the lower jaw five-eighths of an inch at the base and seven-eighths of an inch on each side." The specimen is regarded as the *Carcharodon carcharias* chiefly from this characteristic; Dr. Stevenson's view is confirmed by the opinion of Prof. Wm. B. Dwight, of Vassar College, and by that of Prof. Jordan, to whom was sent a description accompanied by photographs. The following letter, suggesting the importance of the discovery, has also been received from the distinguished naturalist, Dr. Gunther, of the British Museum:

CROMWELL ROAD, SOUTH KENSINGTON, S. W., May 15, 1884.

DEAR SIR—I am truly obliged to you for your kindness in sending me the photographs of the shark, which, with your description, leave no doubt that you have had the extraordinary good fortune of obtaining a *Carcharias rondeletii*. It is one of the most interesting discoveries in Atlantic ichthyology. Although I have been endeavoring for years to get a specimen, I have been unsuccessful hitherto.

Believe me, yours very truly,

Dr. W. G. Stevenson. A. GUNTHER.

It is hoped by Dr. Stevenson and others acquainted with the facts in connection, that this new possession may aid in rendering distinctions more clear regarding the lamnoid sharks, although discrepancies are recognized in even this instance. In the precise description prepared by Dr. Stevenson, it is pointed out that the caudal pit which authorities represent as belonging to all lamnoid sharks is, absent in the present specimen, and that in this also the last branchial partly overlap the front of the pectorals which, to correspond with authoritative descriptions, should have a position entirely in front of the pectorals. Prof. Jordan, however, conceives that these differences may be such as change with age. The remaining difficulty is connected with the expression "five rows" contained in the description of the teeth, published by Storer, and quoted by other writers. It is concluded by Dr. Stevenson that this is simply an unhappy term as intended to comprehend the idea of the "non-functional or rudimentary teeth, which are partly or wholly concealed in the groove of the jaws, and which can only be seen when the inclosing tissues are cut away."

At the same time of the capture of this shark a specimen was taken of the *Odontaspis littoralis* or sand shark, which, although the species is not uncommon in American waters, was found worthy of attention from its unusually large size and perfect skin, and it was given to the same institution receiving the "man-eater." The species is described by Jordan and Gilbert as from four to six feet in length, while this specimen measures eight feet seven inches. Its name is significant of a peculiarity of the surface of the body which is covered with tubercle-like scales or papillæ, giving it the appearance of being thickly sprinkled with sand. E. T. H.

WINTER RANGE OF THE ROBIN.

THE following notes were sent me by Mr. Alex. Scougal, of Sioux City, Ia. It may be well to state here that the northern limit of the ordinary range of the robin in winter lies two hundred and twenty-five miles south of Sioux City, though single birds have been known, in Minnesota and Wisconsin, to remain much further north. Robins were also seen at Vermillion, Dak., a few miles northwest of Sioux City, on Feb. 7, and many of them on Feb. 10. The letter reads as follows:

"Among our winter birds there is one in particular which I wish to mention. It is the male robin (*M. migratoria*). Hardly a person will believe that there is a robin in the State during the winter, but a year ago the 23d of last December, I shot a male robin, but took no particular notice of it except to skin it. Last December during the holidays I took my gun and started for a dense thicket almost impenetrable by man or dog. There I saw a number of robins and shot three. One of them was wing-tipped, and when caught began to call, and immediately there were thirty-four robins sitting around me, making noise enough to deafen one. I held the one in my hand for a long time, so that I could look at the rest, and all of them were male birds; not a female could be seen. I found a house in the woods and asked the man about them. He informed me that they had been there all winter, but he was not able to distinguish the males from the females. I cannot say positively that the female does not stay here in winter, but I have never seen one nor heard of one here during that season; so that I think it must at least be rarely if ever seen. The day I saw the birds was December 27, and the temperature was twenty-three degrees below zero. Again on January 2, 1885, I was there, and saw the robins a second time. It was then seventeen degrees below. I found in them wild grapes and seeds from a small bush [probably *Symphoricarpus*]; they were in good condition. The trees, in that part of the woods, were covered to their tops with grape vines, and many other vines grew underneath. The birds were in good condition, and seemed as lively as in mid-summer. Hence it would seem that these old birds, being the last to migrate, do not go so far south as the rest of their species, but get into these dense thickets and are unnoticed by most people until, with the first warm weather, they fly out in the open fields. The first day or two of February were warm, the mercury rising to forty-six above. These robins were seen by a good many in the city, and quite a cry went around, 'spring is coming, we have seen a robin.' But Feb. 5 froze the woodchuck that came out on the 2d and now (the 16th) it ranges eight to fourteen below zero. The people wonder where the robins have gone, but if they would go on the Nebraska side of the river to the dense thickets of Walker's Island, they could find the same robins as lively as ever." W. W. COOKE.

MOORHEAD, Minn., Feb. 22.

RANGE OF THE MOUNTAIN GOAT.

Editor Forest and Stream:

It may be of interest to several of your correspondents to know of a recent appearance of the Rocky Mountain goat, *Aplocerus*, in Wyoming Territory.

Early in the season of 1882 there was a small band on Freeze-Out Mountain, near the Medicine Bow River. One that was killed we estimated without the scales to weigh rather more than 150 pounds.

While out hunting and prospecting with one of my men, we came upon a large specimen that had been killed. Arranging to come back and secure it we pushed on after game not far away. Subsequent captures and trouble with our stock prevented return. This was on the crest of one of the spurs from Freeze-Out toward Shirley Basin. Having the idea—from the stories of the hunters—that the mountain goats were found even further south in the ranges around the Parks, I paid no further attention to the occurrence, beyond mentioning it to Prof. Allen on my return east.

S. GARMAN.

CAMBRIDGE, Mass.

Editor Forest and Stream:

In your edition of Feb. 26 I observe that Major Bendire contributes an article on the Rocky Mountain goat, in which he gives that animal a much wider and more southerly range than has generally been credited to it. This recalls a statement made to me last fall by Mr. Egbert Johnson, of this city, who, because of bad health, has to spend much of his time living in camp. He is a good hunter and kills much large game. About forty-five miles southwest by west from Denver there is an extensive but detached group of snowy mountain peaks, about 14,300 feet high, of which Mount Rosa is the central figure. In the latter part of the summer Mr. Johnson was encamped among these mountains at about timber line, or in the neighborhood of 11,000 feet above sea level. One evening just at dusk, while walking leisurely along a game trail near his camp, and just above the limit of timber growth, he met a large white goat, which he shot and killed. He believed it to be a Rocky Mountain goat. He has not seen any others, nor do I remember hearing of any. The locality where this animal was killed is very wild and rugged, many miles from any settlement and seldom visited by man. W. N. B.

DENVER, Col.

[The above notes are very interesting. Hunters' stories of the occurrence of the white goat in Wyoming are sometimes told, but authentic cases of the capture of this species have not hitherto, we think, been recorded. We have heard that a goat was once killed on Elk Mountain about fifty miles from the spot about which Mr. Garman writes, and once saw a scalp in Colorado which was said to have been taken in North Park. But it appears to be quite certain that in the Central Rocky Mountains this species is rare.]

SOUTHERN NEW YORK WINTER BIRDS.

THIS winter has been an unusually mild and open one, and consequently more birds than usual have been with us through the whole winter. Below I give a full list of the birds I saw or heard of on good authority:

American robin (*Turdus migratorius*).—I met with only two specimens of this bird during the past winter. I do not think it is usual for it to spend the whole year with us. These two instances of its occurrence here are all that I know of at this season of the year.

Bluebird (*Sialia sialis*).—I met with two flocks of this bird through the winter; one I met with on Dec. 20 containing about fifteen birds, and the other during the first week in January with three birds. I think it is a rare and occasional winter visitant here.

Black-capped chickadee (*Parus atricapillus*).—This and the next species are the two commonest winter birds we have, excepting *Passer domesticus.* One cannot walk in the woods without meeting numbers of these little birds.

White-bellied nuthatch (*Sitta carolinensis*).—The same remarks apply to this bird as to the last, except that, if anything, this is a little the more common of the two.

English sparrow (*Passer domesticus*).—This little pest occurs in overwhelming numbers during the whole year. They keep together in large flock and are found only in the vicinity of barns and stables, where they feed on the grain laid out for the chickens.

Chipping sparrow (*Spizella socialis*).—A rare bird during the winter months. I only observed two or three during the whole winter.

White-throated sparrow (*Zonotrichia albicollis*).—A rather rare winter visitant. Only met with a very few during the whole winter.

American goldfinch (*Chrysomitris tristis*).—A very rare bird at this season of the year. Only saw one.

Snowbird (*Junco hyemalis*).—A common winter bird. They keep together in large flocks and inhabit the open pastures, etc., rarely going into the woods.

Song sparrow (*Melospiza melodia*).—A fairly common winter bird. Generally saw two or three a day.

Meadow lark (*Sturnella magna*).—Before the first fall of snow this bird was very abundant, but almost all left at the first snow. I met with but one when the ground was covered.

Common crow (*Corvus americanus*).—This is one of the most abundant of our winter birds. It occurs much more plentiful during the winter months than at any other season. They associate together in large flocks, and stay mostly in the woods.

Bluejay (*Cyanurus cristatus*).—From some cause or other I did not meet a single one of these birds during the past winter, and so, perhaps, I ought not put it down on the list. But as it generally occurs so plentiful, I do not think that it ought to be passed over.

Downy woodpecker (*Picus pubescens*).—This bird is a fairly common winter visitor here. I only met with a couple of specimens, however, during the whole winter.

Yellow-bellied woodpecker (*Sphyrapicus varius*.—I think that this bird is a rare, occasional visitor in these parts. I met with but one this winter, which I shot and now have mounted. I procured this specimen during the first part of January.

Yellow-shafted flicker (*Colaptes auratus*).—This is another somewhat rare winter bird, although it is common in summer. I met with one specimen during the first week in January.

Belted kingfisher (*Ceryle alcyon*).—I have never before this winter known this bird to stay with us through the year. While out walking one day during the last week of December, I was greatly surprised at hearing the rattling note of one of these birds. I thought it so remarkable to see one at that time of year that I shot the bird and now have it mounted in my collection. This is the only one I saw.

Barred owl (*Strix nebulosum*).—This is, I think, our commonest winter owl. I myself shot two this winter, and heard of a couple more being killed. I shot both of mine in the daytime. They are much hated around here on account of their great fondness for young chickens.

Great horned owl (*Bubo virginianus*).—This is a rare winter visitant here. One was shot last winter, and I was informed that one had been seen this winter, but have not met with any myself.

Red-shouldered hawk (*Buteo lineatus*).—This is our commonest winter hawk. It is a constant visitor to the chicken yards, and many are killed.

Red-tailed hawk (*Buteo borealis*).—This is another rather common hawk during the winter. It is also a great destroyer of poultry.

American quail, Bob White (*Ortyx virginianus*).—The quail has been rapidly decreasing in numbers for the past few years in this place. A few wild birds were let loose last spring and seem to have flourished, as there is a covey of about fifteen or twenty birds now in the vicinity.

I close the list here without going into the subject of water birds. There is so much difficulty in properly identifying the different ducks, gulls, etc., at a distance, that I have not included them in the list. W. T. E.

WESTCHESTER CO., N. Y.

TAME RUFFED GROUSE.—Toledo, O.—*Editor Forest and Stream:* A friend of mine has a female ruffed grouse that has been in his possession some months and is quite tame. He says he has known several cases of female ruffed grouse thriving in confinement, but never of male grouse. Occasionally he has heard of men who claim at some time in the past to have had tame male grouse in their possession, but insists that I cannot point to a single case where such bird is actually in hand at present. I confess that I know of no such case. If what he holds is true, it is certainly a very interesting illustration of the indomitable character of this game bird. Perhaps some reader of the FOREST AND STREAM can cite existing facts which will upset this gentleman's theory.—B. B.

SNOW BUNTINGS.—Perth Amboy, N. J., March 1.—Last week, for the first time in several years, the rare and beautiful snow bunting (*Plectrophanes nivalis*) was seen here in considerable numbers, searching for food in the middle of the principal streets in company with the ubiquitous English sparrows. The latter, by the way, is less numerous than usual at this season, hundreds of young birds having been drowned by a terrific thunderstorm last summer.—J. L. K.

Game Bag and Gun.

IN GOSHEN'S HOLE.

GRAHAM, Griff, Tuck and Doc were lingering over an unusually late breakfast one December morning, loth to make any movement even to aid digestion, for the air without was full of frosty sharpness and accompanied by one of Wyoming's famous zephyrs. There being no out of doors duties requiring their presence or attention, the genial warmth of the dining-room or kitchen held them down. This sort of thing had been so for a couple of weeks and had commenced to grow the least bit monotonous for four big hulking fellows accustomed to active outdoor life in the saddle.

Puff-puff-puff—"What say to loading—puff-puff—the wagon to-day and pulling—puff-puff—over to Goshen's Hole in the morning—puff-puff-puff—for a few days' hunt?" says Graham.

"It's a good idea," answers Griff. "There's something in it, as the fat girl said when she put her foot in the stocking. It means sport, plenty of fresh meat, and a varying to some purpose of the slow quiet days in the bunk-house where all one hears is 'I beg, fifteen two, that's a go, make it next,' and like nonsense. Yes, let's go."

Puff-puff-puff—"Would you like to go, Tuck?"

"Y-e-s," came from somewhere in Tuck's œsophagus, but to one who knew Tuck it meant, notwithstanding his deliberate pronunciation, a most emphatic yes, which, so far as he was concerned, settled the business, and Doc having neither the courage nor inclination to assert his independence by disputing so decisive a majority, mildly acquiesced, and the bill was passed without a dissenting voice.

"Now, Tuck, if you and Doc will see to get the mules and saddle horses up, Griff and I will have the wagon loaded and everything ready for an early start in the morning."

"Then there was hurrying to and fro,"

and ere

"The shades of night were falling fast"

everything we needed was stowed away in the wagon and sheeted down, and by my saddle girth, good friend, ere the morning sun begins to gild the eastern edge of Boughton Hill we'll be well into the sand cañon, popping the buckskin into the mules, else my name is Dennis."

Bean Belly, Crook, Bodie and Lida, the mule power, were early in their traces and not one of them appearing as though they relished the prospect before them. Crook, the off leader, persisted in putting his crooked hindlegs outside the traces, while his side partner, Bodie, a cunning rascal, was eyeing the proceedings, doubtful whether to put his neck in the collar and do good, honest work, or kick himself loose and join the bunch on the divide. Bean Belly, as mild a mannered mule as ever kicked a lung out of a hostler, was temporarily on his good behavior, due no doubt to the good behavior of the gentle Lida, who kept the off whiffletree straight, but old Beans will bear watching.

A half hour's hard and steady pull brought us through the sand cañon and on top of the flat between Bear and Fox creeks. Four miles to the east was Phillip's Hill, just enough of a hill to form a landmark amid the surrounding flatness. Half a mile to the west of our road rose Boughton Hill, with its ups and downs, its grassy sides and rocky points, and fifty miles northwest, looming up in rugged grandeur and dwarfing its scores of neighbors, was Laramie Peak, its dark, intense purple rendered more so by contrast with the light, fleecy banks of clouds that were passing over it.

All around us was the great waving sea of grass, dotted here and there by little drifts of snow which the wind had packed away into hollow and washout. Over in the direction of Fox Creek Gap an occasional pine tree relieved the monotony of the scene, and on the roadside were scattered at irregular intervals those well-known markers of the pathway of civilization, tin cans and empty bottles.

Now, with a good road before us, and with liberal applications of the buckskin, to which the mules tardily and unwillingly responded, we go bowling along over the prairie, the saddle horses under their lighter loads being hardly able to restrain their impatience at the slow-going mules. However, the middle of the afternoon found us among the breaks and timbered country, at the head of the road entering Goshen's Hole, and by sundown we were at Sturgis's cabin on Box Elder.

Goshen's Hole lies between fifty and sixty miles east of north from Cheyenne. It is really an enormous hole in the earth, the western and southern sides abounding in magnificent cañons, many of them independent of each other, well wooded and watered, and rising abruptly in walls of some hundreds of feet to the level of the prairie above. These walls, under the action of storm and sunshine, of frost and heat, have assumed many fantastic shapes—cathedrals with their towering minarets and steeples, long lines of fortifications, castles and monuments. In one place is a steam engine which looks as though it might have been the handiwork of man, and on another point a bath tub that might have been built for a giant among the Brobdingnags, and altogether, these miles and miles of rock would look to a magnified and distorted imagination like the Alhambra, the Pyramids, the Washington Monument, Windsor Castle, Sebastopol and the ruins of Moscow shaken up in a bag and emptied between Lone Tree and Box Elder, while the addition of a little native Wyoming scenery gave it a home-like and natural appearance.

Out from the cañon the land is gently rolling as far as the eye can reach, and furnishing an abundance of feed for the many thousand cattle and horses which range there. Many of these cañons are the fountain heads of springs, forming little creeks running out toward the open, and well wooded with box elder and cottonwood. In August they usually go dry at the lower end for a few hours in the afternoon, but at all other times they furnish an abundance of water for man and beast. Box Elder, our present headquarters, is one of the largest of these creeks. Near its head is one of the cabins of the Union Cattle Company. We pitched our tent a mile above, and "we'll all go a-hunting to-morrow." At sun-up we were at breakfast, when below us we heard the bang, bang of rifles. Running up out of the creek bottom we saw four deer putting up the cañon. Griff fired and brought down one of them, while the others disappeared around the hillside. In less than ten minutes we had our victim in camp. We finished our breakfast and prepared to trail the others, a very easy matter to do in the inch or two of snow which had fallen during the night.

Striking the trail where Griff had killed the one we followed slowly for perhaps a half mile, when the leaps commenced to grow shorter, showing that the deer had slowed up. A few minutes more and there appeared before us a grand specimen of a black-tailed buck. Graham and Doc immediately opened hostilities and continued rapidly firing until he was out of sight, but never a hair on him was touched. In the meantime Griff had fired a couple of shots close by, and said, as Graham and Doc were about to move forward after the big buck, "Hold on a minute until I bleed these two here," when sure enough on the side of the cañon, a hundred feet higher up, were two more of our early morning visitors which had fallen in answer to the two shots of Griff's. It was quite a surprise party to Graham and Doc, for though they had heard the shots they supposed they were made at the same deer at which they were firing. The big buck traveled but a little way further on when he lay down under a low pine tree, when Griff dispatched him with a bullet through the head.

"Well, Griff, the honors are all yours, and I imagine mainly due to your seeing qualities. That's the great secret of deer stalking."

"No, it's not altogether due to my quick eyesight, for you all saw the first and last deer as soon as I did, but I reckon it is partly due to the sights on my rifle. To be sure, it's an antiquated old Henry, but its sights are better than yours and admit of no mistake. Now, your Sharps and Winchesters and Remingtons, when you bought them were all right, but you must needs have some patent sights recommended as specially adapted to the country put on them, and sights such as no old practical hunter would take to a dog fight. I have heard hunters who depended on their rifle for a living say that you could not run fast enough to give them those kind of sights. Do you pretend to tell me that Remington and sharp and makers of that class do not know the proper ones to use? Why, man, if those you use are so superior, you would find them used the world over. As it is, none but a few dude hunters and men who shoot but once or twice a year ever use them. I had as soon have a palm leaf fan for my front sight, and a step ladder for my rear sight, as those things you have. What's that big hole in the bottom of your rear sight for? To see your game through? Why, man, half the time you are sighting through it when you ought to be looking above it. There's where you make your misses. It reminds me of an old clock I heard of. The owner of it replied to a question, saying, 'It is a little queer, but one gets used to it. For instance, when the hands indicate quarter past seven it strikes four, and then I know it wants twenty-three minutes of twelve.' Those sights require as much figuring on as the old clock, and in the meantime away goes your game while you make a clean miss, and my advice would be to plug the hole up temporarily, and at the first opportunity, have them removed and the original ones replaced. Don't throw them away, for they are mighty good to have in a family that's out of milk, that's all."

With our four deer suspended on stout poles resting on the limbs of the box elder trees, the clean, white tent among the trees, and a roaring and cheerful camp-fire, around which the hunters were busily engaged in cleaning rifles, keeping warm and preparing supper, made a pretty picture of camp life. The gray of evening grows quickly at this season into darkness, and to the barking of the coyotes and the hooting of the horned owl, we roll our blankets about us and "lie down to pleasant dreams." MILLARD.

MOUNTAIN QUAIL IN ALABAMA.

Editor Forest and Stream:

Looking over an old issue of the FOREST AND STREAM, March 10, 1881, my eye encountered the letter of an Ogdensburg, N. Y., correspondent, on "The Oregon Quail." He alluded to an importation of birds brought across by the Hon. D. Magone, from Oregon, in the early part of 1880, and which the editor of the FOREST AND STREAM identified from the description as being *Oreortyx pictus*. In the letter mentioned the writer declares that serious thoughts of these birds passing through one of the New York winters were out of the question, and accordingly these mountain rangers were sent, he tells us, to the care of a sporting club at Montgomery, Ala., to be liberated in localities supposed to be favorable to their increase.

This was just four years ago. What became of these adventurous emigrants to Southern climes? Quite an interest was felt in their fate, but though the editor asked for further reports regarding them, no word has come back to the readers of the FOREST AND STREAM (so far as I am aware) to tell us whether they lived or died. Having felt a little more than passing curiosity on the subject, in January I wrote to Gen. Henry Semple at Montgomery, and had in reply a very courteous letter under date of Feb. 4. Let me quote what he says:

"I handed the quail over to our gun club, and they were divided into several bunches of six or seven each and placed in the best positions. One part had a house assigned them and were fed in it regularly. They afterward had the run of a stubble field when they had become quite tame and gentle, but after four weeks of liberty they failed to come up one night, and were heard of more than nine miles off the next day. One of this lot was killed by a negro when twenty miles away. It was full of eggs, which were very near maturity. The other lots were simply let loose in favorable localities. In one instance they bred, and some dozen or so were found the next fall with a bevy of the Virginia quail, or 'partridge', as we were taught to call it in Virginia. There is no doubt that these were the progeny of those sent to that vicinity, as they were too numerous to have been the original birds. Three of them were bagged by a man who brought one of them to Montgomery to show it. None of the others have ever since been heard of. I regret that I did not keep one or two pair in my garden, as we could in that way have tested the question of their adaptability to our climate."

In a private letter from Hon. D. Magone, who imported these birds, he expresses the opinion that they are not identical with the California quail, but are "both larger and handsomer." It is possible that he has in mind the valley quail of California, *Lophortyx c.* If I might venture a guess, it would be that these birds would have done better in the mountainous portions of New York than in Alabama. My Arizona quail have flourished entirely in the open air through the severest winter known in Northern Ohio for thirty years, and "smile" complacently on a temperature of twenty degrees below zero. J. B. B.

TOLEDO, Ohio.

The Tacoma *News* reports: "The Mongolian pheasants brought from China to this country by Judge Denny, late Consul to China, and committed to the care of the Portland Rod and Gun Club, are to be colonized on Protection Island, in Puget Sound. Mr. Powers owns the island and will take charge of the birds until they are old enough to be turned loose on the main land."

COMMON SENSE ABOUT IT.

Editor Forest and Stream:

A lady while reading a daily paper recently, saw notice of the death of a well-known "sporting man" by the name of Johnson. She very innocently asked if he was not a friend of mine, knowing that I had a friend named Johnson who sometimes went fishing and shooting. The terms sportsman and sporting man seem to many people to be synonymous. Webster's definition of sportsman is "One who pursues the sports of the field; one who hunts fishes and fowls. One skilled in the sports of the field." He defines a sporting man as "One who practices field sports; also a horse racer, a pugilist and the like." When spoken of as a sportsman, I acknowledge the title as readily as I would any name; but to be called a sporting man, to be classed with pugilists and the like, makes one's blood boil, and we experience an irresistible inclination to have the game as well as the name, by knocking down the person so calling us. Shooter, gunner, hunter or huntsman are all inappropriate. What shall we be called? I see but one way; that is, to educate the ear and understanding of people to know that a sportsman is not a sporting man. A little discussion on this subject would enlighten many.

Without going into sentimental rhapsodies over the ideal sportsman, I will simply try to set the ball rolling by showing him as he appears to me. Rough and ready, or of gentle birth or fortune, rich or poor, honest or dishonest, business man, farmer or preacher, is a sportsman if he is fortunate enough to have the love of dog and gun, or rod and line, born in him. Unless he has the gift, art will not make a man a sportsman. He kills his game not in mercy and kindness, but from an instinct in his nature to prey, implanted from the first of creation, and a desire to overcome difficulties by his superior skill and judgment. A sportsman is not of necessity a gentleman, any more than all members of any profession or occupation in life are necessarily gentlemen. Yet the sport of shooting and fishing is in itself ennobling. It cultivates and develops nerve and coolness in emergencies, quick thought and action.

It is folly to excuse cruelty of taking life of fish or fowl, if cruelty there be, on the score of procuring food. Rarely if ever is a sportsman driven to it by hunger, or a desire for a particular kind of food. Nor does he consider, while in the field and game is plenty, the exact amount he requires for food. In fact his mind is not likely to dwell on that subject until his shooting or fishing is over for the day, when he is prepared to do it ample justice in the most practical way. A sportsman cannot be a pot-hunter, for when there is slaughter sport ceases. Shooting and fishing have become so expensive that if food were the impelling motive we would go to the market rather than the field. If our markets had

to be supplied only with game killed in a sportsmanlike way the value would be proportioned to the cost, and but few could afford to eat game until it became so plenty in forest, field and stream that rich or poor, sportsman or market-hunter, would be able to obtain fair value for time and capital invested. The genuine sportsman, the man impelled by love of sport, whose motive was pleasure and recreation, would not only obtain the attainment of his object, but value as well, while the man who worked for dollars and cents would get full compensation.

A man may not be a good shot nor expert in use of rod and line, yet may be a thorough sportsman. His sportsmanship cannot be measured by the number of birds he kills or of fish he catches; only by his enthusiastic and persevering pursuit of his favorite amusement.

One who shoots only at the trap, or fly-casts at tournaments, is not a sportsman, and knows not the thrill of excitement enjoyed by one who has worked all day with poor success, when he finds a covey of quail just before sundown, and sees them scatter beautifully in brown straw or sedge, then proceeds to deliberately pick them up one by one over a faithful and steady dog's points. BEDFORD.

BROOKLYN.

BATTERY-SHOOTING.

Editor Forest and Stream:

In your last issue "Sinkboat" endeavors once more to defend his favorite pursuit of battery-shooting, and also tries to reply to my statements of facts already given on this subject. It is not his fault that this method of destroying fowl is indefensible, save for the reason that the birds can in this way be slaughtered in large numbers, and he does the best he can for a poor cause, but after all he brings forward in advocacy of the practice, it still remains as objectionable as ever. In reply to him I propose to consider some of his assertions, and show by his own language that he establishes the very statements which he disputes. "Sinkboat" says that I have "drawn almost entirely on my imagination for my points," and that my "knowledge is not derived from practical experience, but from hearsay." This is a confident assumption on the writer's part which would no doubt be very satisfactory to him if he could prove it, but which appears only amusing to me, when I look back over the years that are gone, and recall the many days I have lain in batteries shooting fowl. "Sinkboat" also says that "it is not the habit to tend the battery with a sailboat, and from my description it would be supposed batteries were terrible instruments of destruction, which, in fact, they really are." Now the chief reason that causes "Sinkboat" to think I have "drawn upon my imagination for my points" is because they do not agree with his experience! Very likely, for "Sinkboat" has stated he is only conversant with battery-shooting as practiced in his own locality, while I wrote generally of the custom of battery-shooters from Currituck Sound to the Mississippi River, wherever these or similar engines were used. Does it seem probable then, that with twenty years' experience over so large an extent of our country, it would be necessary for me to "draw upon my imagination" in order to reply to one whose limited knowledge of the subject was obtained from a single locality only, and where, very possibly, not every one of the evils attending on battery-shooting was practiced.

But let us examine this a little as it appears in "Sinkboat's" statements. That, as a general thing, a battery is attended by a sailboat is so well known by all those whose knowledge of the subject is not confined to one locality, that it is unnecessary for me to do more than reiterate that it is a fact. Where "Sinkboat" is accustomed to shoot, the batteries are probably altogether too numerous for each to have an attendant sailboat lest they interfere with each other, but nevertheless he says the "yacht is occasionally sailed round to break up the large beds of ducks," etc.; and again: "I know it [the sailboat] is only practiced in this section when the fowl will not fly." E-x-a-c-t-l-y. The sailboat is only required when the fowl will not fly; and therefore, even in his own locality, "Sinkboat" confesses that this pernicious habit is indulged in, and thereby corroborates my statements. In Currituck Sound it is the universal practice of the gunners to employ sailboats, and other places also suffer from this system. The sailboats, if possible, are more hurtful than the batteries, as I have already shown. That more fowl are killed by the means of batteries, and that they are an evil, "Sinkboat" acknowledges in his article, for he says, "it is true that out of a given number of shooters, those using batteries doubtless kill more fowl than a like number who do not," and "the over-killing of ducks from boxes is an evil that soon corrects itself." The wherefore of this correction may very properly be doubted, and it cannot certainly be substantiated in many places, but the fact of the evil and the over-killing, as I asserted, is confessed. I do not think "Sinboat" can point to any sentence of mine wherein I advocate the slaughter of ducks, either from the shore or from the box. I condemn both. The gratification that a true sportsman derives fram a day's shooting is by no means solely confined to the quantity of game he may have bagged. Therefore my illustration of Sandusky Bay was not so unfortunate as he thinks. It proved beyond question that in a locality where fowl were naturally abundant they gradually disappeared on the introduction of batteries, and when these were suppressed the fowl returned to their original haunt in undiminished numbers. The quantity then killed in one year was excessive, the same as was 3,000 or 4,000 killed in one day, as has been done in former years from batteries on the Susquehanna Flats at the opening of the season. Neither of these facts are likely to meet the approval of any one who desires the protection of our game. But the fact is no less forcibly presented to us that in Sandusky Bay the batteries were the cause of the diminished number of fowl.

A word as to riparian rights. It by no means follows that because one owns a mile of water front, or is interested in water property, as "Sinkboat" says he is, that he knows all about, or indeed anything at all, of riparian rights. "Sinkboat" asserted in his first article that no one "could commit a trespass in the water," and again, that the "water is free to all." This does not sound as if he were fully conversant with riparian rights. I would refer him to two issues of this journal in April and May, 1883, where he will find the Fox River question and a decision in Ohio on this subject that will enlighten him considerably.

This discussion should be confined to the subject matter, viz., the injury that batteries do to fowl shooting, and certain, if persisted in, to drive the birds from their usual haunts, and therefore nothing that I have written should be construed, as "Sinkboat" would seek to show, as aimed against those who shoot for market. Such gunners will kill game where and how they can, careless of the consequences or the means employed, but it is not necessary at all to bring them into the subject matter, for batteries are equally destructive and objectionable for the reasons given, whether used by professionals or amateurs.

"Sinkboat" further says that in his locality, except by means of boxes, there is no other way to kill fowl. (He evidently forgets sneakboats). And yet fowl were killed there before the introduction of either of these objectionable methods, and probably could be still if batteries were forbidden, but not by any means in the same numbers, and just here, I expect, lies the whole secret of the matter, and is the chief reason why the use of boxes is defended. The Bush, Gunpowder and other rivers as cited "where good shooting can be had over decoys from the shore;" yet point-shooting has been practiced in those localities as long as it has where "Sinkboat" shoots, and ducks are still bagged in large numbers, though I will acknowledge that if batteries were permitted in those rivers, the daily bag for a time would be enormously increased. The owners of the shores of those rivers, however, are too sensible to permit the introduction of these engines.

One more point to notice in "Sinkboat's" article and I have done. He says that I am sensitive about his remark of throwing the points open if box-shooting is stopped. This is merely the fancied result of "Sinkboat's" delicate analysis of my feelings, but as in most of his assertions, he is mistaken. I simply gave his proposition the consideration it deserved. If it could by proved, however, that point-shooting was as destructive to fowl, and caused them to leave their haunts, as is the fact with battery-shooting, then all would agree that there should be lay-days for both alike; but since the points keep the sportsman where he cannot reach the fowl, and as the marsh cannot be moved, batteries must be resorted to, for these can be carried to any spot, and the fowl being constantly pursued everywhere on the waters, are unable to escape this persecution. Thus no comparison can be made between points and batteries in their respective destructive properties, and because one should be condemned for the evil it does, that is no reason that the other, much less culpable, should be called upon to incur a like penalty. In conclusion, I think that "Sinkboat" does probably desire that fowl should be protected, and that every legitimate means should be employed to increase their numbers, and I cannot but believe, in spite of my "vivid imagination", that when, by an experience equal to that which has convinced me, he shall have acquired a full knowledge of the evils wrought by battery-shooting, he will then become one of the foremost advocates for the suppression of these destructive engines.

SAGAMORE.

MAINE GAME LAWS.

THE Maine Legislature, which adjourned Friday, made but few changes in the fish and game laws of that State, so far as the primary points of those laws are concerned. The attempt was made by a part of the hotel, summer boarding house, transportation and guide interests to add September to the open months for hunting moose, caribou and deer, but the petitioners, after a full hearing, were given leave to withdraw. Hence the close time remains as formerly—beginning Jan. 1 and ending the last day of September. The attempt to repeal the transportation laws so as to allow any person, corporation or company to have in their possession more than three deer, two caribou or one moose during the open season also failed.

Sec. 31, Chapter 30, of the Revised Statutes is amended so as to include plover with woodcock and grouse as game birds which cannot be transported, and reads as follows: "Whoever kills or has in his possession, except alive, any wood duck, dusty duck, commonly called black duck, or other sea duck, between the first days of May and September; or kills, sells or has in possession, except alive, any ruffed grouse, commonly called partridge, or woodcock, between the first days of December and September following, or kills, sells or has in possession, except alive, any quail or pinnated grouse, commonly called prairie chicken, between the first days of January and September, or plover between the first days of May and August, forfeits not less than $5 nor more than $10 for each bird so killed, had in possession or exposed for sale. And no person shall kill, expose for sale or have in possession, except alive, any woodcock or ruffed grouse or partridge during August, September, October or November, except for consumption as food, within the State under the same penalty."

The law providing against the transportation of more than fifty pounds of trout or landlocked salmon has also been amended so as to include togue, and otherwise strengthened, so as to read as follows: "No person shall take, catch, kill or have in possession at any one time, for the purpose of transportion, more than fifty pounds of land locked salmon, trout or togue, in all, nor shall any such be transported except in the possession of the owner thereof, under a penalty of $50 for the offense and $5 for every pound of landlocked salmon, trout or togue, in all so taken, caught, killed, in possession or transportation, in excess of fifty pounds, and all such fish transported in violation of this section may be seized on complaint and shall be forfeited to the prosecutor. Whoever has in possession more than fifty pounds in all of such fish shall be deemed to have taken them in violation of this section."

The Commissioners and friends of fish protection have for a long time regarded certain streams emptying into the Androscoggin and Moosehead lakes as the nurseries of trout and they have asked the Legislature for further protection of these streams, with the following results: "No person shall take, catch, kill, fish for or destroy any trout or landlocked salmon in the Rangeley stream, between the mouth of the Kennebago stream and the head of the island at the eddy, so called, in said Rangeley stream, from the first day of July to the first day of May; nor in that portion of said stream from the head of said island to the Rangeley dam at any time; nor in the South Bog stream, which empties into Rangeley Lake, above the dead water at the mouth of said stream, from the first day of July to the first day of May; nor in the Bemis stream, which empties into Mooselucmaguntic Lake, above the blue water, so called, at the mouth of said stream, from the first day of July to the first day of May; nor in the Cupsuptic stream, which empties into the Cupsuptic Lake, between the foot of the first falls toward its mouth and its source, from the first day of July to the first day of May; nor in the Kennebago stream, between the foot of the first falls toward its mouth and the upper falls at the outlet of Kennebago Lake, from the first day of September to the first day of May. No person shall take, catch, kill, fish for or destroy any trout, landlocked salmon or other fish in the Misery and Saccatien or Socatian rivers, which empty into Moosehead Lake, from the tenth day of September to the first day of May."

A large number of private bills have been passed, prohibiting the public from fishing in ponds and streams which are private property, and the Legislature has made special provisions for posting notices on the borders of such waters as follows: It shall be the duty of all persons that may be benefited by legislation, other than the general statutes for the protection of fish in any waters of this State, to publish such protection by posting and maintaining notices as hereinafter provided. Said notices shall be placed on the banks or shores of such protected waters, not more than ten feet and not less than six feet above the ground, in a conspicuous position; and if on running water, such notices shall be not more than one-half mile apart on the banks of such water; and if on a pond or lake, not more than one mile apart on the shores of such pond or lake.

Sec. 2. Said notices shall be painted on wood in black Roman letters not less than two inches in length and not less than one-half inch in breadth, so that such letters shall be plainly legible; and such notices shall state the number of the act and the date of same, giving the said protection to such waters.

Sec. 3. Any one mutilating or destroying such notices, shall be subject to the same penalties as set forth in Section 20, Chapter 127 of the Revised Statutes.

Sec. 4. In case no notices as herein provided are posted and maintained on waters that are protected by special laws, then no one violating such laws shall be liable thereunder to any penalties set forth in such laws.

The old law regarding prosecutions for violations of the fish and game laws has also been amended so that municipal and police judges and trial justices within their counties now have jurisdiction, by complaint original and concurrent, with supreme judicial courts; so that now offenders against the game law of Maine can be brought to trial at once without waiting for indictments before grand juries.—*Boston Herald.*

COL. MENDACITY'S REMARKABLE SHOT.

Editor Forest and Stream:

Against Major Verity's remarkable shot (see FOREST AND STREAM of 26th ult.), you will, I am sure, be glad to offset Col. Jack Mendacity's far more wonderful performance at Blue Springs, near Palatka, on the St. John's River.

Having received the statement from his own lips direct, it must be taken without a single grain of allowance.

The Colonel was out for a day's sport, when suddenly a spooky and very cadaverous looking quadruped came to a dead standstill directly in front of him. The stranger proved to be a wild Florida pig, which like thousands of its kind, had undertaken to run from Jacksonville to Tallahasse without stopping for food or water. The trip, however, proved too much for the little Floridian, reducing him, by simple emaciation, to the shadow of a shingle. While eyeing the Colonel sharply, with a view perhaps to some new departure, the latter leveled his Remington and "let fly." Apparently he might as well have aimed at a sheet of isinglass set up edgewise, but the charge struck the unfortunate quadruped's razor-like spine with such precision as to exactly split the bullet, one-half passing off to the right, perforating the body of a noble buck, and lodging afterward in the breast of a wild turkey weighing sixteen pounds; while the other half sped through the well-armored carcase of an alligator fourteen feet in length, and finally spent itself by killing a pair of fox squirrels that were frolicking up a gum tree in the neighborhood.

Not only was all the game bagged, but both segments of the bullet were recovered, and naturally enough, have been carefully treasured as mementos of this truly "remarkable shot." The pig, so far as powder and ball were concerned, escaped without a scratch, but the poor little fellow's nervous system was so shocked by the fright and spinal concussion, that he died of paralysis within a week thereafter. Besides throwing considerable light upon the natural history of the Florida pig, the incident above shows that notwithstanding the onward march of Northern civilization, the Everglades are still literally swarming with game of every description. "I could tell much stranger things than these." So could "Mendacity." The Major must try again.

ELIHU PHINNEY.

COOPERSTOWN, N. Y.

REYNARD'S WAYS.

I WAS gunning for grouse in Southern New Hampshire early in September, and as I was going through a thick growth of low bushes, I saw some fifteen to twenty yards ahead, on a small mound among the pines, a fox curled up and apparently asleep. The growth surrounding me being nearly as high as my head, I had a fine chance for observation, and cautiously advanced. The fox lay with his head partly turned from me, so that I could just see one side of his face, and that he appeared to partially open his eyes at intervals in a very sleepy way.

I advanced very cautiously to within twelve paces and was intently watching him, when he suddenly changed position by lying on his other side, which brought us face to face, but he did not open his eyes enough to see me, and I stood quietly awaiting further developments, with not very much cover between us. In two or three minutes he opened his eyes wide and took in the situation. In a twinkling he had put a pine tree between himself and me, and if I had wished to take a parting shot it would have been useless. I paced the distance to where he had lain and it was twelve paces. I have never been sorry that I did not shoot him, for his sleep and his awakening were well worth the sight, and though he might be "vermin" to the farmer, he was not game for me so early in the season. Several weeks later I heard the music of foxhounds, and the report of a foxhunter's gun in that same wood, and I fancied reynard came to grief as surely as though I had taken him off on the occasion of our meeting.

Your Pennsylvania correspondent writes of still-hunting foxes with a rifle. I have an uncle living in Essex county who followed still-hunting successfully for several years in his younger days. On one occasion he discovered reynard asleep and attempted to approach him, but the ground was frozen and the hunter's boots were too noisy, and when he had got in sight of the fox's bed it was unoccupied. Straightway the man became a statue, and soon saw a fox come in sight around a knoll to take observations. The fox, after looking for a while at the statue, trotted off behind the knoll again, to appear for another observation. Later on the fox went on to a hill overlooking the statue, and lay down for a long time, keeping an eye on the statue, trying to settle in his mind whether a bar-post had strayed out into the open

pasture or a stump had grown up while he was trying to get asleep. Finally he trotted off around the hill out of sight, and still our statue kept his position, for he had not hunted foxes all those years without learning some fox trikes, and pretty soon he saw the animal come around the hill and stop for another observation. This seemed to satisfy reynard, and forthwith he started off to find another resting place where he could take his nap in peace. Not till then did our statue begin to move, and knowing the ground thoroughly, he followed leisurely. After a while he saw him on the top of a small boulder in the midst of a bunch of low bushes which were too thick to shoot through, when he should get near enough; but within gunshot of the fox and between the fox and himself was a rock, gaining the top of which he could shoot over the top of the bushes without obstruction. This time he took off his boots, and working his way carefully to the rock he climbed to the top of it, and was just raising himself erect to bring his gun to shoulder, when suddenly reynard stood up too; but too late, the gun came to shoulder and Mr. Fox got down the other side, shot through the neck. ESSEX.

A. F. Y., of Escanaba, Mich., says: "In the past eight years I have seen not far from a dozen foxes asleep on the bluff back of my house. I saw three at one time. Foxes are very numerous about here. Rabbits were plenty near my house until the past two years. This winter I have not seen a track."

SOME REMARKABLE SHOTS.

Editor Forest and Stream:

Your column of "remarkable shots" recalls a circumstance under this head which, while not as fatal as some of those mentioned, was the cause probably of as much surprise as the best of them. Two gentlemen while approaching camp on one of the clear Adirondack lakes, noticed a half dozen ducks on the river below. The only possible chance of obtaining a shot was to land and climb the bluff overhanging the river. This one of the gentlemen did, and as he cautiously looked over the edge of the rock he discovered that something had startled the birds, and they were then flying directly past him up the stream. Jumping to his feet he sent one and then another charge among them. He was well armed and a good shot, and actually expected to bag the whole brood, but in his haste he fell an easy victim to the deception.

The reader may try to imagine our friend's feelings when he saw his ducks all safe overhead, but he had riddled the images reflected in water below. FACT.

MERIDEN, Conn.

PHILADELPHIA NOTES.

VAST flocks of both geese and ducks are now congregated in the waters of the Chesapeake Bay below Chincoteague Sound, waiting, it would seem, for the disappearance of ice in the shoaler sounds before moving northward. The Sinnepuxent is still frozen over, as are also many other arms of the Chesapeake Bay.

I have learned from a friend who has just returned from a duck shooting trip not far from Franklin City, which is situated, I believe, in North Hampton county, Va., that illegal battery-shooting is carried on there without molestation, and what is far worse, fire-lighting ducks at night with a big-gun is practiced every night, and he cited an instance of eighty ducks being killed at one discharge, by a fellow who paddled on the flock with a jack-light in the bow of his boat. Each night while he was there several such shots were made at the fowl while on the feeding grounds, and the engineer of a locomotive which laid over on the siding at Franklin City offered to loan my friend the headlight of his engine if he would accept it, and try a shot with a big-gun. Is it a wonder that the ducks, when they reach more northern grounds, are wild and shy?

Many sprigtail ducks are reported down the bay on the Delaware shores, and not a few are being killed and sent to our market; but they are in wretched condition. Since the late pleasant weather has set in, the fowl have worked further up the river; but the marshes still remain frozen tight, so there can be little food found.

We have never before had so much ice in our rivers, and until yesterday, when one of the Philadelphia ice boats opened a channel north of the city as far as Florence. The Delaware for two weeks has been frozen solid from shore to shore clear up to Trenton, N. J. All this ice will have to be moved and advantage will be taken of it by duck shooters who will use it as a blind for their skiffs while paddling on to the fowl, and it is safe to say we shall have plenty of it in our river for a fortnight to come and the ducks have already commenced to come up the stream from down the bay.

No mention has been made to me of the presence of the snow geese below Bombay Hook, although they have doubtless not arrived yet. They may be confidently expected as soon as the meadows where they feed have become thawed out and the grass begins to shoot up under cover of last year's growth.

Some spring birds have already made their appearance in our rural sections. A day or two since purple grackles, robins, and bluebirds showed themselves, and the genial weather of the 3d, 4th and 5th of the month shows that the backbone of the cold season has been broken. HOMO.

MARCH 7.

WISCONSIN GAME.—Menomonie, Wis., March 4.—We have had a very severe winter, the longest season of very cold weather known for years, and it would seem that all the game in the country would die from the effects of it. Such is, however, not the case. On riding through the country great flocks of grouse will occasionally be seen, and about as often as ever. Our sportsmen are expecting their usual term of good shooting next fall. Some of the members of the Menomonie Gun Club are already anticipating the sport in the field next season by getting their guns ready to open the practice season before the traps. Our club prefers clay-pigeons to all other flying targets. Some of our rifle wing-shots expect to try the clays with a rifle; of course they will make the conditions proportionately easier than they are in shotgun shooting.—WING SHOT.

HARRISBURG, Pa., Feb. 26.—A club was organized in this city on the 24th inst. for the protection of game birds and fishes, called the Rod and Gun Club of Central Pennsylvania, with Walter L. Powell as President, Dr. John M. Peddicord, John B. Nichols and Geo. W. Boyd, Vice-Presidents; Albert J. Fager, Secretary; Dr. John Vallerchamp, Treasurer. About fifty gentlemen have joined. The membership will be over 100 before the 1st of April. Much good is expected to result from this organization.—A. J. F.

THAT CUVIER CLUB VENISON.—Denver, Col., March 3.—*Editor Forest and Stream:* I think it was in your paper of Feb. 19 that I observed a paragraph stating that some distinguished gentleman had shortly before given an extravagant game dinner at either St. Louis or Cincinnati—I believe at the latter city. This fact in itself was not remarkable, but special emphasis was given to the statement that the great feature of the feast was a saddle of blacktail, procured in Denver at thirty cents per pound. If this latter was a fact somebody "got stuck." I am sorry to say that blacktail venison has been "hog plenty" and "dirt cheap" in Denver all through the past winter, and I believe abundance of it can be procured yet from game dealers and commission men. I know it was plentiful but a few days ago. Saddles have sold all winter at from six to ten cents a pound; forequarters hardly marketable at any price. For instance, the consignor of fourteen large deer, received here in January, told me one day last week that he had just got returns from the sale of same and the proceeds were $40.50 after paying freight and commission. He said the forequarters were nearly all thrown away; or at least brought nothing in the account. It is a shame to destroy deer for such returns.—W. N. B.

FLINCHING.—In your issue of Feb. 26 I notice on the editorial page an article on "flinching" or gun shyness in sportsmen. Your remedy is no doubt a good one. The following simple plan has also been tried with complete success in several cases to my knowledge. The cure is to simply have your gunlocks taken off and the "tumblers" or "dogs" filed or ground down so that the gun will go off with a very slight touch of the trigger. Then there will be no "tugging" and shutting the eyes; the gun goes off almost before the shooter knows it.—RED WING (Glencoe, Fla.).

QUAIL IN INDIANA.—Newport, Ind.—I have made extensive inquiries, and all the reports confirm the fact that in this part of the State there are but few quail left for next season's sport. The continued cold weather, with the heavy snow that this part of the country has been subjected to this winter, has starved and frozen them by the hundreds, and the majority of those left owe their lives to warm shelter and feed around the farmers' barns and feed lots. The prospects for quail shooting next fall are very poor indeed.—R. E. S.

WORCESTER, March 2.—With the end of February came the end of the fox-hunting season. The company of gentlemen in this city who hunt together have found it a hard winter for the sport on account of the cold and the crusts. Their score is as follows: A. B. F. Kenney and John M. White 10, Leonard Rome 5, John A. Slocum and J. Henry Lark 3 each, Horace Adams 2, N. S. Harrington, A. H. Perry and J. F. Sargent 1 each.—E.

BEHIND OR IN FRONT OF A TREE?—I notice B. B. Seaman in FOREST AND STREAM of Feb. 12, in "A Deer Hunt in Kentucky," says he was told to "keep well behind the tree." I have had a good many years' experience with deer (since 1850), and I will take my stand in front of a tree every time. The deer will not notice one if he stands still. In front one has a much better chance to see his game and be ready.—A. F. Y.

LONG ISLAND.—A bill proposed by ex-Senator Wagstaff and introduced into the Senate by Mr. Otes, prohibits killing of partridges, robins, starlings and squirrels in Queens and Suffolk counties from Jan. 1 to Nov. 1; shorebirds, Jan. 1 to July 10, and rail, Jan. 1 to Sept. 1.

MICHIGAN DEER HOUNDING.—Lansing, Mich., March 6.—Both houses of the Legislature have passed a bill forbidding hunting deer with hounds. The measure is aimed at a practice that has grown to considerable proportions in this State.

Sea and River Fishing.

CASTS IN MANY POOLS.

Editor Forest and Stream:

I intended long since to answer Mr. Ufford's inquiry in regard to gimping hooks, but an unfortunate accident incapacitated me from writing for some time, and in the meanwhile Mr. Cheney gave him the answer so exactly as I should have done, that it left nothing more to be said, except to answer another point in regard to the silk to be used for the purpose. Here I will advice him from my own experience and practice. I always use scarlet saddlers' silk. If the gut is well softened by a few moments' soaking in tepid, not hot, water, you can tie a hook that will never give out, and the bright red of the gimping helps to disguise the hook and cover any deficiencies in the bait, for I suppose it to be for bait-fishing that Mr. Ufford inquires, as very few people attempt to tie their own flies. When I was younger, with keener eyes and more nimble fingers, I always bought my gut and hooks and tied all my own; but of late years I have got lazy and bought ready-tied hooks, and the result has been that I have lost a good many good trout in consequence, by the hook pulling off from the gut, until I have come to the conclusion to go back to my old habit and tie my own hooks again for bait-fishing, which, for many of the heavily-wooded brooks of New England, is the only practicable method.

Laid up as I have been for two months and unable to write, I have had plenty of time to read, and have been catching up with all the back numbers of FOREST AND STREAM, which had been laid aside for me during an absence at the South of about four months last autumn, and have been interested in the various opinions in regard to popular flies, and am inclined to fall in with the majority of the anglers who give preference to the scarlet ibis first, then coachman or royal coachman, professor and Montreal, though for our clear and shallow waters in many parts of New England, a black gnat or midge is the best of all on a bright day. The green drake and queen of the waters are also excellent, as well as the brown and red hackles, and a very killing fly for twilight is a white hackle with a red body lined with gold twist.

I like the plan of the short double loop very much, as when hooks are well tied, the first place to give out is the gut where chafed by the end of the shank of the hook.

I have just been reading Mr. Van Cleef's letter in this week's number of FOREST AND STREAM, and am inclined to think that there is a good deal of common sense in the theory he advances, as I have noticed the diminution of streams where the main part of the forest about their sources had been cleared long since; but the greater part of the changes which I see are due to the actual stripping of the woods from the heads of the brooks, and the clearing up of the alders along their margins, letting in the full blaze of the sun, and leaving no place for shelter for the trout. Brooks where I was sure of a good basket when a boy, have not a trout left in them now, and not water enough in the summer to float one.

Among other amusing anecdotes in your columns have been the "remarkable shots," but I do not remember that I ever had the fortune to do much in that way myself. I think the only time I was ever astonished in that way was on entering a piece of oak woods a dozen or more years since, when I saw a gray squirrel run up an oak tree near at hand and stop for an instant at an open place on the trunk, when I sent him a message from my right barrel. He did not come down, however, but went up and disappeared behind a thick clump of leaves, appearing, as I supposed, in the next minute above them.

I fired the left barrel and down came Mr. Squirrel, and I went to the foot of the tree to pick him up, when, as I stooped over to do so, down came another dead squirrel, striking me fairly between the shoulders, and announcing to me that I had made an unexpected "double."

Still another point which has interested me has been the discussion on "dowels" on rod joints, and here, as a practical mechanic, I desire to indorse Mr. Wells in toto, that dowels are delusions and a weakness. I have an old bamboo rod (of the old style, five joints of four feet each) made by my order twenty-five years since, without them, which is in perfect order yet, while I broke the lower joint of a new split bamboo rod in trying to release my hook from a sunken log, where a black bass had maliciously left it, without apparently putting much strain on the rod, and I found it to have given way in the dowel hole at the lower end of the ferrule. With proper ferrules the dowels do more harm than good.

Let me join "Jay" in his thanks to "Wawayanda" for "Camp Flotsam." That and last winter's account of the "Cruise of the Kingfishers" ought to be republished in FOREST AND STREAM's library, and when it is finished, which I hope will not be soon, "Uncle Lisha's Shop" should form another volume. I have known them all in my boyhood—Uncle Lisha, Solon, Pelatiah and Samwill, though my Uncle Lisha was a blacksmith instead of a shoemaker.

The "Kanuck," Antoine, I have got acquainted with since, for he had not crossed the border much forty years ago. But whoever the author of "Uncle Lisha" may be, he understands the "lingo" of the French Canadian, trying to talk English, to a hair. I shall watch for the return of that pickerel-catching and muskrat-spearing party with anxiety.

VON W.

VAGARIES OF FISH NOMENCLATURE.

NOW that the vagaries of fly nomenclature have received some attention from the contributors to your columns, I trust that another and perhaps greater evil will have a hearing by representation. Whether or no it is a greater evil, it is not so difficult to overcome, and the remedy lies in the rod hand of the contributors themselves. I refer to the use of local common names when writing of various fishes, as well as the use of manifestly improper names. I am aware that it is asking much of an angler to pronounce the scientific names of all fishes, but there are some few scientific names attached to our game fishes that it would not be too fatiguing to write, if the contributor should feel that his meaning would not otherwise be clear to his readers. I may be more stupid than the average angler, but I must confess that it was not entirely clear to my mind that "black spots" meant landlocked salmon, and "red spots" meant brook trout, until Fish Commissioner Stilwell assured me that such was a fact—in Maine. I presume there could be not the slightest objection to the use of "black spot" and "red spot" in a communication to a Maine newspaper, but the FOREST AND STREAM is not confined in its circulation to one State, nor to the United States.

An English friend once wrote asking what fish was meant that a contributor to your journal called "lunge." I wrote him that it referred to our lake trout, *S. namaycush*; but if he should happen to read another letter in a Western paper that I saw recently, he would think that I did not know much about the names of our fishes. The writer of the article speaks of a certain monster "lunge" that proves, just before the curtain drops, to be a mascalonge, or to adopt his spelling, muskalunge. Years ago I made a mental memoranda of the fact that "lunge" and "togue" meant, in certain New England States, lake trout; but now that "lunge" has slipped from my grasp, I shall not be surprised if "togue" turns out to be a weakfish.

A writer, in describing his catch, speaks of "a splendid specimen of the square-tailed trout," and later gives it the scientific name of *S. namaycush*. If "square-tailed trout" means any of the trout family it means the *S. fontinalis*, and by that name I know it well. Another writer was undecided what kind of fish had taken his bait until "in one of his rushes his broad forked tail was thrown above the surface of the water, proclaiming him a brook trout." Still another writer, in quite a long article, gives a very interesting account of some salmon fishing that he had in some waters that I know, and also know that they do not now, and never did, contain salmon. I knew at once that he meant salmon trout, but I will warrant that many of his readers were not as wise, for not once did he mention the fish by any other name than salmon. Had he suffixed the word trout to his salmon his meaning would have been clear, but still he would have been out of line, for Prof. Jordan says *S. namaycush* is simply lake trout, as the title salmon trout belongs by priority of claim to an English fish.

A few years ago while spending the summer at a well-known resort, I discovered one day at dinner that there was salmon on the bill of fare, but before ordering I sent the waiter to get the pedigree of the fish and such incidents of its journey across the border as the steward might furnish, as I did not wish to have a tourist or the canned article rung in on me. The waiter returned with a smile and the intelligence that "You need not be afraid of this salmon for it is some you caught yourself this morning." I had been fishing that morning with Monroe Greece, and we had caught some lake trout, and they were the nearest like salmon of any fish in the lake, but what a gulf there is between the royal *Salmo salar* and the *S. namaycush*.

The following story, which has the merit of absolute truth, illustrates an extreme case of the abuse of fish names: Within a few miles of this place stands a road house, which, before its glory departed, was presided over by Uncle George, as he was familiarly known, who made glad the hearts and digestive organs of his guests by little suppers of fish and game. One evening I drove out to the place with a few friends, to partake of Uncle George's hospitality, and

during the consultation which followed our arrival, he informed us that he had no trout to place before us, but had birds in plenty. A few moments later another party of two from a neighboring summer hotel drove to the door, and before they alighted I heard Uncle George inform them that he could give them trout. I called him aside and demanded an explanation, which he gave as follows: "I haven't any trout for you, but I have a few for these two gentlemen, although I am afraid if they were placed on your table you would call them bullheads (he referred to the fish); still, I insist that they are trout, at least for this evening." I told him that they would detect the fraud at once, but he said, "Oh, no, for I have tried them once before and it worked like a charm."

A common error, particularly in this State, is the calling of a pike (*E. lucius*) a pickerel. This winter for the first time I discovered that the Hudson River at this place contained pickerel (*E. reticulatus*). Where they came from no one seems to know; but I noticed one among some pike at a fish market, and attempted to instruct a few people present as to the identity and name of each fish exhibited. "That," I said, pointing to a specimen of *E. lucius*, "is a pike." "No," said one of the gentlemen, pointing to a *Stizos tethium vitreum*, "this is the pike." I explained that although it was locally known as a pike, it was really a pike-perch, and belonged to the perches instead of the pikes. This was finally accepted as correct, because the pike-perch was a Lake Champlain fish, and "it did not make any difference what he was called," but when I said the only pickerel in the lot was the specimen of *Esox reticulatus*, and what they called pickerel was in reality a pike, there was mutiny, and the meeting broke up in a row.

The various names by which the black bass is known in different sections of the country have been so frequently paraded and explained that at least we know a Southern "trout" means a black bass. Personally I have come to understand a Southern man to mean yellow perch when he says "sun perch," but when he says "bob" I have to think a moment before I can grapple with the fact that he does not mean a float, and does mean a bunch of deer's hair tied to the shank of a treble hook. That, however, is wandering from the fish question, and I return to it by referring to the latest alleged misnomer. During the past season readers of the angling papers have been regaled with glowing descriptions of the excellent fishing in Northern Wisconsin and Michigan. I will not even venture a guess at the number of mascalonge that have been reported as adding to the scores of anglers from all parts of the country; but I now see that a Western writer claims that these fish are not mascalonge, but large pike (*E. lucius*). In this case, however, I imagine that investigation will prove that the writer is wrong, for it does not seem possible that so many anglers as have been reported as catching mascalonge could all be mistaken. The fact that any doubt is expressed about the identity of the fish in question shows that the ichthyological schoolmaster must have been taking his vacation when some one was fishing the Gogebic waters. In looking back over a few communications from this region I do not find any mention of pike in the fish scores, but do find pickerel reported as weighing about ten pounds each. These must be *E. lucius*, so the mascalonge cannot sit on that stool; and the Western writer will, it strikes me, be invited to take the floor and make another report with affidavit attached. There is no need of citing other cases of misnamed fishes, but it remains with the anglers of the country to take up their pens against these evils, that lead only to confusion, "and by opposing end them."

GLENS FALLS, N. Y.

CLICK AND DRAG.

Editor Forest and Stream:

It is quite likely that "Petra" will receive other and better reasons than I may furnish supporting the click and drag attachments to the reel, and yet I cannot refrain from using a little space to describe methods in using these appliances, where they have proved to be very important and satisfactory adjuncts in managing the line as well as necessary weapons in successful encounters.

My tackle consists of a ten-ounce split bamboo rod, a number three reel and sixty yards enameled silk line size H. The click of the reel is set sufficiently light, so that together with the friction of the line through the guides a two-ounce pull will start the reel. The drag is adjusted to double this strain, standing at a four-ounce pull, and the click and drag combined furnish a six-ounce strain for a fighting weight, and the rod is kept up strong near this point after a fish is hooked. With live bait I keep the click on at all times while fishing and set the drag when the fighting comes.

Many ancient anglers will experience a surprise if they will apply the scale test to their favorite tackle, as in many instances ounces will be shown where pounds even were supposed to indicate the fighting strain. Very few light rods will stand a working strain of more than ten ounces, and with many of them half that is the limit of safety, and hence the click and drag become very important appendages in fixing the limit of safety to a certainty. The angler who depends on holding the reel cannot under the varying conditions of exciting contests regulate this strain with the unvarying measure that the click and drag properly adjusted automatically furnish. Besides this the angler learns to judge the situation at the front intelligently from the sounds that come over the line, as a sensitive click not only heralds the movements of the game, but intones the style and vigor of the effort, and the nature and disposition of the victim. The drag steadily holds up to the prescribed limit all advantage gained, and as readily yields line when safety claims it. So closely will such an adjustment yield results that in numerous instances I have attached the scale to the line to test the strain that the hooks, as fastened, would bear and have made many fine captures that an eight-ounce pull would have cleared the hooks from the fish.

The click and drag together afford the means of graduating the rod to any fishing and fighting strain desirable, and I see no way that the conditions can be so perfectly secured if either is omitted. The click is primarily necessary on light-running reels to prevent over-running and vexatious snarls that come to all at times if reel is worked free, and it further signals the least strain on the line without encumbering it but slightly. The drag being tenacious in its hold and unvarying in its movements furnishes the killing strain to the rod, and this necessary strength if applied to the click would not only destroy its sensitiveness and delicacy, but impair the serviceableness of the reel. This graduated adjustment furnishes automatically three rates of resistance that are readily applied and instantly changed to meet emergencies. Tackle can thus be graduated to whatever point the ambitious angler aspires to, in "fishing fine and far off," always remembering that the lightest effective strain lands the most game.

The six-ounce pull seems light and yet it is no effeminate strain even when applied to the monarchs of the deep, as I have seldom joined issue in a case where the defendant was able to carry off straight away more than ten or fifteen yards of line under these difficulties, and I record among my captives trout of four and a half pounds, bass of six and three quarter pounds, muscalonge of twenty-eight pounds, and a large and satisfactory score in the lighter notches.

In an experience extending over many eventful years of an angling existence, I vividly recall the reel music of many close and exciting contests that were fought to a successful finish. These notes from the front have so much enhanced the pleasures of angling that I venture to offer "Petra" these disjointed fragments from accumulated tackle with every assurance that pleasant memories will cluster around a singing reel, long after our favorite streams have run dry and the skillful hand has lost its cunning.

TRIANGLE.

CHANNEL-BASS FISHING IN FLORIDA.

Sciænops Ocellata.—"Called red drum on the Virginia coast; spotted bass or spot in South Carolina, red bass or channel bass in Georgia and Florida, redfish in New Orleans.—*S. C. Clarke, in "Fishing off the East Atlantic Coast."*

FAIR, semi-tropic land, where gentle breezes blow
And flowers perennial in wild gardens grow;
In this bleak northern realm I dreamful muse
Of the rose colors that thy skies suffuse.
Fain would forget that here the frosty air
Inclement sweeps o'er hills and meadows bare;
Here spear-point icicles depend from wall,
Frost pictures dim the casements of the hall,
The river mute in pulseless slumber sleeps,
A ghastly pallor o'er its surface creeps.
The crystal waterfall that erewhile tost
Its volumed sheet, is now enchain'd with frost;
A filmy veil is drawn across the sky,
Thick down the air the gem-like snowflakes fly.
The fields, the uplands stretch a frozen waste.
And all the summer landscape is effac'd.

But bright, O, Florida, the waning year
Smiles o'er thy waters and thy cloud-lands clear:
The fowler comes thy swarming flocks to thin,
The angler comes the luring spoon to spin,
To take by sandy beach or marshy grass
The tarpum, grouper, or the channel bass.

The noble bass with scales intensely dy'd
At bay and inlet drift in with the tide,
A roving fish, deep channels it explores,
Mudflats and oyster-beds and shelly shores;
Where slimy wreck lies buried in the deeps
It finds its chosen haunt, its harvest reaps.
A fish omnivorous, it seeks its prey
Wherever mollusks hide or mullets play,
A fish voracious, it is brave in bite,
Persistent, strong, 'tis valorous in fight,
As game fish the red bass has no peer,
No rival champion in the currents clear.

Warm-weather fish, in summer's sunny time
It swarms the shores of genial Southern clime;
There, off the sandflat, anchor'd in his boat
The angler sees them fearless round him float;
They circle near in heedless leap and play,
And fall to trolling line an easy prey.
But when the north winds smite Floridian coast,
By beach, by island vanishes their host;
In the deep holes, dark recesses of tide,
Sulking in castle, they delight to hide.

In soft May season, when the seas are warm,
Around the sandy beach they love to swarm;
The angler then thro' crested surf may press
And cast his mullet bait with sure success,
Cast it in sloughs, inside the surf that flow,
And gain a prize with every vigorous throw.

GREENPOINT, L. I. ISAAC MCLELLAN.

LARGE-MOUTH BLACK BASS.

Editor Forest and Stream:

In a recent issue a well-known correspondent takes the part of "the under dog in the fight," otherwise the "large-mouth" black bass. These dogs are very evenly matched, and I think the fight should be called a "draw." This would at least be a fashionable way of settling the contest. I agree with your correspondent in saying that the black bass loses a great deal of its activity when it attains a weight of over three pounds. I saw a friend kill a six-pound bass in about five minutes, the fish was caught in the Potomac River, the fight was a tame affair, and from the first there seemed to be no doubt about the safe landing of the fish, the tackle used was light trout tackle.

I have fished for bass in some of the Northern lakes, the Delaware, Susquehanna, Alleghany, Potomac, Shenandoah and some smaller streams, also in Florida and other Southern States.

I believe that the large-mouth black bass of the North is a more shapely fish and has more game qualities than the large-mouth bass of the South, the latter has an enormous belly, which I think is not conducive to wind or staying power. I made a drawing of a Florida bass on the lid of my camp box, the drawing was carefully made by passing a pencil close around the fish. I looked at this drawing a few days ago, and was surprised to see the marked difference between this fish and the large-mouth bass I caught last summer in the small lakes near Chicago. It is obvious that black bass when caught in rivers, fight harder than those caught in the still waters of lakes.

As I have never caught a large-mouth bass in running water, I cannot give an opinion as to the relative gameness of the two fish. I will say one thing in favor of the large-mouth fish which, to me, covers a multitude of sins, and that is, he is a splendid riser, frequently throwing himself completely out of water as he takes the fly, and always showing a good part of his body. The small-mouth fish rises in a sluggish manner, and often sucks in the fly after the manner of the plebian sunfish. The large-mouth bass caught with the fly have been as large as those caught with live bait.

In ten years fly-fishing for small-mouth bass I have caught very few large fish. During these years I have spent three months each season by the river side, and have fished at least two days each week. A large fish has occasionally been caught, but I have looked upon them as lucky accidents. These fish, when young, are very fond of the fly. When they become old, they either grow wiser or change their appetites. It is possible that they are too stiff and lazy for the rush they know to be necessary in the capture of the restless fly. To those who want to catch large fish, and fish that will rise grandly to the occasion, I recommend the large-mouth black bass.

For my part I love the river as much as I do the fish, and long for the clear, shady streams of the East.

E. F.

CHICAGO, Ill.

PLEASANT HOURS WITH THE TROUT.

WHEN business does not call him to the city, my friend A. lives with his family in one of the healthiest counties in the State of Pennsylvania. Here he has a large tract of land to look after, and if he could do so, he would spend his whole time in that pleasant locality.

Through the center of his property for two miles or more runs a brook. This supplies water to a sawmill on the place, and the pond that feeds it might well be called a fish pound for pickerel. But it is the brook that gives us the most interest. A. had often told me about this, and said that there were trout in the brook. He had also asked me if I would not come to his house and try the stream for him, as he was no fisherman himself and did not care for the sport. At the same time saying he could not promise me much fun, for in his opinion I would find but few fish. But I knew what I would find at A.'s, and that was a hearty welcome. I also knew that if there was anything that I loved in the way of pleasure, it was to fish for trout in a stream where they were scarce and where some skill was required if any one hoped to secure them. I had fished for them ever since I was a boy, and considered myself quite an adept in "trouting," as we called it.

So it was agreed that the first week in June Mrs. Stillaboy and myself should start for A.'s house, and very fortunately, in more ways than one, we arrived there just before a succession of thunder showers that lasted until nearly sundown. This, I knew, was in every way favorable to my visit, and that if there were any trout in the stream I would most certainly catch some of them. Of this I was confident, and when good "grandma" told me of what used to be in former days, and how one of the farm hands would go and catch trout for her, and that there was no one to go now, or that they had not the skill to get them, and how fond she was of a trout. When she told me this I felt that I would have one for her, even if I had to swim for it. So I said, "Grandma, I will promise you a trout for your breakfast to-morrow morning." I can remember how she looked at me, as much as to say, "Mr. Stillaboy, your intentions are good, but I'm afraid you are making a rash promise." However, I continued, "You just let one of the boys show me where the stream is and you will see." With this Will jumped up and said, "O, grandma, I will go with him. I know the good holes and I will learn to fish, too." So it was agreed that Will should go with me. He was a very good fellow, too, full of enthusiasm and life, and when I proposed to him that we would have to go early if we wanted to get fish, and even leave the house at daylight, he said, "That just suits me." But now poor grandma was in trouble. "Why," said she, breaking in on our plans, "Why surely, Mr. Stillaboy, you will not start so early. Do you know how soon daylight comes in June?" And it was with the utmost difficulty that I could convince the good lady that I was really in earnest, and wanted to go at that, to her, unreasonable hour.

It was arranged at last that I should arouse Will at half-past three, or, as I told him, "when the whippoorwill began to sing." His last charge to me was, "Now remember, don't forget to wake me, while I thought within myself, "There is little danger of that, I am too dependent upon your guidance and too anxious to go." Will was told that he would find a pitcher of milk in the ice box, and ham and bread and butter in the dining-room closet. As I expected, the first whippoorwill sang under my window at half-past three. And soon I heard several of them calling, one from the rocks at the left of the house, another from the stone fence in front, and a third from the pine trees in the rear. When I got up to look out a bow of light was arched over the eastern horizon, and just above it, to the south, Venus was shining down in full splendor. I could see dim traces of mist in the Delaware Valley, while high on the hill where we were the air seemed clear and pure.

The first thing to be done was to call Will as quickly as possible. He was sleeping soundly when I went in his room and I almost hesitated to disturb him. As I laid my hand upon his shoulder and said, "Will, it is time for us to be getting off," (I had to shake him a little) he replied, in a kind of sleepy way, "Wha'?" "Will," I repeated, "do you think that it is worth while for us to go for fish?" Whether it was the word fish that aroused him or from the fact that I still had my hand on his shoulder I could not tell, but a change came over him at once. He now raised himself in the bed, rubbed his eyes and then said, in a bright and cheerful way, "O, yes, let us go."

Just as we came out of the house the birds were beginning their full morning song. There was still half an hour or more remaining, though, before sunrise, and we hoped to be at Bog Meadow before that time. Venus was shining as brightly as ever, while away to the west one of the fixed stars twinkled dimly in the morning light. We had to walk about half a mile on the highway and then through an old wood road for about the same distance. How delicious everything smelt in that clear morning air; pines, ferns, grasses, everything seeming to exhale its fragrance and freshness as we passed along. And I could not help thinking how much men lose who know nothing of a fresh June morning in the country before the sun is up. The first thing we saw of animated nature on our way was, as we came through the gate, four crows in the cornfield that seemed to have no regard for straw men nor strings. I found a way to drive them off, though, without going to them. I simply clapped my hands as though a gun cap had exploded, while Will remarked, "I'll fix those fellows one of these mornings." The next thing that greeted us was the sharp chirp of a chipmunk as his tail disappeared in the stone wall. A bluejay flies over us, and as he does so turns his head to look at us in a way that seemed to inquire, "Why, where are you fellows going so early in the morning?" And now a brown thrasher mounts the top of a small beech tree and pours forth a volume of song and a field sparrow gives his plaintive strain from a fence stake, and a dove is heard moaning his distant bell-like note. We cross the brook that we are to fish in on the way to Bog Meadow, and consider it just right, and the water is falling. We will see it again, I trust, in three hours or more and feel my basket heavier

than it is now, I hope. As we are about to enter the wood road an oven bird greets us with his song and several Wilson's thrushes are singing all around, and a partridge startles us as he rises at our sight, and the air is sweeter than ever.

But we are at the meadow now and I have no time to notice those red wings that are "kon-ka-re-ing" on that dead alder bush, nor that robin that is singing so near me, nor that miserable hawk that is whistling his shrill call over my head. I have no time now to notice these things. I must get my line in and some oil on my face, for these mosquitoes are beginning to be troublesome.

Keep back from the stream, Will, and tread softly so as not to shake its loose banks. Here goes. Why, I have one the first thing. A nice one, too, nine inches, grandma will have one at any rate. What, no more? I will try around that bend there. Ah, I have another. And here comes his mate. Nice ones for this stream, eight inches each. What! Did I see one break water there in that little pool? I know what you want. You won't take bait. You want a fly, and I would a great deal sooner give you one. Stop a moment. Here is a coachman, and a nondescript, and a black gnat. Oh, you want the coachman, do you? Well, try again. I have you. But I will fall directly. This lame leg is hard to manage among these bog-heads. And now I have another. And here comes a little one. Go back, baby fish, and come to me next year. And you are too small, too. None under six inches need apply. But Will shouts, and I know he has got one. He is holding it up. It is a large one, larger than any of mine. But the meadow is not going to be in the shade much longer, for the moment the sun gets over those trees on that hill at the lower end the fun here will cease. You cannot catch trout here when the sun is shining on the water, nor as for that matter, in any other place.

But stop now, I have another, and just as I am about to take him off I tumble down over a bog-head, and my trout disappears. The meadow is overflowed with water near the edge of the brook, so I am standing in it six inches deep, and the stream that is usually four feet wide is seven or eight now. But never mind, I have another fish and Will has one too; he would not shout in that way had he not caught one. And now I have a little one and he goes back, and as he touches the water disappears in an instant. I wait now for some time, no more rises, no more bites, I am nearly at the foot of the meadow. I have time now to look around. A swamp sparrow with his dark-brown plumage is rising up from the coarse grass near me, and flitting from place to place, and as he alights spreads his wings and pours forth his song. And there is a partridge drumming in that patch of woods on the other side of the stream, and another behind me near the fence we got over. And three crows away off there on that old dead tree are making an awful racket, and I see a red-wing watching me from that bush near the bank. I suppose he has a nest there; and I hear thrushes and ovenbirds and a robin singing away most merrily. But what is that? a bite? Try again. Ah, very fine. You are a good one too. I am glad I came down here.

But now I go back and try the ground over again. I have to make a circuit to avoid the bog-heads. Only one fish large enough to keep rewards me, and as the sun is now shining on the meadow, we determine to take to the woods. To do this we are obliged to return to the road by which we came in. We could not follow the stream at the lower end of the meadow. It was too muddy and tangled with alder bushes and brush. I called it the breeding place for trout, for a little brook comes in there that no doubt kept up a slender supply in this larger stream.

But we retrace our steps a short distance, and after working through undergrowth and alders, at length find ourselves by the stream again. Of course everything is changed now. We are in the woods, where the stream is overshadowed and where the securing of a fish depends very much upon the fact of whether you can get your line in and the fish out. For some distance we have to poke along, occasionally getting a trout and then losing one. But at length we come to a taller growth of trees, and where the stream spreads out and contracts every few rods. What a lovely place this is where it issues from the alders and low growth. This gravelly point, that high birch there, those hemlocks, and above all, that mossy bank with the water running under it and then coming out in that smooth pool. There must be fish there. O, but see that snake gliding away and I cannot kill him. I suppose he lives on the fish here when the water is low. But cast carefully, or you will get your line caught on the tree behind you. A rise and—ah, plague take it, there is the leader fast on that branch. I work patiently and soon the line is freed. Now go carefully and stand further over there. This time I have him, and then another larger sized. But what is this light-colored mark scraping off those pretty spots on one side just below the back fin? I see you have been in a snake's jaw once. May be that miserable fellow that I saw crawling away. I wish I could have crushed his ugly head. And yet, as I kill the fish before putting it in my basket, something within me whispers how much better are you than the snake you despise? He wanted the fish to eat and you want it too. But we are not moralizing now; we have no time. There is another rise. A little fellow. I have him. Put him back by all means. And now another small one, and still another little one. I will go on. Try in that pool in front of that log. And go carefully behind the bush on the bank. I see a wake as though something under water were coming toward my hook. I know what it is. Yes, and you are lauded without a net. And there goes a partridge, and a bluejay is calling behind me, and a squirrel chippering up-side down, or as Merriam describes him, sticking against that tree.

But I am ready for another cast. No more? Go on. O, there must be a good place under that rock. How can I get there? I see. Here goes. Whew! what a rise. And there is that line caught again away up there. There is no getting that down. Good-bye, leader. Snap. Never mind, I have two more in my book, all dampened and ready to put on. But hi! ho! I have lost my balance and am in the brook, and the cold water is finding its way to my skin nearly half way up my back. I hope I have not lost any fish. No. "No, Will, I am not hurt my boy; but didn't I go over." Yes, I will try there again; but it is no use to-day. It was no use. And now we go down further, and come to a little fall where all the water of the stream passes between two rocks and then rushes over. Now don't let the end of your rod appear over the pool, but drop in your bait (for I am fishing with bait now), so that the stream will carry it down and let it float out. I have a fine fish, and I try the same tactics and secure another one. Then I go on and get another, and Will has another. He has been fishing after me through the woods so as not to scare the fish, while I have been leaving him any desirable pools that he expresses a wish to try in. The fact of it is Will is so elated to think that there are fish in the stream, and that he has caught four, that he just wants to see how I catch them.

Now we are through the woods and coming out on some meadow land near the bridge we crossed so early. What a relief it is to get where a fellow can straighten his back and not be afraid of catching his line at every cast. This meadow is still somewhat in the shade, the trees standing on the opposite side from me and the stream running quite near them. Before I reach the first pool I see a fish break water. I know what that means—a coachman and red hackle. They are on and now a fish is on too. I take five here while Will leaves me and goes down to a favorite hole of his near the bridge. He shouts soon after reaching it, and I know he has another fish. I am fishing meanwhile without success. And I have just seen the tail of another snake as he crawled away among the stones, and a sparrow has started up almost from my feet, and there, in a tiny birch bush, is a little nest with three speckled eggs in it. A bird sings as I come away from the nest. But there, by the fence, must be the "good place" that Will told me of. I will go carefully and see how I had better fish in it. Yes, I see. Stand back by the fence and cast over. I do so. My, what a rise! And I have him now. No, not yet, he drops from the line just as he is over the fence, and I have to cast myself upon him to keep him from flopping into the water; and my coachman is in his mouth, the gut is broken just at the shank of the hook. He is my largest fish, though, eleven inches. And now another coachman is on, and I have another fish, and then another and another, and then two little ones that I had to throw back.

But the sun is beginning to shine on the stream now, and we promised to be home by 8 o'clock, and now it was half past 7. And all at once I seem to recognize that my basket is heavy, and I feel a little tired, and would not object to something to eat. We will go home.

Will was at the bridge waiting for me, and he came to the basket again, and as he opened it to put in his last fish, exclaimed, "O, where did you get those? Won't grandma and father be astonished? There are some trout in the stream yet, aint there?" Our walk home was very pleasant. Will told me all about catching his largest; how he felt a tug and thought his line was caught, and then the fish came out.

We were met at the gate by the younger members of the family, all calling out, "What did you catch?" to which Will replied, "O, lots of fine ones." This brought out several of the farm hands, and they all looked with astonishment in the basket. And now grandma with friend A. approach. "O, my," said grandma, "Why, you did get some nice ones. Did you really catch them in our brook?" "Yes, grandma," said Will, "and there are more there, and I know how to catch them now." Friend A. and his good wife were equally astonished. A. said that I was the best fisherman that had ever been at his house. Grandma told us the fish must be weighed. There were thirty-two of them, and their weight was eight and three-quarter pounds. Half of them were dressed at once, for breakfast, and the rest put in the ice box for tea.

I soon had on dry clothes, and as we all sat down to a comfortable breakfast, and grandma looked so pleased, there was a double satisfaction as I thought of the morning's sport. Friend A. told me that he was satisfied, now that he had a trout stream on his place, and that he felt that his property was more valuable than ever. My good wife seemed reconciled too, and did not complain much of her husband's getting up and disturbing her. Had he not succeeded in catching plenty of fish though, he might have caught something else not so agreeable. It must suffice any that have found pleasure in perusing this account, that for two days at least grandma had all the trout she wanted, and every member of the family also, though at no one time did we have the same success that attended us on this pleasant morning.

Stillaboy.

THE MOST KILLING FLIES.

I WOULD like to add my mite to the fund of information on flies, although my experience in trout fishing has been confined to one section of the country, viz., Franklin county, N. Y., and principally around Meacham Lake and the outlying ponds and streams. I regret to say that my statistics cannot be perfectly exact, as I have not kept an accurate account of the flies my fish were caught with; but I can say with great certainty that I have found the red ibis, brown hackle and coachman, in the order named, the best all-around flies. Many trout were taken out of Meacham Lake last summar (about 300 in one July day, I remember) by trolling flies, and I am sure that even on the sunniest days the red ibis was generally the favorite. Of course there are exceptions, individual days when some fly like the white miller or black gnat will be the favorite, and the flies we ordinarily consider most alluring will be hardly noticed.

The first day of last July stands out as a golden one in my calendar, and often I "fight my battles o'er again," and wonder if I shall ever have such another delightful experience. Perhaps the pleasure of it all was enhanced by the fact that I had just returned to my native land from a three years' cruise around the world; but I think the most phlegmatic landsman would have felt his nerves tingle had he been in my place. Taking an early breakfast and an early start, my guide (the doughty Andrew Rogers) and myself found ourselves at our fishing ground about 10:30 A. M. This was down the outlet of Meacham Lake, about five miles from that beautiful sheet of water, where two small cold brooks contribute their quota to the main stream. Sitting in the bow of our boat as we drew near to our destination, it appeared to me that my prospects were anything but flattering. There was very little wind, the sky was very clear, and it was very hot, the thermometer at Meacham Lake House standing at 89 degrees, a most unusual occurrence. I was discouraged, and after I had made three or four casts with never a rise, I was more so. Andrew commenced to bewail the situation, and pointing to numerous tracks on the banks, proceeded to explain to me that Paul Smith's people had gotten ahead of us.

Having no luck I directed him to pull across the stream and drop a little lower down, which he did, and then the fun began. The first cast brought me in two trout, and I did not lack employment for the rest of the day. To make a long story short, from 11 A. M. till 4 P. M., with an hour out for lunch and a smoke, I caught trout to my heart's content, often two at a cast. About 4 o'clock a heavy rain came on, accompanied by thunder and lightning, and after that, though I tried various flies, and even descended to bait, I caught but one trout. So I was fain to knock off fishing, reel up, unjoint my rod and make the best of my way to the house, where I was received with much enthusiasm when it was found that on such an unpromising day, not only was my creel filled but I had a large string besides. Not counting the small fry, which I returned to their native element, I had 189 trout, from a pound down, all taken with flies. A most satisfactory day's sport.

What I started to say was that on this particular day, the fly I generally swear by—the red ibis—was no use whatever. The fish greatly preferred the black gnat, though the brown hackle and coachman did some little execution. On these same grounds, late in July, 1881, I remember catching a 1½-pound trout on a black fly, and this past summer, toward the last of the same month, a 1½-pound trout was caught by Mr. R. Glover, of New York, and a remarkable fine mess, including one of 1¾ pounds, one of 1½ pounds, and two of 1¼ pounds, was taken by that veteran angler, Mr. Daniel Morrell, of Hartford.

Lest some of your readers may find fault with me for being so greedy, let me state that when brought to the house my fish were put on ice and in two days our hungry circle had disposed of them all. My advice to a beginner would be to try the most popular flies first, and if they do not succeed not to be discouraged, but keep on changing until every fly in his book has been tried. Then, if he has not some bait, let him reel up and plod along home. I use three flies at a cast, but I think two would answer about as well. I never but once caught three trout at a cast, and I am quite sure it is exceptional with any one, though three flies offer a greater variety to the fish. I have taken up too much of your valuable space, but my yarn would spin itself out. Perhaps if your readers do not find this a bore I will contribute another mite one of these days.

Sous Bois.

Washington, D. C.

PROTECTING SEALS AND SEA-LIONS.

Editor Forest and Stream:

Because it is apparent that many forms of animal life require protection in order to save them from extermination, some persons not versed in the habits of animals, and their influence on other forms of life, conclude that all animal life should be protected. Before the coming of civilized man to this continent, the balance of life was undisturbed. The fish bred in immense numbers, and the seals did their part in thinning out the mature ones to give place to the growing fry. The imprint of the foot of Columbus on the beach at San Salvador was the introduction of the disturbing element that was to add to the foes of the fish one mightier than all others; one who kills not only for his personal wants but for the needs of others far removed from the sea. There was no longer need of the services of the shark, the seal, and the sea-lion, in thinning the schools of salmon, cod and mackerel.

For some years the sea-lions in San Francisco Bay have been protected at the expense of the salmon to amuse sightseers, but we have fed sea-lions in confinement and know that their appetites for fish are enormous. "Old Dick," the largest one in captivity, who is well known to all the circus men in the country, spent a year in the New York Aquarium, and his allowance of one hundred herring per day merely kept him in life, but did not allow him to get fat; he could have consumed twice or thrice the number, and was always howling for food. The young seals in the Aquarium often killed live fish for sport after their appetites were appeased, just as kittens play with their prey.

In Maine the committee on fisheries and game have been considering petitions for a repeal of the law which protects seals in Casco Bay. A Maine paper says: "Judge Goddard appeared in behalf of the seals and of the prosperous Portland folks who have built villas along Falmouth foreside. He explained to the committee that the seals are a great attraction; that they are hunted only by a set of semi-barbarians who make fifty cents a day trying out the oil when they could earn two dollars by sawing wood; and the constant shooting in the neighborhood of these summer establishments disturbs the quiet and endangers life. Major Richards, of Gardiner, confirmed Judge Goddard's statement as to the danger of such indiscriminate shooting. But no sooner had the judge retired from the room than a member of the committee, who appeared to know the capacity of a hungry seal for fish, arose and in an impassioned speech denounced the seal as a 'miserable, low-lived critter,' who was harder than a caribou to shoot, and so fiendishly cunning as to put to naught the most ingeniously contrived traps. In short he was of the opinion that the seals (and probably also Judge Goddard and the nabobs of Portland) could take care of themselves. The committee voted to report a bill repealing the law which has for some years prohibited the shooting of these animals in Casco Bay."

It does not seem to be widely known that the harbor seal does not furnish the valuable fur now so much worn. That comes from the so-called fur-seal of the Pacific coast. The skins of sea lions and of harbor seals have coarse stiff hair and are of little value. It is true that these animals are intelligent and when grouped on rocks are picturesque, but their great destructiveness renders them an injurious competitor to man in the matter of food. Man can, and does, keep all valuable food fish within a proper limit as to numbers, and often exceeds that point, and in justice to himself should assist to exterminate such animals as sharks and seals which destroy his food and of one of little value in themselves. If the people of any locality wish to enjoy the luxury of seeing seals disporting on the rocks they should fence them in and feed them with such cheap fish as they can afford, but not allow them to devour cod and mackerel, not to speak of the salmon, which are said to have been thinned by the sea-lions of San Francisco harbor. X. Y. Z.

SOME REMARKABLE CATCHES.

Editor Forest and Stream:

Fishing one day near Barnegat Inlet for striped bass with light rod and a single hook with gut leader, at one cast I landed two sea bass each weighing about three-quarters of a pound. One was securely hooked, the other dropped from the line into the boat. This story is true, but I never did quite understand how the second fish was caught.

J. H. S.

Maine Fishing.—Bangor, Feb. 28.—*Editor Forest and Stream:* The Legislature of Maine has been asked for an appropriation to build a road from Shirley Mills to the forks of the Kennebec. This will open a fine country for sportsmen, and the road will pass along the northern end of the beautiful lake called Moxie Pond, which is at least ten miles long and well stocked with fish. Other smaller lakes and ponds will be within easy reach of this road, and anglers will have new waters to wet their lines in if the road is made.—Poke-o'-Moonshine.

THE SCARCITY OF STRIPED BASS.—Westport Harbor, Mass.—*Editor Forest and Stream:* There has been a great deal said about the disappearance of striped bass from our shores. There are yet large quantities of these fish that migrate through Vineyard Sound northward annually as far as the Strait of Canso, and possibly around North Cape, Cape Brenton's Island, then westerly across the Gulf of St. Lawrence till they reach Shiloah Bay and vicinity, and here during the summer months they flourish on the fry of the mackerel, the best known spawning ground on the North Atlantic coast for the mackerel. A thorough investigation would prove that the striped bass was unknown in these waters until after the menhaden were all caught up or driven from our shores. Since the diminishing of striped bass and other kinds of food fish, the fishermen who have supplied the markets with them have been constantly harassed by parties in the Legislature working against the present method of fishing. These parties will be found to be largely interested in summer resorts and sporting circles, and this class will neither catch fish for the public nor let any one else if they can help it. If we stop the present method of taking food fish the public could not be supplied. If my suggestions, published in your valuable paper on Jan. 10, 1884, were carried out there would be no scarcity of food fish, and with the present way of taking them, three days out of seven would supply the public wants of fish. It is my opinion that when every acre of available land in the United States is cultivated to supply the wants of the people, the fish of the ocean, if properly protected with their food, will be the last to fail the public demand.—FISHERMAN.

BLACK BASS FOR STOCKING WATERS.—There is a constant demand for black bass to place in new waters, and no one seems inclined to supply it. We have two inquires this week for them, and only a short time ago Mr. E. G. Blackford asked us where he could get five hundred small bass about four inches long. We occasionally get letters from persons who say they have them, but an order for fifty exhausts their stock. Mr. Livingston Stone sometimes offers large fish for sale, but he is distant and his prices are high. There is a good opening here for some one who has suitable water, to stock it well and sell fish of all sizes at a reasonable rate, say double the market value for adult fish, and about twenty-five cents each for yearlings of three or four inches. The demand has existed for the past ten years and is increasing. Many persons in New York derive quite a revenue from growing goldfish in small ponds, and we believe that with a pond of a quarter of a mile in diameter, and from fifteen to twenty feet deep a thriving trade could be done with black bass, especially if they were advertised in FOREST AND STREAM. There is hardly a week in the year that we do not tell inquirers that if they want black bass alive they must catch them for themselves. Here is a chance for some enterprising pond owner.

THANKS FOR THE VARNISH.—*Editor Forest and Stream:* Will you be so good as to allow me, through your columns, to thank very heartily all your correspondents who have so kindly responded to my question about varnish for fishing rods. To Mr. Wells I am specially indebted, not only for names of various varnishes, but also for the manner of applying them. From each answer I learned something. These ready answers to my own and other inquiries prove beyond a doubt the willingness of all true anglers to communicate any knowledge they may possess upon their favorite recreation. And not only so, but they prove the possession of knowledge, which I remember one of your correspondents was some time ago disposed to deny. I think your correspondent who suggested the asking of questions, hit upon a most excellent plan for developing angling love, and I trust it will be pursued. Will you allow me to compliment you upon the very greatly increased interest of your Sea and River Fishing columns. I know of no paper that contains so much that is useful to anglers as does yours, Each week it brings something new, instructive, helpful. May its shadow never grow less.—M (March 7, 1885).

AMERICAN TROUT IN ENGLAND.—Mr. Thos Andrews, of Guilford, writes to the London *Fishing Gazette* as follows: "I send you a *fontinalis* just to show you how we grow them in my water. She got stranded and I had to kill her. She weighs one pound six ounces and is two years old. Just see the color of her flesh. Eat her and report on her flavor. The *furio*, out of the same water, are equally good." The editor of the *Gazette*, who, by the way, does not think favorably of *fontinalis* for English streams says: "We got the *chef* at the George Hotel, Strand, to grill the fish for us, and we can assure Mr. Andrews that his char was simply charming—flesh a deep pink, flavor like that of a Loch Leven trout." As a change from "speckled beauty" we chant the chaste and "charming char."

MESSRS. ABBEY & IMBRIE, the well-known firm of fishing tackle dealers, have removed from their old quarters and are now installed in very cosy quarters at No. 18 Vesey street, near the Astor House. The change was made necessary by the demand for more room. One entire floor of the four is devoted to the retail trade, and this has been fitted up in a most tasteful and generous manner for the entertainment of their customers-and-friends (note the hyphens). There is plenty of room to swing a rod, and so by practical test select just the one out of the bewildering variety on display. In their more convenient location and such added opportunities, the firm of Abbey & Imbrie will keep up their old fame and add to their present reputation.

THE TROUT OF BEAR RIVER.—Your Glens Falls correspondent, Mr. Cheney, questions you in regard to the trout of Bear River. My identification of specimens taken near the Salt Lake refers them to *Salmo virginalis* End., a variety of *S. clarkii* Rich., *S. purpuratus* of Günther and others. You will see by the publication sent you to-day that I do not feel quite justified in following those who consider the North American freckled trout of the same species as the Kamtchatkan, *S. purpuratus* of Pallas.—S. W. GARMAN.

AT THE SECOND INTERNATIONAL CLAY-PIGEON TOURNAMENT, held at New Orleans, La., Feb. 16, the first prize and diamond badge in the international individual championship match, open to the world, was won with a Parker gun. The first prize for the best individual score in both the international three-men team match and the interstate five-men team match was won with a Parker gun. In the inter-state team match four of the five members of the winning team shot Parker guns. The two first prizes and one second prize in the Von Lengerke sweep, 2½ yds., use of both barrels, break with second barrel to count, were won with Parker guns. The winner breaking seven straight with first barrel and second man six with first barrel and one with second barrel, scoring 6½ out of possible 7. The first prize in the Merino Elastic Felt Gun Wad match was won with a Parker gun. With less representatives, more prizes were won with Parker guns than with those of any other makers.—*Adv.*

Fisheulture.

REPORT OF THE NEBRASKA COMMISSION.

THE report of the Fish Commissioners of Nebraska for 1884 is before us. The board feels highly gratified with the results of the year's business. A marked and increasing interest is manifested by the people of the State over any former year since the Commission was organized in 1879. Between one and two million of pike-perch have been hatched and planted. The eggs were obtained from Saginaw Bay, Mich. Eastern brook trout eggs were obtained from the U. S. F. C. and by purchase from private parties, as well as a few obtained from the adult fish in the State ponds, to the extent of about 150,000, and were hatched and distributed. Carp were also obtained from Washington. The superintendent, Mr. Martin E. O'Brien, makes a report of his operations, in which he recommends a more extended cultivation of pike-perch as one of the most profitable of food fishes. Letters are added showing success with German carp.

REPORT OF THE CONNECTICUT COMMISSION.

WE have the nineteenth report of the Fish Commissioners of Connecticut to the January session of the General Assembly, 1885. The subject of the pollution of streams receives attention. The mill owners ask what they can do with their refuse if they do not empty them into the streams, and the Commissioners reply that "facts show that in many cases their deleterious materials may be saved and utilized by the farmer or the manufacturer," and a case is cited where the proprietor of a woolen mill in Scotland utilized all the waste liquor from his works, which was converted into various articles of commercial value.

The work of the Commission during the past year has been confined to the hatching of shad and the distribution of trout. Of shad there was hatched and turned into the Farmington River 686,000, and in the Housatonic 3,420,000. Brook trout to the number of 600,000 were divided among one hundred and fifty applicants, giving 4,000 to each.

In the matter of a fishway on the Housatonic River at the Birmingham dam, the report says that while the dam was in process of erection, Mr. Foster, then the best authority on fishways, planned one, which was erected but was not successful and was modified, and afterward swept away by a flood. Afterward Mr. H. H. Buck, of Maine, prepared a plan, but did not feel confident that shad would pass through it. In the meantime Col. McDonald had invented a fishway on a new plan, which he claimed would be successful for shad as well as other fish. Last May one of the Commissioners met Col. McDonald, who advised waiting until the completion of the new fishway of his designing for the Great Falls of the Potomac, and the result known whether shad will pass over it or not. This seems to the Board to be a wise course.

Tables of the catch of salt-water fish are given, and an appendix giving the fish laws of the State passed last year.

CARELESSNESS.—The Lancaster, Wis., Fish and Game Association, recently obtained 40,000 brook trout fry from the State hatchery to stock the streams of Grant county. They report that the fish were frozen on arrival. Whether they were in charge of a messenger or not is not stated.

The Kennel.

FIXTURES.

BENCH SHOWS.

March 18, 19 and 20, 1885.—Second Annual Show of the New Haven Kennel Club. E. S. Porter, Secretary, New Haven, Conn.

April 7 to 10, 1885.—First Annual Dog Show N. E. Kennel Club, Music Hall, Boston. J. A. Nickerson, Secretary, 159A Tremont street.

April 21, 22 and 23.—Annual Dog Show of the St. Louis Gun Club. W. A. Albright, Secretary, St. Louis, Mo.

April 28, 29, 30 and May 1.—Ninth Annual Dog Show of the Westminster Kennel Club at Madison Square Garden. Entries close April 14. James Mortimer, Superintendent, 48 Broad street, New York.

May 5, 6, 7 and 8, 1885.—Second Annual Dog Show of the Cincinnati Sportsman's Club, Cincinnati, O. W. A. Coster, Superintendent.

May 13, 14 and 15.—Third Annual Dog Show of the Toronto Dog Show Association. W. S. Jackson, Secretary, Toronto, Ont.

June 2, 3, 4 and 5.—First Annual Dog Show of the Illinois Kennel Club. John H. Naylor, Secretary, 3,182 Archer avenue, Chicago, Ill.

FIELD TRIALS.

November.—Seventh Annual Field Trials of the Eastern Field Trials Club, High Point, N. C. Entries for Derby close May 1. W. A. Coster, Secretary, Flatbush, L. I.

Dec. 7.—Seventh Annual Field Trials of the National Field Trials Club, Grand Junction, Tenn. B. M. Stephenson, La Grange, Tenn., Secretary.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **2113.**

THE DEBARMENT OF WM. H. PIERCE.

Editor Forest and Stream:

I note in your issue of Feb. 20, a copy of a resolution passed by the members of the Philadelphia Kennel Club, disqualifying me from exhibiting at any show held under the auspices of their club till Jan. 1, 1887. This action is stated to be owing to my entry of Mr. Jas. T. Walker's Reeta as one of the Glencho Kennel at the Philadelphia Kennel Club's show held last September.

Rule 2 of the premium list of said show reads as follows: "Every person who enters a dog for exhibition must be the *bona fide* owner [or the duly authorized agent of the owner] at the time of closing the entries."

Reeta being purchased for, and an inmate and a member of the Glencho Kennel, I, acting as Mr. Walker's duly authorized agent, entered her as one of the Glencho Kennel at said show, and her entry in their catalogue reads as follows: "No. 320, Wm. H. Pierce, Glencho Kennel, Peekskill, N. Y. Reeta, dark red, 4 years (Elcho—Fire Fly)."

A special being offered for best kennel of Irish setters, I asked Mr. Lincoln, the Superintendent and Manager, if I could show Reeta with the others as the Glencho Kennel for special. He immediately looked over the Glencho Kennel entries, and in reply said, "Certainly."

Now as I competed for special on the strength of Rule 2 and Superintendent Lincoln's approval, I demand that the club shall reconsider their action. WM. H. PIERCE.

PEEKSKILL, March 7.

[We publish that portion of Mr. Pierce's letter which has to do with the facts of this case. A much larger portion, alluding to the supposed motive for the club's action, we omit, as being at the present time irrelevant.]

Editor Forest and Stream:

In the matter of the Philadelphia Kennel Club, Mr. Pierce and Reeta, I desire simply at this time to say that Reeta, at the time of the P. K. C. show, was an inmate of the Glencho Kennels, and Mr. Pierce her owner's duly authorized agent; that not the slightest concealment of her ownership was practiced, and that she was not entered for the kennel special until Mr. Lincoln had ruled it proper she should be. I shall have more to say next week, with your permission, when I hope to make it appear that in this matter the Philadelphia Kennel Club are liable to discipline by A. K. C.

JAMES T. WALKER.

TROY, N. Y., March 9.

THE NEW HAVEN DOG SHOW.

THE entries for the New Haven Dog Show, to be held next week, amount to 485, just 100 more than last year. The mastiff, pointer, setter and spaniel classes are very well represented. Many noted dogs will be present, and the quality in all classes as well as the number, will be a great improvement upon last year. Mr. Porter wishes us to request all exhibitors to have their dogs at the Armory on Tuesday evening, if possible, in order to facilitate the benching. The secretary announces that all dogs sent by express must be fully prepaid or they will not be received.

THE BOSTON DOG SHOW.

AT a meeting of the New England Kennel Club, on Tuesday evening, it was decided that Rule 8 in their premium list be changed to conform exactly with that of the New Haven Kennel Club, which is as follows:

"8. A dog to compete in the champion class must have won three first prizes in classes at bench shows given under the auspices of clubs, members of this Association. And a dog having won three first prizes at above shows cannot compete in an open class when there is a champion class for its kind, but must compete in such champion class. (Every winning, either in champion or open class, will be recognized as one win)."

The sensible action of the New England Club in this matter, we believe, will be very favorably received by exhibitors.

W. WADE'S AMENDE.

Editor Forest and Stream:

Two years since Mr. C. H. Mason handed me a piece of paper to give to Mr. Mortimer, in the judging ring at Pittsburgh, just as Creole and Nevison were to be judged for the $50 special.

At the time, and frequently since then, I have charged that this was a request to Mr. Mortimer to divide the prize.

I have recently learned, on the most unquestionable authority, that the contents of this note were Mr. Mason's notes on the black and tan terrier class.

I have, therefore, been guilty of a great wrong toward Mr. Mason and hasten to repair it, as far as I can, and ask Mr. Mason's pardon for the great injustice I have done him.

W. WADE.

HULTON, Pa., March 9, 1885.

EASTERN FIELD TRIALS CLUB.

THERE was a meeting of the Board of Governors of the Eastern Field Trials Club at the St. James Hotel, New York, last Tuesday evening. Pierre Lorillard and Henry B. Livingston, New York, were elected members. The committee on revision of the running rules made a partial report, which was adopted. Rule 24 was changed and the maximum points of merit were changed to read: Pointing, including nose, 25, staunchness 10, and style in pointing 5, total 40. Pace 8, range 12, quartering 5, and style 5; total 30. Obedience 10, retrieving 10, and backing 10, making a total of 100. Other changes were discussed which the committe will act upon and report at the next meeting. Among the proposed changes is that of the rule governing a bye, and it will probably be changed to conform with that of the National. It was voted that dogs to be eligible for the Derby of 1886 must be whelped on or after May 1, 1885.

THE SIZE OF BEAGLES.

Editor Forest and Stream:

I have read the articles in your paper in regard to the size of beagles with considerable interest. Inasmuch as game birds are fast disappearing from covers that used to contain them, I have been compelled with others to fall back upon rabbit chasing for outdoor sport. I have used hounds of the beagle variety for a number of years, and have found those about fourteen or fifteen inches in height, weighing about thirty pounds, the best. The small dogs are of little value for reasons already stated in your valuable paper.

Too many of these dogs are timid and gunshy. They lack courage and intelligence.

A very queer mixture of hound, perhaps, to a breeder, was a strain of a cross between a beagle and a dachshund. And yet they were the best dogs I ever saw, and had all the good hunting qualifications any one could ask.

Three or four of these dogs ran together for a number of years, and the music of that pack and their sure, steady and good work, gave one who appreciates such things an untold amount of pleasure. They were tri-colored, mostly white, with tan and some with black and tan spots on.

Attention to the breeding of these dogs would give, it seems to me, a more even size and hunting qualities. And as they will be used more and more in the future, care ought to be taken toward securing perfection all around.

GEORGE R. PECK.

AUBURN, N. Y.

ENGLISH KENNEL NOTES.

XXVI.

I HEAR that the Hanley Dog Show, in point of numbers, is not likely to be the success that the committee had a right to expect for their generous schedule of prizes. I hope my information may not be confirmed, as I can see from the printing and advertising, the show is likely to have a large account to meet for expenses.

The Warwick authorities have just issued their schedule, and it bears the impression of success on every page. This show is now a good third to the Kennel Club and Birmingham in the race for position. I shall not be surprised to see Warwick close with a thousand entries.

Among the judges I am astonished to see the name of Mr. F. Gresham—not for St. Bernards, about which everybody admits he knows more than others require to, but for Scotch terriers, Airedales, Bedlingtons, Skyes, Dalmatians and Blenheim spaniels! "How did he do it?" is the inquiry on all sides. The exhibitors of these varieties, whose indignation has been aroused by the news, have a right to inquire how he contrived to secure the appointment, by what back-staire, kitchen influence he has managed to saddle a respectable committee with his compromising services? Was it for this he cajoled the proprietors of the *Live Stock Journal* into giving free subscriptions as prizes, an ignoble generosity, forsooth! This is a trumpery form of bribery unworthy of Mr. Gresham's abilities. With regard to his knowledge of the breeds he, for the sake of advertisement, has undertaken to judge, it is positively *nil*. The only connection that I can imagine between these varieties and Mr. Gresham, would take the form of those illicit and irregular favors that not infrequently pass betwixt some exhibitors and some reporters. There is already a protest against the appointment in the *Shooting Times* from an Airedale and Bedlington man, who accuses Mr. Gresham of making a "fiasco at Paisley." I would forward what I have said on this subject to the *Shooting Times* direct, but I hesitate to burden the editor with the batch of impertinent inquiries that would follow the publica-

tion of anything from my pen. I fear I already owe another London editor apologies on this head.

Among the list of donors to the Warwick prize fund, I notice Mr. W. K. Taunton's name. He is the gentleman who some two years ago misguided the fortunes of a mongrel body yclept the British Kennel Association. In fact he also founded this curiously compounded society, the object of which was to hold a show or two in the year, hire a keeper for the members' use and support the Kennel Club. It is strange but true that several conspicuous men of doggy society were wheedled into the fold. They hired a room in the Strand (London) where they held meetings and gave birth to the ill-fated Aston show. It was drowned with too much water. There were the society's own water trials, then the water trials of the elements and lastly the cold water trials thrown on the undertaking by the public. Afterward the funds got into low water and the members swam away leaving the poor secretary to mournfully sing:

"The cold streams ran by him, his eyes wept apace;
O willow, willow, willow!"

I have by me a catalogue of the show and I can ungrudgingly credit the society with much inventive and ingenious ability. The challenge classes they instituted have undoubtedly supplied the Kennel Club with their latest idea. The intelligent energy exhibited by Mr. Taunton made him at one time a warm favorite for the Kennel Club secretaryship, though it may be said that we have seen since he would not have cared for the position, it also brought him under Mr. Morrell's (bloodhounds) notice when he was chairman of the Association, and thus led to a closer association, for I hear that Mr. Taunton has become a partner in Morrell's government black ink firm. I congratulate Mr. Taunton upon attaining a position fully merited by his spirited business capabilities.

Mr. Taunton has taken the lead, ably assisted by his trusty lieutenant, Mr. Emil Portier, of the movement for re-establishing in public estimation brindle-colored mastiffs. I neither think, nor hope, they will succeed. I have only seen one mastiff of that color that I should be proud to sell, and that was Wolsey in Vero Shaw's "Book of the Dog." I am inclined to consider that the finest picture in the work.

All the champion prizes at Warwick will be gold medals; the entrance fee in these classes is a stiff one—twenty shillings for each dog.

Mr. Langdale, who was a spaniel breeder of reputo when many of us were in our green-as-grass days, buying St. Bernard pups ("that will make champions") of Mr. Gresham, is now interesting himself in the resuscitation of the Spaniel Club. "The witty captain," as a dunderheaded Scotchman was lately inspired to call him, has got his shoulder to the wheel, and I hope he will drive the car right over the Toy Spaniel Club project. What do they want of clubs, are they not satisfied? They are combed by fair women to sleep in their laps—what more do you want?

I see that the Capting is among the puzzlists, and has not forgotten the surroundings of his youth. Among the "quaint sayings of parish clerks" sent up to the society paper *Truth* this week (Feb. 19), is this one: "You should come to our church, man, when me and the parson does the cursing of a Hash Wednesday. Lor, 'ow we does give it 'em.—Langdale."

Our sporting press has been indulging in sickening pæans over a sensational run of the Bicester foxhounds. The run was one of the longest on record and terminated by the fox expiring in front of the pack. Two horses dropped dead from exhaustion, one of them, I am sorry to relate, ridden by a lady. This act, so far from exciting disgust for its brutality, has even been celebrated by the artist's pencil in our *Graphic*. The whole business is foreign to my instincts as a sportsman. The death of these two noble, high-couraged brutes fills my mind with the greatest abhorrence of their riders' merciless bid for newspaper fame, and strengthens the foundation of my contempt for that rotten society which is supposed to exist for the prevention of cruelty to animals.

We have had an unusual number of disputes over best dogs lately. In one case a dog followed a man to his house. The dog was taken in and hospitably treated, and the finder even advertised for the owner, who promptly turned up, removed his property and refused compensation to even defray disbursements. The finder brought an action against him for twenty-five shillings. He was nonsuited, the judge telling him that the action he had taken was entirely a voluntary one. In another case a workingman applied to a magistrate to know if he could retain possession of a dog he had found and that he would like to keep. The magistrate replied that he could keep the dog until the owner found him out. I am under the impression that this magistrate's decision was faulty, and that the finder could never get into trouble by keeping the dog. I have inquired into the law on this subject and gather the instructions to the police are that they shall arrest all stray and ownerless dogs and conduct them to the police station. This is obviously a regulation framed rather for the protection of the public than in the interests of the dog-owner. The dogs so procured are daily collected from the stations and conveyed to the Home for Lost Dogs. They are kept there for three days, during which period they can be claimed and removed by their rightful owners. At the expiration of that time they become, according to their rules, the Home's property, to do with as they think fit, which means that if they are worthless curs they are destroyed, but if they have a marketable value they are kept on the chance of finding a purchaser. The proceeds of such sales are devoted to the funds of the Home, which is otherwise well supported by voluntary subscriptions. I am not accurately informed upon the Home's legal status in this particular, nor do I know how they would act supposing an owner saw his dog in their kennels and claimed it after the three days. I am quite certain that were it my dog I should claim it and sue the Home for its retention should they refuse to give it up, offering of course, and fully expecting, to pay all expenses of keep, etc. It seems to me that it would be too hard upon a man to expect him to purchase his own property. The Home could put itself right upon this point by advertising their finds, and if this failed to discover the owners, the latter would, as in other similar legal cases, forfeit their claims. The institution of the Home has been a great boon to Londoners, for it has served to clear the streets of the wandering wretches that, diseased from filth and savage from hunger, had become a danger to respectable dogs and the public itself.

Though I cannot help feeling that Mr. Sheffield has been snobbishly treated by the Bristol committee over his objection to the pug with the ornamental collar, yet I am heartily glad that the "Cox on collars" question has terminated in favor of the part proprietor of the *Field* and Kennel Club committeeman. As the Bristol schedule distinctly insisted upon "plain collars," Mr. Sheffield's objection was a valid one, but this is a case where the end justifies the means, and the little act of injustice on the part of the Bristol people, performed to please Mr. Cox, will be overlooked for its good effect, if the result of it is to expunge forever a meaningless and insulting regulation. The Kennel Club having itself long ago relinquished the thought that a judge could be influenced in his decisions by recognizing a dog's collar should have at the same time insisted that their altered regulation be adopted by all shows that use their rules. Even at Hanley I read that "All dogs must be forwarded with a suitable strong chain and plain collar." The new and sensible wording of the regulation omits the description "plain."

The Bulldog Club is going to hold a show early in the year, and the London Aquarium is mentioned as the locale. Will the very particular manager of this establishment prudishly restrict the entries to the male sex? It is unofficially mentioned that "Mr. Benjamin is likely to be the judge." If another roubriquet is required for this pushing young fancier, I would suggest "The Compleat Angler," though seriously I do not think the club's choice could fall upon a more efficient and upright judge.

The queen of watering places is bustling itself about holding a dog show. They have already taken the first step by making "circular" application to the Specialist Clubs' honorary secretaries for extra prizes, which they are unlikely to get until they inform exhibitors upon the classes they intend to give. The last Brighton show was a financial failure. They held it some way out of the town in an open field called Preston Park. It was too far to walk, and the public's interest in dogs did not run to cabs. It was a Kennel Club show, and they lost a couple of hundred pounds over it. The townspeople who are organizing the present meeting will do well to profit by the experience and find a suitable spot within reach of the railway station and "Mutton's."

I hear that they are likely to get the Corn Exchange, than which no place could be more suitable. The Exchange contains accommodation for at least a thousand dogs. As the business men are certain to require it on a Thursday, the show will have to open on Saturday and close Wednesday night. The intervening Sunday would be objectionable but unavoidable. Those who know Brighton on a Saturday can appreciate the gain to the receipts that will accrue through opening on the half holiday. If the committee are smart and lucky they will hire the Pavilion grounds and have a band to play in the evening. The Exchange has an entrance into the gardens. That would tempt the London fanciers.

The "Dead-Alive Journal," otherwise known as the *Live Stock*, publishes another dog picture this week. The subject is the black and tan collie Rutland. The artist's name is withheld, out of consideration for his friends and relations, I presume. Without any fear of recognition by the public, I should be quite willing to trust him (to copy for publication) with a portrait of LILLIBULERO.

FEB. 22, 1885.

MOUSSE.—Montreal, Canada.—*Editor Forest and Stream:* This story is true. It is vouched for by reliable persons who have knowledge of the circumstances related. We have lots of just such people up here: "Mousse was a big, hulking, yellow dog, one of those indescribable mongrels that are called hounds, look like wolves, and appear to make up the larger part of an Indian village. Poor Mousse. He was never given a good meal from one end of the year to the other; kicks and blows and no end of rushing after cattle and barking at sheep was his portion, but withal he kept up a good heart, did Mousse. He curled his tail in spite of the kicks, cocked his ears in spite of the blows, wailed out at the moon and played with the three small children of his master without letting the young villains know that he had fangs—not even when they tried to scoop his eyes out. Mousse and the people that owned and abused him lived on Ile Perrot, and quite close to the little old stone cottage, runs fiercely a rapid, as ugly and nasty a bit of broken water as can well be found. One day last fall the mistress of the house sent her children, the youngest a baby of a year, out into the sunshine, attended only by old yellow Mousse. Down to the river strayed the older children, taking the baby with them, and as the others played aimlessly around, the little one toddled into the waters of the rapid. A little mite of humanity adrift there amid foaming waves and cruel jutting rock edges as sharp as knives, and the man who would, even to rescue a precious life, throw himself among them, would be bold, aye and foolhardy. But Mousse is not a man. He is only a dog. With one wild spring he follows the baby into the foam. The water lashes him and throws him on the rocks, it leaps on him like a tiger, but with his yellow eyes all shining, Mousse arches himself to meet the shock, and springs for life. The current is swift, but the dog is swifter, and safely dog and child reach the solid ground at last. But who shall tell of the struggle? When a man risks his life for another's on the battle field they give him the cross of his sovereign. What will Mousse get for saving a life in a rapid? No dinner. Everybody is too busy taking care of the baby to think of that. The next morning Mousse is hungry, and he wants a little fun too, so he chases down a hen and kills it before the very eyes of his mistress, the mother of the child he saved, the owner of that hen. She, outraged at such a sacrifice to whet the hungry appetite of her infant's rescuer, catches up an axe, runs out and calls to her the child-saver, the hero-dog, and splits his head open."

WORMS IN THE CAVITY OF A DOG'S HEART.—*Editor Forest and Stream:* My dog was taken sick. I noticed at first that his urine was black and bloody; in two days he had a short breath and would take no food. The third day, when I gave him barley water, he coughed twice very hard, and was dead in no time. Upon dissection everything inside looked healthy and in good condition, but in his heart I found a bunch of long worms about the size of a goose egg, and in one of the lobes another smaller bunch. There was very little blood in the heart and that very much discolored. How did the worms come there, and could he have been cured?—G. A. W. (Pattersonville, La.). [Our correspondent's statement seems definite, and this is not the first time that we have heard of what appeared to be bunches of white worms in the cavities of a dog's heart. We know of no authentic instance of worms in the heart cavities of a dog. We are forced to conclude that what seemed to be worms was either post mortem fibrinous clots, or what is more likely, the muscular fibres of the auricles or ventricles called *musculi pectinati*, which in the auricles exactly resemble a bunch of worms. Can any of our correspondents, medical or lay, throw any light on the subject? If any of our readers who notice anything like this would put some of the worms in a small bottle of alcohol and forward it to us, the matter could be determined at once.]

THE AMERICAN FOXHOUND.—South Norwalk, Conn., March 3.—*Editor Forest and Stream:* Will you be kind enough to agitate the quesiton of having our native foxhounds recognized as a class at the bench shows. I think from what I hear among owners of hounds that they would be glad to exhibit them if there was a possibility of getting a fair chance. As it is now, if they enter their hounds they will go into the class with English hounds and be judged by the English standard, which is far from all good points in our natives. I am sure there are a great many native hounds in the Eastern States that are considered first-class in the chase, and I, for one, would like to see them brought out in full force at the bench show, where we could compare notes and do something toward improving them more. Give our natives a chance in the shows and we will guarantee them in the chase, hence they will become the more sought after and will be still more improved in their qualities by careful breeding, and ere long will take the lead of all others in our rough, rugged New England States. Come, boys, lend your hands to the cause and let us boom it up until we have our dogs recognized. Will the Westminster Kennel Club start the ball by giving us a separate class? They take the lead of all others in everything—good shows, good judges, good dogs, etc.—NATIVE.

NEW ENGLAND KENNEL CLUB.—*Editor Forest and Stream:* At the annual meeting of the New England Kennel Club held March 7, the following members were elected to serve one year: Arthur W. Pope, President; T. C. Faxon, Vice-President; Lowell T. Field, Treasurer; J. A. Nickerson, Secretary. Executive Committee: Arthur W. Pope, T. C. Faxon, Lowell T. Field, Jean Grosvenor, J. A. Nickerson. Finance Committee: J. Frank Perry, Chas. H. Baker, Arthur W. Pope. Standing committee on membership, John E. Thayer, F. H. Cunningham, F. M. Curtis.—J. A. NICKERSON, Sec'y.

"TRAINING vs. BREAKING."—Canal Fulton, O.—*Editor Forest and Stream:* I have thought for some time it was my duty to write you and thank you for your great favor conferred on sportsmen by publishing "Training vs. Breaking." I have for a number of years been an enthusiastic wing-shooter and have had to train my own dogs, and as soon as Mr. Hammond's work was published I procured a copy and bought a pointer bitch, Queen Bow (King Bow ex Bow Queen), from the Detroit Kennel Club, and I have trained her by Mr. Hammond's method and it has worked to my entire satisfaction. I have heretofore used the instructions of Dinks, Mayhew and Hutchinson to break my dogs, but I never had as well-trained dogs as I now have by Mr. Hammond's method, nor dogs that were half so affectionate. I made one mistake in training Queen Bow that I found out when I commenced to hunt quail with her last fall. I used to make her point her food or bits of food. She wood point nicely, but I found when she came to point birds I had not held her long enough on the point on her food, for she would hold her birds about as long as she was used to point, and then she would break her point. I have now trained her longer on her point and she is all right. I give this to show that your principle is all right, but that mistakes may be made. One-half the pleasure of a true sportsman is in the working and training of his dogs. The sportsman who will buy "Training vs. Breaking" and train a puppy by Mr. Hammond's method, will find greater pleasure hunting with that dog than if he uses an equally well-broken dog of some other man's breaking.—GEO. HOOVER.

CLUBS AND SHOWS.—*Editor Forest and Stream:* Mr. Luke W. White writes in the FOREST AND STREAM of last week as follows: "And to show Mr. Mason that even he is not free from inconsistency, I will here relate some facts. The first time that I ever saw the now most familiar signature of C. H. Mason, was under a criticism of 'Dogs at the New York Show,' in FOREST AND STREAM about four years ago. Talking of the pointers there, he said: 'A weedier, seedier lot it was never my misfortune to behold;' and Gregory's Belle, unplaced (I bred her), was one of that same lot. Since this opinion of Mr. Mason's was published, he gave that same Belle first prize, I believe it was at Washington." Mr. White also informs your readers that he hates "abuse." Does he also hate the truth? If he is not a hater of that virtue why don't he give the date of the paper in which the alleged critique appeared? I am a constant and careful reader of the FOREST AND STREAM, but fail to discover that Mr. Mason ever stated what Mr. White attributes to him, and as Mr. W. likes to have things "above board," perhaps he won't mind giving the date when the critique appeared, also the date of the Washington show. It really appears to me that Mr. White in attempting to make black look white, has succeeded in making white look black. I don't propose to fight Mr. Mason's battles, but I hate—WHITEWASH.

THE PHILADELPHIA KENNEL CLUB.—There is every probability that the Philadelphia Kennel Club will give a bench show of dogs during the month of May, and strong efforts are being made to pefrect the plans. It was first intended to hold an exhibition in conjunction with the Philadelphia State Agricultural Society, in September or October next, but this is met with considerable disfavor among the members. The Philadelphia *Morning Record* of March 7 makes an announcement as above, and the matter is therefore a secret no longer. Although perhaps premature in its announcement that the Philadelphia Kennel Club will hold a show this spring, it is almost settled that such an exhibition will be given, and a meeting called for March 10 will conclude the preliminaries. At a meeting of the Philadelphia Kennel Club held March 3, at the rooms of the association, the following officers were elected. Vice-President, Col. Ridgway; Secretary, Mr. E. Comfort; Treasurer, Mr. L. Shuster, Jr.—HOMO.

A BIG ONE.—Buffalo, N. Y.—*Editor Forest and Stream:* Apropos of an item on large dogs which appeared in the issue of FOREST AND STREAM for Feb. 26, I inclose the following clipping from the Rochester *Union*, Feb. 18: "Hon. Charles W. Voshall of this city, brought to the *Union* sanctum to-day the largest English mastiff in the world. The canine is the property of Mr. G. L. Thomas of Albany. He answers to the name of Senator, is thirteen months old, and weighs 160 pounds. Senator is out of the celebrated English bitch Nina by Dido, the great English dog whose dam was Buff. Both father and mother have taken the first prizes at the bench shows in New York for the last three years. His height is 35¼ inches over the withers, extreme length, tip of nose to end of tail, 7 feet 8 inches. He is valued at $1,500."—CRICKET. [If Senator's measurements are no more accurate than the names and winnings of his ancestors, he will hardly be able to sustain his claim as the "largest mastiff in the world."]

THE CINCINNATI DOG SHOW.—We have received the premium list of the Cincinnati dog show to be held May 5, 6, 7 and 8. The prize in each champion class is $10 with $10 and $5 in the open classes and a ribbon in the puppy classes. The show will be held under the rules of the American Kennel Club with the exception that to Rule 8, which requires three first prizes to enter the champion class, the following note is added: "Note.—Rule 8 applies to American Kennel Club shows, beginning at the New Brunswick show of 1885. Dogs that have won a first prize prior to that date in open classes at the bench shows of any organization now a member of the American Kennel Club, should be entered in the champion class also." Entries close April 24, Washington A. Coster, Superintendent, Box 48, Cincinnati, O.

THE PORCUPINE has been credited in popular belief with the uncanny power of darting his quills and piercing his enemies at a distance; and there is one particular "Porcupine" (he of the Philadelphia *Sporting Life*), who actually does possess this quill-darting gift. His point-blank range from Philadelphia is long, 87 deg. 37 min. 30 sec. W., lat. 41 deg. 53 min. 3 sec. N. There is no dodging the quills, and the hapless victims are having a truly agonizing time of it.

THE NEW YORK DOG SHOW.—The Westminster Kennel Club have received a cablegram from Mr. Hugh Dalziel accepting the position of judge at their show next month.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

H. F., Haverhill, Mass.—A Newfoundland dog has partially lost the use of his legs. He reels as one intoxicated when he starts to walk. He eats all right but drinks more than usual. Ans. Look to the bowels and general condition of your dog. How old is he? Give him ten drops of the tinct. nux vomica night and morning in sweetened water. You do not give enough particulars.

H. A. B., Charleston, W. Va.—My cocker pup has had diarrhœa for nine months. I have tried Grover's diarrhœa cure and it does him no good. I finally gave him two doses of worm medicine and he passed six tape worms from four to six feet in length. Ans. Tape worms are not uncommon in dogs. The treatment is to limit the diet for some days and to give some worm medicine, such as oil of worm seed, santonine or male fern, and then to physic. For simple diarrhœa a castor oil laxative followed by bismuth and opium powders is sufficient.

V. E. S., Colorado.—A pointer pup 10 months old is troubled with canker of the ear. I have had it cut from one ear, but evidently did not cut deep enough, and now the other ear is affected. I dislike to cut his ears again. Ans. You may use the bromo chloralium and laudanum, so often recommended by us, or Goulard's extract of lead,

or the glycerite of tannin of the strength of fifteen grains to the ounce. A little powdered opium, one grain to the ounce, may be added to the latter. Always wash the ears carefully with warm water and castile soap before making the application.

P. P., Burlington, Vt.—1. A young pointer dog is troubled with sore eyes. Every morning the ball of the eye is completely covered with a thick gravish discharge, and when removed a film sometimes gathers over the eye so as to obstruct the light. When the eyes are turned to the light it can be seen that the whites are swollen and entirely of a reddish or pinkish hue. The first trouble came from a hard cold which seemed to settle in the eyes. I have used a wash of warm water and vinegar, and lately have dropped a solution of sulphate of zinc two or three times a day. The solution immediately clears away the discharge, but it returns in the night. What shall I use? 2. A cocker pup, about eight months old, is troubled with a profuse yellowish scurf over the whole body, but chiefly on the head, if combed or brushed off it returns. The pup has been kept in a clean, cool place; his bedding, shavings, has been changed every week; he has never had any meat to speak of, but has been fed on oatmeal, Indian meal and milk. Does the scurf indicate any disease of the blood, and what should be used to remove it? Ans. 1. You had better supplement your local treatment of your pointer's eyes with measures toward the general condition. Do not feed too highly. Mush and milk with occasional bits of cooked meat stirred in is an excellent diet. Keep the bowels free. Satisfy yourself that your dog has not contracted the distemper. This disease is characterized by discharges from all the mucous membranes, eyes, nose, mouth. Also loss of flesh, appetite capricous, hot nose, and fever. It is contagious. Give him also ten drops of the tincture of the chloride of iron in sweetened water night and morning. You may try alum solution; ten grains to the ounce of water, for the eyes. 2. The cocker pup should get five drops of Fowler's solution of arsenic in food night and morning, increased after two weeks to eight drops.

KENNEL NOTES.

NOTICE TO CORRESPONDENTS.

Kennel notes are inserted in this column free of charge. To insure publication of notes, correspondents MUST GIVE the following particulars of *each animal*:

1. Color.
2. Breed.
3. Sex.
4. Age, or
5. Date of birth, of breeding or of death
6. Name and residence of owner, buyer or seller.
7. Sire, with his sire and dam.
8. Owner of sire.
9. Dam, with her sire and dam.
10. Owner of dam.

All names must be *plainly* written. Communication on one side of paper only, and signed with writer's name.

NAMES CLAIMED.

☞ *See instructions at head of this column.*

Echo. By Seymour Van Santvoord, Troy, N. Y., for red Irish setter bitch, whelped July 11, 1884, by champion Glencho out of Sampson's Nora (Elcho—Fire Fly).

Mark Twain. By O. O. Smith, Binghamton, N. Y., for black and white English setter dog, whelped Nov. 18, 1881, by Cash Boy (Cashier—Flake) out of Katydid II. (Dash III.—Katydid).

Seth A. By Geo. P. Allender, San Francisco, Cal., for black, white and tan English setter dog, whelped Nov. 14, 1884, by Buckellew (A.K.R. 30) out of Madam Llewellin (Rake—Roxy).

Frolic. By John Wiedemer, Atlantic City, N. J., for red Irish setter bitch, whelped Jan. 26, 1885, by Chester (Duke—Brownie) out of Lady Bess (Dash Elcho—Bess).

Fairy King, Franklin, Frolic and Fern. By Blackstone Kennels, South Attleboro, Mass., for orange belton and blue belton English setter dogs and blue belton and white and lemon bitches, whelped Oct. 7, 1884, by champion Foreman (Dashing Monarch—Fairy II.) out of Jessie (Blue Dan—Flake).

Farmer and Folly. By Blackstone Kennels, South Attleboro, Mass., for orange belton English setter dog and blue belton bitch, whelped Oct. 7, 1884, by Foreman (Dashing Monarch—Fairy II.) out of Nettie B. (Mark—Rose).

PRIOR CLAIM.—*Editor Forest and Stream:* In your issue of March 5 I see that Mr. C. P. Emory, of Loveland, O., has claimed the name of Alpina for his St. Bernard bitch. That name belongs to me, as I claimed it in your paper a year ago, and Alpina is registered in A. K. R. of March, 1883, No. 928. She is now the property of Dr. J. H. Hinton, of New York city.—ESSEX KENNELS (Andover, Mass., March 9).

Jem Wind'em. By O. D. Thees, New York, for blue belton English setter dog, whelped May 15, 1884, by Count Noble (Count Wind'em—Nora) out of Lady May (A.K.R. 1371).

East Lake Pug Kennels. By Geo. Gillivan, West Jefferson, O., for his kennel of pugs.

BRED.

☞ *See instructions at head of this column.*

Nellie C.—Mentor II. Garret Roach's (New York) St. Bernard bitch Nellie C. (A.K.R. 415) to Mill Brook Kennels' Mentor II. (Mentor—The Nun), Feb. 24.

Wanda—Verone. Mill Brook Kennels' (New York) St. Bernard bitch Wanda (A.K.R. 194) to their Verone (A.K.R. 418), Feb. 16.

Rifle and Trap Shooting.

RANGE AND GALLERY.

NEWARK, N. J.—The third tournament of the Newark Rifle Association commenced on the Essex Range, Monday, March 2, and closed Tuesday, March 5. The shooting was very fair, and some of the old-time scores were made. We give scores of ring target (possible 120) and Creedmoor target (possible 50):

Warren Club.	Ring.	Creedmoor	Essex Team, No. 1	Ring.	Creedmoor
Nunley	109	48	Suellen	115	50
Wolf	107	45	Cooper	115	50
Freche	104	45	Waits	113	48
Alexander	102	43	Coppersmith	112	48
Cheeseman	94—516	42—223	Lake	111—566	48—244
Essex Team, No. 2.			Essex Team, No. 3.		
Miesel	109	48	Felts	104	45
Hagel	108	48	Helms	102	44
Deathrick	106	45	Dutcher	100	44
Welter	105	44	Huegel	100	43
Hatfield	104—532	44—229	Winckhoffer	93—499	40—216
Freilinghuysen Club.			Domestic Club.		
Chase	112	49	Dainty	110	47
Walsh	111	48	Jeffreys	107	45
Weigman	110	48	Reynolds	103	45
Zimmer	109	46	Wadams	103	43
Lynn	104—546	45—236	Leitz	100—523	45—225

The Essex Club will shoot a match with the Sull's Head Club, of New York, on March 21, on the range of the latter club, Twenty-fourth street and Third avenue.

SAN FRANCISCO, March 1.—At Shell Mound Shooting Range this afternoon, Captain J. E. Klein, who brought over 15 men of companies C and G to practice for the regular company contest, which comes off next Sunday, chose a team of seven besides himself, and shot against an equal number similarly selected by J. Johnson, with the following result, the shooting being done at the 200-yd. range, military rifles:

Klein	4555455444—45	Johnson	4445551545—45
Diers	4454344444—40	Simpson	5544434404—37
Sherman	4444434343—37	Ruddock	4444444444—40
Lochbaum	5444445444—42	Knock	3334452043—30
Dupuy	4443434354—39	Morel	4333434334—34
Sloan	4244020233—24	Behre	0334342234—26
McDonough	3324234345—33	Smith	0020202300— 9
	260		234

Mr. Pierce of the Fifth Regiment made the following practice score:

200yds	5455444445—44 5455445544—45—89
500yds	5554455454—46 3455555455—46—92

Pierce and Kellogg will, on the 15th inst. shoot for rank in the Fifth Regiment team, the two holding at present, first and second places respectively.

Colonel Ranlett and Messrs. Diers, Maginnis and Johnston of the Pacific Club practiced at the 200yds. range with the following result:

Ranlett	34443455 5—42 Maginnis 4454454555—45
Diers	4544444444—41 Johnson 5544454555—46

At the 500yds. target only Diers and Johnson shot, their scores being:

Diers	4355455543—43 Johnson 5555555544—47

At the 200yds. range Sergeant Ed. Hovey obtained the following figures:

Hovey	44 47 44 45 43—223

REVOLVER SHOOTING.—Providence, R. I., Feb. 27.—I have noted with interest the discussion in your paper of revolver shooting, and fully appreciate the annoyance of "kicking" and "throwing up" incident to heavy charges. I use the extra short .32 rim-fire cartridge, which gives perfect satisfaction. It will not penetrate thirteen inches into a pile of pine boards, but this does not affect my peace of mind. It will go through a rabbit at thirty yards, and is powerful enough for anything ordinary. With this cartridge revolver shooting becomes a pleasant pastime without the bang and kick of the heavier charge. —PADDLE.

LAWRENCE, MASS.—The Lawrence Rifle Club has much excellent material, and it is likely to make a prominent name for itself. The following matches were opened March 7, to continue each week until closed by the directors. *Creedmoor Handicap Match.*—Open to all comers, 200yds. Position standing, rounds 10, any rifle within the rules. Prizes to be won on the aggregate of each competitor's four best scores, to count as one continuous score. Military rifles allowed two points on each score to be shot without cleaning during each score. *Creedmoor Practice Match.*—Open to all. Will be continued throughout the season; distance, 200yds. Any number of continuous shots. *Military Match.*—Open to the members of the local militia only. Same conditions as the Creedmoor Handicap Match, except that five shots constitute a score, four best scores to win. Springfield military rifle only allowable. Three prizes are offered, as follows: First prize gold badge; second prize, silver badge; third prize, silver badge. Rules.—Creedmoor rules will govern, and the decision of the executive officer will be final. A challenged shot will cost 25 cents, if the competitor is sustained the money will be refunded.

IN THE target description, issue Feb. 26, the powder charge should have been stated as 165 grains.

BOSTON, March 7.—There was a first-rate attendance of shooters at Walnut Hill to-day, and the 2 o'clock wind was not very troublesome. The Creedmoor prize match closed, and H. Cushing, who has worked very hard, secured first prize. As usual there was a team shoot, and the winning team led by 29 points. The result of the day's work, including the team match, is appended, all at 200yds.:

Victory Match.

NATIONAL RIFLE ASSOCIATION.—The new office of the N. R. A. is Room 55, Temple Court, No. 5 Beekman street.

THE TRAP.

HOTEL TRAP-SHOOTING.

Editor Forest and Stream:

While traveling last summer in the West, I found a summer resort hotel in Michigan which afforded its guests a new and seemingly popular amusement in the shape of trap-shooting at clay-pigeons. At the suggestion of some of the boarders, the hotel porter was induced to buy a trap and a few pigeons, and hire one gun, which he let the guests use at a certain price per shot. He soon found it so profitable that he bought several guns and more traps, finding it a paying investment during the whole season, shooters coming from all the neighboring hotels to participate. Is it not surprising that many of our summer resorts have not added glass-ball and clay-pigeon shooting to their old worn out list of amusements? The investment would not be large. Say two guns at $35 each, two traps at $7.50 each, clay-pigeons at from two to two and a half cents a piece. At a charge of five cents per shot or ten shots for forty cents, I have no doubt a paying business could be done, to say nothing of amusement, which would be very attractive. The increasing interest shown in trap-shooting and field sports among gentlemen of the present day would soon make popular any hotel offering such amusement. Many a weary day have I spent on the seashore where snipe were said to frequent, waiting for the wind to blow "sou'west." Something in the way of trap-shooting would have been a godsend. Let some of the humbugs advertising "good shooting and fishing" as an inducement for people to come to their places, provide clay-pigeon shooting for "off days," when the wind don't blow from the right quarter, and they will find their patrons much happier and their own pockets better filled by the experiment.

BEDFORD.
BROOKLYN.

THE NATIONAL GUN ASSOCIATION.

Editor Forest and Stream:

The following synopsis of the articles of incorporation of the above association, was published in *The Daily Commonwealth*, of Covington, Ky., March 2, and will explain itself:

"Jacob E. Bloom, Walter Irvine Jeeries and Henry Franklin have adopted, signed, acknowledged and filed for record in the office of the County Clerk of Kenton county, Ky., at Covington, in accordance with the General Statutes of the State of Kentucky, articles of incorporation of the National Gun Association, and have associated themselves and become a body corporate under that name. The principal place of transacting the business of the corporation is Covington, Ky., and the general nature of the business to be transacted by the corporation is to organize shooting tournaments, to establish gun clubs throughout the United States, to promote shotgun wing shooting, to adopt rules for all classes of shooting at the trap, to secure and manage game preserves, to protect and preserve birds, game and fish, to collect and preserve specimens or natural history, to publish reports of all matters of interest in connection with the objects of this corporation, and to promote and foster an interest in all lawful sports subsidiary to the main objects and business of the corporations The corporation is to begin March 1, 1885, to continue for 25 year, thereafter, and it may be extended as provided by law. The amount of

its capital stock is $5,000, divided into shares of $5 each, five per cent. of which is to be paid in cash prior to the first election of Directors, and the remainder to be paid at such times and in such installments as may be called for by the board of directors. The affairs of the corporation are to be conducted by a board of directors, composed of nine of its stockholders, who shall elect from their number a president, vice-president, general manager, secretary and treasurer, any one or more of which offices may be held by the same person, excepting the office of president and vice-president, and excepting also that neither the president nor vice-president shall be secretary. The first election of directors is to take place March 4, 1885, the next election upon the second Tuesday of January, 1886, and annually thereafter upon the second Tuesday of January of each and every year during the existence of the corporation. Vacancies in the board of directors may be filled by the remaining directors until the next regular election. Directors shall hold office for one year, or until their successors are elected and qualified. The treasurer shall give bond in the sum of $5,000, and the directors may appoint other agents, not stockholders, and may require bonds of its officers and agents. The highest amount of indebtedness or liability to which the corporation is at any time to subject itself is not to exceed two-thirds of its capital stock, and the private property of the stockholders is to be exempt from the corporate debts." J. E. BLOOM, Gen. Man. Nat. Gun Ass'n.

RIFLE WING-SHOOTING.—*Editor Forest and Stream:* In FOREST AND STREAM of Feb. 26 appears a communication from Meadville, Pa., which says, referring to Mr. Otto C. Wilkins's rifle shooting at glass balls thrown in air: 'At Franklin, Pa., May 4, 1880, Wilkins beat the best score on record at that time, with a rifle at glass balls out of a Bogardus trap, 6yds. rise, using a .44 Kennedy magazine rifle, and broke 476 out of 500; his best run in this match was 107 straight. In 1879, at an exhibition shoot at Green Castle, Pa., he broke 985 out of 1000, and made a run of 273." For the sake of sporting literature and suffering humanity, I would beg permission to ask did he use a single bullet? were the balls the ordinary size glass balls? and did the trap throw like a Bogardus trap should throw—from the shooter? I have read of hitting with a rifle needles and bumble bees in the air. I have read of hitting a stone in the air with a repeating rifle, and loading and breaking one of the fragments before it reached the ground. I have read of letting go five quails at once, and with a repeating rifle killing all of them, one by one, while on the wing—and I heard of a man who said he knew a man that read of such rapid shooting with a Winchester that the second bullet overtook and hit the first one, but the news from Meadville knocks all these accounts out in the first round. There are a number of shots here who shoot the rifle at flying objects, and who have broken at twenty feet rise, twenty out of twenty-five, twenty-eight out of thirty, etc., balls being thrown by hand or by a trap, straight up in the air, and for their sakes I hope that some one who has seen this wonderful shooting from a Bogardus trap will kindly and charitably answer the above questions.—WING SHOT.

BROWN'S DRIVING CLUB.—Long Island, March 6.—Pigeon match between Messrs. Nichols, Trevor and Livingston. Mr. Nichols holds the Kings and Queens county cups, the Riverside Club plate, and the Sheldon and Langley cups, besides other nameless trophies won on hard fought fields. The match of to-day concludes his performances before the traps. His retirement will cause general regret among the lovers of the trap and trigger. Mr. Trevor, of London and New York, is a rapid, graceful and accurate shot, whose name is well up on the prize lists of Hurlingham. He has followed the big game in many parts of the world. In the Gordon-Nichols-Livingston-Renwick match of a year ago, Mr. Livingston shot next to Mr. Nichols, with a total of 87 birds out of 100. His score in to-day's shoot is the same as in the match of last year. Mr. W. Sanford was referee. American rules, handicap rise, 80yds. boundary, 100 birds each: Nichols, 30yds., missed 7th, 27th and 35th, birds here killed to 67th, which was missed, as was also the 71st, and the 72d fell out of bounds, here killed to 84th, which was the last bird that got away. Total killed, 93. Trevor, 26yds., missed 9th, 12th, 20th and 35th, here killed to 68th, which he missed, also missed 66th and 69th, killed to 81st, missed 89th and 91st, here killed to finish. Total killed, 90. Livingston, 28yds., 2d bird missed, here killed to 9th, missed 9th and 10th, here killed to 23d, which fell out of bounds, then killed to 34th, missed 34th and 38th, here killed to 51st, which was missed, then killed to 78th, which was missed, also missed 82d, 88th, 94th, 97th and 100th. Total killed, 87.

WASHINGTON HEIGHTS, March 7.—Regular monthly shoot of the Washington Heights Gun Club, there being a blinding snow the score was not up to the standard:

C R Terwilleger	0010100000101010111110110—12
Fountain	0111111111010010110101101—17
Roe	1011101110010101110111101—17
J H Terwilleger	1111111111101111111111001—22
Romeline	0010000010011000100100101— 8

Ties for second—Fountain and Roe shot off at 5 balls each. Fountain, 11111—5; Roe, 11011—4. The finish of six shoots for medals, Mr. J H Terwilleger making the highest average score winning first, Mr. C. R. Terwilleger second.

NEW ORLEANS.—Dr. Carver, writing under date of March 2 touching a recent offer of the Spencer Arms Company, says: "I have accepted the proposition made me by the agent of the Spencer Arms Company to shoot 1,000 bats in less than seventy-one minutes and 1,000 bats in less than one hour, having 1,000 bats in less time than one hour is an unheard-of feat, and I question my own ability to succeed; but one thing is sure, the word fail has never been displayed on my banner, and let me assure the people of New Orleans that if they wager their money on the result of this contest of time versus bats, which is a fearful question of skill and endurance, that I will win if possible to do so. Those who wager their money must remember that the second and not the first thousand must be killed in less than one hour, and should I kill the first thousand in fifty minutes I would only win the $150 offered to kill 1,000 in less than seventy-one minutes. But to make this exhibition doubly interesting, I will will attempt to kill 2,000 bats in less time than 140 minutes from the firing of the first shot. The best record of bat shooting is 1,000 killed last year in seventy-one minutes." The match excited no small amount of interest, and wagers were freely made at 100 to 60 against his performance of the severe task. The Doctor started in upon his work with his old time vigor, doing good work for a period and proving himself a very remarkable marksman; but the cartridges provided were a bad lot and did not work well in the Spencer arm in use, and after killing 890 bats in ninety minutes he was compelled to give up the match.

WELLINGTON, Mass., March 7.—The shotgun fraternity were out in full force to-day at the grounds of the Malden Club, participating in 11 events, with following results: 1. Five blackbirds—Snow and Leroy divided first. 2. Seven pigeons—White first. 3. Three pairs blackbirds—Field first 4. Seven blackbirds—Schaefer, Sanborn and Loring divided first. 5. Seven pigeons—Souther and Schaefer divided first. 6. Three pairs blackbirds—Field and Warren divided first. 7. Five pigeons straightaway—Charles, Manson and Field divided first. 8. Five pigeons—Charles first. 9. Miss and out—Divided by Short and Schaefer. 10. Seven blackbirds—Leroy and Snow divided first. 11. Merchandise match, 5 pigeons—Buffum first.

SOLOMON CITY, Kan., March 2.—The Solomon Gun Club had a glass ball shoot Monday, March 2, and entertained one of our old members, John Krum:

John Krum	0100010011—4 Thos Robertson 0110111111—8
H B Aldrich	1111110101—8 T J Edworthy 1101101111w—7

Robertson and Aldrich shot 9 each and withdrew for want of ammunition.—SEC.

WORCESTER, Mass., March 2.—The Worcester Sportsman's Club held its annual meeting this evening, and the following officers were elected: L. G. White, President; William S. Perry and A. B. F. Kinney, Vice-Presidents; William L. Davis, Secretary; O. L. Taft, Treasurer; Gilbert J. Rugg, M. D. Gilman, Charles A. Allen, Alba Houghton, Executive Committee. The club have decided to have a two day's tournament, April 2 and 3, open to all comers.

THORALD, Toronto, Feb. 26.—A shooting match between Capt. Ritter, of Welland, and George Rogers, of St. Catharines, for $100 a side, at 100 glass balls each, came off here to-day, and was won by Capt. Ritter, he having broken 87 balls and Rogers 77.

TRAP AND FIELD SHOOTING.—Collinsville, Conn., Feb. 9, 1885. —*Editor Forest and Stream:* Your issue of Jan. 18 contained an article by "S. H.," who says he thinks trap-shooting of no benefit to the beginner after one season as a means of developing the skill for shooting in the brush. Why not? All trap shooters will admit, I think, that a beginner can learn at the trap the proper way in which the gun should be brought to the shoulder, and that by continued practice at the trap he will learn to quickly sight a moving object, whether it be a bird in or out of the bush. Why, then, should not the beginner keep in practice at the trap. "S. H." says the brush is in the way. I say never mind the brush. When a bird is flushed, note the direction he is about to take as quick as possible, move your gun in the direction he is going, and let him have it when passing an opening. Let "S. H." imagine himself at the trap. The trap is sprung, throwing a clay-pigeon at his right quarter. Does it not present a one mark whereby one can improve the opportunity offered, to estimate the speed and make the necessary calculations that would be required if shooting at a grouse or quail, or any other bird under the same circumstance? A year ago this coming March, a gun club was organized in this place. It has now ten or more active members, several of whom went out last fall and stopped more than one wary grouse after only six months' practice at the trap, this being their first attempt at shooting in the brush. Now why should they not keep practicing at the trap, in order that they may be ready for the birds again by the first of October next. "S. H." says he has a friend that is a good shot at the trap but who misses the easiest of shots when shooting in the field. There are, I think, many reasons for this. May it not be the case that his friend is a little nervous when a bird is flushed in front of him, and consequently shoots too quick, or if a quartering shot is presented, perhaps he overestimates the distance and holds too far ahead, or is it not possible that in his endeavors to watch the flight of the bird he only sights across the muzzle of the gun. In other words, let his friend take particular notice as to whether in his hurry he gets his eye down on to the rib of the gun. On the other hand, if he has none of these faults, I do not see why he should fail to put into practice in the field that which he has learned at the trap. In conclusion let me say to "S. H.," that I am a beginner and also one of the above-mentioned number, and that I have a four-footed friend that accompanied me on my tramps last fall, who is also a beginner, and that for the sake of example to him I did not dare miss all of the easy shots.—F. R. H.

CLUB YACHTS FOR NON YACHT OWNERS.

IN pursuance of their policy of encouraging Corinthian sailing the Seawanhaka Corinthian Y. C. have now under consideration a scheme for extending the benefits of the club to the non-yacht owners, of which class there are a number. In nearly all yacht clubs there are many who take a deep interest in the sport, and who are valuable members, but who own no boats themselves. Their active participation in the sport depends then on the hospitality of the yacht owners, and usually when they sail it is as guests rather than crew. It is frequently the case that this class, the non-owners, contains some of the best blood of the club, as its members are the younger and more enthusiastic yachtsmen, ready to work, taking a deep interest in all discussion, but without the wealth of older members of the club. They are the recruits whence the club, in future years, must draw its strength, and everything done for their advantage is a direct benefit to it.

We have before suggested in the FOREST AND STREAM the desirability of having a yacht of suitable size provided by the club for the use of the non-members, and the trustees of the Seawanhaka C. Y. C. are now deliberating on the application of the idea to their club. The scheme was introduced by them in their report at the last meeting and was left by the club in their hands with power to act on it. A sloop yacht of 50ft. waterline has been placed at their disposal, and it is proposed to keep her in commission with a man aboard, and to allow her to be used by club members, under such conditions as may be found necessary. It is probable that the details will soon be arranged and the yacht in commission by the opening of the season.

It is within the power of nearly all clubs to furnish a boat for the same purpose; even in the smaller clubs where less money is available, a small yacht of the type most popular with each, could be provided, and placed in the hands of one or more regularly organized amateur crews. No boatkeeper would be necessary, but a crew should be selected, consisting of captain, mate, and as many hands as can be conveniently accommodated, who shall have the entire care of the yacht. The discipline of such a crew, as far as obeying orders is concerned, must be the same as with a paid crew, the captain having entire control assisted by the mate. The boat, once furnished by the club, she must be kept in order by her crew. Hauling out, scrubbing, painting, overhauling gear, and other accomplishments that stand high on the Corinthian list, will be done by them, and the boat should be a model for the members' yachts. For racing the crew would be trained as carefully as amateur crews of oarsmen; in fact the details of management would be similar to those governing the use of club boats in rowing clubs, where the authority is usually vested in a captain, who is to a certain extent responsible for the care of the boat. The expenses of maintaining such a boat would be but small when once in commission, as the work could be done by her crew or crews, from the fitting out in spring to the final stowing away of sails in winter. If more than one crew could be recruited, a second or even third could be formed to use the boat in turn, each assuming a portion of the labor of maintenance. The positions of captain and mate might be held in turn by the members, a captain being chosen every month, if desirable, in a small boat, but if any racing is done, or the yacht is large enough for cruising and more than an open sailboat, it would be better to elect a captain for the season.

When the club can afford it the club yacht should be a cabin boat, large enough to accommodate a captain, mate and crew of four or five, besides a boatkeeper. The latter, whom the club should employ, should be an old sailor, versed in all the mysteries of knotting, splicing, rigging, sailmaking, and practical sailing. He would live on board, and to him would be intrusted the general care of the yacht. Such work as was needed would be done by the crew under his supervision. Many would be glad to learn how to splice wire rope, strap a block, reeve off new halliards, set up rigging, bend sails, rig a jury mast, or to set and take in spinaker or topsail, under a careful instructor. The drilling that falls to the lot of most amateur crews preparing for a race amounts to simply nothing, and the only wonder is they do so well. Here there would be time to practice deliberately, instead of leaving all to a sail or two before the race, and the two or three crews that would in turn drill on the club yacht, would turn out twenty or thirty fairly expert hands to be distributed among the fleet at each cruise or regatta, instead of a number of willing but untrained "bag-tossers."

The conditions under which the yacht could be used must be laid down by the club. The boatkeeper should keep all in order and ready for use at any reasonable time, and the times when each crew could use her would have to be definitely settled. The captain in charge should have both a full command over his crew and the responsibility for the care of the boat. When used for short sails it might be necessary to provide for some way of getting back promptly in order not to disappoint other crews. Each week in turn, one crew would take the yacht for a short cruise, starting Saturday afternoon, and returning in time for business on Monday. On race days, if not entered, the club sloop, manned by one crew, would save the expense of an extra stakeboat, while the other crews would be distributed among the competing yachts. If entered, the crew in charge would be supplemented by extra men from the other crews, making up her full complement. Such a boat should be a model, in condition, for the entire fleet. Whoever used her should strive to make and keep her as neat and shipshape as possible, bright brass and copper, clean paint, bright spars, white sails, rigging all taut, the pride of every member of her crews, and with many hands the labor would be light.

In organizing a crew those who propose to join should select one of themselves as captain, agreeing to obey him in all matters. The captain should of course be a sailor, capable of handling the yacht under all circumstances, earnest and enthusiastic in yachting matters, and able to enforce the necessary discipline. Unlike other crews, each member of this one, except the boatkeeper, would have a voice in the command as far as choosing the direction of a cruise or a day's sail which would be done as all club business is arranged, by a meeting; but such points once decided on, the captain's authority would be absolute. He should select a mate to assist him, and also a steward, and should allot to each of the others some specific duty about the yacht. While the handling of the boat would rest with the captain, he could give up his place at the wheel to any competent member of the crew, or could vacate his command for a time in order to give each a chance at all the various duties. The mate, of course would assist the captain and relieve him as in a regular crew.

A most important office, if any cruising is to be done, is the steward. To him would be intrusted the entire charge of the commissary department. On receiving notice from the captain to provision for a cruise, the probable duration and number of hands being given, he would lay in ice, meat, potatoes, bread, groceries, canned goods in sufficient quantity; he should be able to cook a fairly good meal, with an assistant detailed to help him, and he should be responsible to the captain for order and cleanliness in the galley, one or two of the crew assisting to wash dishes and clean up. Among a party of boating men who spend Saturday and Sunday together the following scheme has been found to work well. When the party assemble on Saturday evening a schedule is made out by the skipper, giving the bill of fare for supper, breakfast and dinner, and allotting the work for each meal. Two or three are sent out to forage, and when all are present they are told off in pairs, two for fire and water, two to set and clear the table, two to cook, two to wash dishes, and two to sweep out afterward. The labor of each one is light, all is done quickly and without confusion, and each has an equal share. One of the more experienced is detailed as cook, a novice assisting him, so it is, in a way, a training school. One of the party keeps an account of all expenditures, and before separating the expense, which is always very small, is divided equally among the members present. This plan, with some modifications to adapt it to the work on a yacht, would work well in a crew such as we are speaking of. Another similar plan, in a canoe club, makes the poorest sailor in the Saturday races cook for the time, the larder being replenished by fines, in the form of eatables, for bad seamanship. Catering and cooking are very important factors in Corinthian yachting, and a little practice in this way is often of immense service.

A part of the outfit of such a club yacht should consist of a good library of yachting works, with a suitable collection of charts, and there would be no difficulty, when a new crew once interested, in securing these by contributions on the part of the crews. Of course the lead line, log and instruments would be found aboard, to be used by the crew under the instructions of the boatkeeper or captain. With an energetic and capable captain there need never be any lack of variety when on board. The ordinary routine work possesses a charm for the true Corinthian who is not afraid of a little tar on his hands, and in this case the labor, being divided among a number, would be light. When under way the crew should take the same pride in handling the boat properly and especially in setting the racing kites, that a militia man does in his drill, and with as good results. The sail every week would give an excellent opportunity for such a careful and systematic drill over topsails, jibtopsails and spinakers as amateurs seldom get. A boat of 40ft. waterline, if kept in proper condition and under a capable boatkeeper, should prove of infinite benefit to the club in one season as a training school for members, while further it would bring many sailors into the club, men who are not yacht owners and do not care to join a club on the chances of an occasional invitation to sail, but who would gladly avail themselves of such a chance for a season's yachting at a nominal expense. Many yacht clubs have laid aside sums for improvement when needed, and this is a way in which money may be expended that will bring a direct return to the treasury.

The uses of the club yacht need not stop in winter. Laid up by some accessible dock in the city, a superannuated old tar in charge, a little stove in a snug cabin with flags and photos on the bulkheads, wide lockers to lounge on, a few easy chairs, and books and papers on the table, what cosier place could be found for a meeting, or to lounge away an hour talking over old cruises and races, planning new, while one or two evenings each week could be devoted to a debate of some interesting point in sailing, or to similar pursuits. The plan is now in good hands and under the active management of the S. C. Y. C. will, no doubt, have a fair trial, and yachtsmen will all be interested in its success. Without waiting for a season, however, we hope that some of the other clubs will try the same measure with such success as will secure its adoption as a permanent feature.

A NEW CRAFT ON THE SOUND.

Editor Forest and Stream:

About eighteen months ago I addressed a communication to your journal asking for information in regard to the best type of small sailing boat, adapted to the use of a man who desires occasionally to venture across Long Island Sound with his wife. I referred to the risk attending a trip of this kind in a small catboat, and inquired whether this type of boat might not be modified in character, so as to render it not only uncapsizable and unsinkable, but also capable of reaching its destination in a rough sea. This communication, which was published soon afterward in the columns of your journal, brought out several replies, all of which agreed in this, that a small deep-keel boat is safer than one of equal length which draws only a few inches of water, but is perhaps of much greater beam. In regard to the question of sail plan, the testimony furnished was not so conclusive, and I was unable to decide in my own mind at that time whether it would be better to have the contemplated small boat rigged as a catboat, or as either a sloop or a cutter. I finally decided to adopt the jib and mainsail rig, and have recently given the order for the designing and construction of this substitute for a small catboat to Thomas Webber of New Rochelle, in whose shop this little ship, already in frame, may be seen by anybody who is interested in such matters. The measurements, as nearly as I can state from memory, are as follows:

Length over all	18ft.
Length on waterline	14ft
Greatest beam	47in.
Greatest draft	4in.
Least freeboard	13in.
From deck at bow to waterline	27in.
Length of cockpit	6ft.
Breadth of cockpit	32in.
Depth (from floor to top of coaming)	26in
Weight of iron shoe	1018lbs.
Confined air space, chiefly in zinc or galvanized iron tanks, about	16 cu ft.

The question will naturally suggest itself, in what respects shall I be the loser by giving this narrow 18ft. keel boat the preference over an 18ft. catboat? In the first place the latter will easily accommodate six or eight passengers, while the former will carry comfortably not more than three adults. I believe, however, that these three may be much more comfortably seated in the deep well of the keel boat than in the more roomy but very shallow cockpit of the centerboard craft. In the second place, the deep draft of the keel boat will generally compel me to come to anchor in comparatively deep water and go ashore in a rowing boat, while in the catboat I might readily land at almost any spot along the shore, if the sea were sufficiently quiet. Finally, the difference in cost will be in the proportion of nearly two to one in favor of the catboat.

The first disadvantage, the lack of room, is a material one and not to be underrated. The second is of much less importance, as I expect to carry with me, stowed away under the deck, a 10ft. Osborn or Stranahan sectional canvas boat, by means of which I can reach land in even very shallow water. In regard to the increased cost, I can only say that the difference is well worth paying, if a decided gain in safety is thereby acquired, and unless I have studied the teachings of FOREST AND STREAM during the past three years in vain, the question of gain in safety is indisputable. PATERFAMILIAS.

NEW YORK, March 7, 1885.

A SWINGING CENTERBOARD.

Editor Forest and Stream:

As the season is opening for yachting, I would wish to call your attention to the advantage to be gained by fitting swinging keels to small yachts instead of the centerboard. In the first place the latter inclines with the vessel, and therefore does not take that hold in the water that the swinging keel would. The mode of fitting it I will endeavor to explain. We will suppose that the vessel will draw no more aft than forward, but the swinging keel would supply the loss of heel by being made deep at the after end. I would propose to fit a shoe on the main keel, hollowed in the middle and chamfered on the two outer edges, so as to allow the swinging keel to be triced up, for running into shoal water. The connection between the two keels would be made by what is known as the "rule joint," and secured to the main keel by straps confining it to the groove. One of the advantages to be gained by this keel arises from the fact that when the vessel heels over, the keel can be braced to any required angle by the guys which would be connected with the lower edge of it, while the other ends, after passing through suitable chocks, would be secured to cleats on the covering board—there should be two on each side, of wire rope. It is proposed to allow the gripe to extend about two or more feet abaft its usual place, to cover the fore end of the joint. The swinging keel would there begin and gradually increase in depth to suit the requirement. This keel would have to be loaded at the lower edge, and would require stiffening with suitable round iron bolts at every two feet, according to circumstances. The upper edge has a piece of thick stuff wrought on each side to form the "barrel," and is bolted well through and through.

It may be as well to remark that to make vessels weatherly we must

strive to create all the lateral resistance possible, and bear in mind that water on the surface is easily displaced, while that at a depth more nearly resembles a solid.

The hold in vessels fitted with this invention is not cut up, as with the sliding keel arrangement, and for vessels of small dimensions would doubtless be found very advantageous.

P. A. SCOTT, Captain R. N.

[Captain Scott's idea is similar to that embodied in the Goodrich board, patented in the United States, and described in the FOREST AND STREAM of April 19, 1883. These boards have been tried, but have never come into general use.]

SMALL STEAM LAUNCHES.

ALTHOUGH the steam launch has become a prime necessity to all who are dependent on transit by water, the sportsman, fisherman, yachtsman, tourist, and other pleasure seekers, as well as to many whose business is on the water, it is still far from perfection, and capable of much improvement. In the larger sizes excellent boats can be had, but there are many places where a small boat of good build, that could be had for a reasonable price, is greatly in demand. Usually the builder of a steam launch is either a boat builder who buys an engine and boiler for his boat or conversely an engine builder who buys the boat for the engine, in either case the chances being that boat and engine are unsuited to each other. To meet the demands for a small, well-constructed boat, Mr. E. E. Roberts, well known as an engineer and steam yacht builder, has determined to build a special boat, as mentioned in the following letter, and desires suggestions from yachtsmen and others as to the details. Mr. Roberts is a practical engineer, with a large experience in building and running steam yachts, and he will no doubt turn out a boat in which hull, engine and boiler are fitted to each other. Many of our readers have had experience with similar boats, and can give valuable suggestions as to details of model, dimensions, build, engine, etc., which may aid Mr. Roberts in producing a desirable boat, and we shall be glad to receive and publish their ideas. The size proposed would probably be as convenient as any for the majority of purposes, hunting, fishing, carrying supplies to camp, and also as a convenient adjunct to water-side villas. As a tender for small yachts a smaller size, 16ft. long or under, would be very desirable, as it could be used as a rowboat, the change being quickly made; while in a calm it would tow the yacht, though of course but slowly, and enable one to come to moorings or to get somewhere. We hope to hear more on the subject, and to publish shortly the plans of boat and engine.

Editor Forest and Stream:

As a result of my advertisement in your paper, I have received numerous inquiries for very small steam launches, which I have not as yet built. I have some thoughts, in consequence, of getting up a boat of light but strong construction and light draft, about 21ft. long over all by 5½ft. beam, and say 30in. depth of hold. In this boat I propose to put about a two-horse (actual) reversing engine and one of my sectional safety boilers, both on one base-plate, so that they can be lifted out of the boat easily as a complete machine; the shaft and wheel to be arranged so as to be readily disconnected, and, by removing the rudder, drawn entirely out of the boat for transportation; the boiler to be arranged so as to burn kerosene oil, or, by an almost instantaneous change, converted into a coal or wood burner, so that for use as a shooting boat dead branches of trees or similar fuel could be used to generate steam. Steam could be raised in this boiler in about ten minutes from cold water, and the engine would be arranged so as to exhaust either into the stack or overboard under water to prevent noise in shooting.

I would, of course, make a special advertisement of this boat if I was already building it; but it would be well, before getting up expensive patterns and moulds for both machinery and boat, to consult the public through your paper and get their ideas in regard to the various uses to which such a boat could be put both for fishing, shooting and transportation.

The boat could probably be sold complete for about $400 if made in quantities. The boiler is approved by the United States Steamboat Inspection, so that it could be used in navigable waters.

Would you kindly place this matter before your readers and endeavor to draw out their opinions, in regard to points of construction, comfort, draft, etc.?

E. E. ROBERTS.

NEW YORK, Feb. 26, 1885.

THE YACHT RACING ASSOCIATION.

AT a meeting on Feb. 4, in London, the Council of the Y. R. A. adopted unanimously the scheme proposed at the previous meeting for classifying yachts according to the areas of their mainsails, into racers, ex-racers, and cruisers. These classes would be known as A, B and C respectively, and would be allowed to race together under a certain allowance from one class to another. In class A there would be no limit to size of mainsail, but the limits for classes B and C, with sizes of existing mainsails, are given in the table.

The report of the committee was as follows:

The practical difference between a cruising and a racing yacht, or an ex-racing yacht whose spars have not been reduced, is that either of the latter has a much larger sail spread than the cruiser. The difference is so considerable that neither the tonnage rule nor the sail area × length rating will bring the three classes together with the ordinary time allowance. Beyond this the practice of having races for "bona fide cruisers" has always existed, but has not been very general, owing to the want of a practical rule for distinguishing the cruiser from the racer. The proposal here made is that, as there is such a considerable difference in the sail spread of the two classes of yachts, the sail spread can be made the basis of classification. The relative efficiency of cutters, yawls, and schooners' sails is governed by the mainsail, and this sail will therefore properly afford the principal basis for classification. In the tables which follow a maximum limit of mainsail has been assigned to yachts of the cruiser and ex-racer classes; actual examples of each class, including the racer, being also given. It was found that the mainsails of yachts varied pretty regularly as the 1·8 roots of their Y. R. A. tonnage, and that, therefore, a standard mainsail of a cruiser being chosen, the mainsail for any other could be found from the formula—

$$\text{Mainsail} = \sqrt[1.8]{\text{Tonnage}} \times \text{Constant}.$$

The maximum area of mainsail for the B classs, ex-racer, and C class, cruiser, in the tables has been calculated from this formula. The constants used in calculating the tables were as follows:

Schooners	B Class 172	C Class 150
Yawls	B Class 200	C Class 175
Cutters	B Class 235	C Class 205

As in progress of time there would be, should the classification be adopted, attempts to gain an advantage by an increased area of topsail and decreased area of mainsail, the council propose that the area of topsail should not exceed ·4 of the area of mainsail for cutters and yawls, and ·3 for schooners.

The council think it undesirable to prohibit the use of jackyards, seeing that, area for area, a topsail which has a jackyard according to the prevailing fashion, would have a much shorter upper yard, and there would be probably, on the whole, less weight for the crew to hoist.

In the case of schooners, their foresails should not exceed ·6 of the area of mainsail.

The council do not consider it desirable to recommend that the A, B, and C classes should be grouped together in one match; but, if sailing committees desire to so group them, a suitable allowance would be for yachts in A class to be rated at four times their tonnage, and yachts in B class at twice their tonnage.

SCHOONERS.

The Council also recommend a limit to size of topsail in Classes B and C to ·4 the area of the mainsail, jack yards being allowed. It also recommended an alteration in the Y. R. A. time scale, decreasing the allowance between yachts over 40 tons, and increasing it in the smaller classes. The annual general meeting of the Y. R. A. was held on Feb. 25, at which the following proposals were adopted:

1. That the sail area rule be continued in the Appendix as heretofore.

2. That the words in italics be omitted from the following sentence in Section 2 of the Appendix: "Schooners and yawls shall not be allowed to enter *in classes of 40 tons and under* at the reduced tonnage."

3. That the words in italics be inserted in the following sentence in Rule 1: "No member of the Sailing Committee or Council shall take part in the *discussion or decision* upon any disputed question in which he is directly interested."

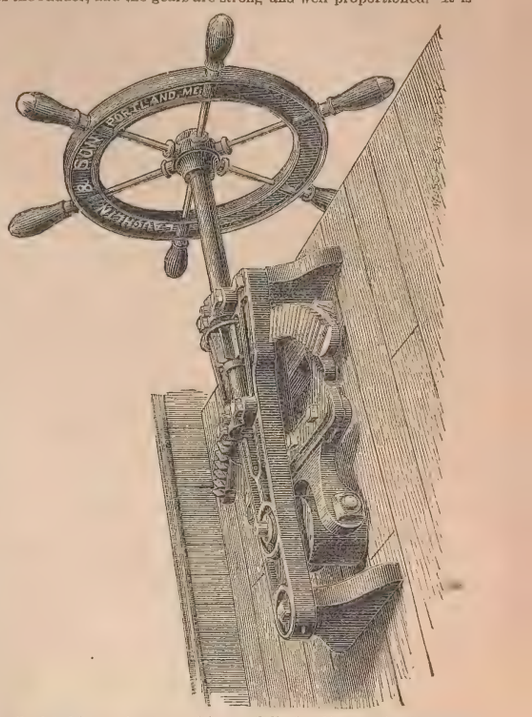
4. That in Rule 14, before the commencement of the second sentence, the words which follow be inserted: "The following shall apply to all yachts."

5. That a scheme for the classification of yachts by area of mainsail and topsail be adopted, and to be termed the A, B and C classes, but that there shall be no restriction in the sails of the A class.

6. That the Time Scale be altered so as to decrease the allowance somewhat between large yachts, and increase the allowance between small yachts.

The condition of yacht racing in England has long been a subject of complaint by those whose boats are outclassed, or who do not care to spend much money on racing crews and sails, and many efforts have been made by them to secure a change of the measurement rule; but vested interests have been too powerful, and the rule practically is the same to-day as it was years ago, as it encourages the same type. The length and sailll area rule was adopted a short time since as an alternative rule, but has not yet come into general use. The present rule is intended to provide races in which the cruisers and ex-racers can enter on fair terms with the racers, thus increasing the interest in the sport. It will give a show to the moderately rigged boat, it is true, but it will not change the principle that maintains in all sports, that money wins prizes, that lead keels, new and perfect canvas, large and well-drilled crews, will still be ahead of cruising rig and gear, iron ballast and small crews. Many will be able to enter under this classification who could not do so before, and some will no doubt take prizes; but these, in the main, will go to the most perfect boat, which will in most cases be the one on which the most money is spent. The tables given will show the sails carried on many boats whose names are familiar to our yachtsmen.

CARMELITA.—The Carmelita, after lying at anchor for several days last week off Tompkinsville, got under way on Sunday, March 9, at 10 A. M., and left with a fresh northerly wind. It is expected she will make the voyage in 105 to 120 days. Captain Snow was accompanied by several New York pilots on the trip from New York to Staten Island. Although Carmelita is a four-beam boat the pilots pronounced her too stiff, and in accordance with their views Captain Snow sent up her foretopmast and raised some of the ballast up to the floor, besides stowing some in the lockers. The pilots say that the Carmelita can go to any part of the world, and will carry any sail that can be put on her.



PENTUCKET Y. C.—The old Haverhill Y. C. has disbanded and a new one has been formed under the name of the Pentucket Y. C., composed partly of the old club. The club now has 11 keel yachts, 4 cutters and 10 centerboards, with two cutters 34ft. long now building. They also have a snug and comfortable club house. The officers are: Commodore, Chas. W. Gline; Vice-Commodore, Louis Willett; Fleet Captain, Frank Quimby; Secretary and Treasurer, John Goodell (Box 41, Bradford, Mass.); Measurer, John Goodell; Board of Trustees—Jas. A. Dreuer, C. H. Stacy, John Goodell; Regatta Committe—N. G. Knowles, John A. Crossin, Frank F. Drew.

A NEW SLOOP.—Mr. Desmond, of Hoboken, is now building a centerboard sloop for a member of the New Jersey Y. C. Her length on deck is 25ft. 8in., waterline 23ft. 4in., beam 11ft., draft 3ft. 10in., with board 9ft. 10in. The mast is 27ft. deck to hounds, masthead 3ft.; mainboom 30ft., gaff 17ft. 6in., topmast 10ft., bowsprit 19ft. Her frame is of oak and hackmatack, with cedar plank and white pine deck. Her cockpit is finished in yellow pine with rail and companion of mahogany. There will be four berths in the cabin, which will be finished in hard wood in Queen Anne style. Her iron keel will weigh 1,800 lbs., and her inside ballast 3,700lbs.

HUDSON RIVER CORINTHIAN ICE Y. C.—Hyde Park, N. Y., March 10.—*Editor Forest and Stream:* I write to inform you of the formation of the above ice yacht club. Commodore, Jas A. Roosevelt; Vice-Commodore, Dr. J. C. Barron; Treasurer, Archibald Rogers; Secretary, E. P. Rogers. Twenty-five members were elected at first meeting. Challenges have been issued to the Poughkeepsie Ice Y. C. for the Ice Yacht Challenge Pennant of America and the Poughkeepsie Challenge Pennant.—E. P. ROGERS.

DEATH OF A NEW YORK YACHTSMAN.—Mr. James Scott, an old member of the N. Y. Y. C., died on Saturday last of pneumonia.

LAUGHLIN'S ADJUSTABLE STEERER.—The steering gear illustrated, is a new pattern lately made by Thos. Laughlin & Son, of Portland, Me. It is adjustable, so as not to be affected by the motion of the rudder, and the gears are strong and well proportioned. It is

easily fitted to any boat, requiring no delicate adjustment. This gear is made in two sizes, one with wheel 21 or 23in. to fit a rudder head of 1¼ to 3in.; and one with 25in. wheel for rudder head of 4 to 6in. The shafts are brass-covered, and the entire gear is well made.

YACHTING NOTES.—Mr. Frank Towle's centerboard sloop Polly was launched on Saturday. She was built by Wallin & Gorman, and will sail under the Larchmont Y. C. flag... Thetis has had 8in. added to her forefoot. Wilson & Gurney will make her a new suit of racing sails. They are also busy on canvas for the Addie E. and Wood Bro.s' new cutter, and also a new boat for Bibber, for Mr. Tyler.... Namouna leaves this week for Charleston, S. C., where Com. Bennett will join her for a cruise in the West Indies, on which Vice-Commodore Douglas and Rear-Commodore Lawrence, with their families, will accompany him. Com. Bennett will probably visit the Mediterranean in June, returning in good time for the August races.... The Wanderer, Mr. G. W. Weld, is off for a cruise in the West Indies.... The Mohegan, Mr. H. D. Burnham, was at Havana when last heard from, and intended to leave on Feb. 28 for New Orleans. She left Boston on Jan. 5, and arrived at Bermuda on Jan. 11, experiencing a severe gale in which she lost jibboom. On the 15th she left for St. Kitts, arriving on the 20th, and leaving on the 23d.... Last season the Yonkers Y. C., on their cruise up the Hudson, were handsomely entertained by the Albany Y. C., and in return they have lately presented to the latter a handsome challenge cup of oxidized silver, lined with gold, 14in. high. The pedestal is of silver and gold, resting on the backs of four turtles. The cup, proper, is surmounted by a rudder, rope and anchor. On the front is engraved "Champion Cup of the Upper Hudson." On the back, "Presented to the Albany Y. C. by the Yonkers Y. C.... The signal of the Harlem Y. C. has lately been changed to pointed burgee, blue ground with white stripes.

A HANDY STOVE.—The owner of a small singlehander has lately devised a very convenient little stove for a yacht. Two alcohol lamps (flamme forcé) are placed in a box of galvanized iron, which is 18in. long, 9in. wide, and 7in. deep. The top of the box is hinged to lift up, and one side is hinged to open downward. Just above the burners of the lamps a wire grating is placed on which the can and kettles rest. By closing either top, side, or both, the heat is confined, and cooking may be done very quickly. By using alcohol the smell and dirt inseparable from kerosene are avoided.

PRESERVING CANVAS.—We have inquiries constantly from all quarters for some method of preserving canvas from mildew, and have published various receipts for the purpose. A new preparation has lately been brought to our notice by Mr. Chresten Nelson, of Gloucester, Mass., who has patented it. This preparation is intended to be used on sails and cordage, as well as on all cloth or canvas fabrics exposed to the weather, and it is claimed that it will protect them perfectly from mildew and decay.

NEW BEDFORD Y. C.—Officers for 1885: Commodore, Francis Hathaway; Vice-Commodore, John G. Rhodes; Rear-Commodore, George W. Parker; Secretary, John H. Barrows; Treasurer, E. Stanley Willis; Directors—Edward S. Brown, Willard Nye, Jr., David L. Parker, Horace Wood, Frank E. Sawin, Arthur E. Perry, George M. Crapo, Richard H. Morgan, Richard S. Taber, Gilbert D. Kingman and William R. Sherman.

"OLSEN'S."—We learn from Mr. Olsen that he is receiving more information from yacht owners than in any previous year. "Olsen's" is now recognized by American yachtsmen as a permanent institution, and they also understand the importance of making it as accurate as possible. The list for 1885 will appear in May, and details of yachts should be sent in at once.

HILMA.—Mr. John Driscoll, of Greenpoint, is now building a very handsome little sloop for Mr. E. J. Hazzard of New York. She will be 22ft. over all, 18ft. on waterline, 8ft. beam, and 1ft. draft, with board down she will draw 8ft. Her ballast will be iron, 800lbs. being cast to fit floors. The fittings will be of mahogany, and she will carry four airtanks of galvanized iron. The design is by Mr. A. Cary Smith.

GANNET.—This little yacht has proved faster since changed from yawl to sloop rig. This year her centerboard trunk will be removed and an iron shoe 1ft. deep and weighing 2,300lbs. will be added below her present iron keel. She will still hail from Larchmont, and will be used chiefly for cruising on the Sound.

JERSEY CITY Y. C.—The officers elected for 1885 are: Commodore, H. C. Roome: Vice-Commodore, F. C. B. Aucher; Treasurer, Geo. Hawes; Secretary, P. W. Figueira; Measurer, Geo. L. Winn.

ROWING AND SAILING BOAT.—We advertise this week a fine little boat for pleasure rowing and sailing. She is lightly built and handsomely finished like a canoe, with cat rig and oars.

Canoeing.

THE OAKLAND MOSQUITO FLEET.

Editor Forest and Stream:

As you have built up the canoeing columns of the FOREST AND STREAM, so that now we look to it as the organ of the fraternity, I thought it might interest you to receive an account of our little fleet here, and perhaps publish it, to the end that an impetus might be given to the sport on this coast. The "Mosquito Fleet" here had its origin about a year ago. The first boats were the canoes Midge, Capt. Moody, and Zephyr, W. W. Blow, with the Nellie, 12ft. yawl, Mr. Yale, and the Ripple, a similar boat, Mr. Evans. From this small

beginning the fleet has grown until at present it numbers the following boats:

Sailing canoes—The Talisman, Frank Pixley; Sunbeam, Edgar S. Fisher; Undine, E. R. Cooper; Hattie Bell, W. H. Byrnes; Two Sisters, Dr. J. M. Willey; Mystic, W. W. Blow; Zephyr, W. W. Blow, besides skin canoes, kyacks and other paddling craft. Yawls—The Nettie, Charles G Yale; Ripple and Chiquita, Taliesin Evans; Burrito, H. A. Powell; Ella, Capt. J. P. Montague; Emerald, W. L. Oliver. Skiffs—The Mosquito, W. A. Byrnes; Outing, Mead; Dolphin, Alfred Blow. Besides these are skiffs and sailing boats that join the fleet at times. The fleet has a good cruising ground and good accommodations for housing along the Beach. The canoeists are active and enthusiastic, and have lately added two new sailing canoes and several paddling ones to the fleet. They have a great advantage over Eastern canoeists, as the season never closes but it is warm enough for canoeing all the year around. Besides their home waters, there are creeks and rivers in the vicinity yet to be explored, and they hope to make a number of cruises in the coming spring. ZEPHYR.

CRUISING OUTFITS.

TWO letters have appeared lately in your columns asking for information as to outfit for cruising. The outfit of my craft may be of interest to beginners:

First, then, the Boreas is so roomy that her captain is able to keep a perfectly clear cockpit. Forward of the cockpit the stowage room is divided into two parts by the centerboard box. On the port side is a box containing everything required for cooking, viz., a flamme force spirit lamp (will carry two this season) a quart can of spirit and cans for coffee, sugar, tea, hominy, etc., pepper and salt are carried in glass dishes with perforated tops. In the lid of the box—which is nearly two inches deep—are fastened a granite dinner plate, a tablespoon, teaspoons, fork, knife, can opener, etc. In the box are two small tin pails nested, a tea infuser, a granite mug and a small frying pan. There is still plenty of room for bread, canned provisions, etc. Butter is carried in a small glass jar with a tin screw top.

This season the Boreas will be fitted with a much higher seat than at present, and the provision box will be carried under it. This will leave the space the box now occupies clear for a shore tent if it is decided to carry one.

On the starboard side is the canoe tent and a box containing a 5×8 Rochester Optical Co.'s best camera and two or three holders. The tripod is also carried here.

In the locker behind the seat is a waterproof bag containing a pair and a half of heavy blankets, a rubber blanket, a rubber bed or cushion, an air pillow and a piece of mosquito netting. A smaller bag contains spare clothing. These bags are made of oleoid and cost seventy cents each. They are perfectly waterproof, except possibly when kept under water for a long time during an upset, and the Boreas is not that kind of a canoe.

The rubber pillow weighs ten ounces. If kept inflated and a cord tied around it, a good life preserver is always at hand. The bed is 2ft. wide and 3ft. 9in. in length. It weighs two pounds and a half. Some canoeists have an idea that a bellows is required to blow up an air bed. This can be inflated, ready for sleeping on, in just one minute, by any person possessing a sound pair of lungs. This is the bed for canoeists. If a new one was required each season it would be got, but with care it should last a life time. I cannot give cost, but rubber dealers here seem to think a similar article could be made for about eight dollars.

In the after airtight locker is carried a small brass hurricane lamp. Filled half full of oil it will not spill even when lying on its side, and that quantity will last me a week. Use the finest water white oil. In the locker are also carried two canvas rolls. One, the toilet, contains towel, soap, comb, tooth brush, and small mirror; the other has tools, beeswax, whipcord, screws, nails, spare cord, cleats, etc.

The Boreas will cruise this season in her former racing rig, the mainsail being cut down to about 90ft., two reefs to be taken in at any time from deck, the first leaving up about 65ft., the second about 40ft., and when the Boreas can't carry that, it's time to go home.

The foregoing will be of little interest to old canoeists, but beginners may find something in it worth remembering. BOREAS.

A POTOMAC CRUISER.

Editor Forest and Stream:

While "Seneca," my companion on many a delightful cruise down our beautiful Potomac, is busying himself with a dissertation on his favorite craft, the sneakbox, in reply to "Kanuck's" inquiries in FOREST AND STREAM of the 12th instant, I will respond to the appeal of the Idlewild's owner in the same issue of the FOREST AND STREAM by giving a detailed description of the Tonic, fully equipped for a week's cruise.

Although only a yearling in the sport of canoeing, I am into it up to my eyes and the lion's share of my leisure is devoted to tinkering and experimenting on my own little craft and her outfit, and in reading everything I can get hold of in regard to the doings of my brother canoeists. Should they derive any pleasure or profit from anything I can say here, I shall feel that a portion at least of the enjoyment received at their hands has been reciprocated.

The hull of my canoe as far as the gunwales (I decked and rigged her myself) was built after plans of my own designing, by Passeno, one of our crack Washington boat builders, and this, his first attempt at canoe work, was fully up to the mark. Though somewhat wider on deck at bow and stern than the Shadow, and without her objectionable tumble home, she follows very closely the lines of that most excellent model of a cruising canoe. Her dimensions are: Length, 15ft. 8in.; beam, 32¼in.; depth amidships, 10½in.; at bow, 7¾in.; and stern, 17½in., with 2½in. round to the deck. They fall outside the A. C. A. racing limits, but as I am an out and out cruising man, and care nothing for racing, that fact doesn't keep me awake o' nights. I find her none too large for work on our wide river, and being a married man I frequently use her *à la* tandem, which I can do without discomfort.

The forward bulkhead is 2ft. 8in. from the foreside of stem, the after one 3ft. 4in. from the sternpost, which is straight and nearly plumb. The compartments are entered by deck hatches, which have thus far proved watertight, being well packed with sheet rubber.

The well, placed a trifle further aft than usual, is 4ft. by 20in., with a coaming coaming 8in. high forward and pointed. An oilskin apron is buttoned over it in rough or rainy weather.

The sails are two lateens of 51 and 20ft. (rather less canvas than she could carry if rigged for racing), the mainsail is hoisted by halliards, while the mizzen is fitted with the (for small areas) very handy ring and pin attachment. The mainmast is stepped 14in. from bow, the mizzen 86in. from stern. With an extra storm mizzen of 14ft. to be set up in very strong winds, and using the 20ft. mizzen as a mainsail, I get along very well without having to bother with reefing gear.

Like my good friend "Seneca" I go in for simplicity, and make it a point to have everything conform to that creed as far as possible without sacrificing comfort, yet he laughs at my foot steering gear, terming it a nuisance like all the rest of such fixings. Perhaps he would whistle a different tune could he be induced to try it just once. It consists simply of two pedals hinged to the foot brace or stretcher with a line from the upper end of each passing over the coaming on each side and toggled, just abaft the cockpit, to the endless rudder line running around the well on deck, where it is never in the way when stowing sails or cargo below decks. By throwing off the loops from the toggles, the whole affair may quickly be removed from the canoe.

Having tried A tents, with the ridge placed both athwartships and fore and aft, and found them lacking in head room unless made very high, I am now rigging one after the pattern of those used by the Mohicans of Albany, which I think by far the best tent for cruising yet devised.

A cushion 5ft. long, 15in. wide and 1in. thick is carried for a mattress, being folded into a square during the day for a seat.

The sleeping bag is made of two light blankets folded once and sewn up the sides and across one end so I can have from one to four thicknesses over me as required, and on my last day out, Nov. 26, I found it none too warm, even after piling on all my extra clothing. Rolled tightly it is encased in another bag of oiled muslin and stowed in the forward compartment with the other clothes bag, also of oiled muslin. I also carry a rubber blanket to be used when sleeping ashore or in case the canoe floor is wet from leaks or spray. It is stowed in the forward compartment.

Just aft of the forward bulkhead under the deck is stowed the most valuable piece of cargo, to wit: the "grub box" or camp kit. It is made of ¼in. white pine, well varnished inside and out, dimensions 18×12×7½in., and contains bread, crackers, cheese, sugar, coffee, tea, butter, salt and pepper, bacon, syrup, condensed milk, rice, pickles, sardines, canned salmon, eggs, a bottle of alcohol, and two small tin pails, and a tin cup. Fastened on the under side of the lid is a small frying-pan, without a handle, a tin plate, two pocket alcohol stoves, knife, fork, and spoons, and last but not least, a small pair of pliers for handling hot utensils. I have only to draw out this box, rest the lid, which fits on without hinges, across the well for a table, and set the little stoves going underneath, to get a meal at any time, and have even boiled eggs and brewed a cup of coffee while under sail. Of course the quantity of provisions carried in this box is only sufficient for three or four meals, the remainder, with potatoes, beans, onions, etc., being stowed in a waterproof bag in the after compartment, where I also carry another and larger tin pail containing meal, flour, baking powder and an extra tin cup. In the same compartment are stowed my fishing rod and tackle, rubber boots for wading ashore when the water is cold, and a small brass lantern.

The oilskin apron and a waterproof jacket of the same material are stowed under the forward deck on the port side of the camp kit, with the storm dandy on the starboard side. Under the after deck are the tent, anchor and line, and in cool weather a heavy ulster.

Preferring to sit rather high, both when sailing or using the paddle, I made a box about 14in. square and 4in. in depth, to which the backboard is hinged. It serves as a handy receptacle for repairing materials, hatchet, hunting knife, pipe, tobacco, matches, candles for the lanterns, w. f. (whisky flask), small bottle of coal oil for making fires ashore in wet weather, soap, towels, toilet articles, etc., etc.

With all this duffle aboard I have little need for ballast, and with a 3in. rockered keel can make as good time to windward as any canoe on our river, and there are eleven of them.

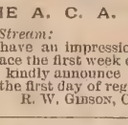
Presuming the Idlewild to be designed mainly as a cruising canoe, an outfit similar to the above would of course be too cumbersome for her, but her owner may perhaps get an idea or so from its description. TONIC.

WASHINGTON, D. C., Feb. 14, 1885.

AMERICAN CANOE ASSOCIATION,

Secretary, C. A. Neidé, Box 2127, New Orleans, La. Dues $1 per year. Initiation $1. Candidates for membership can send $2 to the secretary by registered letter or postal order, and he will present their names for election.

THE A. C. A. REGATTA.



Editor Forest and Stream:

Several canoeists have an impression that the A. C. A. regatta is arranged to take place the first week of the annual meet. This is a mistake. Will you kindly announce that the cruise commences Friday, July 24, while the first day of regular races is Monday, Aug. 3.

R. W. GIBSON, Chairman Regatta Committee.

THE A. C. A. BADGE.

THE following report has been made by the badge committee, and the badges will be prepared as soon as the required number, fifty, are ordered. Those desiring the badges will please send their orders at once to Dr. Neidé. The design selected is neat and handsome, and the reputation of Messrs. Tiffany is a sufficient guarantee

of the quality of the work. Such a badge has long been desired by canoeists, and it now rests with the members of the A. C. A. to show their appreciation of the work that the committee have done, in answer to their demands, by ordering their badges promptly.

REPORT OF BADGE COMMITTEE.

The committee appointed at the last annual meeting of the A. C. A. to select an Association badge, met in New York on Jan. 10 last, to decide between a number of handsome designs submitted, and unanimously adopted one by Tiffany & Co., viz., an A. C. A. burgee, enameled on gold, encircled by twisted gold rope, the ends tied in a square knot. The burgee has the graceful wavy appearance of a flag flying in a gentle breeze, and is especially commendable for the beautiful shade of the enameling.

After deciding upon the design the committee saw Tiffany & Co., who, at first, refused to make the badges at the limit of price set by the Association ($5 each), except in lots of fifty, but finally consented to make the dies, etc., provided the first order was for that number, and to thereafter make up and keep in stock a quantity to be drawn from as orders were received. Therefore, as it is absolutely necessary in order to obtain these badges at all, to make the first order fifty, the committee urge A. C. A. men desiring them to send their orders to secretary, Chas. A. Neidé, Box 2127, New Orleans, without delay, who will, as soon as the number reaches fifty, forward to Tiffany & Co.

Signed by committee. { W. B. WACKERHAGEN. GEO. L. PARMELE. JAMES L. GREENLEAF.

CONEWANGO CREEK AND ALLEGHENY RIVER

NOTICING "Hints to Canoeists," by "Senorita," in your issue of Jan. 15, and being of the same mind, I herewith contribute as my "mite" a rambling account of my first and only canoe cruise.

It was last summer. We started from Mayville, N.Y., on Lake Chautauqua, for a trip down the lake to Jamestown, thence by Conewango Creek, seventy-five miles to the Allegheny River at Warren, and down the river to Pittsburgh, about 200 miles further. After starting the cook-boat and cook down the lake on the steamer, we left Mayville on a hot morning, without a breeze. We paddled until near noon, when a lively breeze started, and being a novice and in a 27in. Stella Maris canoe at that, I was considerably exercised for a time as to whether I was going to come out right side up with care, however, and after a lively sail we arrived at Bemus' Point, where we found our menial waiting for us to help him load the cook-boat. This being accomplished we all sailed a few hundred yards further around the point to a small cove, where we found an excellent spring, and camped for the night.

We mustered five. Marguerite for short, Oleo (from oleomargerine), captain; Reba, purser; Floatsam, Whiffler, and myself, the Amaryllis, dignified into Mary Ellis. By the time we got our canoes fixed and tents up supper was announced, and a grand rush ensued, not because we were hungry, but because we wished to ascertain whether our man Friday was deserving of his munificent salary. Such a supper. A few slices of fried ham, coffee and bread and butter; the ham was tainted and the coffee execrable, so we waited until the cook could fry some bacon and heat a can of Boston beans, then we attacked it again. Somebody wanted eggs or flapjacks, but our domineering domestic crushed him by the remark that he was too tired to fry flapjacks. Such insolence, after having ridden up the lake on the steamer and only rowing a light boat about 500 yards, to serve us a trick like that; and when I think of that supper, I wonder we didn't do something desperate. Why, after we had all tumbled in except Floatsam, who was sitting by the fire working with his rigging, he (the cook) stretched out in the cookboat said, "Mr. B., I wish you would get a match and light my pipe, I'm too tired" (this is a fact). It's a wonder B. didn't destroy him then and there. I will remark just here that he only cooked two more meals for us, though these three meals cost us about thirty dollars, as we had to pay him a week's wages, whisky, doctor's bills (he caught the rheumatism (?) and our tender-hearted purser didn't like to see him suffer) and railroad fare, and after that we did our own cooking, the success of which I won't vouch for.

The second day was spent in reaching the outlet of the lake, where we camped. Here the supper was a slight improvement on the night before, at least such is my impression, though I don't think we were enthusiastic over it. After story telling, jokes and vocal efforts that would make an angel weep, we all turned in. In arranging our canoes, the boys all succeeded in getting under shelter of the two trees available except myself, who, as I usually do, got left. Under ordinary circumstances, this might not seem very striking, but a big storm was brewing, and when I thought of how my gossamer tent wouldn't turn the rain, I wept silently. I tried to get up a scare about lightning striking the trees, but it was a flat failure, so we all turned in and I endeavored to delude myself with the idea that the storm wasn't coming our way anyhow.

I was awakened about an hour later by the roar of the wind, and my tent pins pulling out, and then my little private picnic commenced. The shore was thick with nettles from dead plants, and when I made my debut in my bare feet, I immediately got into difficulty. At last I succeeded in breaking off a couple of my tent strings, and loosening or breaking what tent pins were left, getting desperate I piled rocks on deck to hold the tent in place and scrambled under cover as it now began to pour. After a frantic search beneath decks, making a sorry mess of the cargo, I found my rubber blanket, and sticking it underneath the tent rope, pulled both sides down even and pinned it; then after getting things as near shipshape as possible, I rolled over and soon forgot my troubles. I awakened in a lather of perspiration, and made up my mind that I had rather go through a dozen storms than sleep under a rubber blanket again. By this time the wind had subsided, and the rain had nearly ceased, so removing the poncho I crawled out. I wanted a drink, and after falling over everything in camp and getting everybody growling I found the bucket empty, so went back to my canoe, where with my feet out I smoked for about an hour and finally near daybreak turned in and got a little sleep. I don't hanker after any more nights like this, though I suppose we have to go through a few in order to enjoy a cruise.

The next morning we paddled down the outlet to Jamestown, where we hired wagons to transport us around the dams. We didn't stop in Jamestown longer than we could help (for which I was sorry afterward, as it is a very pretty place) but launched our craft below the last mill, and started on down the creek. If we got any dinner that day I have forgotten it, seems to me that we should have eaten every day, but—with the exception of the first one, which was a catastrophe from which we have never fully recovered—our meals were such a hollow mockery that the only recollection of them is a void. We hadn't gone a hundred yards before we were aground, got off, made another hundred, and did the same thing over again. However we wanted exercise, and didn't mind a little thing like that. A long stretch of very swift water put us in a good humor again, then still water, mill dam and hard work, after which more swift water for the balance of the afternoon.

Just here comes another of our mistakes, causing short allowance of grub. We were informed at Jimtown that it was only 30 miles to Warren. Deluded lambs, we little thought it was going to take us three days to paddle that 30 miles (it was 20 miles by railroad, but the longest 75 miles by the creek that I have seen for many moons). Upon conclusion that the culinary diggy couldn't get down the creek (and we were right), we took a small lunch to last us over supper that night, and breakfast next morning, and shipped the cook, grub and boat by rail to Warren (I have been thankful ever since that the railroad crossed the creek here). Paddling on down the creek we halted for the night at Camp Floatsam, where, at one fell swoop, we devoured the provisions that were to last us until we reached Warren; a little coffee was about all that survived the wreck.

That night's sleep was my first good one on the trip.

The first two days' cruising on the Conewango was simply immense. The stream is about 10 to 20ft. wide, sometimes narrowing down to about 6 or 7ft., and running like a millrace, dashing over boulders with fearful recklessness, and so crooked that, most of the time when following close single file, the captain, who generally took the lead, was out of sight of the rear man and often of the third canoe. In the narrower parts of the creek, the trees on either side hung over and close to the water, so that we frequently had to duck our heads and trust to luck while going at a lively pace.

Toward evening of the second day on the creek we had a cold rain during which Floatsam neglected to put on his poncho, and further on we stopped at a small village, where Oleo and Reba foraged, leaving Floatsam, Whiffler and self under the lee of a bridge to meditate and watch while drawn up together. Floatsam suddenly fainted from the effects of his drenching, and nearly flopped into the creek, which was deep here, and it was with great difficulty that we got him out on the steep bank, where he lay some time before coming to. After an entire change of clothing and getting warmed up he was all right. By this time Oleo and Reba returned with sundry packages and cans, and we continued on down the creek, camping some half dozen miles below at Camp Whiffler. We went through the usual formula of getting out the pans, dishes, etc., and putting them away again—I can swear to this, for it was my turn—and after drying our clothes at the fire, turned in for a very cold night. Silence reigned supreme until the wee sma' hours, when the camp was thrown into confusion by blood-curdling yells and frantic appeals for assistance from the interior of one of the canoes. The chief engineer thereof was entertaining an imaginary snake, and he offered a dollar apiece for matches, with a recklessness of manner that would have made Coal Oil Johnny wild with envy. Added to this our captain prolonged his agony by demanding cash in advance for his matches, but finally his better nature got the best of him, and crawling out he went over and relieved the mind of the gallant tar by an investigation which revealed nothing. The aforesaid tar smiled over the occurrence next morning, but he hasn't forgotten the boom in matches on the Conewango.

The next day brought hard work. We had six dams and one log boom to wrestle with, though we had a great many fine rapids to run, which soothed our feelings some. About noon on the following day we arrived at Warren, where we were handsomely treated by the Warren C. C. men. We got something to eat here, I remember. One of our boys met us here with his canoe, the Lotus Flower. Added to our fleet were five of the Warren men and our much abused but indispensable cracker junk, with a new kitchen mechanic, whose culinary education consisted in being able to row the boat, chop wood, light the fire, and do his share of the masticating. However, with the assistance of sundry farm houses and stores along the route, we managed to make out with him. The balance of the trip was made in quick time—about thirty miles a day—but very enjoyable, nevertheless. At Tionesta we dropped three Warren men, two of our own at Oil City and one more Warren about Foxburg, and picked up one of our own men at Kittanning, the Lady Jane; three of the original starters bringing up at the boat house at the Ninth street bridge, twelve days out. We had some very fine rapids coming down the Allegheny, also some very fair sailing.

To our uninitiated the trip was simply immense, except the eating, and hereafter when we read a brilliant and romantic account of how So-and-So prepared his elegant repast at the camp-fire, we shall set him down as a humbug, for we have been through the exasperating reality of all that sort of thing and know whereof we speak.

I have parted with the Stella Maris and a new Mary Ellis is on the stocks, a 14×31 Princess, in which I hope to make many another cruise. I expect to take her to the Thousand Islands meet, where I hope to win a place in the lists for my AMARYLLIS.

TOLEDO C. C.—*Editor Forest and Stream:* The Toledo C. C. would like to contribute their little mite to make the Canoe column of the FOREST AND STREAM as popular as it has always been. We have a membership of 20, with 12 canoes enlisted. At our first camp-fire on Feb. 16 the following resolution was passed: Resolved, That we, the Toledo C. C., do indorse the action of the Cleveland C. C. in regard to Western meet at Ballast Island, and pledge it our hearty support. A very interesting paper was then read by Mr. Keip, the secretary of the club, on the subject "Cruising." The paper was well received and a vote of thanks extended by the club for same to Mr. Keip. Our commodore, Mr. J. W. Hepburn, then read a paper on racing, giving his views on the best dimensions for a canoe for racing, paddling and cruising. It was accepted with thanks. We will all attend the meet at Ballast Island and expect to have a jolly time. Will some of our Western canoeists please let us know through your columns how the meet will be appreciated by them and how many will attend?—GUS G. KEIP, Sec'y Toledo C. C.

NEWBURGH.—The "Dockrats" have not been idle, but have laid out a good three-mile triangle, northward from the north end of Plum Point, also a half-mile course for paddling, under the bluff. Both have been chained off carefully on the ice. Other courses have been laid out in front of the boat house: One of 1½ miles southeast, one of 1½ miles northeast, one of 2½ miles north, and a 3-mile triangle. Mr. Van Dalfsen's new Mohican has arrived, Mr. Grant Edgar will put a Childs board in the Dido, Mr. Harrison will deck his canoe, adding a drop rudder and Childs board, and Mr. Knight will also use a Childs board.

NEW YORK C. C.—A meeting of the New York C. C. was held at the office of Mr. J. F. Newman, on Friday, March 6. Mr. Whitlock's resignation of the office of commodore was read and accepted, and Vice-Commodore Munroe was elected commodore. W. P. Stephens was elected vice-commodore in place of Mr. Munroe. The Committee on Constitution and By Laws presented the draft of a new constitution and by-laws, which was accepted, and will be presented at the next meeting for approval. Messrs. Whitlock, Schuyler and Stephens were appointed a committee to attend to removal of house.

KNICKERBOCKER C. C.—The last camp-fire was made doubly pleasant by the presence of Mr. Geo. Rogers of the Peterboro B. C. Mr. Greenleaf delivered a very interesting lecture on river cruising, including especially the paddle and its use. Mr. Rogers also spoke on canoeing in Canada, bringing out the fact that canoeing there was less cruising than pleasure boating, the canoe being universally used, but mostly for short trips near home and for pleasure paddling, as rowboats are used here. Some discussions on cruising followed, the meeting adjourning at 11 P. M.

PERSONAL.—Commodore Gardner and Secretary Eckman, of the Cleveland C. C., visited us last week. They are in New York on business connected with the Ballast Island meet in July. Both gentlemen are long distance cruisers, as they have been down the Mississippi in 1883, from Cleveland to Lake George in 1881, and have made many other cruises. Mr. Gibson was in town on Saturday and spent a day with the Marmalade Lodgers. Mr. E. C. Rand, Mohican C. C., left New York on Wednesday for a cruise in the Bermudas.

PITTSBURGH C. C.—The officers elected on Feb. 27 for 1885 are: Captain, Reade W. Bailey; Mate, W. H. Nimick; Purser, W. W. Lawrence. This club boasts the greatest length of flag officers extant; not one of them can pass under a 6ft. doorway, and Captain Bailey is the tallest man in the Association. The club are about to make their annual change in their signal.

THE ERIE MEET.—The dates of the meet at Ballast Island have been arranged to allow men to leave after the races and reach Grindstone two or three days before "Race Week." The Camp at Ballast Island will be from July 18 to 28, thus reaching Grindstone on July 30 or 31 (Friday or Saturday), while the A. C. A. races begin on Monday.

CANOES FOR SALE.—We call the attention of canoeists to the canoes advertised for sale in our columns. Many old canoeists are changing their boats for new models better fitted for racing, or are having canoes specially built to their order, and there are a number of excellent cruising canoes for sale at reasonable prices.

QUI VIVE.—Mr. I. F. West has sent us a good photo of his canoe Qui Vive, once well known about New York. She is a canvas canoe, built by her owner, 14x26in., sheer 5¾in., and weighs complete 49lbs., including paddles, backboard, hatch, stretcher, two masts, sails and rudder.

FREAK.—After a season's trial with a keel, Mr. Schuyler will go back to centerboard, this time trying a Childs patent.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

N., Philadelphia.—We know of no scent for the purpose.

PERCYVAL.—We believe the law is off April 1. See next issue.

W. D., Lyme, Conn.—We know of no dealers who keep bird lime.

L. C. S., New York.—Law on the birds extends from June 1 to Oct. 1.

F. R.—Write to General Passenger Agent, Flint and Pere Marquette Railroad.

SHARPSHOOTER.—1. See answer to "Wild Rice." 2. The trap is a good one.

F. M. B.—Put two wads over powder and crimp the shell instead of cutting it off.

H. W. H., Sandy Hill, N. Y.—There is no law in this State against shooting crows.

D. R. E.—The address is W. B. Hornaday, Smithsonian Institution, Washington, D. C.

READER.—Take both rifle and shotgun. You will find large and small game and trout.

J. H., Boston, Mass.—Call on Dr. Al Watts in your city, and he will tell you about the ferrets.

L. J. C.—Bogardus's book is $2. Yes, let your friend practice rifle shooting. It will help him.

J. M. C., Lowell, Mass.—We know of no such map. We shall publish such a book this spring.

E. M. H., Agawam.—Select a 12-gauge or 16-gauge, as your fancy may dictate, and 6lbs. to 7lbs.

S. R. D., Brooklyn.—Write to Chas. Harker, 62 Cortlandt street, for catalogue of last poultry show.

W. H. H., Newport, R. I.—There is no person in the country who can be depended upon for a supply of black bass. When we want them we have to go and fish for them. Write to Mr. Livingston Stone Charlestown, N. H.

ACCOMAC, Virginia.—Possibly Mr. W. Hapgood, Boston, Mass., might give you the information.

UNDER LEVER, Newfane.—1. The shells give general satisfaction. 2. For patterns see answers in last issue.

G. W. C., Newport, R. I.—For wing-shooting, read "Field, Cover and Trap-Shooting," by Bogardus. Price $2.

D. A. P., Peekskill.—We do not know where you can dispose of the back numbers. Send them to some hospital.

H. S. B., Illinois.—You can procure stratena cement at the drug or stationery stores. It will answer your purpose.

J. D. T.—1. Select a 7 or a 7½-pound. 2. Shells 2¾in. 3. Full choke. 4. Probably by addressing the office of the paper, London.

SUBSCRIBER, Elmira, N. Y.—You can have the stock of your gun, straightened to improve your shooting. Any good gunsmith can do it.

H. W. C., Monroe, Mich.—Deer shed their antlers every year; we have had much discussion about this subject in the FOREST AND STREAM.

J. M. M., Canton, O.—Mr. Wells's book on angling will soon be out, and you will do well to consult that. Its publication will be announced in our columns.

W. D. T., Mansfield.—Can you tell me of any place in New England where I can purchase some small black bass for stocking? Ans. We cannot; see answer to W. H. H.

FUR TANNING.—Several correspondents are advised to consult Gibson's "Complete American Trapper" (price $1) for recipes for tanning the different kinds of skins.

D. B. K., Denver, Col.—The Gitana is 92ft. 9in. on waterline, 20ft. 6in. beam, and 11ft. draft. Her tonnage is 95.71 tons N. M., and she belongs to Mr. Wm. F. Weld, Jr., of Boston.

J. W. H.—We have two single breechloading shotguns, 12-bore, full choke, each loaded with 3½ drams of powder and 1 oz. of No. 7 shot. No. 1 has 30in. barrel and No. 2 has 33in. barrel. Will you please be so kind as to inform me through your paper at about how many yards I should be able to shoot a squirrel or partridge, and kill at the longest possible range. Also how much further No. 2 would shoot than No. 1, and kill according to the above table? Ans. They would probably be sure to kill up to sixty yards, and perhaps 25 or 30 further, but this last would be only accident. There would be no material difference in distance. It would be a matter for experiment.

NATSEN.—For the hares use box-trap and bait with sweet appl . For W. J. G. P. S. apply at secretary's office in Camden. 3. We pr sume that there are new laws on the catfish.

NEMO, Brockville, Ont.—1. "The Management and Diseases of the Dog," by Hill, is the book you want. We can furnish it. Price $2. 2 and 3. The puppy's tail will probably come all right as he grows older.

SPARROW.—We know of no one who furnishes English sparrows. They may be trapped easily by a figure 4 trap, or taken by the use of bird-lime. A small boy, if suitably rewarded, would supply all required.

SOMERSET TENDERFOOT.—The directions of the maker of the Lyman sight are, "the sight is placed either a little to the right or left of the central line of the gun, depending on which side the auxiliary barrel is used, so that the sights will line with it."

WILD RICE, New Orleans.—You can secure wild rice seed of Chas. Gilchrist, Port Hope, Ontario. The cost, we believe, is $2.00 per bushel, and the duty nothing or very small. Valentine Bros., Valparaiso, Ill., may supply some seed. See our editorial page.

L. C. S., New York.—For the canoe use white cedar, you can get it from C. F. Hodson, 742 Water street. 2. Read "Hallock's Gazetteer" or Thad. Norris's "American Angler's Book," or Mr. Wells's forthcoming work. 3. For trout flies see much recent discussion in this paper.

J. H.—1. Use a 16-gauge, 6-pound, 28-inch barrel. 2. Two and one-half drams are better than three drams. 3. We have not used them. 4. You might get a copy by addressing L. C. Clements, Fleet street, London, E. C., Eng.; but some Americans who have sent him money have not received anything in return. 5. We have not heard that a second edition would be printed.

INQUISITIVE, Paterson, N. J.—1. Is a split bamboo rod made out of the bamboo cane commonly sold at fishing tackle stores? 2. Is there a map published of New Jersey that has every stream marked thereon? 3. Can trout live in a stream inhabited by black bass? Ans. 1. No, it is specially imported. 2. Not that we know of. 3. They can, if the bass do not eat them, which they are apt to do.

This important work, now for the first time offered to the public, contains full life histories of all the quadrupeds of this State. These biographies are as different as possible from those too often found in scientific works; instead of being dry and dull

MAMMALS

they breathe the very fragrance of the woods and fields, and give us a close insight into the every-day life of their shy inhabitants. To the lover of nature the work commends itself by its title. The hunter will need it for the complete account it gives of the habits of the deer, the hares and the

OF

squirrels. The farmer should read it because it tells him all about his enemies, the shrews and field mice who devour his crops, and about their enemies whom he would like to protect.

NEW YORK.

This interesting work is published in two volumes, the first taking the reader from the *Carnivora* (flesheaters) to the *Cervidæ* (deer), and the second concluding the subject.

BY

C. H. MERRIAM, M.D.

The volumes are superbly gotten up and are printed in large, clear type on heavy tinted paper.

We offer a few copies for sale at the following prices: Single volumes, paper, $2 each. The two volumes, paper, $3.50. The two volumes, cloth, $5.

Forest and Stream Pub. Co.,

39 Park Row, New York.

The Field Trial Winners of America.

The newly-issued book, "Gun Trial and Field Trial Records of America," contains a complete summary of field-trial winners to the close of 1884, in addition to the official reports of our International Gun Trials, standard live-bird, clay-pigeon and glass-ball shooting rules, American Kennel Club rules, National Field Trial Club rules, list of principle kennel clubs, etc., etc. A valuable book of reference for all who use the dog and gun. Price, post-paid, twenty-five cents. Address TURF, FIELD AND FARM, 39 Park Row, New York.

"MIST COLOR" LEADERS.

TRADE MARK.

Being consumers of nearly three-fourths of the total amount of silk worm gut imported in this country, and having in Murcia, Spain, increased our facilities for the manufacture of silk worm gut, we are enabled to secure a selection of material for our leaders beyond what even we have ever had. The leader being one of the most important articles in an angler's outfit, we have long given particular attention not only to the material of which it is composed, but also to the manner of making or tying it. *All of our leaders have a place every three feet, made quadruple by looping, so that the flies can be easily adjusted and will not wear the leader unnecessarily. All of our leaders are "Mist Colored."* Every envelope contains one dozen leaders; has our name and trade mark on it; states the length and quality of the leaders in it.

If your dealer does not keep our goods in stock, or will not order them for you, send us 50 cents for our 180-page illustrated catalogue.

Harrison's Celebrated Fish Hook.

Registered.

Trade  Mark.

Whereas, It having come to our notice that some unprincipled house, to gain their own unworthy ends, and to attempt to damage our good name having spread reports to the effect that the manufacturers of the above hooks are defunct, we now take this opportunity of informing the American and British public that such reports are utterly false. The same efficient staff of workpeople is employed as heretofore, and **we challenge the world to produce a fish hook for excellence of temper, beauty and finish in any way to approach ours,** which are to be obtained from the most respectable wholesale houses in the trade.

Signed, **R. HARRISON, BARTLEET & CO.,** Sole manufacturers of Harrison's Celebrated Fish Hooks, Redditch, England.

Explanatory and Suggestive.

FOR THE CASUAL READER.

Arma virumque cano—"Arms and the man I sing." And, indeed, it would take the genius of a Virgil and the roll of Latin hexameters fitly to tell the deeds of this man, whose arms are shotgun and fishing rod. Go where you will, he is there. You run into him on the crowded city street, encounter him on cars and steamboats; he perches atop the country stage, bestrides the burro, and doubles up like a jacknife in the kanim. Seek out the most distant, most tortuous streams, his line has been wet in their waters; penetrate into the wilderness, the tin can of the sportsman's camp is yet further on. He goes for game—if the fates shall send anything within reach of his ammunition; for fish—if by good fortune a trout shall rise to his fly or descend to his worm. But, good luck or bad luck, game or no game, fish or no fish—fun always, fresh air, ozone, quicker pulse beat, brighter eye, more elastic step, all the multitudinous rewards, which, after all, outweigh the biggest "bags," and tip up the longest "strings." Is it not true that only a poet could tell his deeds as they ought to be told? Perhaps so. Perhaps not. He can usually tell them himself. And he does, with a thousand different pens, in a thousand different ways.

You may read it in the FOREST AND STREAM.

And that is better than if it were put into verse between book covers.

One who does not understand these things might imagine that after being told so often, this story of the man—him with the rod and gun—might in the end become hackneyed. But it is not so. Why? Well for pretty much the same reason, we venture to say, that the fields themselves and the woods and the lakes and the streams never become hackneyed. However that may be, one thing is certain. Our columns every week, and month after month, give ample proof that there is still an abundance to tell of what is seen and what is done afield and on angling waters; and that hosts of people still delight to read the telling, our subscription books show with ever increasing emphasis. The FOREST AND STREAM is in the best sense

A Journal of Recreation.

It tells of the recreation found by busy men, in out-door, open-air life. It *is* recreation to these same men and to others. Explain it how you will, this recreation found in the pages of the FOREST AND STREAM is different from the diversion afforded by other papers. Why? Because (it may be answered again) the recreations of field and stream are always ten times more potent for good than are those found in almost any other way.

Look through the pages and you will see that the departments include a pretty large field. It is a wide scope of subjects. But if you look carefully you will see that the paper, from front cover to back cover is homogeneous. What is in it belongs in it. There is not the mistake of trying to foist upon the reader, who is interested in angling and shooting, a lot of stuff about horse racing or base ball or prize fights. There is no sawdust-ring odor. Everything is redolent of the woods. There are plenty of other papers devoted to the other subjects. If you are interested in them, you need hardly spend time to read the rest of this explanatory advertisement. The FOREST AND STREAM'S field is broad, but it is not broad enough to take in all creation. The editors are perfectly contented with the scope of the paper as it is at present. And now

A Word About 1885.

For fifty-two weeks of the year 1885 we propose to publish the FOREST AND STREAM, and to fill each number with the same rich abundance and variety of reading that may be found in this present number or in any one of the five hundred numbers that have gone before it.

There will be the same delightful accounts of the adventures and misadventures of the *Sportsman Tourist*, and whether the "tour" be across a continent or only across the pasture lot into the woods beyond, the story in either case will be well worth the time it takes to read it. We shall have, now and then, a description of such excursions in foreign lands, but for the most part these columns will deal with what is seen and done in our own country, for that, after all, is what the readers of FOREST AND STREAM are rightly presumed to be most interested in.

The *Natural History* columns will give attention to varied forms of animal life, more particularly such as may come under the observation of sportsmen in their rambles. This department of the FOREST AND STREAM we believe to hold a place altogether unique. It is neither the dime-museum sort of un-natural history affected by the newspapers, nor the abstruse, fine-spun and terribly dry lucubrations of the scientific associations. It is intelligent talk about animal life, intended for intelligent readers.

In the *Shooting* and *Angling* columns (we need hardly say it) will be accounts of hunting excursions and fishing trips—with luck, good, bad and indifferent; discussions about matters mechanical, ethical, sentimental, fanciful and practical; some, after much debating, will be settled; others will be left (and the reader with them) at the end just where they were at the beginning.

The *Kennel* will give in 1885 (as it has given in 1884) the earliest, most accurate and the only unbiased reports of shows and trials, and it will be the endeavor of the editors to maintain for the FOREST AND STREAM in this special branch the position it now holds away in advance of anything else published in this country.

The *Yachting* columns are in charge of an expert, whose highest ambition will be to keep these departments in the place already won for them in the recognized lead of journalism. Though the *Canoeing* interest of the country is of comparatively recent growth, the FOREST AND STREAM fully appreciating its importance, has provided for those who sail or paddle a (pretty generous) corner, which is so full of practical suggestions and recountings of cruising experiences, that a canoeist might almost as well try to get along without a paddle as without the paper in his mail every week.

In a word—this is what we started out to say—in 1885 the FOREST AND STREAM will be newsy, bright, wholesome—a journal of out-door recreation.

Terms:—$4 per year, $2 six mos., 10cts. per copy. Sold everywhere. Make orders payable,

PETER HENDERSON & CO.,
35 & 37 CORTLANDT STREET, NEW YORK.

New Publication.

CANOE

THE FOREST AND STREAM began a year ago the publication of a series of papers on canoe construction, by Mr. W. P. Stephens, of the New York C. C., widely known as an expert on canoe design and building. These papers, having appeared through the year in our columns, have since been rewritten, and with numerous additions are now published in a handsome volume under the title of "Canoe and Boat Building for Amateurs." Mr. Stephens is peculiarly fitted for the preparation of such a work, beginning as an amateur, and having after a long experience of the difficulties attending a learner, taken a prominent place among canoe builders, due both to the model and workmanship of his canoes. Realizing fully the difficulty of explaining to a novice an art in itself far from easy,

AND

and with which he is entirely unfamiliar, the book begins with a description of the various classes of canoes in general use, with their main features and dimensions, and definitions of the terms used in connection with them. Numerous examples of canoes are given, and in connection with them, such plain instructions in designing as will enable the beginner to select intelligently the proper craft for his pur-

BOAT

pose, and to plan her dimensions, details and fittings. To this end designs of all classes of canoes are given, with full dimensions and details. The object has been not merely to enable the tyro to build one boat as described, but to teach him the principles of designing and building in such a way that he may construct such a craft as he desires. Following the chapters on designing, the construction of a canoe is taken up in detail, the tools and appliances being first clearly described, as well as the various materials, after which follows the actual work of building. Every operation is taken up in order, from the selection of the keel to the varnishing of the finished boat, and illustrated with numerous diagrams.

A chapter on sails describes all the varieties in use by canoeists, down to the new Mohican settee, with directions for making, rigging and measuring them, while the method of proportioning the sails to the boat is clearly explained, all the calculations

BUILDING

being worked out in detail. The many minor points of a canoe, paddles, steering gears, rudders, aprons, and camp outfit are also described at length, while a chapter is devoted to canvas canoes.

The subject of boat building is fully treated, a rowboat of the usual construction being taken as an example, and described in all its parts in such a manner as to make clear the principles involved, and their application to any form of boat, either lapstreak or carvel build. Each of the numerous technical terms belonging to the subject is defined clearly when it first occurs, and as the index is full and complete, the book is in itself a glossary.

In addition to the numerous diagrams in the body of the work, twenty-four large plates are printed on bond paper, containing the working drawings of canoes for paddling, sailing, cruising

FOR

and racing, with their sail plans, rowing sailing boats, large canoe yawls, and various boats for special purposes, such as gunning boats, yacht boats, and the widely known sneakbox.

The canoe yawl, a boat between a canoe and a yacht, is illustrated by examples of various craft from 17 to 20ft. long, and suitable for a crew of two or three on a cruise. This class of boat, while little known among us as yet, is admirably fitted for cruising, and will meet the wants of many who object to a canoe as being too small, and yet desire a boat with the same excellent qualities. The boats and canoes illustrated are in all cases among the best of their class, the list of canoes including English, Scotch and American craft, and are all drawn

AMATEURS.

to scale, so as to be available as working drawings. The plates, for convenience in using, are placed loose in a tough manilla envelope and accompany the book.

Pp. 168, with 24 plates of working drawings. Price $1.50. Address,

STUD FOX-TERRIER
Champion Raby Tyrant,
(K.C.S.B. 11,179.)
Pupped October, 1880. Weight 16½ pounds.

Raby Tyrant is a white dog, with an even marked rich black and tan head. He is a thoroughly game and stylish terrier, possessing a beautifully shaped long punishing head, with perfect drop ears, small eye, rare neck and shoulders, deep chest, well ribbed and muscular quarters, short, straight legs, excellent feet, great bone and substance, with an exceptionally hard and dense coat.

Raby Tyrant is without doubt one of the most successful terriers of the present day. He has been exhibited 67 times, 33 different judges having adjudicated upon him, and has won 47. First 10 cups and specials; 12 second and 2 third prizes. His breeding is undeniable, combining as he does the choicest and most valuable blood that can be obtained. At the stud Raby Tyrant is proving himself eminently successful.

Fee, $15.00.

JOHN E. THAYER, Hillside Kennels, Lancaster, Mass.

Stud Dogs Proper.

ANSWERS TO CORRESPONDENTS.
PUBLISHERS' DEPARTMENT.

With its compact type and in its permanently enlarged form of twenty-eight pages this journal furnishes each week a larger amount of first-class matter relating to angling, shooting, the kennel, yachting, canoeing, and kindred subjects, than is contained in all other American publications put together.

FRANK NORTH.

MAJOR FRANK NORTH died at Columbus, Nebraska, on Saturday, March 14. He was only forty-four years old, but had undoubtedly had a wider and more varied experience among Indians on the frontier than any man now living.

Frank North was born in Ohio, and when about fifteen years of age accompanied his family westward to Council Bluffs, Iowa, and a little later across the Missouri into Nebraska. Here they settled not far from the old Pawnee village, and Frank North as he grew up formed close relations with the tribe. His strong character early brought him to the notice of their principal men, and before attaining manhood he had become a person of influence in the councils of the Pawnee Nation.

Early in his career, though not until after his qualifications for the title had been well proved, he was named by the tribe "Pawnee La-shar" (the Pawnee chief) a designation only given to one other white man, Gen. John C. Fremont. He was thus in name as well as in fact, the ruler of this once great nation.

About the year 1863, in command of a party of Pawnee scouts, he accompanied General Connor on an exploring expedition to the then unknown Powder River country. While on this expedition he saw a great deal of hard fighting, on several occasions narrowly escaping with his life.

Later, during the building of the Union Pacific Railway, the depredations of the hostile Sioux, Cheyennes and Arapahoes became so serious along the line of the road that the Government authorized Mr. North to enlist a battalion of scouts from the Pawnee Nation, and offered him the command with the rank of major. He was at this time the originator of the plan of using Indians to fight Indians, a method which has been pursued with more or less success ever since.

Several companies of these scouts were so enlisted, and for years the battalion did good service on the plains and in the mountains in Nebraska, Kansas and Wyoming. The amount of property saved to the Government, the settlers and the railroad through the efforts of Major North's command can scarcely be computed. In all this service of almost constant fighting, extending over a period of more than ten years, he never lost a man on the battle field, and this caused him to be regarded by the Pawnees as in some way divinely favored.

The secret of Major North's success in commanding the Pawnees, who loved him as much as they respected him, lay in the unvarying firmness, justice, patience and kindness with which he treated them. He never demanded anything unreasonable of them, but when he gave an order, even though obedience involved great peril or perhaps appeared to mean certain death, the command must be carried out. He was their commander, but at the same time their brother and friend. Above all, he was their leader. In going into battle he never said "Go," but always "Come." It is little wonder, then, that the devotion felt for him by all the Pawnee Nation, and especially by the men who had served under him in battle, was as steadfast as it was touching.

The Pawnee scouts were last called out in 1876, when General Crook fought the hostile Cheyennes in the Powder River country, and, led by Major North and his brother, they made the famous charge on the village which inflicted on the hostiles the crushing blow from which they never recovered. How he held his men under fire that day, when the bullets were raining on them from the hillsides, was told in a letter written by a participant in the fight and published in these columns May 10, 1877. "For cool bravery," it ran, "he beats anything that you ever saw. Why, at one time we were under such hot fire that even our scouts wanted to run, and to tell you the truth, I felt sort of that way myself; but Frank just straightened himself up on the old black horse and said, very quietly, 'The first one of *my* men that runs I will kill.' They didn't run."

The story of the killing of Tall Bull, and the fight with Turkey Leg's band of Sioux, illustrate the readiness and the daring of Major North in battle. Tall Bull was a chief who commanded a large village of renegade Sioux and Cheyennes, dog soldiers, who had given great trouble by their depredations. Major North, with his Pawnees and a few United States troops had been looking for this village for some time and at length succeeded in surprising it near Pawnee Buttes. The village was captured in the charge and many of the dog soldiers killed. Others fled or concealed themselves in the ravines and washouts, which seamed the prairie, and made a desperate fight. The Pawnees were scattered about in little parties killing the hostiles thus concealed, when Major North and his brother came riding rapidly along, side by side, over the open prairie. They had approached within fifty or sixty yards of a narrow steep-walled ravine, of the existence of which they were ignorant, when an Indian raised his head above its side and fired. The ball whistled between the heads of the two riders, Major North threw up his hands and reeled in the saddle as if about to fall, and the Indian's head disappeared from sight. Springing from his horse the Major handed his bridle rein to his brother and directed him to ride away at a gallop. The tramp of the two horses sounded more and more faintly on the hard ground, and the Indian, thinking that the whites were riding off, raised his head to note the effect of his shot. The rifle was already leveled at the spot where the head had disappeared, and as the black hair came into view the finger pressed the trigger more and more closely, and when the eyes appeared above the ground, a ball pierced the brain of Tall Bull. A hundred yards up the ravine lay his war pony, stabbed to the heart, and by it sat his squaw awaiting, with Indian patience, whatever fate might come to her.

During one of the summer hunts of the Pawnees, on which Major North accompanied them, they were attacked by a large war party of Sioux under the Chief, Turkey Leg, who, after a severe battle, were defeated, and driven off with a loss of many men. The Pawnees were out hunting, and were scattered over the prairie running buffalo. Major North's first notice of the attack was by seeing the dust knocked up about his horse by rifle balls. He called to a Pawnee near him to tell those boys to be more careful about shooting. The Pawnee looked for a moment in the direction from which the balls were coming, and after an instant called back, "They are Sioux, you had better run." They rode for the bluffs near at hand, but were surrounded by the Sioux and took refuge in a little washout at the head of a ravine, where they were somewhat sheltered from the enemies' fire by the sunflower stalks and the low edges of the bank. Their horses were at once killed, and the Sioux, who were numerous, became very bold, charging up to the edge of the washout and shooting down into it.

They were led by an Indian apparently of some importance, who was conspicuous by a large American flag which he carried. This man was constantly exhorting his men, and would lead them part way on the charge, sheering off, however, before coming within range of the washout, where Frank North and his brother-in-law, with seven Pawnees, were lying concealed. After each charge he would ride to the top of a hill near at hand and make a speech to his warriors. It occurred to Major North that if he could kill the man who carried the flag, the other Sioux might lose some of their courage. As they were retiring from a charge, therefore, he crept cautiously down the ravine, concealed by the long grass which grew in its bed, until he had come within rifle range of the hill from which the leader was making his speech, and by a careful shot killed him and regained the shelter of the washout without injury.

Disheartened by the fall of their leader, the Sioux made no further attempts to kill the besieged company, but after a little desultory long-range firing drew off, so that North and his little company regained the main village.

If the story of Major North's life were written, it would constitute a history of the Indian wars in Nebraska and Wyoming from 1860 to 1876—a history so full that there would be little left to add to it. Wherever the hostile Indians were worst there Frank North was to be found at the head of his Pawnee scouts, doing the hardest of the fighting, and accomplishing work that could have been done by no other body of men.

From his long service in the army Major North was known to all officers who have ever been stationed in the field where his operations were conducted, and by all of them he was admired and respected. He was closely connected with the growth of the State of Nebraska. Several times he represented Platte county in the Legislature, and the strength and uprightness of his character won the confidence of all who knew him. There was no man in Nebraska who had so wide a circle of friends, nor one who will be so sincerely mourned as Major Frank North.

His was a singularly lovable nature. If the stronger manly points of his character inspired respect and admiration, not less did his gentleness and consideration for others win the deepest affection. He was modest almost to diffidence, and it was with difficulty that he could be induced to speak of his own heroic achievements. And yet his face told the story of the power within the man. One who is accustomed to command men, and is so a judge of character, after seeing him for the first time, made the homely remark: "There is a man with grit in his face; one you could 'tie to.'"

Frank North is at rest. After a life full of adventure, of trouble, and of physical suffering, he sleeps well. He will not soon be forgotten. All over the Western country there are men who will long cherish the memory of Frank North; a man who was brave as a lion, as gentle as a woman.

ALBANY.—The deer-hounding bill has not yet passed the Senate. Mr. Owens's bill to amend the trout law has passed the Assembly. Mr. Otis's bill providing for further protection of game in Queens and Suffolk counties passed the Senate. The Coggeshall bill relative to trespass damages was lost and then recalled for recommitment. The Adirondack forestry bills appear to be destined to go by the board.

ARBOR DAY.—The observance of a public holiday, set apart for tree-planting by school children and others, has proved a most effective way to enlist the feeling of the community in the subject of forestry. It is proposed to establish such a holiday in this State.

THE NEW JERSEY BILL relative to song birds is an excellent measure, and the public will hail its passage with satisfaction. But the penalty of $500 is so excessive that it will defeat itself when put to test. A fine of $25 would be better.

THE CHICAGO MARKET receives many tons of Wisconsin venison shipped in trunks under lock and key. It is estimated that within the period of six months past 15,000 carcases of venison were shipped to Chicago and other markets.

THE MICHIGAN DEER HOUNDING BILL, we are informed, has not yet passed the Senate; a communication on this subject will appear in our next issue.

THROUGH TWO-OCEAN PASS.

IX.—IN THE SHADOW OF THE TETONS.

CLAMBERING down the rough mountain side, the Pinto and I scrambled along over the loose rock piles, and wound in and out among the dead tree trunks that strewed the ground. After reaching the valley, I rode down over the low, bare, burnt hills, and then turned out into the broad meadows at the head of Jackson's Lake, and striking the trail pushed on after the pack train.

The country is very lovely, and one never tires of gazing at the grand range toward which we are journeying. The mountains are so lofty that they seem close at hand, and yet, all through the day's march, they never seemed to draw any nearer. No satisfactory view of Jackson's Lake is had after passing the meadows at its northern end, for the trail passes for the most part over lowlands, and the immediate shores of the lake are covered with timber. A few miles from the head of the lake the trail bends off to the southeast to cut across to the bend of Snake River.

The country is well watered, small lakes and wet meadows being abundant, and often among the high grass about such places could be seen trails where the elk and moose had passed along but a short time before. The timber on these hills is very fine; much larger than that seen on the east side of the range, some of the pines and firs measure from eighteen inches to two feet in diameter. From the hills that were every now and then crossed, glimpses could be had of Snake River, here flowing between high banks. Great numbers of white swans were seen in the river and in the little lakes which we passed. While crossing these same ridges I could occasionally see far ahead of me the train, the tiny men and mules reduced to picture book size in the distance.

Late in the afternoon, just before reaching Buffalo Creek, a small cabin was passed on a little bench to the left of the trail, built, as I afterward learned, by prospectors as a shelter for their horses in fly time. The valley of Snake River here is narrow, and greatly overgrown with underbrush and young pine timber. The streams flowing in from the east, of which Pacific and Buffalo creeks are the most important, carry a great deal of water, even at this their lowest stage, but their wide beds covered with gravel and boulders show how enormously greater must be their flow in the spring, and give a hint of the very great area drained by them. Here in this valley I noticed Menzies spruce, a northwest coast conifer not seen during the trip except in this neighborhood.

A little below the mouth of Buffalo, Snake River Valley becomes much wider, and here may be seen some of the grandest ice work to be found on this continent, marvellous terrace and morainal deposits which would delight the heart of a geologist.

The sun had disappeared behind the Tetons before I rode out into this plain, but I could still see in the trail the fresh tracks of the animals, and urged the Pinto to a lope in order to overtake them, if possible, before dark. This was accomplished, and I found them just going into camp in the river bottom among some tall old cottonwoods and almost on the edge of a beaver pond. Great logs, a foot or more in diameter, lay on the ground, cut down by the chisel-like teeth of the beavers, and there were some old stumps nearly two feet through, which showed that their trunks had been felled in the same manner. Willows grew on every hand, but a little open level spot was found where there was room enough for the tents and the fire. Not far off was heard the rushing murmur of the great river. We found here a prospector and his partner, who were starting for the Wind River Mountains in search of the ever hoped for, but always elusive, "rich strike," which is the motive power of men of this class.

Their camp was made not more than fifty feet from ours, and through the thick network of willows, which formed the dividing line between the two, we could see the dancing flames of their roaring fire, and now and then as a log was tossed on the burning pile, a cloud of sparks soar upward among the dark green foliage of the overhanging spruces. Meanwhile the animals of the two camps were fraternizing, for among the prospectors' stock was a mare with a sucking colt, and about this small creature all our mules gathered in silent adoration, forgetting even to eat in their admiration for the ungainly little beast.

The prospectors' dog—who ever saw a prospector without a particularly lean and ill-favored cur?—sneaked over to our fire and munched the backbones of the trout that had been thrown from the plates on the grass, and a little later Carter, the cook, detected him in the act of purloining from one of the mess boxes a piece of bacon, which he carefully held by the string, not touching the meat with his mouth. Stewart suggested that the prospector had trained the dog to forage for his master in the neighboring camps, but this was no doubt a libel.

That night the river sung our lullaby, and at intervals a great owl sat in the trees above our camp and drowned all other sounds by his dolorous hootings.

The Teton Range runs north and south, and forms the divide between Snake River and the waters flowing into Henry's Fork. It is the most imposing range in the Rocky Mountain system, and its principal peaks are only equaled in majesty by some of the superb volcanic cones of the furthest Northwest. The northern and southern extremities of the range, though grand in their massiveness, are low by comparison with the central mountains. The chief of these are Mount Moran, a gigantic square-topped pile of granite, with two or three glacier-like masses of ice on its northern face, and a few miles further to the south the towering pinnacles of the Three Tetons, which shoot skyward in real rock aiguilles, reminding one forcibly of the Matterhorn.

From our camp in the Snake River bottom the range could not be seen, for the opposite bank was lined with tall spruce trees, which entirely cut off the view. About 10 o'clock Mr. Hague and I started across the river, intending to ride over at least to Leigh's Lake and there obtain a nearer view of the lofty peaks. The river was wide and so deep that the water came almost up to our saddle blankets; but although the bottom is covered with large boulders on which the horses were likely to slip and stumble, we crossed without mishap, and rode through the open dry woods of the bottom toward the high bluffs which form the true river bank. We saw here abundant tracks of deer and elk, some of the former quite fresh, and came across a huge old porcupine which tried, awkwardly enough, to run away, and then stopped among some low rose bushes and, hiding its head, erected all its quills in most threatning fashion.

The bottom was here about a mile wide, and before we had gone more than half this distance we were abruptly brought to a standstill. The whole western portion of this bottom was a great beaver marsh, much of it very soft and miry, overgrown with willows, and intersected in all directions by narrow, muddy sloughs, with steep banks, in which a horse might readily enough sink out of sight. We turned northward, and for the next two hours were engaged in trying to make our way out on to the high prairie. Every little while we would find what looked like a good dry tongue of land, which we hoped would extend through to the bluffs, and after following it for a longer or shorter distance, would find some impassable mud hole which would oblige us to seek another road. Just under the bluffs which we were trying to reach, a slough about thirty feet wide, marshy, boggy and overgrown with long grasses, ran north and south for a mile and a half, and although we several time reached the margin of this, we were never able to cross it. At length, after we had worked our way for a considerable distance along its borders, moving very slowly on account of the treacherous nature of the ground, I climbed a cottonwood tree and obtained a wider view, which showed me that only about a quarter of a mile away was a strip of hard ground which would take us to the bluffs, and by making a considerable detour to avoid the heads of the slough, we at length reached the high prairie. Just before we left the bottom we rode into a full-grown brood of the Western ruffed grouse (*Bonasa umbellus sabinei*), which rose and scattered in all directions among the willows.

Reaching the bluffs we rode up the steep ascent and off toward the range. The prairie is curiously carved and sculptured by glacial action, and everywhere are to be seen morainal deposits of great extent. The drift is mainly quartzite granite and serpentine with some volcanic rock. Long ridges, composed wholly of this drift, run out for a long distance from the foot of the range, and are now for the most part bare of timber, though on some of them the fire has spared many of the pines, and young quaking aspen timber grows on many of their slopes. On the highest of the river terraces on this, the west side of the river, are a number of groups of evergreen timber and occasionally single trees left standing by themselves in what is now a wide sage plain. This is a very unusual occurrence in the West, and here goes to show that at no very distant time in the past this whole wide terrace was covered with pine forest. This terrace is essentially a flat plain, though occasionally traversed by ancient waterways at right angles to the axis of the range, a few feet below the general surface of the plain, and from one hundred yards to half a mile broad. At one place in this plain stands a timber-covered oval mound, regular in shape, its longer axis at right angles to the axis of the range. It is perhaps three hundred yards in length, and is probably morainal in character, though as its surface is covered with dead and living vegetation, this is mere conjecture. On this plain a number of antelope were seen, but they were wild and there was no cover under which they could be approached.

Looking back from the top of one of the ridges above this plain we had a fine and wide view. Well up above where the river now flows one could trace the beautifully marked terraces, showing the different flood plains of the stream, running smoothly and evenly along the hillsides north and south as far as the eye could reach. Above rose the pine clad mountains, sometimes attaining the dignity of peaks, as Mt. Leidy, but generally forming a low though massive range. Below the upper terraces could be seen, here and there, extensive sage plains, which at this distance had all the appearance of far-reaching wastes of gray sand. The river was not visible from this point, being hidden by the high bluffs between which it flows.

Riding on, we passed over a number of the burnt ridges to the northwest, hoping to obtain a view of Jackson's Lake, which here runs in close to the foot of Mount Moran, but finding that the ridges became constantly higher, and were always more thickly covered with timber, we at length turned off to the southwest to look for the smaller Leighs Lake. As we passed over the burned hills in this direction, great numbers of fresh elk tracks and trails were noticed. Many of them had been made the night before and some since daylight, and it is probable that in the timber before us there were great numbers of them. At length having reached a ridge a little higher than any that we had yet passed over, we had a fine view of the southern end of Jackson's Lake. It seems to wind and twist about among its points and islands, and sends out long, narrow, finger-like bays into the hills in a curious way, and as Mr. Hague remarked, "it needed but a few more points and islands to make it like the Japanese Inland Sea." Having admired this beautiful sheet of water and the grand old mountain whose base it kisses, we rode on, and a little latter saw from a hilltop Leighs Lake. It is about two miles long, and flows, not as might be supposed, into Jackson's Lake, but by an outlet to the south into Snake River. Lying, as it does, in the midst of a dense pine forest, and mirroring the superb peaks which overhang its waters, it is an ideal mountain lake.

Here we dismounted and studied for a while the range before us. The mountains are masses of granite, almost everywhere bare and gray, though here and there they are a little blackened by groves of pine timber high up on their sides, and their summits and the few ravines which seam them are whitened by patches of snow. Perhaps their most impressive feature is their nakedness. They are so utterly bare that it adds to their majesty. And they are so steep that it is only in the ravines that any considerable masses of snow can lie on them. Elsewhere it slips off as it falls, or is blown away by the fierce winds that ever play about their lofty summits. The ice masses on the eastern face of Mt. Moran are much smaller than those on its northern side. Those have to the eye the appearance of being true glaciers, though this could only be determined by an examination of the waters that flow out from beneath them. Even here on the east side, however, the ice when examined through the glass shows crevasses and fluting on its lower border and occasionally the color which is so characteristic of the glacier. A very prominent and striking feature of Mt. Moran, which may be seen from this point to the best advantage, is a nearly vertical dyke of dark rock running up the side of a square granite face, immediately under the summit of the mountain. This dyke must be one hundred feet wide, and reaches from the summit of the mountain down under a snow mass and the talus of loose granite blocks at its foot, and then appears again on the mountain side in a direct line with the upper part of the dyke. Just south of the snow and the debris below it appears a dark mass which looks like a part of the dyke broken and pushed a little out of line. It may be a bend in, or an enlargement of the mass.

Our nearness to the range at this point prevented any satisfactory view of the Three Tetons, for the southernmost of the three was hidden behind the Grand and the northernmost was dwarfed by it. This superb peak, however, towered above its fellows grander and more impressive than we had yet seen it. The long sloping saddle which runs up toward the peak was visible, and then above that the sharp needle of granite inaccessible to human foot. The view there had was one that will never be forgotten by the beholder, for though lapse of time may blot out from the memory the sharpness of detail and the vividness of first impressions, yet the awe-inspiring majesty of these tremendous mountains gave rise to feelings that can never be wholly obliterated.

Turning again toward camp, we regretfully rode away from the hill where we had had so much enjoyment. Taking the nearest way down to the plain, we passed around the points of the ridges on our way to camp. From the aspen thicket where one of these points runs out toward the head of a ravine a great brown doe bounced out as we approached and ran down to the ravine, her long ears flapping backward and forward at every bound. I jumped from my horse to shoot at her, but just as I did so she sprang down a depression in the prairie, so that when I stood on the ground I could only see her ears. She ran off down the ravine and was not seen again. Later, we rode over a ridge near where four antelope were feeding. They took the alarm at once, and my shot, made as they were running quartering up the opposite hillside, was just about four inches too high, passing into the ground just over the buck's shoulders. All the antelope here were wild, as if a good deal hunted.

On reaching the river bottom again we endeavored to take advantage of our experience of the morning, and by keeping out close to the river's edge succeeded in finding firm ground all the way to the ford, although the process of forcing our way through the tangled willow thickets was not pleasant. Arrived in camp, we found that the fishermen had been successful and had secured a number of fine and heavy trout. Just before dark a flock of seven Canada geese flew up the river, honking loudly, and as they were passing camp I answered them, and presently they turned about and came back, flying directly over the tents and looking down in the most interested way, as if to see who it was that was talking to them.

During the night the storm which had been brewing for several days broke upon us, and the next morning when we turned out it was raining hard. Everything was wet, and we did not attempt to move. It was rather cold, and overcoats were in demand as we stood about the fire, while the rain, sometimes changing to snow, came down with a persistent drip. Stewart and Saddlemeyer, as soon as they had arisen, had cut some poles, and with a *manta* and three or four sling ropes, soon rigged up a capital shelter, under which, about 9 o'clock, we had breakfast in a very luxurious lazy

fashion. Soon after breakfast the packers went fishing, but came in about noon without having had a bite. Most of the day was spent about the fire, but toward the middle of the afternoon it became rather stupid, and so I set up my rod and started off up the river. I followed up the beach for perhaps half a mile, and began casting at the tail of a long reach of quiet water just above a swift, deep rapid. After a few casts I caught a small trout, and then a larger one, weighing perhaps three-quarters of a pound, then several others of moderate size. They were strong, vigorous fish, and their eager way of taking the fly was very pleasant to feel. I followed down the swift water and had made a long cast out toward the middle of the stream, when a huge fish, which looked about the size of a North River shad, rose to my tail fly, a brown hackle; but in his eagerness missed it, and sprang over it, showing his full length out of the water. I cast again over the same spot, but this time recovered my flies more slowly. He rose again, and just at the right instant I struck and had him fast. For a moment he seemed too much astonished to do anything, but he soon recovered himself and then came the fight. His first move was to make a strong rush toward the deepest water of the rapid, during which he twice sprang into the air, shaking himself savagely to see if in that way he could not free his jaws from the tiny steel. Then suddenly he turned and came back toward the rod, throwing himself out of the water as if trying to fall upon the line. All this availing him nothing, he started down the river at top speed, and so furious was his rush that I did not dare attempt to check him, but when the line was nearly all out started after him, running along the slippery stones of the beach and through the pools of water left by the river, as if it had been a salmon that was fast instead of a trout. At length he stopped and began to sulk, and I took up all the line I could and then soon had him moving again. He now developed a new set of tactics, and began to stand on his head and shake himself from side to side so as to bring all the strain possible on the line, and then would give a series of tugging jerks, continuing for several minutes, and at length began to throw himself over and over in the water as if to twist the line, and then by a sudden rush to break it. When at length I succeeded in getting him close to the shore, and he saw me, he began again his long rushes, which he continued until he became exhausted. I had no landing net and dared not attempt to lift him from the water, but finding a place where the beach was shelving, I drew him out by the leader and soon had him safely in my hands. He was a handsome fish, very deep and thick, yet with length enough to make his shape a very graceful one. What his weight was I do not know, for I had lost my scales, but he was very large, probably more than four pounds. It took me twenty-four minutes to land him, and I never gave him an inch of line except when absolutely forced to do so in order to save my tackle from breaking. The battle with this fish was the event of the afternoon, and although a few more trout were taken, there was no struggle at all comparable with this one.

The fishing over, I collected my catch and turned toward the camp. The rain had ceased, but white clouds hung low over the valley and concealed the mountains on either side of the valley. As I walked down the beach, however, the western sky grew lighter, and for a few moments the sun struggled to break through the clouds, but in vain. Then suddenly far down the valley the white wall that shut out the view broke away, and I could see the tremendous mountain mass of the Teton Range. I paused and gazed, waiting for the rent to close up again. Through it I could see, like a picture in its frame, the mountains, not dark and gray, as they had hitherto appeared, but white in all the purity of their newly-assumed mantle of snow. And as I gazed the break in the clouds moved rapidly northward, exposing one mountain after another, each more beautiful than the one seen just before. About the needle peak of the Grand Teton hung a wreath of mist which concealed it, and added to rather than took from its height. It was a fleeting vision, for just after the rift had passed Moran, the clouds came together. I had had my glimpse into the glories beyond, and, though I waited, the veil did not lift again, and with this beautiful memory in my heart I returned to camp.

Mrs. Glass's Famous Recipe for cooking a hare was proved in an English police court the other day to have become obsolete. The new rule reads: "First catch your cat." The discoverer of the new principle, like many another propounder of novelties, was arrested, tried, convicted and sent to prison. This was on complaint of the numerous individuals whose pet cats she had stolen, skinned and sold on pretense that they were Scotch hares. It is to be noted that the people who bought and ate the game, made no complaint; and the woman herself deposed that her own family ate the cats, and that the meat tasted like that of a rabbit.

Present Range of the Buffalo.—The attention of our readers who are familiar with the old buffalo ranges is called to Mr. Allen's note in our Natural History columns. It is extremely important that the materials for the closing chapter in the history of this animal should be accumulated at once, and the task of writing this chapter naturally falls to Mr. Allen. Every one who can contribute any facts about the buffalo should do so immediately. We shall hope to hear from our Western readers at once.

The Sportsman Tourist.

THE BUCKTAIL IN FLORIDA.

II.

I DATE as below for good and sufficient reasons. It was in December last that I received a letter from Capt. S. D. Kendall, in which he said, "Hillo, 'Nessmuk!' What's got you? Are you coming?" The thermometer was then marking 20° below zero at my Northern home, I was sick in body and spirit, and it was impressed on my mind that the raw, slushy months of February and March were destined to wind up my cruising unless I could reach a more genial clime. And I said yes, I am coming. I cannot say when or how, but sometime, somehow, I will get there. Pick me out a high, dry camping ground well shaded by live-oaks, preferably on Lake Butler, I think; but you will know best. And—I am coming. And when, after many delays, I at length launched the canoe for a visit to the Springs with the Captain, I felt as one who returns home after a wearisome journey.

I wanted to see the Captain's selection of a camping ground at once, but he had been telling people about the little canoe and how I was coming a long distance to visit him, and had promised to pilot the Bucktail to the Springs at once on her arrival. "And there are some good people there to whom I would like to introduce you," he added.

So, with his long, sharp canoe, the Linnie M., on the lead, we paddled up to the landing at Tarpon Springs, the first time that two double-bladers had ever made the landing, the Captain said, "For the single canoe is not common on the gulf coast of Florida."

Of course the Bucktail was looked upon with much interest and curiosity, for she belongs to a class of cruisers not much in use hereabout; and doubts were expressed if she could live in a topsail breeze, even on Lake Butler. I had little to say. I am likely to stay long enough to test her seagoing qualities fairly. If it should turn out that she will live "outside" it will be known of men. If not, the least said the better.

When we had spent half a day visiting in the little village, I suggested that we return, get dinner, and take a walk to inspect my future camping ground. I had been introduced to more people than I could remember, and had met genial welcome from all, but my soul was thirsting for a camp, and an outdoor life among the live-oaks. The Captain explained, however, that a week or so devoted to visiting and getting better acquainted would be more in order. Besides, Mrs. K. had expended considerable time and labor getting up a cosy corner in the loft where the Captain builds his boats, and it would hurt her if I only occupied it for two or three nights. Then it was absolutely necessary that any man camping on the lower Anclote should become acquainted with the devious windings, bays, bayous, and cut-offs of that tortuous stream in the last six miles of its course. Besides, it was the home of the cheerful 'gator, which, he assumed, I was anxious to shoot. The two salt lakes and Butler Lake also needed investigation. The latter was noted for the size and quantity of its black bass (called here green trout), and he thought they would take it as a compliment if a tourist should offer them a choice of gaudy flies, which is something they are not accustomed to.

So I put myself in the hands of my friends, and the Captain led me into and out of cut-offs, channels, bayous and strange places for nearly a week, until my arms were so lame and swollen that I was absolutely disabled for further paddling, and forced to call a halt. Then we took it on foot among the pines and live-oaks, the latter standing alone or in groups of three to a dozen. The pines are pretty evenly distributed all over the higher, dryer land, and the palmettos line the shores of lakes, rivers, gulfs and bays. They are the three principal trees of the Gulf Coast, though the scrubby jack oak is met with everywhere, and is of little use, save as fuel, for which it is excellent, even when in a green state.

We went over to Lake Butler by way of Salt Lake, and I took along the fly-rod, with a few bass flies. Considering that the bass were entirely unacquainted with this mode of capture, their behavior was all that the most ardent fisherman could ask. I had not made half a dozen casts when a fine big-mouth took his chances on a split ibis, and after monkeying with the reel for a quarter of an hour, was gently led to a white sandy beach, where the Captain deftly gaffed him by thumbing his under jaw. We had no means of weighing him, but he was more than a meal for three hungry persons.

"Go a little slow with that light rod," said the Captain, "bass are taken here sometimes of over ten pounds weight." Just then another and larger one attempted to immolate himself on the split ibis. He succeeded in getting on to the hook in very good shape. But, whether it was my fault or whether the wood was defective, I shall never know. Anyhow, he snapped the tip like a pipestem and went his ways. Now that he has got a little used to this mode of angling, I presume he will take to it kindly, and I may hook him again, but with a Henshall rod and a stronger tackle all round.

On both of the Salt lakes, as well as on Lake Butler, I noted some very fine camping grounds, to which I called the Captain's attention. He agreed with me that they were nice spots, romantic, and all that; but wanted me to look at his selection before deciding on a camp.

And so, on the following morning, we took a walk through the open, park-like pine forest to a high, dry point of land between the Anclote and Lower Salt Lake. And just where a bend of the river left a fine bayou to the left was the spot. It was chosen by a cruiser and canoeist, as well as veteran woodsman, and it was chosen well. It did not take me five minutes to decide on making a camp there sufficiently permanent and comfortable for any length of time I might choose to stay. The site was enough to cheer the heart of any outer; and, though description is not my forte, I may as well mention a few leading features. First, it is only one and three-quarter miles from the springs, and three-quarters of a mile from the Captain's ranch by land, and dry, open walking through the piny woods. There are about three score live-oaks standing in clumps, and a clump of pine, the largest, shade the spot chosen. They stood very closely, the two outside ones being less than twelve feet apart, while the two nearest together had their rugged trunks within less than two feet of each other. The two northern ones were just six and a half feet apart, and nature seemed to have grown them there expressly to support the front of a shanty.

Thirty yards to the north and northwest is the bayou, with banks from ten to twenty feet high, and thickly lined with live oak and palmetto; also it affords fine landings for the canoeist, and at certain stages of the tide, swarms with channel bass and mullet.

To the south and southeast is a grove-like slope of yellow pine, between the trunks of which the clear waters of lower Salt Lake are plainly seen, and beyond the bayou there is an immense marsh covered with a heavy growth of rushes where the 'gator makes his home, and the marsh is relieved at one point by a wooded island, on the lower end of which is a fish-eagle's nest, looking from camp like a bushel basket set in the very top of the tree.

Before noon the next day I had bought lumber for the camp and engaged Jake, the darkey drayman, to haul it to the spot.

And before dark the next day, I was at work with hammer and saw and square, putting the final touch to what I hope may prove a pleasant, healthful resting place—with a reasonable amount of out-door sport added—for many weeks to come.

When my first camp-fire of live oak and pine was burning low, I took a hard coal and wrote on the clean pine boards, in large letters, that he who runs may read:

OAK POINT.
February, 1885.
Camp Tarpon.
N——K.

I cannot close without adding a word concerning the weather. I am willing to believe that this season is quite exceptional. That they speak the truth when they say that the oldest settlers cannot remember such a season as the last half of January and the fore part of the present month; and that nine days out of ten are bright and pleasant in Western Florida. It is my luck to have struck the tenth days pretty much in a bunch. As a sample, take the last two nights in camp. Night before last it rained from dusk till daylight. The shanty roof proved ineffective against the rain, and the entire duffle got generally moist. Yesterday forenoon thatched roof with dwarf palmetto and snugged up the camp for foul weather. Last evening there were thunder storms around me in all directions, but it was not until 10 P. M. that a heavy one struck the camp, and it meant business. The furious wind drifted the rain in horizontal sheets, the lightning was fierce and incessant, the thunder a heavy article of constant quantity and excellent quality, and the entire affair a display of grandeur and power well worth turning out at midnight to see. The average outer would probably suggest that it could as well be seen in a dry skin from the windows of a comfortable hotel. And the average outer would be all wrong. To thoroughly see and realize such a magnificent display you want to take it in as I did last night, from the open front of a little 7x5 shanty, moored to a couple of gnarled live oaks by the front cross pole, where, by the vivid flashes, you can look far down the vistas of writhing pines and the long, gray beards of century oaks. It was magnificent—but a little damp.

Mem.—To go down to the Springs this A. M., get Jake to haul some boards and battens, buy nails and cloth for a front screen, lay in a knapsack of supplies, and organize for tornadoes.

Oh, I will get the hang of this Florida weather in one or two more weeks of camping out. Nessmuk.

Camp Tarpon, Feb. 8.

RAMBLES IN THE WILDERNESS.

Better to hunt in fields for health unbought,
Than fee the doctor for a nauseous draught,
The wise for cure on exercise depend;
God never made his work for man to mend.

—*Dryden.*

IF all mankind would follow this advise it would add greatly to their happiness, and give the doctors a rest. The field is a good place to "hunt for health," but the fountain head is located in the wilderness, wherein is distilled the "grand elixir to support human nature," and is free to all who comply with the conditions. But the wilderness is fast wearing away, and the question is frequently asked by people in search of pleasant pastime and healthful recreation, where can I find within easy access to the city, good hunting and fishing? To such inquirers the Upper Peninsula offers many pleasing attractions. And notwithstanding a few small farms and hamlets dot its southwestern border along the Menominee River, it is to all intents and purposes a wilderness still, covered with extensive forests of pine, intermingled with swamps of cedar, tamarack and balsam fir, seamed with water courses and dotted with lakes. A considerable portion of this land has very little intrinsic value after the timber has been removed, except in some few places where minerals abound, and many thousand acres have reverted to the State through non-payment of taxes, and will always be held as public domain, and will for many years to come afford good sport if the present laws for the protection of game are respected or suitably enforced. And notwithstanding frequent incursions of the detestable deer-fiend and his odious brother, the "trout-hog," there are yet large game and fish found here in sufficient abundance and variety to satisfy the wants and gratify the ambition of any considerate sportsman who possesses the necessary skill to bag the game, which is extremely wild in consequence of having been hunted so much. Deer and ruffed grouse are quite plentiful. Black bear, lynx and foxes are often killed here, and the wolf frequently manifests his presence at night by hideous howls. They are a timid, skulking animal, and seldom get in the hunter's way—not if they know it. Trout (*Salmo fontinalis*) are quite plentiful in many of the streams, and especially in the Brule River, thirty-seven miles beyond Waucedah, on the Menominee River Railroad.

A party consisting of G. E. Nichols, of Brooklyn, N. Y.; W. Zeigler, New York city; "General" J. D. Wallace, "Doctor" J. W. Farlin, Samuel Baker, C. H. Keihl, and the writer (sometimes called the "Judge") and William (Mr. Zeigler's colored cook) left here on the 9th of October last, for a few weeks' vacation in the region known as the "Menominee Range;" and presuming that some of your readers may feel an interest in following the trail some day, I will "blaze" it as we go along.

Taking a sleeper on the Chicago and Northwestern Railroad at 9:05 P. M., we breakfasted at Marinette 7:50 A. M., and crossing the Menominee River at this point, we arrived at Powers (305 miles) at 10:10 A. M. Here we changed cars to the Menominee Railroad, and arrived at Waucedah, eleven miles further on, at 10:45 A. M. This was the terminus of our ride by rail. Here Geo. Harter met us by appointment with two heavy teams to transport us to the Menominee River, eighteen miles distant.

There was a large amount of baggage, and it was piled high above the wagon boxes, making it necessary to bind the loads with strong ropes to prevent "breaking bulk" on the way. The road was exceedingly rough; the long, steep hills were worn deep in ruts by recent rains, often taking the wheels in up to the axle, and the wagons meanwhile

twisting, creaking, rolling and pitching about in such a careless way that the "deck passengers" were in constant peril of being ejected as from a catapult. A brief experience on the wagon hastened their decision to walk over the rough places, which included most of the way. But patience and perseverance rarely fail of being rewarded, and at 5 o'clok P. M. we reached our camping ground, distant from Chicago 334 miles, in twenty hours, when eighteen years ago the writer consumed five days in a birch bark canoe to reach Waucedah from Marinette, the mouth of the Menominee.

The wagons were quickly unloaded, and by the light of a large camp-fire aided by lanterns, the tents were pitched, wood chopped for the night and brought in and everything put in running order. While all this was going on, William, some fifty feet away, was preparing our supper over a small fire in front of the dining tent, his joyous good nature breaking out occasionally in little snatches of plantation songs, of which the following verse is a fair sample:

> De night-time comin' an' de daylight scootin';
> De jewdraps fallin' an' de big owl a hootin';
> You kin soon see de bright stars fallin' an' a shootin',
> An' hear de ole huntin'-horn blowin' an' a tootin'!

Just then Mr. Baker called out: "William, give the tootin' a rest and hurry up the cakes. I am famishing!" "Yes sir, I's jes' goin' to call you, sir," when straightway each one folded a camp-chair, and tucking it under his arm, made haste to satisfy the cravings of the inner man, also to pass judgment on William's qualifications as a cook. That they were highly satisfactory, the long-continued clash of table cutlery and the oft-repeated calls for more, was sufficient evidence, without the remark of Mr. Nichols as he rose from the table and pulled down his vest: "The little I have eaten I have relished well."

This evening we expected to meet the six guides we had engaged at the Keshena Reservation in Wisconsin, but they were delayed by high water in the numerous streams they had to cross in their journey of a hundred miles through an unbroken forest, and did not reach camp until next day in the afternoon. The streams were crossed on log rafts rudely constructed, and they were three days and a half on the way. All of them were representative men of the Menominee tribe, faithful to their trusts and skilled artists in their line; two of them—Frank Py-waw-waw-hoe and Simon Wow-wah-sha—have accompanied the Doctor and the writer on every trip they have taken since 1866.

A short distance above our camp there were several lodges of Menominee Indians, who disown their tribe and tribal relations, and live in a village of their people at White Rapids, sixteen miles down the river; they were on a hunting and fishing excursion. One of their ponies, having a bell fastened to his neck, made nightly excursions to our supply tent to cultivate friendly relations with our vegetables, and one night repeated his visits so often that Keihl exhausted the supply of boots at hand (except his own) before morning in driving him away. We hired two canoes from these Indians for the time we remained, and caught several nice messes of black bass, pike and pickerel. Sunday was our second day in camp, and, being entirely devoted to rest, a late breakfast was ordered, and William improved the time in getting up a surprise for us. Quite late in the morning, as the party were all seated around the glowing camp-fire, enjoying its grateful heat and conversing upon matters befitting the day, a loud call to breakfast brought every man to an upright position with a unanimity of action only equaled by the sudden collapse of the camp chairs, as they started in hot haste for the table, each one striving hard to get there first, and let some other fellow have the tin plate, which (for the time being) belonged to the man that "got left." And the surprised-gratified look that took possession of each countenance as the party entered the tent, can be more easily imagined than described.

The rough board table we had eaten from the night before, was now covered with a white glossy linen table cloth, damasked with flowers; napkins of the same material and bearing the legend "Thistle" flanked each plate (the tin one included), The menu consisted of broiled grouse, broiled venison, fried fish, fried venison, fried bacon and eggs, fried potatoes, venison ribs roasted before the fire Indian style, roasted sweet potatoes, baked apples, cranberry sauce, stewed tomatoes, oatmeal mush, bread and butter, tea, coffee and cream. It was a toothsome meal, "Too good for any but anglers, or very honest men."

After a week Baker and Keihl, with their guides, started up the river in a canoe with rods and reels, trolling for fish. They had proceeded about a mile and a half from camp, busily engaged with the sport, when a very large buck came tearing throug the brush on the Wisconsin side, closely pursued by a dog, and plunging into the river some two hundred yards above them, started for the Michigan shore, about two hundred and fifty yards away. As the water was very deep, only about half the upper part of the deer's head was exposed to view, his body was entirely submerged.

The deer no sooner touched the water than wild confusion reigned supreme in the canoe. Rods and reels were left to shift for themselves, the two repeating rifles with full magazines were caught up, and in ready response to the action of the levers as they moved swiftly up and down, the leaden hail began to beat the water into foam around the deer's head and in places afar off, the guides often putting themselves in the greatest jeopardy of being shot, while making frantic efforts to head the deer off the shore. But he got there unharmed just as the ammunition gave out, and as his noble form materialized above the water, he shook his antlered head defiantly toward the canoe, and his flag waved the pursuers a graceful adieu as he disappeared in the dark recesses of the forest. Both rifles being empty it was impossible to give him a parting salute. It was a very cold day for the boys. In sadness and silence they returned to camp and put on their ulsters. That evening the party of still-hunters brought in three deer, which were enough for several days, and the escape of the buck was regretted by none but the boys.

The weather throughout our stay was extremely fine, bright and clear during the day with a sharp crisp air and heavy frosts at night, greatly enhancing the pleasure of sitting around the glowing camp-fire engaged in cheerful talk or listening to the songs of Mr. Nichols, who is an excellent vocalist. The song most frequently called for was,

> "I'm a rambling wreck o' poverty
> And the son of a gambolier."

There was other musical talent in the company, which was rarely displayed, except to join in the refrain when needed.

We had been in camp about ten days when a reporter for one of our leading daily papers made us a flying visit, not in a professional way, however; said he was "looking for b'ar or deer."

So it was arranged that night to turn out in full force early the next morning for a "drive," of which for the benefit of your young readers I will attempt a description; but would first state there were no dogs with the party, all the "drivers" were Indians. This way of killing large game is not often resorted to, and finds but little favor with a still-hunter. It is about the only chance, however, for the shotgun to get its work in effectually. A "drive" is all planned and executed by the Indians, and it requires a "heap talk" and many pipes of tobacco to arrange all the details. Frank was the chief, and the council was opened early in the evening. A great many pieces of forest were named and their merits fully canvassed, and finally the ground was agreed upon. Frank stood up, and extending his arm pointed out the location, and naming one of his party and then another, he assigned a duty to each until all got their instructions. This matter settled, they sought their blankets and rest.

Long before the brightness of the morning star began to fade in the east, the whole camp was stirring. Snow had fallen during the night, covering the earth with its mantle, and under the line of fog which covered the river, large bunches of foam, resembling in the distance white-water fowl, could be seen as the swift current bore them along; the air was sharp, crisp and scintillating with particles of frost, while the sky overhead was thickly studded with stars which shone with a brilliancy peculiar to a northern latitude. Soon after breakfast the party, in Indian file, marched out of camp "under the opening eyelids of the morn," Frank leading the way into the forest. After reaching the extreme right of the ground to be driven, and about half a mile distant from camp, the drivers then started off to gain a long distance from the stands, while the line of defense was being formed. Frank then calls a name, and, pointing out a stand, says: "You stay here—good place—deer him come dis a way," indicating the direction by a wave of the outstretched arm, then resuming his course a distance of three hundred yards or more, another men gets a "good place," and so he kept on until all have their proper stations assigned them, whereupon Frank starts off to direct the drivers.

In selecting stands great care is taken to give the rifles a long range to cover, and as Frank says, most any place is good enough for a shotgun. Flank shots are prohibited, also the leaving of stands while the drive is progressing. And just as soon as a stand is taken, a vigilant watch should begin on the right, left and in front—the movement of a leaf or twig should not pass unnoticed, as deer often walk along in a very stealthy manner, especially when they scent danger and are not fully apprised of its exact location. An hour had elapsed before the drivers were heard; at first an indistinct sound like the tapping of a woodpecker on a distant tree. This noise was soon heard quite plain in different quarters all along the line in front, then a loud war whoop was given as a signal that the game was afoot, and followed presently by the sharp report of a rifle on the right, then three more at short intervals between. Nothing more was heard for some time except the rapping of the drivers, which seemed quite near, and this appeared to have nearly died out when word was passed from right to left along the line to "Come in, the drive is up." The writer was stationed at the extreme left, and quit his stand soon after the third summons, and greatly to his disgust, losing a shot at a deer Frank drove past the stand some fifteen minutes later, as it afterward appeared.

The sudden cessation of noise from the direction of the "drivers" was owing to a strip of open ground they had to pass through some little distance from the stands. As to the person responsible for giving out the word to "come in" history is silent. The result of the "drive," which promised so much, was one buck killed by the General, who shot at him three times, and Mr. Zeigler fired one shot as he passed his stand, and scored a miss. Five of the party had seen nothing larger to shoot at than a bluejay or a red squirrel; but the Scribe had. As he alleges, a wolf approached his stand in such a stealthy way that the Scribe first saw him in a crouching, cat-like position, about thirty feet off, just ready to pounce upon his prey. But the Scribe made some movement—perhaps in search of a tree—which instantly changed the animal's intention, and he beat a hasty retreat; and as he started, the Scribe thought "discretion is the better part of valor," and he decided to follow Dogberry's instructions to the watch:

Watch—How if a' will not stand?

Dogberry—Why, then, take no note of him, but let him go; and presently call the rest of the watch together and thank heaven you are rid of a knave.

Now the Scribe was healthy and strong. He had traveled over three hundred miles with his gun heavily loaded with buckshot for b'ar. Therefore it would be unreasonable to suppose that his nervous system would get "rattled" at the sight of a—fox, "that and nothing more." The Doctor being next on the left of the Scribe, says the fox on his retreat passed him like a flash, his brush in a straight line with his body. There was no report from the Doctor's gun!

A few days after this, most of the party started for home, having been out two weeks. The Doctor and Judge remained one week longer with three Indians. The general "round up" in large game was twelve deer. All the venison in excess of our own wants was given to the Indian families and to Mr. Harter, who lives about four miles from our camp and carries the mail past it to Pembina Post Office, Tuesdays and Fridays each week, from Waucedah, Menominee county, Mich. To him and his most estimable wife, the party are greatly indebted for luxuries supplied our table and many other acts of kindness that were highly appreciated.

The invigorating air of that region, redolent of balsam and pine, together with wholesome food and exercise, had imparted to the cheek a healthy glow, a brightness to the eye, elasticity to the step, and a manly vigor to gird on the armor so lately put off, and renew life's battle again.

And still more lasting than all these are the bright memories of congenial associates and pleasant adventures incidental to camp life in the wilderness. A. L. Rose.

Chicago, Ill.

A Three Black Crows Story comes from an Exeter, N. H. correspondent, who relates that to the excited fancy of an Adirondack tourist at Meacham Lake, last summer, three crows skimming along close to the ground took on the semblance of a she bear and cubs; so that the novice actually rushed to the hotel, secured his shooting iron and hurried back to bag the game. The story, which is vouched for, only shows that people will find what they are looking for.

Natural History.

THE BIRDS OF MICHIGAN.

BY DR. MORRIS GIBBS.

(Continued.)

23. *Certhia familiaris rufa* (Bartr.) Ridg.—Brown creeper. This species is found throughout the year within our boundaries, excepting, perhaps, in extreme cold winters. Mr. C. W. Gunn, of Grand Rapids, embraces it in his list of the "Winter Birds of Kent County, Michigan, 1881." He considers it as only a half hardy species, in which most of the collectors undoubtedly agree with him. The creeper is found throughout the State, and is reported from every quarter by the collectors. It is a well-known species, but is silent and retiring in its habits, and not often seen by those not interested in the study. I have found it in at least seven different counties in various parts of the State, and during every month of the year, and have come to regard it as one of our most constant small birds.

It undoubtedly nests in our southern row of counties in those sections were pines are found; but as a rule is rarely found breeding south of 43° north latitude. I have yet to record the species in Kalamazoo county during June or July. The only nest that I have met with, was found by Mr. W. A. Gunn, in Ottawa county, about 43°. It was placed behind the bark of a dead pine about forty feet from the ground, and was quite inaccessible. The date was May 19, 1879, and the birds were just building. In Montcalm county, the species undoubtedly nests, as it is found throughout the year, though never abundant in summer. In latitude 44° north and beyond, the species is very abundant, and specimens may be taken plentifully during the summer months.

The song of the fragile, yet hardy species is very agreeable, and we are the more pleased with it because of the fact that it issues from the throat of so plainly clad a songster. It is composed of but few notes which are clear, high strung, and very musical. It may be described by the syllables *Ca wheetle teetle teetle* uttered in an absent manner, as if the short effort could be of no benefit to either singer or others, and not worth the while to stop for. The bird continues its circling search for insects as it utters the notes, and hardly pauses once during the ascent of a trunk, although the song may be uttered a dozen times while the bird is exploring one tree. There is a real harmony in the simply-uttered notes of the creeper, and to those who have studied the lays of our birds, the song comes as a veritable burst of pure liquid melody. Unlike the flashing oriole and tanager, or the brown thrush and veery, all of which appear later, and offer tributes of song when spring is appearing or fine weather is upon us, the creeper bursts forth during the solemn months of winter, when the earth is covered deep with snow, and the prospects for spring are forbidding. To be sure the plainly-clad fellow selects the brightest days on which to test his hidden powers of song, and seldom tunes his voice beyoud the usual call notes, unless the sun shows himself. During January and February thaws in the pineries, hundreds of the plain brown-striped birds may be heard singing, filling the woods with the pleasing, yet plaintive notes, while in the cities the songs may also be heard issuing from the oak trees of our streets and door yards, although not so continuously as from the pines, where great numbers are to be found in winter.

A description of the song is difficult, because of its being blended apparently into one, or at most two syllables. If a careful ear attends, however, during the separate utterance of the song, it will be found not difficult to distinguish with certainty the exact division of the syllables, or we may say here musical notes, and they will be found, we think, to correspond quite nearly to the syllables given above. The call notes are a repetition of the word *cheap* or *creep*, generally low, but occasionally quite loud.

The food of the creeper is both animal and vegetable, in fact we may say the little fellow is omnivorous, a condition more common than is generally supposed in the case of all of our birds, both large and small. The creeper is in favor of an insect diet, and undoubtedly if he had his own way about it, he would confine himself entirely to that style of living. But unfortunately for *Certhia* he is compelled to take what he can get, and like most of us, is often only too happy to feed on what he can obtain without too much attendant work. One would suppose that our little friend would spend his winter in Florida; he has a free pass, and could, by making proper connections, reach the land of flowers within a week of easy stages. But he does not care to migrate each fall and spring, and if the Peninsular State is good enough for him we certainly will not object, particularly if he cheers us with his presence during the leaden days of winter.

Insects are not rare in winter, but they are lying dormant, and most of them are protected in their little cases of shelly covering, and are not exposed to view as in the summer. Many of these little chrysalids are found attached to the smaller limbs, and are swung about in the wind, secure in their attachments and clearly safe from predacious birds and larger insects for the time. Other species with which our little friend is acquainted in the warmer months, are covered deep in the mould beneath the snow, while others sleep secure from the winter's storms wrapped in delicate cocoons spun in the crevices of the gnarled and battered tree trunks. These latter pupæ are the principal food of an insect nature which is picked up by the creeper, and if the trunks are searched by any one desirous of examining into the matter, very minute egg-shaped chrysalids may be found placed nicely within small irregular spaces in the rough bark. But it is easy to see that it will take a great many of these small animals to support in good health the army of vigorous woodpeckers, creepers, chicadees and nuthatches which so frequently throng our woods. So the creepers, and for that matter the nuthatches and others all feed more or less on vegetable substances. The creeper secures his vegetable food generally from the small axillary buds found on the greater limbs or even trunk where the small adventitious growths occur, and it is with these fresh buds that the crops are generally filled. Many of the small pupæ are found, even in mid-winter, in the crops, but more of the soft and esculent buds are usually found in December, January, February and March than of the insects.

While climbing—for to my idea this bird climbs, hops or jumps in its mode of locomotion, and does not creep—the little bird does not pursue a direct course, but rambles about the trunk from side to side, and only gains the top of the tree after at least twice the distance is traveled that would have been gone over had the bird walked directly up the

trunk. Its mode of securing its food from the crevices of the bark necessitates this manner of hunting about the tree, and although apparently aimless in its course the creeper is in reality instituting a most thorough search for its food; and that this is a laborious and often painstaking task is sufficiently evident when we observe several birds in succession mounting the same tree, over apparently the same route, not one of which pauses to feed, showing that nothing was found by them. A few moments later a woodpecker appears and with the aid of his stronger bill tears loose a chrysalis and devours it, where the delicate little creeper was too weak to succeed.

While writing this biography I was interrupted and called to a distant part of the city, and in walking past an oak tree the pleasant *creep* of this little fellow reached my ear. The mercury is 24° below zero, and a stiff wind is blowing, making it one of the coldest days of the year. During the past night the mercury indicated—31°. How is it possible for this mite of flesh and blood, weighing less than one ounce avoirdupois, to exist in such an atmosphere? This question will be answered further on, when we shall discuss the principle of respiration in birds, with their powers of generating heat. For the present we will leave the little fellow circling around the rough cold trees, waiting, as we are, for the coming of pleasant weather.

KALAMAZOO, Feb. 14, 1885.

HORNS OF THE FEMALE CARIBOU.

Editor Forest and Stream:

In his letter published in your issue of the 5th inst., which has just come to my notice, Mr. Grinnell states, in effect, that because the books have laid it down, that, as a rule, the female caribou carry horns, he will not accept the statements made that this rule will not apply to those of this species occurring in New Brunswick and Maine.

Whether Mr. Grinnell considers my statements reliable or not is not important. I have done my part in publishing what information on the subject I have been enabled to gather, and which includes the evidence of three observers who have made a study of the deer occurring in this Province, and the testimony of reliable hunters who have had a widely extended experience, all of whom agree that it is the exception and not the rule, for female caribou found in New Brunswick to carry horns. Two contributors to this journal have recorded similar results of their observations in Maine. If Mr. Grinnell will not accept these, and still maintains that the book must be correct, so much the worse for Mr. Grinnell.

It is important, however, that those readers of FOREST AND STREAM who may be influenced in the matter, should not be led by Mr. Grinnell to consider that the books should be taken as infallible guides. That our standard works are in the main correct, no student will attempt to deny, but that eminent naturalists have made mistakes, and that these mistakes have been repeated again and again by subsequent writers, while it may be a revelation to Mr. Grinnell (and from the contents of his last letter one may fairly suppose that it will be) is a well-known fact. As an example of these errors, take the case of the position of the "hood" on the hooded seal (*Cystophora cristata*) The specimen in the American Museum of Natural History, Central Park, has the hood placed on the top of the head—the position which the books have assigned to it—but Dr. C. Hart Merriam has lately stated that it is utterly impossible for the animal to arrange its headgear in that manner. Will Mr. Grinnell doubt Dr. Merriam's statement because it differs from the books?

Take another case. The crested grebe (*Podiceps cristatus*) was placed among the birds of North America by Bonaparte and by Audubon, and Richardson and Nuttall, and this was repeated by Mr. Lawrence in 1859, and by Dr. Coues as late as 1877, yet Dr. Brewer wrote of this same grebe that "there is no authentic record of the capture of a single specimen in America;" and I venture the assertion that few students of to-day will hold to Audubon's statement in preference to accepting Dr. Brewer's.

Numerous other instances might be cited, and each succeeding year, for many a one yet to come, will doubtless add its contribution to the last, for a long time must necessarily elapse before observers shall have definitely determined every question relating to the natural history of this continent.

But while protesting against the assumption that the books are infallible, I must not be understood as presuming to doubt the reliability of the statements of those who have studied the caribou of the northern regions. Whatever mistake has been made lies with the authors, who, while writing of this northern section of the habitat of the caribou, have repeated a rule which does not apply here, instead of limiting their statements to the results of their own observations. For I maintain, there is not any evidence in what they have written on the point at issue, to prove that it is not a mere repetition, and it may be fairly supposed that at least the majority of the authors cited did not examine into the question at all. As Mr. Grinnell affirms, the rule has been so often repeated as to be considered an established fact, and being so considered, would naturally be accepted by these observers without question. Most of these gentlemen—Major King, Captain Campbell-Hardy, Dr. Leith-Adams, Mr. Rowan—were English sportsmen—naturalists who spent two or three years in this country, and who used part of the time they could spare from other matters in endeavoring to study the entire natural history of the locality, and they could not possibly have collected sufficient data upon the point in question to warrant them in attempting to controvert it, had they been so disposed.

Mr. Grinnell has quoted from Mr. Charles Ward's article in the *Century Magazine*, but, while any statement that Mr. Ward might make would, undoubtedly, command respectful consideration, I fail to see that there is anything in the words quoted to prove that Mr. Ward was not also merely repeating that which he might have naturally supposed to be an established fact. It may also be fairly questioned if Mr. Ward gathered any data upon the point in question, for being an artist and a sportsman, he would not be likely to look into such a matter with the scientific precision of a naturalist. I have inquired of numbers of our most intelligent sportsmen about this matter of the horns of the female caribou, and from all have received about the same answer. When shooting caribou they usually select the males with the largest antlers. Few of these gentlemen have seen many specimens they could say with certainty were females. They have seen herds with a large percentage of hornless animals, but supposed they were young deer or those which had shed their horns.

Let me ask, in conclusion, is it wise to allow such evidence as has been cited against my position to outweigh the evidence I have offered? To place the testimony of a writer who has given the matter no special attention, or who has had but little time to devote to it, against that of such an observer as my correspondent, the mining engineer, who has lived for twelve years in the heart of a caribou district and made this species a subject of special study? Is it wise to accept the statement of those who have examined a few specimens and reject that of Mr. Braithwaite, who has killed some four hundred? As to the opinions of the hunters who have written to Mr. Gregory, they only prove that this exception to Richardson's rule does not obtain in their locality, and I am not aware that any statement to the contrary has been made. MONTAGUE CHAMBERLAIN.

ST. JOHN, N. B., Feb. 28, 1885.

PRAIRIE DOG WELLS.

Editor Forest and Stream:

I have read with much interest the communication in your issue of Feb. 26, by "C. D. P." on "The Prairie Dog as a Water Witch," and am led to ask, Is there any positive evidence that prairie dogs burrow for water? Has any one ever actually met with a "prairie dog well"? The conjecture has often been advanced that prairie dogs must obtain water in some way, and that as it is not always procurable at the surface of the ground where they live, they must burrow to considerable depths to obtain it. But I am aware of no positive evidence that this is ever done, nor have my own observations among the prairie dog towns of the West ever led me to suspect that they ever burrow to obtain water. However barren the localities may be in which their towns are situated, their conditions of often extreme fatness shows that they in no way suffer from lack of food, and it seems reasonable to suppose that the vegetation on which they so comfortably subsist may also afford them the requisite amount of moisture for their support.

But the special, and I fear misleading point, to which I wish especially to refer, is your correspondent's conclusion "that the prairie dog burrows for water . . . and possibly to great depths, and that where a dog burrows man can bore. Consequently, that water can be found in the center or vicinity of any prairie-dog town" by boring. Respecting this point, I would refer your readers to an article by Dr. C. A. White, of the United States Geological Survey, entitled, "Artesian Wells Upon the Great Plains," published in the *North American Review* for August, 1882 (Vol. 135, No. 2, p. 186-195). After detailing the experiments already made at government and private expense in boring for water on the Great Plains and elsewhere in the West, and stating the geological conditions that have been found to obtain there—showing the difficulty and almost hopeless attempts to get water by boring, at least in remunerative quantity in the "prairie-dog country"—he concludes that the facts are opposed to the hope of profitable irrigation of farming land upon the plains by means of artesian wells, although wells yielding a small supply of water may be obtained. But in view of the great cost of boring wells, ranging 1,000 to 1,200 feet in depth—the depth hitherto found generally necessary—Dr. White, in concluding his article, says: "But the risk of failure has hitherto proved to be so great that no boring ought to be undertaken upon any portion of the great prairies without the known results of a careful geological examination of the region by competent persons." This seems to show that the prairie-dog "sign" might prove illusive.

J. A. ALLEN.

CAMBRIDGE, Mass.

ACADIAN OWL.—A fortnight since, during a driving snow storm and toward dusk, I saw a sudden flight of wings across the window by which I sat, and on looking out beheld a small owl perched on a maple tree near by. For a few moments it remained, and then took wing and was lost to sight, and I was lost in wonder and admiration of the strange and pleasing vision. Business called me away from home for a week, and on returning I learned that a pigeon had been found on the stable floor with its head eaten off and its body still warm and supple—no blood on feathers or about its body on the floor. In closing my stable on Friday night (the 13th instant) I saw what I at first supposed to be a pigeon fly from the loft to a window and there perch. In the dim light I finally decided that it was no pigeon, but an owl, and that a very diminutive one. The light of day revealed the little fellow in all his petite prettiness. On the next day I caught it in my hands and transferred it to an unfurnished room in the house, where it now holds court. In all my experience and observation in forest and field, in deserted houses and crumbling ruin, I never saw an owl of this species before, and would like to identify it. Is it an Acadian owl? It is a trifle larger than a robin; ears quite prominent; breast mostly white, slightly mottled with delicate brown; head a delicate tan color; back, wings and tail nearly the same hue, the pinions being tipped with white. Meagre though this description is and void of ornithological technicalities, I hope the pretty prisoner may be classified, and I shall be thankful to any brother sportsman who will name this owl and give its habitat.—O. W. R., Feb. 16. [We presume that it is a sawwhet or Acadian owl (*Nyctale acadica*) (Gm.) Bt.].

A SCREECH OWL ATTACKS A PLYMOUTH ROCK ROOSTER.—Lockport, N. Y., Feb. 26.—On Saturday last I received a box containing a live screech owl (*Scops asio*) from a young farmer friend, and on Tuesday received the following letter from him: Dear Sir—"Friday morning I found a large Plymouth Rock rooster, with his head and neck badly torn and covered with blood, and, after some search, I saw a small owl up in the barn. I caught it and found fresh blood on the feathers around its beak. To be sure it was the owl that did the mischief, I put both the fowl and the bird in a darkened place, and was at once treated to a surprise, for the owl flew at the cock and lit on his neck, and began to pick at his head in a very furious manner. Being sure that I had the culprit, I boxed it up and sent it to you. The rooster weighed nine pounds alive, rather large prey for so small a bird." The owl was of the red-mottled variety and weighed five and one-half ounces—truly a small bird to attack so large a fowl. This is the fourth owl I have received from this party, and they have all been of the red variety, two of which were young birds, secured June 17, and an adult, secured the next day in the same woods, and probably one of the parent birds. I have come to the conclusion that I have the whole family, and that the red is a separate variety from the black mottled. I presume I have handled fifty *Scops asio* within the past five years, and these were the first of the red variety I had seen. —J. L. DAVISON.

BATTLE BETWEEN A RED-NECKED GREBE AND A DOG.—Buffalo, March 8.—A novel combat was witnessed the other day between a pugnaciously-inclined little Scotch terrier and a full-grown male specimen of the red-necked grebe (*Podiceps griseigena*). The scene of the conflict was in the yard of a house along the principal street of our city and about a mile distant from the Niagara, where the bird had evidently intended to pass the winter in its always open waters. A fierce gale, at the rate of fifty or more miles per hour, was blowing at the same time, which in connection with an accompanying blinding snowstorm, accounts for the strange surroundings in which the bird was discovered. It would be difficult to surmise how long the battle between these two curiously-matched contestants might have lasted, as according to the testimony of the boys who put an end to it by capturing the grebe, no special vantage had been gained on either side, the bird holding well his own by dexterously dealing telling blows with his sharp beak whenever the dog attempted to make a charge. The red-necked grebe has thus far not been noticed in this vicinity, and would be least of all expected to be seen on the 10th of February, when it was taken. After capture it was put into a large tank filled with water, where it lived for over two weeks, subsisting on small fish. Being in good plumage, it was mounted and transferred to the cabinet of local birds belonging to the Society of Natural Sciences in this city.—C. L.

DOMESTICATING NATIVE BIRDS.—*Editor Forest and Stream:* How many varieties of our game birds would live and breed in confinement? I have been informed that California quail, prairie hens or pinnated grouse and other varieties of gallinaceous game birds can be easily domesticated. I think if they cannot be allowed their liberty, they might be reared in inclosed yards successfully, and prove, if not a useful, a very ornamental and grotesque acquisition. Will some of the readers of FOREST AND STREAM give their opinions on the subject?—G. BUELL (Grand Rapids, Mich.). [It is, of course, impossible to do more than express an opinion on a matter of this kind, for enough experiments have not yet been made to demonstrate that many of our native gallinaceous birds will live and breed in confinement. There appears, however, to be little doubt that the California valley and the Arizona plumed quail will breed in confinement, and that the pinnated grouse are easily domesticated. We have owned prairie chickens and valley quail which were as tame as ordinary hens, and would scratch in the freshly-upturned earth at the very feet of the gardner, who was preparing his beds for planting. Audubon, we think, records the fact that prairie chickens have been domesticated on quite a large scale. We have no doubt that the plan proposed could be carried out with great pleasure and profit to any one who has the time to devote to the matter. Let us hear from our correspondents on the subject.]

WHAT IS THE PRESENT DISTRIBUTION OF THE AMERICAN BISON?—*Editor Forest and Stream:* As is well known, the American bison or "buffalo" has so rapidly decreased in numbers during the last few years that few are now to be found within the limits of the United States, or in the immediately contiguous British territory. If we cannot preserve the bison, we should at least secure a tolerably detailed history of its extirpation. In former years I gave considerable attention to this subject, and in 1876 published the results of my investigations, illustrated by a map showing its gradual restriction to its then comparatively extended habitat. Its destruction has since gone on at a fearfully rapid pace, till now it is believed to exist within our territorial borders in only very small numbers and over very restricted areas. Any readers of FOREST AND STREAM who may be able to give exact information as to their present numbers and distribution, and likewise respecting their destruction and extirpation at particular points during the last decade, and especially within the last five years, will make a most welcome contribution to the history of the last days of this doomed beast. I make the appeal urgently, and in behalf of science, and in the hope that any one having any facts at command bearing on the subject will feel "in duty bound" to make them known.—J. A. ALLEN (Cambridge, Mass.).

Camp Fire Flickerings.

"That reminds me."

148.

THEY were sitting around the evening camp-fire after a successful day's sport with the trout. One had seen a bear that day and was "yarning it" for all it was worth, and that led to bear stories all around, with one exception, "Rufe" Crosby, the guide, kept silent, puffing away at his T. D., at most vouchsafing a nod or grunt as approval, or otherwise of the points stated. Finally, as he was a famous bear hunter, he was urged to contribute something in that line; so knocking the ashes from his pipe, he spoke to the question last raised: "O yes, bars are skeery critters. I mind the time once when I hunted the critters up in New Brunswick, whar a railroad runs miles and miles through the woods. I was comin' outen the woods wun day with a young bar on my shoulder just as a train haul'd by a bran fired new engin', just outen the city on her fust trip, 'nd just as she come up to whar I wur standin' she guv the orfullest snort, jumpt off the iron into the ditch bottom upward and all her wheels a pawin' uv the air. Yes, bears *is* skeery critters!"

KITT CARSON.

149.

Going out home on the train one evening Frank S. began to tell us about his gun; how close she would shoot, etc. He said: "One day I was out shooting and was walking along the railroad track where it ran through a piece of woods. Suddenly a partridge sprung up right under my feet and flew directly away from me. I up and fired just as it was in a line with the nearest telegraph pole. The shot struck him in a lump and just plastered him against that telegraph pole! He never dropped." ¶

NORTHERN MICHIGAN.—Roulette, Pa.—Camping out in the northern peninsula of Michigan, in a part of October and about twelve days in November, I killed thirty deer, eight beaver, one large fat bear, of which I got six gallons of oil, one lynx, one martin, one mink, three muskrats, two 'coons, four skunks, five hedge hogs, twelve partridges, one duck, one large bald eagle, one raven, one owl; and trout, perch and bass I did not count. The deer were very fat and plenty. This last fall was the fourth fall that I have hunted up there.—L. S.

Game Bag and Gun.

REMINISCENCES OF CAMP ARMISTEAD.

DOUBTLESS to many of your older readers, as to myself, the columns of FOREST AND STREAM often call up scenes and events almost forgotten, and faces whose lineaments have nearly faded from memory. Not infrequently upon its printed pages has the well-remembered name of some old-time friend or companion assured me that not as yet had he paid his obolus to the grim ferryman, and sometimes a simple phrase or epithet has borne me back into a past peopled with pleasant memories. I remember how, when I read McLelland's snipe story, published some years ago, the words "laughing Marion" recalled the happy face of my long-syne schoolmate Marion L., to whom I was certain that he alluded. It is, however, to a contribution from "Arkansas" published during the past year, giving an account of "one hunt of the Capon Club at Camp Armistead, in the valley of Virginia, that I am indebted for a "memory of joys that are past," and FOREST AND STREAM for these reminiscences. For many a happy day have I too spent at Camp Armistead, and many a time have I breasted the steep sides of old Hanky. But when last I stood upon his bare forehead the dogs of war had been uncoupled, and from far northward down the wide valley of the Shenandoah I heard their fierce bayings on the red field of Antietam. Since that memorable day I have revisited Camp Armistead only in memory, and only through the dim glasses of retrospection have I seen the happy faces that once gathered around its camp-fire.

There was Shep M., who always shot "by the eye of faith" and—never hit anything; and Sam W. with his happy laugh. Alas! the one sleeps beneath the sod of the valley, and much I fear the other's laughter has long since lost its infectious music. There was Capt. Mark and Cousin Dick—every one called him Cousin Dick—who never made an enemy nor ever lost a friend; and Bob C., *sans peur et sans reproche*, whose young life crimsoned the sea-rippled sands of Roanoke. And Peyton, noble old Peyton, who next to his wife and children loved his dogs. There, too, was Garrett W., "whose wit was humor and whose humor wit;" and Jim G., the story-teller of the camp, with his petrified smile that some were so uncharitable as to call a grin. And old Whack, too, glorious old Whack, who always knew all about it "you know," or it was not made of iron or steel, nor had ever sported horn, hoof or feather; who was always so full—not of whisky, for Whack never tasted a drop in his life—but of nicotine, that it was hard to tell which were the better colored, he or the meerschaum he was always smoking. Nor must I forget old Mrs. Mac, whom "Arkansas" mentioned as occupying the Armistead house. At the time of which I write she lived in a cabin some half a mile east of camp, and was quite a sportsman in her way. It would, however, have been very straining on the imagination to think of her ever having followed the chase a "Dian of the silver bow," while like

> "Fairly Fair,
> Her girdle showed her middle gimp,
> And gowden glist her hair."

For hers was not that lithe spiritual beauty that Ary Scheffer loved to paint, and it were risking little to say that corsets had been an unknown quantity in the equation of her life. Neither do I think that her vanity had ever hidden her amplitudes in nainsook flummery or frills and furbelows. She had fed upon the ozone of the mountain air, and fattened upon the phosphates of the yellow maize, and when draped in the close folds of her shooting jacket of faded prints, she towered like some "tall admiral" high above the puny statures of her lowland sisters. In sooth, had a sportive cyclone dropped her among the tiny surf sprites of some modern seaside resort, she would have been a very "Triton among the minnows."

When our drivers were out she often "went on duty" in her yard, her armament consisting of a long singlebarrel, whose capacious maw would have put to shame old Kit North's muckle-mou'd Meg. One day while occupying a stand near her cabin I saw the end of that old gun sticking up over the top of the hill that rose between us, and shortly afterward I heard its smothered sneeze, followed by "sic him, Tige. Hold fast to him, Tige." And then the bleat of the captured deer told me that old Mrs. Mac had my venison, and I wished her—well, back among the bogs of her forefathers. Upon another occasion at that same stand I pitched up my Richards at a spike buck as he came full tilt down the steep mountain spur, and as he did not fall gave him my second barrel after he had passed me. The last shot was, however, a useless expenditure. The shot in my first barrel had clumpered, and at a distance of thirty-five yards had bored a hole behind the shoulder that I could run my arm through. His momentum had literally deadheaded him down the steep ridge some forty or fifty yards. When old Mrs. Mac came over to learn the result of my shots, I told her that I had gotten a nice fat old hare this time. Her eyes, however, falling upon the deer, she said if I didn't know a cotton-tail rabbit from a spike-buck I had better go home to my mammy. Then she asked me if I was not hungry, and how long it had been since I was weaned, and several other entirely irrelevant questions. I was right glad when she went away.

Ah, I was younger then, in heart as well as years, than I am now.

> Eheu fugaces, Postume, Postume,
> Labuntur anni.

But, thank heaven, although Time has whitened my scanty locks, not yet for me is "the grasshopper a burden," but still for me the blue sky is blue and the green earth beautiful, and for me the birds still sing and the winds and waters make music.

But a truce to such reflections. Let us back to Camp Armistead, and while the darkness deepens in the valley, where our camp-fire burns brighter with the fast falling night, let us listen to a story of the Crawford hunt that Garret W. is telling to those who are gathered around it. It was of old Uncle Dabney Carr, "the white-haired old patriarch," as he called him, that his story ran. How once upon a time the old man had asked him to "drive us down a mealy nose from Alick's Nob, friend Garrett;" how some of the thoughtless boys had drawn the shot from the old man's gun, and then came a great buck, ten-pronged and with a spoor like an elephant's, and jumped into the pool by which he was standing, and shook his antlers in Dabney's face and pawed the water all over him, and then went rattling down stream over the smooth stones, with his flag up and not a single shot-hole in his dun hide. And how it almost broke the old man's heart, that must, he said, have been as big as a flour barred if it half filled the case he carried it in.

Peace to your ashes, old friend; for your feet have long trod the happy hunting grounds, and oftimes, while listening to the swelling chorus of the chase, I have fancied that you, too, leaned and listened,

> "From yon blue heavens above us bent,"

to that music of "horn and hounds" you loved so well.

But now across the camp-fire's blaze, as they busied themselves over the platters, come the voices of our colored contingent. It is Joe who speaks, "I don't b'l'eve er word on it, Unk Samp."

"You dunno what you b'l'eve," replies Samp, "time you git ole ez I is, you'll b'l'eve er heap more 'n you know," then turning to one of our party, "Tell us erbout it ergin, Mars Peyton."

Joe was only an ordinary everyday cornfield negro, but our old colored friend Sampson was a character. In his youth Samp had owned a portly "old Virginia gentleman," but mint juleps and peach and honey had been too much for the old F. F. V., and the orchard had died long ago, with the yellows, and the mint was growing green over the old master's grave, and Samp was an orphan, made one by the old master's last will and testament. In other words Samp was an old issue, ante-bellum free negro. Together with his freedom and his old master's blue-brass-button-swallow-tail coat, old Samp had inherited all of the dignity of his aristocratic belongings. Add to this dignity a self-conceit so easily lifting itself up by its own boot straps, that it never permitted him to acknowledge his ignorance upon any subject, and bred a vanity that was forever airing the spotted green and gold of its peacock plumage. Besides this Samp had hardly a speaking acquaintance with truth, in the abstract or otherwise; while, strange to tell, he would readily give credence to any absurdity he might hear, and seemed the more readily to believe any story the less he understood about it. It follows, therefore, that there was no such word as "jest" in Samp's lexicon, and that he was as little liable to take a joke as if he had in his youth been vaccinated with laughing gas.

"Well, Samp," said P., in reply to Samp's appeal "to tell us about it ergin, Mars Peyton." "I don't mind telling it over again to you, but some of these boys seemed disposed to smile when I told it yesterday."

"But I knows it fur a fack, Mars Peyton," interrupted Samp, "I knows it fur a fack, sir, you did kill dat deer er mile."

"O, no," said P., "I only said that I was on one ridge and the deer was on another, and that to get to him after I shot him, I had to make my way down into and around the head of the ravine, so that I must have traveled nearly a mile."

"Jess so," said Samp, and then turning and addressing the camp, "I tells this yer boy Joe, gentermens, dat Mars Peyton kill dat deer er mile, an' he say he don' b'l'eve it, but ef Mars Peyton had ter go er mile ter git ter dat deer, don' it stan' ter reason dat bullit had ter go er mile too? Jess-so, you see, gentermens?" he continued, laying the forefinger of his right hand into the palm of his left, "de contractions ov de yerth des drawed dat bullit down inter dat holler an' den de extractions ov de yerth des drawed it up ergin on tother side twell it git eben wid dat deer, an' den it des bored him right fru, sir." And Samp, sighting along the forefinger of the right hand, thrust it through a hole formed by the forefinger and thumb of the left.

"The first instance on record of the trajectory being on the lower side," said Sam W.

"Jess so," said Samp, and then continued, "I tells you alls gentermens, you des hole dat long gun ov Mars Peyton's lebel an dat bullitt boun' ter hit sumfin," and turning to our story teller, "aint what I tells you so, Mars Jeems?"

"Yes," says Jim, "it's just as plain to my mind that Peyton killed that deer a mile as that old Mrs. Mulrooney's pig turned to a 'possum."

But it is growing late and the camp-fire burns low, and although Samp stands expectant to learn the relation between a pig turning to a 'possum and the feat of killing a deer a mile, Jim will not tell his story to-night; for the tired hunters are seeking their beds, and soon the stars alone will keep watch over Camp Armistead, silent save when some heavy sleeper sounds his basso-profundo, or whimpering hound follows "over bank, brush and scaur" the phantom deer of his troubled dreams. TUCKAHOE.

THE INOFFENSIVE CANUCK.

Editor Forest and Stream:

I cannot refrain from adding a few words in support of my old friend "Stanstead," concerning the French Canadian poacher, and I can heartily indorse "Caribou" in his truthfully depicted character of the same, in your issue of March 5. I do not wish to cast a slur on the French Canadian; I solely refer to the poachers. My own experience with them is identical with "Stanstead," and in proof of their law-breaking propensities, I will cite an instance.

Two years ago last April a couple of French Canadians, who folowed the profession of guides in summer when they they could get sportsmen, crossed over from the Province of Quebec into Maine and took up their quarters near the head of the Magalloway River. They remained there a little over a week, and during that time slaughtered in the deep snow and crust six moose—out of this number five were cows and four had twin calves in utero. They did not carry out the meat, but left it to rot; all they brought away was the skins. The same parties are now hiding in Maine to escape arrest for having killed a moose in August across the border in Canada. They eke out an existence by guiding during July, August and September, when their chief delight is in floating for deer. As soon as fall sets in they commence with their nets and seines upon the spawning beds, which practice they follow up in spring again, as soon as the ice clears out of the lakes. During the winter they bring their cunning to bear in trapping fur-bearing animals and all sorts of game from the partridge to the moose. I was informed upon good authority that one of the same men caught a two-year bull moose in a bear trap which he had set in a deer runway, but did not discover his catch till the carcase had decayed.

This class of poachers, and their name is legion, follow this role of wholesale slaughter and extermination, not from a love of the sport (if I may be allowed to use the term in such a meaning), but do it for a living, for filthy lucre, as they are too lazy and indolent to follow agricultural pursuits, or any honest mode of making a living.

I cite this one example; I could quote many, but this is sufficient to show the game inspectors of Maine, that the unassuming Canuck is not so harmless as supposed and that their pernicious habits must be checked if we wish to keep the State of Maine what it is at present—a paradise for sportsmen. H. B.

BOSTON, March 10, 1885

IN GOSHEN'S HOLE.

THE sun was high in the heavens before we were astir in the morning, and the programme for the day was to be an antelope hunt on the flat. Griff and Graham had saddled their horses and started away immediately after breakfast, leaving Tuck and Doc to put the camp in order, when they too started for the end of Box Elder Creek. Riding in the shelter of the trees, an hour brought them to the open country where the creek sinks.

A few hundred yards beyond a bunch of range cattle were grazing in the tall grass among the sage brush, and still beyond them was a band of perhaps a hundred antelope quietly feeding. We tied our horses, and under cover of the cattle slowly decreased the distance between ourselves and the game. On approaching quite near to the cattle they became uneasy, moving about in a manner which was bound to put the antelope on their guard, for they often take their cue by noticing the movements of the cattle, and leaving even when they cannot divine the reason.

Now we were obliged to get down on all fours and crawl under cover of the sage brush until we were in shooting distance of the antelope. Lying quietly and submitting to the inspection of the curious cattle until they were satisfied that we were not after them, they resumed their feeding, and all was quiet. Slowly on hands and knees we lessened the distance between us and the antelope. After an hour's tedious work we were beyond the friendly shelter of the sage brush, and nothing to hide our movements if we even raised our heads. Presently they commenced to move about in an uneasy, restless manner, as though they were suspicious of some hidden danger. There was nothing for us to do but wait or "turn loose" and take the desperate chances of hitting something at a long and uncertain distance.

We had both read that old hunters frequently attached a flag or cloth to a stick with which to attract the attention and curiosity of the antelope, but whether it was a white flag or a red one we had forgotten or could not agree upon; so we compromised the matter by making use of Tuck's red and white bandanna handkerchief, but whether the colors were not blended in proper proportion or whether the antelope wanted their colors "straight," it was a signal failure, so down came the sign.

Meanwhile the cattle had strung out and were heading for the creek to get their morning and mid-day drink, and we were in hopes the antelope would follow them. We concluded that rather than lie any longer on the frozen ground to chance a few shots, and firing, we caused a commotion in that little bunch. They circled around and came to within two hundred yards of us before they saw us. Then stringing out, away they went up the side of a far-off hill, not one of them touched by lead.

> Jump, jump, jump,
> Through the tall, rank grass, oh, 'lope:
> And I would that my gun could reach you,
> Though it will some time, I hope.
>
> And the graceful 'lopes lope on
> To their shelter beyond the hill,
> But oh for the touch of a solid ball
> And the sight of a 'lope that is still.

They had approached the top when Doc, without any idea of accomplishing anything, gave them a parting shot. Up went a big buck—down he came, and remained on the hillside, while his companions passed on and vanished in the whichness of the whither.

Unable to measure accurately, we agreed to call the killing distance of the last shot six hundred yards, and what was our surprise when dressing the antelope to be unable to discover any mark of a bullet. We brought up one of our saddle horses, and reached camp by the middle of the afternoon, and submitted our victim to the inspection of Griff and Graham, who had had an unsuccessful day's hunt. They carefully examined hide, hair and flesh of our antelope, but no mark of bullet could they find. Graham, in a tone of jealousy probably caused by our better luck, averred that our buck had died of heart disease, and vowed he would never dine off of meat that had died in that way. "I don't think I owe my stomach any such grudge as that." Came the business sun of the next morning bright enough, cold enough, with just enough of frost in the five-mile breeze to make locomotion comfortable among the cañons. The brown of the bluffs made a fine background for the green of the pine and cedar. Hurrying clouds cast their shadows over hill and level, and with the breeze in our faces, Tuck and Doc, in light marching order, started for two black-tailed deer. Our figures were modest. Only two was the number we wanted. Supposing we were to strike a bunch of six or eight? We would probably be like the money-making banker or merchant, who commenced life with a hoped-for fortune of a million dollars as the goal of his ambition, and reaching that, was desirous of doubling it before retiring and enjoying his success.

Passing over the middle of the first spur, which jutted out into the open, we were descending among the sage brush on the opposite side, when Tuck whispered down close, "There go three deer crossing at the head of the cañon." Quickly we dropped down among the sage brush, which fortunately was high and thick enough to afford ample hiding places from which to watch the movements of the deer. They were now in plain sight, about four or five hundred yards from us and toward the head of the cañon, slowly crossing to the other side. Two bucks and a doe, they loomed up in magnificent form, pretty as a yellow wagon with a spring seat; every movement full of unconscious grace, with such a measure of reserved power, that we were strongly inclined to let them escape us and we return to camp. There was, however, a much stronger inclination not to do anything of the kind, so we waited and watched. Down the hillside and out of sight into a deep gully they went, and up again on the further side they slowly traveled, and in such a direction as not to materially increase the distance at which we first discovered them.

Presently they rounded a point of rocks and were lost to view. Now was our time to cross the gully below us and trail them if they were still on the move. Reaching the bottom of the gully we continued up under its shelter for some distance beyond where we saw the deer tracks crossing before we ventured to climb the opposite side. The point of rocks where the deer disappeared was now our objective point, and we were where we could see beyond it. The deer were yet on the move, apparently headed for a large cedar tree growing by the side of a washout some little distance above them. We were at the rocky point before again venturing a look for our game. They were slowly nearing the big cedar, reaching which, sure enough they stopped. If they laid down our course was simply to move forward on

our present line. They had evidently breakfasted for they were now quiet and evinced no inclination to either move forward or lie down, so we concluded instead of longer waiting and watching to make a short detour and approach within rifle shot of them under cover of a slight rise in the ground to our left. This movement on our part was so speedily and carefully performed that at our next view of the deer we were within a hundred yards of them.

They looked very handsome, and all in blissful ignorance of the prospective "deep damnation of their taking off." We could approach no nearer, but one needs no fairer opportunity to do good execution, than given a .45-70 Sharps and a deer broadside at a hundred yards. Here at least was a place where there was no ground for an argument between bullet and buckshot. We fortunately had taken the precaution to plug up the lower opening on our rear sights, and selecting the two bucks, banged, banged. The bullets were off and both bucks fell, our quota full; but Doc, forgetful of his modest and reasonable figures of the morning, fired at the doe, who yet lingered near her dead companions, seemingly astounded at their strange antics.

"A clean miss, by Jupiter."

"A clean hit sure as you're alive," says Tuck.

"She jumped away in too good form for a wounded deer."

"Y-e-s, she was lively enough, and went out of sight apparently unharmed, but I noticed she was not going in her natural way. She is favoring some part of her body, and I mistrust she is shot through the belly. We'll come up to her presently and find where her complaint is."

With our knives we gave the bucks the finishing touches. They had both been struck just back of the shoulder, and died as we would have them without much suffering. We started after the doe and found she had tumbled into quite a deep gully only a few hundred yards from where we had shot her. She was done for, and it was only from Tuck's knowledge of action that we searched for and found her. There are, no doubt, plenty of deer killed and never brought into camp, simply because they go out of sight apparently untouched, and it would be on the side of mercy if every hunter would make some study of the deer in motion, so he might be able to detect any varying of its natural movement after it had been shot at, and by following up he would prevent much unnecessary suffering and enjoy the other satisfaction of better luck.

We were in camp by noon. Our companions had already returned from their morning hunt empty-handed. With a couple of pack horses our spoils were brought in early in the afternoon, and now, with seven deer and an antelope hanging up a tree, there was no present prospect of running short of provisions, and as the main object of the expedition was not to kill everything in the cañons, we varied the programme by loafing in the tent the remainder of the day. A party of friends who had been hunting in the neighborhood paid us an afternoon visit. They had not met with as good success as we had, and were going to return home in the morning. As they were not loaded heavily, they took back to the V B ranch four of our deer, which lightened our load, and gave us a few more days in the Goshen Hole cañons.

MILLARD.

HINTS AND WRINKLES.

Editor Forest and Stream:

In your issue of March 5 "Backwoods" calls attention to a method of fixing wads in place without crimping. This is the same idea carried out more perfectly and fully by Alexander's shot wad advertised in same issue. A glance at the cut of the latter wad shows clearly the advantage of it. Will you kindly send me "Backwoods's" address, that I may send him a sample of Alexander's wad. F. H. HACK.

BALTIMORE, Md., March 8.

Editor Forest and Stream:

Having tested the merino felt wads thoroughly, I commend them to sportsmen as being in my judgment superior, for pattern, penetration and cleanliness, to any wad I have ever used, excepting the English thick felt wad, which is similar, only containing more grease, and sold at a price which places them beyond the reach of sportsmen of moderate means.

I use a No. 12, 2¾-inch shell, loaded as follows: 4 drams powder, a thin Card wad (No. 12), then a first grade thick merino felt wad (No. 11), and a Card wad (No. 12), put down with one or two strokes of a mallet, 1¼ ounces of shot, and a second grade merino felt wad, which is about half the thickness of the first grade wad, and crimp the shell down firmly. I find that with this load my gun shoots with great power, and the shot are thrown with extreme closeness and great regularity.

I think the great advantage to be derived from the use of the felt wad over the ordinary hard wad consists in the fact that being more elastic and expansive they more perfectly and tightly fit the barrel, expanding readily where the bore is enlarged (as most chokebore guns are for some distance back of the choke), and as readily contracting where the bore is constricted, thus absolutely preventing the escape of gases and the disturbance of the shot charge, which frequently results from this cause. E. L. M.

WASHINGTON, D. C.

Editor Forest and Stream:

I have a 10-gauge, 9½ pounds, right barrel 250 and left 300 pellets in a 24-inch circle, 40 yards, 1¼ ounces No. 8 shot, and for all kinds of shooting I think it the best gun I ever used. I have owned small-bores, 12, 14 and 16, but do not want any more of them. Aside from my own experience, the fact that about 85 per cent. of the best sportsmen in the country are using 10-gauges is all the evidence I want that they are superior to the smaller bores for all kinds of shooting. I load for woodcock with 3 drams powder, ½ ounce No. 10 shot; partridges, 4 drams powder, ⅞ ounce No. 8 shot, and for ducks, 4 to 4½ drams powder and 1¼ ounces of shot, and the results are highly satisfactory to me. I think a great many sportsmen use too much shot in chokebores for brush-shooting. If they will try lighter loads of shot when brush-shooting I think they will make better bags.

Upland game quite scarce here, our best shooting being at ducks on Seneca River marshes. I spent the month of December in Southern Michigan on partridge and quail, which are moderately plentiful there, although it is said that last winter was very severe on game in that section.

SKIRMISHER.

CLYDE, N. Y.

Editor Forest and Stream:

I could not keep my first breechloader from rusting in the winter after I had cleaned and put it away. When I came in with my gun I would clean it, oil it thoroughly, and put it away in a dry place; but it would rust inside. I soon discovered that it was the frost in the barrels, which difficulty I overcame by setting the gun near the stove till it was perfectly dry, after which, when cleaned and oiled, I had no trouble with it. SKIRMISHER.

CLYDE, N. Y.

Editor Forest and Stream:

This is my experience with the Alexander mucilage-edged wads: I carefully loaded eight paper shells with the exact amount of powder and shot in each. I used an Eley pink-edged wad on the powder. In four of them I used a Baldwin or common wad on the shot, and crimped the shell in the ordinary way. In the other four I used Alexander's patent shot wad, which abolishes the crimper. At a distance of 35 yards I placed my 30-inch target and fired the eight shells alternately, using a new target for each shot. With the Alexander wad I put from 31 to 43 more shot in the circle than with the shells that were crimped. I got as good, if not better, penetration by the use of the Alexander wad. When testing I used the same barrel all the time, and kept a shell loaded with an Alexander wad on the shot in the other barrel to see if it would jar loose. After shooting I found, upon examination, it was as firm as before I commenced.

J. S. W.

MY GUN.

THE knell has toll'd, the hours are fled,
And I shall mourn my friend as dead
Till August sun shines o'er your head—
My gun.

Then you shall leap to life once more,
And in a loud and deaf'ning roar
Your voice shall ring across the moor—
Old gun.

When autumn's chill and withering blast
Your steely locks shook free at last,
With me your lot you freely cast—
Dear gun.

I never knew you yet to fail,
When once you sighted "can" or teal,
Death struck them down with leaden hail—
Sure gun.

And in the yellow harvest field,
Where shivering partridge crouched and quailed,
To knock them over you seldom failed—
Rare gun.

With me you've been both true and tried,
With ammunition well supplied,
No game at forty yards denied—
That gun.

When 'cock and pheasant from the brake,
On whirring wings their flight would take,
Your voice the forests would awake—
True gun.

When winter's silv'ry moon was high
Along the shore when game was nigh,
I read "death" in your hollow eye—
Sure gun.

On many an ice-cold winter's day,
When snipe and plover were your prey,
Bang! right and left you blazed away—
Good gun.

And o'er the plain and in the wood,
And through the marsh by field and flood,
To me an honest friend you stood—
Old gun.

'Tis years since first my arm you pressed,
And I your shining coat caressed;
You've won a place within my breast—
Dear gun.

Within that case some months you'll lie,
Where I shall keep you warm and dry,
And now again to you good-bye—
My gun.

NEWARK, N. J. JAMES FLOOD.

MAINE TAXIDERMISTS.

IT will be remembered that the Maine Legislature of 1882–83 repealed the law which provided for the appointment of taxidermists in that State, and thus put into force for everybody the game laws, as well as the statutes for the protection of insectivorous birds, which laws were made more stringent and effective at that session. The reason for this repeal was the abuses of the taxidermists' privileges, the same as in every other State which presumes to protect our song birds. Persons who there wished to kill a deer in close time, or any other game, were simply obliged to obtain a taxidermist's permit, from the Governor I believe, and they could shoot as they pleased. This caused the Commissioners and game wardens of Maine no little trouble and chagrin. But the Legislature made a clean sweep in the winter of 1883. The song and insectivorous birds had decreased to an alarming extent in some parts of the State.

The repeal caused a howl among those who wanted to shoot, and in some instances complaint came from students who were honest in their wishes to secure natural history specimens. The result of that feeling has been the framing and passage of the following law by the Legislature just closed:

AN ACT

TO AUTHORIZE THE TAKING OF BIRDS AND THEIR NESTS AND EGGS FOR SCIENTIFIC PURPOSES.

Be it enacted by the Senate and House of Representatives in Legislature assembled, as follows:

SECTION 1. Upon the request and recommendation of the Fish and Game Commissioners, the Governor, with the advice and consent of the Council, may commission persons to take, kill, capture and have in their possession any species of bird, other than domestic, and the nests and eggs thereof for scientific purposes, but the number of commissions in force shall not exceed ten at any time.

SEC. 2. No person to whom such commission may be granted shall sell, offer for sale, or take any compensation for specimens of birds, nests or eggs, nor dispose of the same by gift or otherwise to be taken from the State, except to be exchanged for scientific purposes, and for any violation of any of the above provisions of this section, such persons shall be subject to a fine of not less than ten nor more than fifty dollars, to be recovered by complaint before any trial justice or municipal judge, one-half to the complainant and one-half to the county where the proceedings are commenced.

SEC. 3. This act shall not authorize the taking, capturing, or killing any bird, or taking the nests or eggs thereof on Sunday.

SEC. 4. The commissions authorized by this act shall be in force for two years only from the date of their issue, and for such commissions there shall be paid to the State a fee of five dollars.

SEC. 5. Whenever the Fish and Game Commissioners shall so request, the Governor shall recall and cancel any commission issued by the authority of this act.

This law sounds like a good one, if taxidermists must be appointed at all. It leaves their appointment to the Fish and Game Commissioners, in good hands, so far as Maine is concerned, at least, and then leaves them at the mercy of same Commissioners. The number is limited—they should have been put under heavy bonds—so much the better for the birds—and prohibits traffic in dead birds. It would have been well to have added in Section 4, after "birds," their skins; since the trade in bird skins in some sections of New England is enormous. But perhaps the killing for "scientific purposes" is broad enough to cover danger in the direction of bird skins.

In Massachusetts many thousand sea swallows are killed every season and their skins sent to France to be dyed for milinery purposes. It is in the direction of fashion that the destruction of our many birds is most to be feared. The fashion is simply a disgusting one. Nothing is more sickening than a dead bird on a hat. It contributes nothing to the good taste of the wearer. A woman has frequently rode in the horse cars this winter from Boston Highlands to Temple Place, with the whole front of a prairie chicken on her hat, with shrivelled beak and glass beads for eyes, projecting in the same direction as the woman's nose. The expression on her face seems to say, "What a nice ornament I wear on my hat." Bah! What a poor, uncultivated, cruel taste.

The writer of this has at the present time a Brazilian grass parrakeet, a very handsome and affectionate little fellow. He sits on the finger while his master writes; chirps and kisses his fingers, then runs up the arm and nestles under his chin, puts his head into the vest pocket, will even climb up and kiss the lips if permitted to do so. This bird is a beauty, and has a little episode in his history. His beautiful plumage, long-tipped wing pinions and tail might have cost him his life. A would-be lady earnestly petitioned his owner the other day to sell him. She had just held him on her finger and witnessed some of his affectionate, cunning tricks. But it turned out that she wanted him stuffed to wear on her hat. That woman would make a good Indian squaw; but she pretends to move in good society. The bird is safe. His bright little coat will never cater to a sentiment too vulgar and cruel for a civilized woman. SPECIAL.

TO CURE GUN-SHYNESS.

Editor Forest and Stream:

In your issue of yesterday I notice a communication from "Green Wing," Glencoe, Fla., entitled "Flinching." Your correspondent advises that one should have the "tumblers or dogs filed or ground, so that the gun will go off with a very slight touch of the trigger." This advice strikes me as being very bad indeed and conducive to a great many more accidents, and I hope that no "gun-shy" readers of the FOREST AND STREAM will try this plan.

A good many years ago an uncle of mine brought me from England a book entitled "The Modern Playmate," by the Rev. J. G. Wood. The directions which he gives for teaching a novice to shoot cured me of the habit of flinching, and I send them to you, hoping that others may be benefited by them. They are quoted, I think, from Col. Hawker's "Instructions to Young Sportsmen," and are as follows:

"Put caps on the gun and a wafer on the wall.

"Then let him practice at this mark, and when he can draw the trigger without flinching he may proceed to take his second lesson, remembering that in doing this the moment that the gun is brought to the center of the object the trigger should be pulled, as the first aim is always unquestionably the best.

"Then send him out to practice at a card with powder till he is perfectly steady, and afterward load the gun occasionally with shot; but never let the time of your making this addition be known to him, and the idea of its being perhaps impossible to strike the object will remove all anxiety, and he will soon become perfectly collected.

"The intermediate lesson of a few shots at small birds may be given; but the above plan throughout must be adopted at game and continued in the first instance till the pupil has divested himself of all tremor at the springing of a covey, and observed in the last till most of his charges of shot have proved fatal to birds.

"If he begins to shoot with both eyes open, he will save himself the trouble of learning to shoot so afterwards.

"An aim thus from the right shoulder comes to the same point as one taken with the left eye shut, and it is the most ready way of shooting quickly."

Of course, these apply more directly to the beginner, but I can vouch for their curing one of the worst cases of gun-shyness that ever came under my notice, my own. ELK.

MORE ABOUT THE SPORTSMAN.

THERE are sportsmen and sportsmen and sportsmen, and I think this triplet includes about the entire genus except the market gunners, who gun for a livelihood; and so long as they gun or fish honorably, and are not law breakers, they are not to be rashly censured. But as they are never called nor call themselves sportsmen, we pass them without further remark.

A numerous class of sportsmen is those who go for a "good time," care but little for the kind or quantity of game bagged, as they can generally get enough of that from dealers to take home and send to friends, have large outfits consisting of kegs, but more often of mysterious baskets, bottles, boxes, etc., not usually seen around their homes.

Generally they are large-hearted fellows—who ever saw a churl or miser among such?—but being far away from home associations, home restraints are thrown off and a degree of license allowed that would be thought very rude, if not worse, by their usual associates. We are all acquainted with such if we have not indulged in their ways.

Another class is of those who hunt only to kill, and these are rarely if ever found among the former class, being too earnest for blood to waste any time in carousing or story telling, and stopping only when no game can be killed. To them everything is game that will count. Whether fingerling trout—example the one hundred and eighty-five Chateaugay trout that weighed nine and one quarter pounds, all caught in one day—half grown woodcock, partridge chicks, or sucking fawns. Such care little for game laws, and nothing but a slight fear of its possible grip on their pockets causes them to pay any attention to legislative enactments. Instead of "sportsmen" they should be styled "game exterminators." May their number be growing "small and beautifully less."

Last, but not least in the list are those who, worn out with the cares and confinement of an active business or sedentary life, seek recuperation and sport in a day's, week's or month's retirement among the fields, lakes and mountains to obtain health and recreation in a law-abiding way. The rod or gun are not all that go to make up to the full the

enjoyment of this class of sportsmen; they have their place, and an important one. But a mountain tramp, a long row on stream or lake amid such scenes and in such an atmosphere, send the purified blood pulsating with new life and vigor through each particular vein and artery till the whole system is aglow with health and animation. After such an outing is it any wonder they write such charming letters to the sportsman's paper for the delectation of us stayers at home? And why should they not? Who like them has the opportunity of studying nature in her varied aspects of beauty, grandeur, sublimity and sometimes of terror?

The pages of the FOREST AND STREAM bear ample testimony of the inspiring and beneficial results of such outings to this class of sportsmen. J. H. D.

POUGHKEEPSIE, N. Y.

SOME REMARKABLE SHOTS.

Editor Forest and Stream:

M., a broad-faced, good-natured rustic, had volunteered to drive me out a few miles and show me some "patidgeds." It was in the month of December, with the snow about eight inches deep. Upon arriving at the scene of operation he apologized for the looks of his double muzzleloader by saying that his boys had been "messing" with it, but that he had togged it up so that it would stand the racket of a day's shooting. Our route led up the banks of a swift-running brook, which was here and there fringed with evergreen trees. M., who was a short distance in advance, flushed a couple of birds. I stepped forward nearly to his side, at the same time asking which direction the birds took in their flight. He brought his gun from his shoulder to give me the desired information, when the barrels parted from the stock, changed end for end in the air, struck on the edge of the bank, slid ten feet rapidly through at least six inches of snow, striking into the brook breech first where the water was knee deep. The bottom was pebbly, and the capped nipple, striking a stone, instantly exploded, and sent the charge within a few inches of M.'s head, fairly staggering him, although he was untouched by a pellet. Congratulations being in order, I told him that I was especially thankful that he was not sent to the happy hunting ground, as it would have proved awkward business for me to explain the manner of his taking off satisfactorily to the coroner and his friends.

E. W. B.

MASSACHUSETTS.

Editor Forest and Stream:

In 1852 I purchased my first muzzleloader. I have it yet but its usefulness is gone, and it lays across a pair of four-prong antlers secured with it. The morning after the purchase a younger brother and myself started out bright and early to drive the cows to pasture, and of course took the new gun along. We approached a thicket stealthily, and peering in I saw the head of a bird, took deliberate aim and fired. There was a commotion, and when we reached the place we were surprised to find no partridge, but an old hen and five chickens just kicking their last. Not a word was spoken until the last kick was given, when the silence was broken by my brother, exclaiming, "O, but aint that a darn good gun." We never saw any chickens there before nore after. We were not so much surprised about the after.

J. L. D.

LOCKPORT, N. Y.

Editor Forest and Stream:

As a sportsman the "Q." road beats the whole business of you for remarkable shots, for it uses locomotives for guns. Engineer Francis, on his run from St. Jo up the other night, made a wing-shot with his engine, and struck a prairie chicken with the headlight and brought it into town dead. It was found on top of the headlight by a wiper in the round house. COMMON SENSE.

CRESTON, Ia.

Editor Forest and Stream:

When cousin Drake Bosworth and I were boys together, at Smithville, in this county, our fathers owned together a smooth-bore rifle, once a flintlock but at the time I speak of improved to a "punchlock." Perhaps some of your readers are not old enough to remember that kind of artillery. We carried the little percussion pills for priming in a quill, and one of these little pin-head things being placed in a little cavity of the powder or priming tube, was exploded by a blow of the pointed steel hammer that was fastened in the cock where the flint had been held. They were quick enough when the guns were clean, but if dirty or oily, would hang fire like the mischief. On one occasion our gun came near causing me to shoot my brother. He had gone up on the other side of the tree to drive the game upon my side. I took aim and pulled the trigger; the pill exploded with a sharp crack, but the gun didn't, so I brought it down to a level to reprime, when off it went and the whole charge went so near my brother's head that we both felt pale for a while, you may well believe. One day when cousin Drake had the gun, he saw a squirrel near the top of a tall tree in the open. On trying to shoot it he had an experience like mine, for as he was holding the gun nearly level and feeling for a pin to prick in fresh powder, off it went, and happening to glance toward the tree he was astonished to see the squirrel falling dead to the ground. Frightened by the snap it had tried to escape by running down the tree, and happened to get right in range of old hang-fire when it went off. Such a thing might be tried many million times before it would happen again. The above was an actual occurrence.

WATERTOWN, N. Y. R. S. B.

Editor Forest and Stream:

The amusing record of remarkable shots, which has been chronicled by your correspondents of late, recalls an experience of my boyhood, when I used to prowl about the haunts of the many aquatic birds of Minnesota, with a little single-barreled muzzleloading shotgun, never doing enough execution to diminish the supply to any alarming extent, but usually managing to bag enough booty to satisfy a youngster to whom a successful shot afforded more satisfaction than the result of the most successful day's work with modern appliances could do at this day. One October day, I took up the gun and started for the cornfield to which I had been directed, mumbling something about "geese flying over," in answer to the maternal question, "What do you want of a gun to husk corn with?" If the inquiry had been followed by observation, the writer would have been seen a few hours later tramping along the bank of the river which ran near by, with the shotgun on his shoulder, and keeping a very sharp lookout for ducks. But it was an off day for ducks, and not one appeared to the sorrowful gaze of the anxious truant. After following the river as long as I dared, I gave it up, and with unqualified disgust started for the cornfield. I had but just started when, glancing around, I saw three black ducks coming swiftly toward me, and down I dropped behind a bush; but they had seen me, and changing their course, were passing by far out of range, as I supposed. My disgust was so great that I pointed the gun at them and let drive out of pure spite. I believe I have never since that day been so thoroughly dumbfounded with astonishment as I was that moment, when all three of those ducks suddenly turned their tails skyward and dropped like plummets into the river, where they kicked a few times and died. The wind brought them ashore, and the proudest and most tickled boy in America fished them out and carried them home, silencing his mates with the champion shooting story of the season. M. A. B.

DE SMET, Dakota.

Editor Forest and Stream:

I have seen two English snipe rise at a distance of ten yards apart and fly toward each other, and in crossing shot with one barrel.

I have seen a woodcock and kingbird killed at one shot, the woodcock coming out of the bushes and the kingbird darting at it, were both killed with one barrel.

I know of a single reedbird being shot on the marsh while flying over a boat, that in falling was caught in the shooter's hand.

I have seen on arriving at a cover for woodcock, one cock come out and being killed, the dog sent to retrieve come out with the bird in his mouth, and on being sent on come with another woodcock to his master, only one shot being fired.

Have seen a shot at a mudhen sitting on the water of a pond; the mudhen being missed, jumped and flew up the meadow, returning, alighted within two feet of the spot it first jumped from, and at the moment of alighting raised five teal duck that were within three feet of it, and that staid there in the grass after the shot was fired until the mudhen returned.

I know of twenty-one teal duck picked up when the person who shot only saw one duck, and that swimming into a bunch of rushes was out of sight at the moment of discharge. The rest of them were killed and crippled with one barrel without the gunner knowing that they were there. The dead were picked up at the time, then the person who shot came home for a spaniel, with which he collected the cripples without firing another shot.

I knew a rabbit being shot at and not killed, to run down a path in the bushes, jump on a man standing in the path. The animal got as high as the man's breast, was pushed off and jumped there again, being pushed off the second time. When asked why he did not shoot the rabbit, the man said he was not going to shoot another rabbit, but was going home, which he immediately did, under the impression that something was going to happen to him. He is lively yet, though.

I knew of a rail shooter on the marsh while gunning with a spaniel, in shooting at a rail, to kill his dog; also of one who was out for rabbits, in shooting at a rabbit, to kill his friend's beagle hound. BOG SNIPE.

BRISTOL, Pa.

Editor Forest and Stream:

1. During a visit to the shore, my friend suggested a shot at the sea gulls. I assented, and he armed me with a light breechloader, to which was attached a safety arrangement, consisting of a rod running back of the trigger-guard which had to be squeezed against the stock before the gun would go off. It was simple enough. We reached the shore and a gull came along, but I forgot about the arrangement against premature explosions and pulled as hard as I could, but the gun would not shoot. The gull sailed by, and I took the gun from my shoulder in disgust, when off went both barrels and the gull dropped, to the astonishment of my friend, who did not think to try so long a shot. I did not explain my success. 2. While squirrel shooting with a .32-caliber Stevens, I saw a squirrel running along a fence at about twenty yards. I shot and knocked him over. On picking him up I found that the ball had missed him, but had knocked a splinter from the rail into his neck, which had killed him. PADDLE.

PROVIDENCE, R. I.

THE BORE OF SHOTGUNS.

Editor Forest and Stream:

Speaking of guns it reminds me that I did the most of my shooting in my boyhood days with a single-barreled shotgun, for which I disbursed the sum of two dollars and fifty cents, in Platt street, New York. It was of uncertain bore (ranging anywhere from 12 to 16), and the roughest thing inside I ever felt of. Immediately after getting it, another boy, by the name of Minor, and myself followed sixteen deer hunters into some woods south of Prompton, in Eastern Pennsylvania, and I shot a buck stone dead, which had been chased by one of their hounds. Sixteen more disgusted men you never saw than those hunters, as one by one they gathered in and noted first, the buck, next myself, and then —— that gun.

Previous to starting out I had loaded the concern with half a handful of grocery powder, five buckshot, and used for a wad to hold it down an old ounce ball (that I had found somewhere) wrapped up in a piece of newspaper. That ball did the business, it broke the deer's neck.

I don't know just how much stock to take in the fine-spun arguments of your correspondents with their $300 guns, in their talk about cannon 10-gauges and 12 little ones. That old shotgun of mine seldom failed to pick a pigeon or a squirrel from the tops of the tallest maples, and it had to be a mighty lively old cock of a grouse that got away from it on the wing. I don't believe that your fellows know it all yet. COMMON SENSE.

CRESTON, Iowa.

Editor Forest and Stream:

As I have owned in the past twelve years nine different breechloading shotguns, varying in bore from 14 to 10, and in weight from 7 to 10 pounds, and having had plenty of spare time to use them, think I know something about a gun for both brush and water shooting, and my judgment is that a 10-bore, 8-pound, 30-inch barrel, both barrels very little choked, is the best gun for any man to buy, and whoever buys a 16 or 20 bore gun, unless he is more than an average close shooter, will get left by an ordinary gunner. The gun I have used for the past three seasons is a 10-bore hammerless, weight 7 pounds 14 ounces, and I use from 2½ drams for woodcock to 4 drams best powder for ducks; and I have fired it with the latter load in line shooting on Long Island Sound 115 times a day without feeling the least disagreeable effect from it. I never use but one ounce of shot, except for ducks, then use 1¼ ounce No. 3. I would much rather bag a partridge with my 10-bore loaded with 3 drams of powder and 1 ounce of No. 6 shot (which is always my load for ruffed grouse) than to miss it with a 16-bore loaded in the same way, because it is a little more "tony" to shoot the 16-bore gun. I do not believe in small-bore guns any more than I believe in wearing skin-tight pants. S. H.

EASTHAMPTON, Mass.

NEW JERSEY SONG BIRDS.

THE following bill, Senate, No. 162, has been introduced into the New Jersey Legislature by Mr. Griggs: An Act for the preservation of birds. 1. Be it enacted by the Senate and General Assembly of the State of New Jersey, that no person shall at any time within this State, catch, kill, trap or expose for sale, or have in his possession after the same has been caught, killed or trapped, any night hawk, whip-poor-will, sparrow, thrush, meadow lark, skylark, finch, martin, swallow, woodpecker, robin, oriole, red or cardinal bird, cedar bird, wren, tanager, catbird, bluebird, snowbird, tern, gull or any insectivorous or song bird, not generally known as a game bird. 2. And be it enacted, that no person shall in the months of March, April, May, June, July or August in any year, within this State, knowingly or willfully molest, tear down or destroy the nest of any wild bird, or take, carry away or destroy the egg or eggs of any such wild bird; nor shall any person, at any time whatever, sell, offer or expose for sale or buy the egg or eggs of any bird named in sections one and three of this act. 3. And be it enacted, that it shall not be lawful for any person to kill or catch, buy or sell any of the birds mentioned in section one of this act, or any of the birds commonly known as game birds, or any sandpiper, plover, willet, curlew, marlin, or other bird of the species commonly called shore or bay birds, or any heron, crane or fish-hawk for the purpose of preserving or stuffing the same as an article of ornament or apparel. 4. And be it enacted, that any person violating any of the provisions of sections one and two shall forfeit the sum of five hundred dollars for each offense, and any person violating the provisions of sections three shall forfeit the sum of fifty dollars; the said penalties shall be recovered in the same manner provided in the act entitled "An act." 5. And be it enacted, that nothing in this act contained shall be held to apply or affect the bird commonly known as the English sparrow. 6. And be it enacted, that this act shall take effect immediately.

PHILADELPHIA NOTES.

THE marshes along the Delaware River are now open, and the sprigtails are freely using them. Already a great improvement in the condition of the fowl that are sent to the market from below can be noticed. A flight of snipe last week settled on the meadows below the mouth of Salem Creek, N. J., and fifteen or eighteen were killed by a market shooter and sent to a game dealer in this city. This occurred on the 9th inst., and the birds were in good order. During the three or four days of pleasant weather which we had the first of the month, not a few snipe arrived south of Philadelphia, but it is only this week that any of them appear to have been killed.

The West Jersey Game Protective Society have been scattering grain, this winter, in the woods of the counties over which they have jurisdiction in order to provide food for the grouse and quail during the period when the ground has been covered with snow. This, it is reported, has resulted in a great good, and many birds have been saved by it.

I have learned that there are not a few out-of-the-way places on the Chesapeake Bay where punt-gun shooting at night with a jack-light is regularly practiced. Not only is this done in Accomac county, Va., but at numerous points south of it where the law can be readily evaded. If a series of arrests of these lawbreakers could be brought about, as was done in the case of the Spesucia Island poachers a year ago, much good could be accomplished, but this can hardly be expected, as the sections where night-shooting with a light is done, as I am told, are isolated ones and would be difficult and expensive to reach.

March 14.—Our game dealers do not attempt to cover up their sales of quail, which can be purchased at any of the stands. Two or three straggling snipe were killed to-day on the meadows at the foot of Broad street, and there were at least a score of gunners out tramping these marshes, Saturday being just the day to tempt them to make the first try of the season for the longbills. Next week all the meadows bordering the Delaware River and creeks flowing into it will doubtless be thoroughly worked, and it will be strange if a single snipe dropping into them to feed will escape.

HOMO.

WILDFOWL AT SOUTH OYSTER BAY, L. I.—March 16.—The geese, brant and ducks are making their appearance in the bay, and the gunners are having good shooting. The birds were late in coming this season on account of the severe cold weather, but now they are on hand ready for business. I have often wondered why some of the sportsmen are in the habit of going South, East, North or West for wildfowl and baybirds when they can get good shooting nearer home. The Great South Bay at this point is quite shallow, and there are a number of islands scattered through the bay, which makes point-shooting good. And as there is plenty of food for the birds, they are bound to come in great numbers and remain, after they do come, until their breeding time, when they leave and return again in the fall, bringing their young with them. With a good south or easterly wind, or an overcast, stormy day, they generally bag from five to twenty-five birds in a morning's shooting, and occasionally fifty or more. Now taking in consideration that South Oyster Bay is only thirty miles from New York, I think any sportsman will agree with me in saying that from five to twenty-five birds is a good bag with which almost anybody ought to be satisfied. I have occasionally gone to different places at a greater distance and tried to do better, but very seldom have done any better, and often have not done near as well.—O. C.

NESSMUK'S INSECT PREVENTIVE.—Boston, March, 1885.—I should like to propound to following query to your correspondent "Nessmuk:" In "Woodcraft" he recommends to keep insects away, oil of tar, castor oil and oil of pennyroyal to be mixed together and then "simmered over a slow fire." As oil of pennyroyal (*hedeoma*) is one of the volatile oils, where will it be when he is through simmering? I have found oil of pennyroyal and glycerine of use when musquitoes, gnats and midgets were about, but as the pennyroyal is the obnoxious thing for the insects, you may be sure I did not do any simmering.—CORWER.

MARKET-SHOOTING.—Creston, Iowa.—*Editor Forest and Stream:* There is a good sight written up about game protection. Now do you know, that if I had the making of game laws, I wouldn't allow an ounce of game to be sold in nor exported from the United States or territories? And I would not allow a paid hunter in the woods. If any man could not put up with farm products to fill his maw, I would oblige him to hunt and fish for his rarities or go without. It would be healthier for him and much manlier. Let every body hunt and fish as much as they please, but forbid all selling. The infernal dollar is at the bottom of the whole trouble. Moreover, if British or any other "good livers" wish to cram themselves with our dainties, let them come over here after them personally, and eat with us.—COMMON SENSE.

COMPANION WANTED.—Each fall for the past seven years I have visited Southern Minnesota or Dakota for duck and goose hunting. Most of the time have enjoyed good company, good shooting and a good time. My sporting friends have, however, for various reasons dropped off one by one, leaving me at present sticking out lonely and conspicious, like the kingfisher's hole after the bank had caved off. I wish three or four companions to visit Minnesota or Dakota, as we shall decide on or about Oct. 1, to remain about four weeks. If this should meet the eye of any sportsman who would prefer a month's outing to being president, and whose purse is not so long as to interfere with his enjoying capital sport at a moderate cost, let him drop me a line.—E. W. B. (Blackinton, Mass.).

MASSACHUSETTS FISH AND GAME PROTECTIVE ASSOCIATION.—Between forty and fifty members of the Massachusetts Fish and Game Protective Association met last Thursday night (March 12) at the Parker House and passed a very pleasant evening. After supper a general discussion was held in regard to the game interests, referring especially to the deer on Cape Cod, and to the bill in the Legislature to abolish the leasing of ponds in the State, it being the general opinion in each case that the present law ought to be maintained. The discussion took quite a wide range and several members gave their personal experiences in a manner which contributed greatly to the entertainment of those present.—BOSTON.

DEER IN ULSTER COUNTY, N. Y.—Seeing an article in your last issue on "Deer in Connecticut" reminds me that last November a fine three-pronged buck was shot near this place by Mr. J. O. Beers, and a year ago a deer was shot near the city of Kingston. Before that date no deer had been seen here within forty or fifty years. Where could these deer have come from?—H. B.

MISSISSIPPI.—Corinth, March 14, 1885.—Birds have been scarce, the weather unfavorable, and in consequence bags have been light. A few snipe have put in an appearance this month. I was out on Monday last and bagged nine. The birds were very wild and afforded few shots. Those that I bagged were unusually large and fat.—WILL.

LARGE PELICAN.—A Tamora, Neb., correspondent reports having killed near that town a white pelican, measuring from tip to tip of wings 8 feet 8 inches, and from tip of bill to back of head 15½ inches.

Sea and River Fishing.

ON THE TRACK OF "WAWAYANDA."

THE history of "Camp Flotsam" has been eagerly read by three or four of us here, and we have followed closely the delightful description given by "Wawayanda" of their searches after the best place for bass. We, too, have thrown the fly on Loughboro' Lake, and recognize many of the places he mentions. But our appliances are more primitive than those used by the historian of "Camp Flotsam;" our flies are all made by ourselves while fishing around the box stove during the long winter evenings, and I must confess no two are alike and all of them without a name; yet the bass seemingly relish and cling to them with as much avidity as to those that are dubbed before being cast on the water. This, no doubt, is because the bass of this far-off region have not been trained up to appreciate the relative merits of civilized and uncivilized flies. We hope that the small-mouth of Loughboro' Lake will not be led away by the charms of the scarlet ibis, Montreal, Lord Baltimore and others, to such an extent that they will not look on our more humble lures, with at least equal favor, else we will hold "Wawayanda" personally responsible.

Our party consists of four, Jack, Arny, Dug and the writer, living in a small country village about twenty-five miles from "Camp Flotsam." Driving from here to the bridge spoken of by "Wawayanda," we leave our horses and row toward the rising sun.

On one occasion we had spent the first day very pleasantly in fishing and prospecting for a favorable camping ground, and toward evening, finding a suitable place, pitched our tent and began to prepare supper for four hungry fishermen. Jack took all the fish we did not want and started for the nearest farmhouse to try and exchange them for milk or anything suitable for camp. The rest of us soon had some fine ones dressed and ready to cook. We extemporized a stove a few feet from shore by placing a large, flat stone horizontally on others placed upright, and soon had a fire of driftwood burning brightly. Dug was sitting between the stove and the lake holding a fish on a spit; Arny was frying some in a pan, and the writer was making tea and laying the table. Our appetite rose at the sight of the fish turning brown and giving out a fragrance that increased our already sharpened appetites, when in an instant the top of the stove exploded and flew in pieces, scattering the supper in every direction. Dug was not prepared to receive fire, but started after water immediately, by falling backward in the lake and wetting his feet up to his ears. Arny's pan of fish performed the double-contortion act, and as soon as he realized the true state of affairs, a very decided leak of plain old English adjectives came from him, while the writer tried hard to console himself that it was his rod hand that was scalded by the tea instead of his reel hand.'

When Jack came back we were sitting around the ruins, like Rachael, refusing to be comforted. He tried to console us by saying that he had exchanged all the fish for a pail of milk, but it was of no use, we wanted fish for supper, not milk. That night we went back to the diet of our infant days, and made up in quantity what we lacked in quality, and after burning some tobacco, went to bed. The loon's cry seemed more doleful than ever, and it was a long time before we were lulled to sleep by the murmuring voices of the waves on the shores. We were awakened early in the morning by our attenuated stomachs, and after once more poking around the scene of the late disaster, we tried hard to allay our craving with bread and milk, and then started out to get enough fish for a very early dinner. But who that camps out during the summer has not met with some such experience to teach him lessons for the future?

Loughboro' Lake is a splendid fishing ground, and adds to this attraction scenery similar to the Thousand Islands of the St. Lawrence River. Indeed it is the same range of mountains (Laurentian) that the lake lies in. We hope that "Wawayanda" may have the pleasure of many visits to his old camping ground, and it would give our party great pleasure to meet him some day on Loughboro' Lake and exchange notes about favorite places. SAW BILL.

LENNOX COUNTY, Ontario.

THE HOLMES DINNER.

ON the evening of Feb. 24 a party of genial anglers gathered at the Peninsular Club House, at Grand Rapids, Mich., to do homage to the Nestor of Michigan sportsmen, Dr. E. S. Holmes. The anglers were members of the Pokotink Club, and the occasion a complimentary banquet to Dr. Holmes, the president of the Michigan Sportsmen's Association. The following Pokotinks were present: Dr. E. S. Holmes, Henry M. Hinsdill, John Perry, Norman D. Carpenter, Elliott Judd, Henry C. Post and Hoyt G. Post. Letters were read from L. H. Withey, D. D. Cody, Col. R C. Ward, and C. W. Eaton, who were unable to be present.

The room and tables had been tastefully decorated, the crowning triumph was the centerpiece on the table, composed of the Doctor's fish basket and bait box, so artistically trimmed with flowers that the Doctor did not discover his "weapons" until the banquet had been some time in progress, when he suddenly exclaimed, "Well, by the great king of catfish, there's my old bait box."

A feature of the evening consisted of a card for each guest, with a sketch depicting the person in some fishing adventure, and based on actual experience, and so well had the artist's work been done, that each was easily recognized. These were made the subject of remarks by the various members. The story of Post's big grayling, tribulations of the rainy night on the Jordan, Perry's "sheepshead," Carp's method of breaking camp, Hinsdill's capsize, and other memories of the pleasant days spent by the club in Northern Michigan were called up and lived over again.

The menu was such as only anglers and other extra good fellows deserve, and was as follows:

"This dish is too good for any but Anglers or very honest men."
IZAAK WALON.

MENU.

Raw Oysters.
Bisque of Clams.
Fried Smelts, Tartar Sauce. Saratoga Chips.
Boiled California Salmon, Anchovy Sauce. Nouille Cakes.
Croquettes of Whitefish, à la Marinere. French Peas.
Black Bass, à l'Etuvee.
Regents' Punch.
Rocky Mountain Brook Trout. Cepes à la Bordelaise.
Mayonnaise of Shrimp.
Fromage de Brie, Roquefort.
Gelee Aux Mirabelles.
Biscuits Glacés, à la Vanille, Cake.
FRUIT.
Coffee. Cigars.

The "wee sma' hours" were reached and passed ere the last fish and story was digested, Carpenter sung "The Sword of Bunker Hill," as he used to in camp and as no other man can sing it.

The venerable doctor fully appreciated the compliment, and closed the entertainment by remarks most fitting and appropiate.

The occasion was one to which all who participated will look back upon as a most delightful one. The dishes were all prepared and served in the best manner, and the Holmes banquet was a complete success.

GRAND RAPIDS, Michigan.

HOW WE CAUGHT HIM.

THAT was a cunning trout—an educated one I used to think. How he could seize the fly or the bait and not get caught, I could never understand, or whether in fact he seized them at all; no one could tell. The most that I knew of him (until he was caught) was that come along almost any time of day and throw your fly or your bait under that bank opposite, with the alder bush growing out over the water, and you would be almost sure to have a rise, or feel your line pulled suddenly away; but this would only happen once at a time. You might remain there if you chose and spend the rest of the day whipping that place, and no more rises would you have, whereas if you went away for an hour or so and then came back, the same thing would happen again.

It was a thing that puzzled me. The first time it happened I said to myself, "It is a small fish, too small to catch;" for it was always a rule with myself and the boys (whatever the "creek skinners" might do) that no trout under six inches in length should be brought into the house. But as I say, this strike by the alder bush puzzled me, until one day as I was using my utmost skill, and standing as far back as I possibly could and cast my fly in the place, I saw a swirl in the water that looked too large for a little fish, and felt an unusual tug. This set me to thinking, and also led me to inquire of the boys that fished along the stream if they had ever observed anything peculiar as they tried by the alder bush.

"Yes" said the best fisherman among them, "I have. I always got a bite there. It is a big fish, too; he would weigh a pound. I had him half out of the water one day, but I never could catch him, and now he only smells of the bait."

All that we have narrated happened in May, and now it was toward the last of June, when one morning my little nephew, who was tired of doing nothing, asked me if I would not go to the brook with him and let him catch a trout. I had promised him so often that I would take him there that I now determined to do so.

It was the very morning for trout. There had been a thunder storm during the night that had raised the stream, and now the day was lovely. So off we started, the little fellow carrying his stiff rod and bait box, while I walked with my cane. We soon reached the brook, and it was not long before several trout were taken. I hooked them and Al. pulled them out (though only two or three of them were large enough to save), when all at once it occurred to me to go up the stream and see what could be done at the alder bush. My thought was to try a new plan—I would go on the west side and put a grasshopper on the hook and drop it gently into the water above the bush.

After some searching we found a grasshopper, a nice yellow fellow, and not too large. This was put on for bait. Then I reeled in some line, and the little fellow, grasping the butt of the rod in his hands and I holding it nearly half way up, we approached the stream very cautiously. I could hardly see over the bank on account of the blackberry bushes, but managed after a few efforts to drop the end of the rod just above where I judged the bush stuck out. The moment I did so I told Al. to hold on to the butt and took my hands away. But now what is the trouble? I have not heard the slightest sound, but those litle hands do not seem able to hold the rod up. Ah; I see, just as I feared, I did not throw the bait in the right place and the current has carried it down under the bank, and now the hook is caught among the roots. "Give me the rod, Al., I will unfasten it; you will break the line." I have the rod. Ah, what a peculiar feeling! It is among the roots, to be sure, but there is a fish on that hook. I feel him, and the rubbings against the line, too. A slow and steady pull. Come out here, whatever you are. Ah! I have you. And the line breaks just as you are a few feet over the land. You are a fine fish; not so very large, but large for this stream. The trout measured eleven and a half inches, and my old friends told me that they had never tasted of a finer one. STILLABOY.

CROPPIE OR CRAPPIE?

Editor Forest and Stream:

This paper may be considered as an addendum to that in FOREST AND STREAM of Feb. 26, entitled "Newlight or Southern Croppie." It is furnished in response to a request from your fishing editor, who writes me as follows: "In last FOREST AND STREAM, under the head of 'Remarkable Catches,' I speak of the 'crappie, or as it is now spelled, croppie.' I see that you use the latter spelling, can you give the FOREST AND STREAM the derivation of the word? I learned to call it crappie while fishing near Potosi, Grant county, Wis., in 1856, and see that Norris spells it so. I thought it some French name, as many Frenchmen lived along there. Croppie is a name that I have heard only in connection with an Irish song: 'Croppies Lie Down.' If you can dig out the meaning of these words I wish you would."

I will say in the first place that I have used both of the names, croppie and crappie, in writing of the *Pomoxys* species. In addition to other local names, I first heard the name "croppie" in Ohio, Indiana and Illinois. Afterward in Wisconsin, in 1866, I heard for the first time the name "crappie," which was used by St. Louis anglers, and I was then under the same impression as Thad. Norris and Mr. Mather, that it was of French derivation, associating it in my own mind with Johnny Crapaud, and this impression was strengthened afterward by hearing a fisherman at Quincy, Ill., call these fish "Johnnies." I can give no plausible derivation of the words croppie or crappie. There are no common words of similar sound or spelling except crop, and the Latin word *crapula*. Certainly there is no connection between these fishes and the Puritan roundheads or "croppies." I use the name croppie now, because it seems to be more widely known than crappie, which latter name seems to be used mostly along the Mississippi River above Cairo.

In all of Prof. Jordan's writings he spells the name crappie, except in his "Catalogue of the Fishes of Illinois," where he uses the name croppie. Nelson, in his "Partial Catalogue of the Fishes of Illinois," uses croppie. Prof. S. A. Forbes (Illinois), in his "Food of Fishes," also uses croppie. In First Annual Report Fish Commission, Minnesota, croppie is also used. In third Report Fish Commission, Iowa, I find both croppies and crappies. I have heard crappie used occasionally in Ohio, Indiana and Illinois, but generally croppie is the term employed, if either, in those States.

Most percoid fishes are called "bass" in the North, and "perch" in the South, hence the Northern croppie is usually a bass with some descriptive adjective, as "strawberry bass," and the Southern croppie a perch, as "silver perch. Most of the adjectives applied to the croppies are descriptive of its spots or markings, as strawberry, calico, spotted, speckled, chincapin (this name is derived from the nuts of the dwarf chestnut and the chincapin-oak, which the spots of the Northern croppie are supposed to resemble), etc. Some of the adjectives applied are suggested by the color, as white, black, silver, sack-a-lai (lait?), etc. Others are suggestive of habitat, as grass, sand, lake, timber (brush), barfish, bridge-perch, etc. Others of peculiarity of form, as razor-back, tin mouth, bigfin, goggle-eye, etc. In fact all of the numerous names of the *Pomoxys* species are more suggestive than croppie or crappie; notwithstanding, I like either of the latter best, for they have never been applied to any other fishes and are distinctive, even if meaningless. Perhaps some brother angler of St. Louis can give the derivation of crappie or croppie, and account for its application to "the best panfish of the West."

Referring to the angling books, we find very little concerning these fishes. Brown's "American Angler's Guide" does not mention them. Scott, in "Fishing in American Waters," probably alludes to them under the head of "The Spotted Bass or Speckled Hen," which he states is "common" in Western waters. His description is unrecognizable, being merely that: "It ranges in weight from a quarter to two pounds, is blackish-green on the back, greenish-yellow on the sides, with a white belly, and dotted in black similar to some of the dace genus [*sic*] of Western streams." He gives an illustration of his fish, but like all of Scott's illustrations, it is a nondescript. Its head has a regular curved outline; the dorsal fin reaches from the head to the tail like a dolphin's, and the anal fin is represented as very small. In the second edition (*fide* Gill), he mentions the Southern croppie as the "white perch of Mississippi." As I have not seen this edition I cannot say more. Herbert, in "Fish and Fishing," does not mention either of the croppies, though he uses a miserable cut of the Southern croppie to illustrate the "Rock Bass (*Centrarchus æneus*)." His description of the rock bass is compiled from DeKay, so it is to be inferred that he knew nothing of either fish.

In Norris's "American Angler's Book," Uncle Thad, as usual, is more reliable than any of the books on general angling; and though he confounds the Northern and Southern croppies as one and the same fish (it must be said in extenuation, however, that there existed the same confusion among ichthyologists when his book appeared—1864), he gives a good description of the "crappie" and its habits and habitat. He says: "This graceful fish is known by the creoles of

Louisiana as the 'sac-à-lai,' where it is also sometimes called 'chinkapin perch.' In the neighborhood of St. Louis, Mo., it was called originally 'crappie,' by the old French habitans, and still bears that name." Norris also gives a fair illustration of the Southern croppie.

In Hallock's "Sportsman's Gazetteer" the compiler has been singularly unfortunate, so far as the "croppies" are concerned. In the list of "Northern Inland Fishes" the croppie is not mentioned, unless the description of the fish given as "rock bass (*Centrarchus æneus*)," page 273, was intended to answer for the Northern croppie as well, for most of the short account given is applicable to either; the coloring of the eye is certainly that of a croppie, and not of a rock bass or "red eye." And on page 323, in the list of "Fishes of the West," these two fishes are again confounded under the same heading, as follows: "Straw bass, rock bass, calico bass, goggle eye, or croppie (*Ambloplites rupestris*)." Following this mixed title are half a dozen lines of vague description that might apply to either a croppie or a rock bass. On page 378, in the list of "Southern Inland Fishes," is a very brief description of the Northern croppie, compiled from Holbrook's "Ichthyology of South Carolina," and correct so far as it follows that excellent naturalist. But the compiler forsakes Holbrook and mixes up the common names of both species of croppie in the caption of the article, and appends the technical synonyms of *Pomoxis hexacanthus*, Agassiz, and *Pomoxis rhomboides*, Linn. Now, Linnæus knew nothing of the croppie, but he applied the specific title, *rhomboides*, to the salt-water bream, or pin-fish (*Lagodon rhomboides*). It has never been applied by any author to the croppies, so far as I know. Nor was *P. hexacanthus* ever used by Agassiz. He restored Rafinesque's name *Pomoxis* for the croppie genus, and verified his description of the Southern croppie, *Pomoxis annularis*. He also stated that *Centrarchus hexacanthus*, Cuv. and Val., "belonged, unquestionably to this genus," but Holbrook was the first to use the title *Pomoxis hexacanthus*.

On the same page (388), in a list of "perches," the compiler has: "Silver perch, or speckled perch: called also strawberry bass and calico bass. (See 'Northern Inland Fishes')." As these are all names of the croppie species, one would expect to find a description of one or both under the head referred to; but on such reference we find only the "rock bass" before mentioned, until we come to the "black bass (*Micropterus nigricans*)," where, among the common names used for this well-known fish, we find the strawberry bass, speckled hen and spotted bass. Then, after descriptions of the black bass and Oswego bass, we read: "The strawberry bass is a flat, deep fish, has a nose well turned up, is thinner than the Oswego bass, and has black and yellow blotches." The compiler, apparently disgusted, tries to wade out of the difficulty by adding: "However, in attempting to define differences, nothing is accomplished toward identification or separation; only confusion is increased." We should say so

On the same page, and following the "silver perch," we find: "Sand perch, or bachelor perch; called also tin-mouth. Taken from Virginia to Mississippi. Apparently a cross [*sic*] between the yellow belly and silver perch." Then follows a very brief but fair description of the Southern croppie. From the above it will be seen that the compiler of the fishes of the "Sportsman's Gazetteer" could truthfully say "only confusion is increased," and no doubt the reader is by this time much of the same opinion, and is ready to whistle with the vim and defiance of a ribbon-man on St. Patrick's Day, "Croppies, lie down!"

Cynthiana, Ky., March 11, 1885. James A. Henshall.

SNELLING HOOKS.

I HEAR it suggested that tapered hooks are not "marked" because at and near the end of shank they are too slender, but the marking could begin a little distance from the end and be made effective, and I trust some bright manufacturer will at once begin the improvement; no doubt his sales will be increased.

Mr. C. shows he has experience and skill when he states that the wax or cement is an important factor to a well-tied hook. I am ignorant of the wax used by fly-tyers; but, Mr. C., would not your formula be improved by substituting linseed oil in place of tallow? Linseed oil possesses the drying element; tallow is of a different nature. I also ask Mr. L. the same question. I have used the receipts given by these gentlemen, and think they have merit. Did either of these practical anglers ever experiment with a liquid cement by adding to best oil copal varnish, gum mastic and caoutchouc, and if they desired a wax or cement of greater consistency, put in sufficient quantity of best resin and beeswax? If they have, I think they did not find it washed off "easily by using soap and warm water." And this is why they will find it valuable when they fish in the lime-impregnated waters of Maine. But I am often told there is another trouble in this matter as yet only hinted at. It is said that with the cements in use, by having the tackle in the water an hour or so and then out of the water for about the same length of time, if put into the water again, and even after ten or fifteen minutes a fish gives a tug at the bait, away goes the fish and the hook with it. The moisture and the drying having caused contraction and expansion of the winding thread, the hook was no longer held fast. I have experienced this difficulty many times when the hooks were snelled by myself or bought from best tackle dealers. It is under such circumstances I have lost confidence in some of the formulas recently stated.

Biting, crimping or fluting gut no doubt is a great adjunct. It partly compensates for shrinking and swelling of thread and gut. I perform the process with a little instrument which flutes and flattens at one pressure of the hand. I take stock in the flattening, as it forms a greater surface of contact for the lashing thread and the hook. To reinforce adds, no doubt, much to the strength.

Allow me to suggest that if the gut length will not permit forming the loop as you describe, one can lay a short piece of gut on the long one, then tie the knot and you have the desired result; but when completed does it look as neat to the eye as if not reinforced? To singe the end of a gut snell forms a knob that is hard to draw under well-waxed windings. It is an old method but a strong one. I apprehend the difficulty with gimp is that the metal covering slips from the silk "body." If we take off the covering for one-half the length of the gimp that is to come in contact with the hook, and thoroughly saturate the uncovered silk with a cement, or wax, and then wind it upon the hook as has been directed, Mr. Pickerel will not dislodge it when he makes his wild rushes. White lead is one of the best cements known to chemists. Has any one tested it for the purpose under consideration? Lead is an element in some of our best varnishes. Caoutchouc is considered a better ingredient in a cement than gutta percha. Gum mastic has properties very peculiar to dissolve.

Years ago an old angler gave me the recipe for the varnish given by "Amateur." This sportsman called it the angler's instantaneous cement. It is very fine when filtered. I have used it, and think better of it than of shellac alone. And this reminds me. "Amateur" speaks of a knot, a diagram of which with many others can be found on a page in Dr. Henshall's book concerning black bass. I think said knot a trusty one, and the aforesaid page a very valuable one. I have had great comfort in studying it. Perhaps I am fond of "knotty questions." My practice leads me to fully indorse what "N." says of heating the hook. The blacking on it is very slippery, and many cements will not thoroughly adhere to it. "N.'s" method of holding the hook while heating is new to me. I think favorably of it and shall test it.

I criticise none of the methods or processes given. I only state my experience with them. I do not seek to instruct my superiors. I have sought to make suggestions as food for thought and experiment, and when you have wrought out new discoveries and a cement for the period, please give an account of your achievements through the columns of our co-worker the Forest and Stream. What would we anglers and sportsmen do without it? J. W. T.

New Britain, Conn.

THE MODEL FISHING ROD AND LINE.

IN a very excellent article, entitled "Fly-Fishing," in *Harper's Magazine* for April, our well-known correspondent, Mr. Henry P. Wells, gives some directions for casting the fly, and discourses in this way on the model fishing rod:

"The rod should be of the best, whatever material it may be made from. Lancewood, greenheart, bethabara, and many other woods are capable of being converted into an excellent fly-rod, provided the material is good of its kind, and it has been fashioned by the hands of a skilled workman. Rent and glued—or, as it is now more generally termed, split—bamboo unquestionably stands first as a material in the general estimation of experts in this country. In the fly-casting tournaments held year after year at Central Park in New York, it has gradually supplanted all other kinds of rods, and certainly in it strength, lightness, and that steely spring which is the acme of perfection in a fly-rod are found to a degree unequaled in any other known material.

"These rods are made by gluing six strips of Calcutta bamboo together in such a way that a cross section of the completed rod forms a hexagon. The rind of the bamboo is placed on the outside, and is untouched in the manufacture, since therein lie all the virtues that the material possesses.

"The variety of bamboo used for this purpose may be distinguished by the charred marks on its yellow cuticle, without which none seems to be imported into this country. No one in the least familiar with this bamboo can have failed to remark these burns, always present, yet never alike. To the split-bamboo rodmaker they are a perfect nuisance, forcing him to reject altogether many a cane otherwise excellent. So every one, surprised that so much labor should be expended merely, as far as is apparent, to injure the cane, naturally asks why this is done.

"Reasons are as plenty as blackberries, and so, of course, there is no lack in this case. Here are a few samples, assigned by those who said they knew all about it.

"1. It is a religious ceremony.

"2. They are roasted over a large gridiron to kill the larvæ of boring insects.

"3. It is merely for purpose of ornament.

"4. The bamboos grow in jungles matted together with all manner of climbing and tenacious vines; before they can be extricated the jungle must be fired to destroy these creepers.

"5. That the canes are roasted over a gridiron to burn off the leaves and creepers attached to them, as the most simple and expeditious way to get rid of them.

"6. That it is done with a hot iron, each cane being treated separately, merely to straighten them.

"I have heard others, but these are quite sufficient for a liberal exercise of personal predilection, my own being toward a combination of the reasons numbered 4 and 6.

"Different specimens of every variety of rod material vary greatly in excellence, one sample being good and another utterly worthless. Therein the integrity of the rodmaker, and regard for his reputation, are the only safeguards to the purchaser. Therefore it is cheaper in the end to buy from the maker himself or his recognized agent. If they have a reputation they will do their best to maintain it. Anonymous rods are like anonymous letters; they may be unexceptionable, but usually they are not. Above all things remember there are no bargins in fishing tackle. If an article is cheap in price, it is almost invariably cheap in quality as well.

"Comfort in use, efficiency in casting the fly, and power to control and land the fish after it is fastened, all will admit, are the desiderata in a fly-rod; strength to withstand the incidental strain, and elasticity to recover on the removal of the deflection caused thereby, being in all cases presumed.

"It needs no physicist to assure us that with two rods of equal weight, and respectively ten and twelve feet long, the former will occasion far less fatigue than the latter, since while the shorter arm of the lever is equal in both cases, the longer arm, which is to do the work, is greater in the latter. Nay, further, even though the shorter rod exceed in actual weight, still it may retain its superiority in this respect.

"Killing power, and the ability to control the movements of the fish, depend not on the length, but on the power or stiffness of the rod; and this, other things being equal, must be greater in a ten than in a twelve foot rood, since the leverage against the controlling power is less."

Of lines Mr. Wells says: "The American 'enameled waterproofed lines' alone are used in this country for fly-fishing. If Phariseeism is ever pardonable it is when a good line of this kind is compared with the best produced in any other country. If not decrepit through old age—and their longevity is far in excess of any other lines—in strength they leave nothing to be desired. Smooth as ivory on the surface, they render through the rings with the minimum of friction. Their weight is sufficient to cast nicely without being excessive, and at the same time this is always uniform, while their flexibility is just as it should be—neither so great as to foul the tip, nor so stiff as to cause inconvenience. In short, they are as nearly perfect as the work of man's hands is permitted to be.

"They are braided from the best Italian boiled silk, and water-proofed by a process the secret of which is jealously guarded. Their first cost is high, but in the end they are far cheaper than any other. The temptation to economize is great in the purchase of this essential, since lines in all respects equal, to the eye, may be bought at half price. But these are made from a thread spun from a "fluff" produced by disintegrating old silk stockings, unbrella covers, and such trash, in a machine, and are utterly worthless for any purpose except to rob the unwary of their money. Therefore, buy your lines of a reputable house. Take the best they have, and pay their price, and you will have no reason to regret it."

MIDWINTER IN THE ADIRONDACKS.

THE longer I live in the woods, the more I regret the waste and destruction I see, and I do think there is a growing sentiment in favor of protection among all classes except the lumbermen. You say you wish there was never to be another tree cut, only as wood for the inhabitants. There need never be a tree cut for that, enough blows over every winter to furnish ten cords where one is used, but in this, like every other thing of the kind, the poorer classes must have the best or none, where it costs nothing. They think because a tree blows over it is good for nothing, so go for the very best and most valuable one standing, in many cases burning a black cherry, which if cut into lumber would be worth from $100 to $300, to keep fire for one week. The black cherry is the most valuable of any wood we have here, that will make good firewood. I have an old Englishman at work for me and it nearly drives him crazy to see so much wood wasting. He is cutting up all the down trees that he can find that are sound enough for wood, some of them it is not very profitable for me to have him spend his time on, only that they are where I wish to clear out such stuff to let the sun and air in to dry up the land, so I let him work. He fills up my woodbox with spruce and pine chunks, full of knots and pitch, and I burn the spruce in the big stove, and the pine in the fireplace.

Up to Jan. 17 we had a very mild winter, but since then we have had a tough one. To-day has been one of the worst I ever knew, 12° below zero all day, and the Methodist minister from Duane came in to dinner. We filled him up and sent him out warm at least. We have had many callers during the winter, so we have not seemed so much alone as other winters.

I have had several letters from Mr. Sherman since he was here. I think his trip to the north side of the Adirondacks has done some good. I think he has a better opinion of the country and people than he had. I think his selection of a site for the hatching works the very best that could have been made. I am more than satisfied. If I get able to do anything I will have built a small hatching house, and then can help the State if the Commissioners wish any help. My experience with wild fish in wild waters may be worth something to them; if it is it shall be freely given. I am very anxious to see the thing well under way. They have every chance to make a success of the establishment, and ought to do so.

Our winter has been a good one for the fish. I have not known of any fishing through the ice. A. R. Fuller.

Meacham Lake, Franklin Co., N. Y., Jan. 28.

Varnish for Rods.—Troy, N. Y.—*Editor Forest and Stream:* I trust that "M." will not get confused in his endeavor to harmonize and to put to a practical demonstration all of the suggestions that have been so freely offered by various correspondents. Mr. Wells very kindly dwells upon the application of the varnish at greater length than upon any description of varnish to be used, and his remarks come very opportune, striking as he does the key note of the whole trouble with the majority of amateurs. When he says, "But I apprehend the amateur usually encounters more difficulty from the manner in which he applies his varnish than from the inferiority of the varnish itself." It is absolutely necessary that the varnish be applied correctly, still it is quite as essential that good material be used to work with. Poor varnish will not, with the best application, make good and enduring work. Most rodmakers can supply good varnish. I have used various kinds, and that procured from Thomas A. Chubb, I must say, gives me the best satisfaction. It soon hardens, distributing itself very smoothly and uniformly over the surface, and will stand a great deal of rough usage. I speak from my own experience, and with eight or ten fine rods, most of them split bamboo, considerable varnish is required every season to keep them in fighting trim.—H. P. S.

Bass in Black Pond.—Swedesboro, N. J.—"Homo" inquires what I know about the bass in Black Pond. About three years ago a man living adjoining, set a net and caught a fish weighing 6¼ pounds. I did not learn of it until several days after, and started at once to interview him; he showed me the dried head. I concluded it was a black bass and had been a large one. We have no other authenticated instance of a bass being caught here. Within the last fifteen years many small perch have been put in the pond and although a great deal of fishing is done by girls and boys no perch are caught. Small sunfish, a few ill-conditioned, small catfish are about all they ever get. Many years ago this pond was famous for the large perch caught. As they do not appear now, and as the bass did not thrive, and as the pond has a bad smell in the summer, we have concluded that the conditions are not favorable for fish, and have ceased making any effort to stock it. Can any one give information where rock bass can be obtained for stocking purposes and at what cost? We have good waters around us, and have about concluded that to have fishing we shall have to make some effort.—C. D. L.

Tackle for Bass.—In answer to "W. G.'s" question about light bamboo rods, I would say I have used a 5½-ounce rod for black bass with much satisfaction this summer. I was not fortunate enough to hook any larger than one pound, but took two at once. I would not use any heavier rod for anything under two pounds, and would like a trial with a three-pounder, I would risk the rod. I used the smallest braided silk line and No. 5 Aberdeen hooks. I make my own rods, and was willing to break one to find out how much it would stand. It is well to play the fish in a delicate manner, however.—C. L. H.

Pennsylvania.—Trout fishermen who reside in the interior of Pennsylvania with whom I have talked, tell me they expect to have a late opening of the season, as far as actual work is concerned, as there is more snow on the mountains at this writing than for many years. All this has to melt and run off before they will think of putting their rods together.—Homo.

The Kennel.

FIXTURES.

BENCH SHOWS.

March 18, 19 and 20, 1885.—Second Annual Show of the New Haven Kennel Club. E. S. Porter, Secretary, New Haven, Conn.

April 7 to 10, 1885.—First Annual Dog Show N. E. Kennel Club, Music Hall, Boston. J. A. Nickerson, Secretary, 159A Tremont street.

April 21, 22 and 23.—Annual Dog Show of the St. Louis Gun Club. W. A. Albright, Secretary, St. Louis, Mo.

April 28, 29, 30 and May 1.—Ninth Annual Dog Show of the Westminster Kennel Club at Madison Square Garden. Entries close April 14. James Mortimer, Superintendent, 48 Broad street, New York.

May 5, 6, 7 and 8, 1885.—Second Annual Dog Show of the Cincinnati Sportsman's Club, Cincinnati, O. W. A. Coster, Superintendent.

May 13, 14 and 15.—Third Annual Dog Show of the Toronto Dog Show Association. W. S. Jackson, Secretary, Toronto, Ont.

June 2, 3, 4 and 5.—First Annual Dog Show of the Illinois Kennel Club. John H. Naylor, Secretary, 3,182 Archer avenue, Chicago, Ill.

FIELD TRIALS.

November.—Seventh Annual Field Trials of the Eastern Field Trials Club, High Point, N. C. Entries for Derby close May 1. W. A. Coster, Secretary, Flatbush, L. I.

Dec. 7.—Seventh Annual Field Trials of the National Field Trials Club, Grand Junction, Tenn. Entries for Derby close April 1. B. M. Stephenson, La Grange, Tenn., Secretary.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **2200.**

CROSS-AS-THUNDER.

MY WIFE had always wanted to keep a dog, but I opposed it. This had been a bone of contention between us for many years. I had an insane dread of hydrophobia, and firmly believed that, like distemper, every dog had it some time or other.

One night about two years ago my house was robbed. Mrs. Logic then argued more strongly than ever in favor of a dog, but I compromised the matter by putting in an electric burglar alarm that rang a bell and turned up the gas whenever the shutters or doors were tampered with at night. After that patent alarm was in, life became not worth living. On an average of twice a week the confounded thing got out of order, and in the middle of the night the bell would start to ringing and I would go prowling around the house armed with a revolver only to find everything all right and no signs of burglars. I wanted to have it taken out, but my wife would not listen to any such proposition unless I promised to substitute a dog. So, at last, wearied with the loss of sleep, I made up my mind that even hydrophobia would be a pleasanter and speedier death than mental exhaustion, and I consented to substitute a canine for an electric alarm.

"Now, Paul," said Mrs. Logic, the morning after I had agreed with her upon the dog question, "don't you think of such a thing as coming home without a dog—a real cross creature that will bite off a thief's leg." So during the day I went to a store that I had seen advertised as a place where dogs were sold.

"I want a dog," explained I to the proprietor, "that combines tremendous power of jaws with a moderate appetite. My family is small and the amount of table scraps limited."

The man went down a trap door into the cellar and soon reappeared leading a canine with a very battered appearance. He was white with a brindle patch over his left eye, would weigh forty pounds and was of the kind commonly known as bull-terrier, but his face was much shorter than the show type of that breed.

"There, sor," said the man, "is a dog as will fill yer bill exactly. He won't eat more nor a canary burd."

"Is he cross?" I inquired.

By the way of reply the fellow cried "Sketch 'im!" and the brute made a rush at me. Had the chain broken I should have been badly mutilated.

"Softly, my good man, softly," said I, very much frightened "I need no further proof than your single word. What is his name?"

"Cross-as-Thunder is wat he is called, but yer can call him Beauty or anything yer like; a dog soon larns to know a new name."

"Why is he so cut up?" I queried. "He looks as if he had been run through a sausage machine, but was so tough that the knives only scarred him."

"Well, yer see, sor," replyed the man, "this 'ere dog was onct owned by a fellar wot fights dogs for a livin', but Cross-as-Thunder got to lickin' all the terriers as was turned up, so he had to part with 'im, as no dog can be found to pit agin 'im."

Here, I thought, is a golden opportunity to disgust my wife forever with dogs, so I bought Cross-as-Thunder and had him sent to my office, first getting a muzzle to avoid the possibility of an unpleasant accident.

That night when I went home to supper, leading the dog, my wife greeted me with:

"So, Paul, you have actually kept your promise, and what a delightfully ugly creature you have bought. What massive strength of jaws. Woe to the burglar who falls into his clutches. But see, the poor thing has been greatly abused, for he is covered with cruel scars."

I did not think it politic to mention the real cause of the scars.

"I was reading only this morning," added my wife, after further inspection of Cross-as-Thunder, "in a fashion paper, that the uglier a dog was the more fashionable he is, and I am sure that when I appear on the street with this one, Mrs. Robinson won't put on quite so many airs about her pug. I am certain I shall learn to like him very much."

After supper my wife suggested that it would be the proper thing to feed "Crossy," as she had already nicknamed him. Here was a quandary. The dog could not eat with his muzzle on, and I was afraid that with it off he might be inclined to make a meal off of his new owners.

Mrs. L. patted him and talked baby talk to him until she actually got him to wagging what little tail he had remaining from his numerous battles in the pit.

Finally she took off his muzzle and he behaved very nicely, eating his supper and curling himself up in my easy chair out of which I was afraid to drive him.

"Now Julia," said my wife to our maid, "bring in Malty; he and "Crossy" might as well get acquainted at once."

Malty was a large Maltese cat, a great pet of my wife. Toward this cat I had an undying hatred from the fact that he had several times killed some fancy poultry I was breeding in the back yard.

When the cat was brought in, Cross-as-Thunder needed no formal introduction. He jumped from the chair, and in the twinkling of an eye his enormous jaws had crushed the life out of poor pussy's body.

Of course my wife cried and put all the blame on my devoted head for bringing such a horrid brute into our peaceful home, and insisted upon Cross-as-Thunder being turned into the street at once.

But I had taken a liking to the dog for ridding me of my poultry's enemy and I took his part, and after considerable coaxing prevailed on my wife to let him remain.

A week or so after I had bought the dog a rough-looking man in a red shirt called at my office, and inquired:

"Be you the gentleman as owns the fighting dog Cross-as-Thunder?"

"I am. Why?"

"Well, I knows a greeny as has a dog he will turn up agin yours. He'll bet fifty bulls on the fight, and if you'll give me a fiver I'll bring him to you."

I explained that the dog's fighting days were over, and the fellow left, shaking his head mournfully and muttering, "Such a soft snap. What fools some people are."

The owner of the dog shop evidently made no secret of my name and address. So many of the sporting fraternity called on me with similar offers and requests for the use of Cross-as-Thunder for stud purposes, that at last I had to give my clerk instructions to tell all persons who looked as if they belonged to the "fancy" that I was out of town.

As time went by I grew very much attached to Cross-as-Thunder, and succeeded in training him so well that I could take him on the street unmuzzled and he would bother neither man nor beast.

One Sunday as I was taking a walk, accompanied by my dog as usual, a man with a Newfoundland came suddenly around the corner.

The two dogs sniffed around each other as dogs will. The owner of the Newfoundland who had not noticed me, said to his dog, "Sick him, Bruno!"

Bruno obeyed his master's command, but the bull-terrier grabbed him by the ear and held on like grim death. The man rushed up with cane uplifted, but I reached the spot at the same time, and catching his arm, cried:

"Don't strike that dog. You started the fight, and I will see fair play. May the best dog win."

I spoke as if I meant business, and as I was the larger the man dropped his cane and waited.

Cross-as-Thunder did not keep us long in suspense. The ear to which his jaws were glued came off, and the Newfoundland ran bleeding and whining to his master.

I called my dog to me, although he seemed hungry for the other ear, and as I walked away said: "My friend, the next time you 'sick' your dog on another, be sure that dog is not a bull-terrier."

Shortly afterward I discovered that this man was a new neighbor, and in the course of time we became acquainted, mutually apologized on the dog fracas, and were quite intimate.

A year afterward we went on a gunning trip together, and one night after a successful day's shoot both of us drank more wine than was good for us.

"Logic," said my neighbor, "I have bought a new dog."

"It is about time," I answered, "you got rid of that one-eared Newfoundland."

"This one is a bull-terrier," said he, and can whip any dog that stands on four legs."

"Pshaw!" retorted I, "always except my dog Crossy."

"I will except none."

"For how much money will you back your opinion?"

"For all you choose."

"All right, say for $100."

So we each made note of the bet, and nothing more was said about it during the remainder of our trip. After returning home I thought how scandalous it was for two respectable middle-aged gentlemen to sink to the level of dog fighters. I called on my neighbor and explained my views to him.

"Mr. Logic," said he, after hearing all I had to say, "I esteem and respect you greatly, but I hate your dog. He mutilated poor Bruno for life, and I intend to be revenged on him. Promise that you will kill the ugly brute, and I will not only call the bet 'off,' but I will buy you another and a handsomer dog."

"Never!" cried I, getting into a passion. "I would not kill Cross-as-Thunder for a dozen Newfoundlands. As for your new bull-terrier, he will have the biggest contract a dog ever undertook when he tackles Crossy."

"I'll bet you $500 instead of $100 that he will whip him," shouted my neighbor, also getting angry.

"Agreed!" I yelled, now greatly excited.

So it was arranged that the fight should come off four weeks from time.

Here I had gone and actually bet four hundred dollars in addition to my former wager. What would my wife say if she knew it?

However, if Cross-as-Thunder must fight, he should have proper training, so I visited the dog fancier from whom I had bought him, and acted under his advice.

The first day I gave the dog a dose of medicine consisting of three grains of tartar emetic and four grains of calomel. The next day I followed with a dose of castor oil. I kept him in a warm and dry place while under this treatment to prevent his taking cold. This prescription was supposed to clean him out, which it certainly did. Then I got a sheep's head, split it open, and boiled brains and all thoroughly. In the liquor thus obtained I stirred bran until I had a thick soup. This was fed to the dog for four days. He had now lost all his fat. After that I put him on a diet of lean beef and rye bread boiled together, which was fed twice a day, giving him all he would eat. This was kept up until four days before the fight.

To exercise him I got up every morning at daybreak, and putting a cat in a bag attached by a rope to a pole, I would swing it around my head and get him to jump at it. This was rather hard on the cat but as I never allowed him to catch hold she suffered nothing but mental torture. After a half hour of such exercise I carefully rubbed the dog down with a coarse towel and put on his muzzle which was kept on the rest of the day to prevent him from eating anything but his regular diet. After returning from business in the afternoon I took him out for a long walk, getting him to run as much as possible. On reaching home I rubbed him down again as I did in the morning.

My wife began to wonder what all these mysterious proceedings were about. I told her I was training Crossy for a running match, and the credulous woman believed me.

Four days before the fight I mixed two raw eggs with a pound of lean raw beef chopped fine, and fed to him twice a day.

From forty-two pounds he was now reduced to thirty, having lost twelve pounds by the training he had received. His condition was excellent, his muscles being like iron.

I had engaged his former owner to handle Crossy, and my neighbor had hired another member of the fancy to do the same for his dog.

The fight came off at a tavern on the outskirts of the city (Philadelphia) and took place at 12 o'clock at night in a private room.

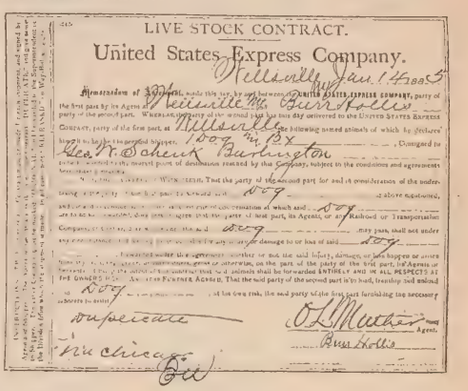
That night as I drove to the place in a cab I would have been willing to lose my bet not to have witnessed the fight. I felt positive it would sicken me when I saw the two brutes chew each other up.

When the two dogs were put to the scratch my handler, pointing to the other animal, whispered to me:

"You see how the hair on t' other dog's back is riz up? I never seen a terrier yet do that as wasn't a cur!"

This seemed curious to me, as the hair bristling up gave him the appearance of being terribly savage, but the man's prophesy came true, for in the fifth round my neighbor's dog went yelping from the ring and refused to come to time. Old Cross-as-Thunder had scarcely a scratch.

It may seem strange, but after the fight had fairly begun, I lost all sense of the depravity of the thing and grew greatly excited, and felt a sort of demoniac joy every time my dog tore a piece of flesh from his opponent. After all civilization is but a thin wash that rubs off when we are brought face to face to a fight in which only pluck and endurance can win. There is much that is brutish in human nature yet.



Shortly after the fight Cross-as-Thunder was run over by the cars and killed. In looking around for another dog, I became acquainted with Mr. Watson, and through him received a bull-terrier that, though he may not be the equal of old Cross-as-Thunder in the pit, I hope to see whip any bull-terrier in the open class at the New York bench show in May next.

PAUL LOGIC.

DOGS BY EXPRESS.

Editor Forest and Stream:

I wish to call your attention and the attention of the readers of your valuable paper to the injustice done by railroads and express companies both to the buyers and shippors of dogs. I will speak of but one of the many express companies simply from my own personal knowledge. As I live at a point on the New York, Lake Erie & Western Railroad, where there is but one express company represented, I am obliged to receive and ship all goods over the United States Express route via the above named railroad. It has always been a rule with me to go to the express company's office after boxing as lightly as possible (with a view to safety and comfort), and trying to make rates as low as possible, as I know it to be exceedingly annoying for one to pay even a fair price for an animal, and when it arrives, go through the same operation by paying to the express company for carriage as much as the animal cost originally. I propose to explain the *modus operandi* of the United States Express Company. Whether other companies have adopted the same rule I cannot say. In the first place this company charges $1.40 per 100 pounds from New York to this station, distance 358 miles, with no change or transfer, for merchandise. For a dog boxed securely with no food or water, and at the owner's risk, it is double that amount, $2.80, per 100 pounds. You must also sign a release, which reads as follows:

LIVE STOCK CONTRACT.

United States Express Company.

Wellsville, Jan. 14 1885

Burr Hollis

Now the whole matter is summed up here in this way: The U. S. Ex. Co. compels you to prepay or guarantee charges on a dog in a box, with no food or care, together with no responsibility on consideration of the said U. S. Ex. Co.'s reducing the regular freight rates by charging you double the amount charged for carrying any merchandise for which they assume the responsibility of safe delivery. Certainly, consistency thou art a jewel. When I first saw one of the above documents I was led to believe that I was getting a reduction of rates by signing the release, but as I was shipping a valuable dog, and it being small I was willing to pay more and be sure of good treatment, but when I communicated with the company's agent, he told me it was not optional at all with me but I must sign the release or he could not receive the dog for shipment, as his orders were imperative not to receive a dog under any consideration excepting as stated in the above named release, which I was obliged to sign or not ship the dog.

I should like very much to hear from other shippers, and to know if they meet with the same obstructions to shipping their animals in safety. There should be some remedy certainly to this great evil. In the last twenty years doing business I find that two-thirds of my customers ask the question of cost of delivery and seem to dread it much more than the price paid for an animal; and in all cases shippers should take great pains to box very light and secure, and in the case of large dogs to always supply a good collar and chain on the dog and drive a staple in bottom of box at one end and fasten securely to this, then if a dog escapes from the box he can be secured before escaping from the car or freight room. I inclose you a copy of the live stock contract issued by the U. S. Express Company for your own inspection. I should like to see copies of this issue reach some of the superintendents of the different express companies, and hear their views of the matter.

BURR HOLLIS.

WELLSVILLE, N. Y.

THE NEW ORLEANS DOG SHOW.

[FROM A SPECIAL CORRESPONDENT.]

THE dog show given under the auspices of the World's Cotton Centennial and Industrial Exposition, opened on Thursday, March 5, with one hundred and seventy-five entries in the various classes, and closed Monday, March 9. The weather during the entire time was all that could be wished for, and the attendance during the entire five days was unprecedented. To the able superintendent, Mr. L. F. Whitman, belongs the entire credit for its success. The selection of judges met with universal approval among the exhibitors. Major J. M. Taylor, of Lexington, Ky., was judge of the setter and pointer classes. Col. F. G. Skinner, Atlanta, Ga., judged the foxhounds, hard-haired Scotch and Dandie Dinmont terriers, while Mr. John H. Naylor, of Chicago, Ill., judged the mastiff, St. Bernard, Newfoundland, terrier, and all non-sporting classes.

In the large pointer champion classes there were no entries. In the open dog class there were seven entries, of which one was absent, and one was under weight and transferred to the small class. They were rather a sorry lot and the judge very properly withheld first prize. Second went to Don, who also took special for best pointer dog. The class for bitches under 50 pounds had no entries, and champion classes for small pointers had one entry each, Bravo and Daisy Bravo, both absent. Pointer dogs under 50 pounds had seven entries, of which six were present. None of them were considered worthy of first and second went to Duke, a fairly good looking animal. The bitch class was of the same character and first was also withheld. There were but six entries in the puppy class and contained as poor a display of the kind as one could find. Both first and second prize was withheld as there was not a dog in the lot that can ever hope to come to the front on the bench. Armstrong's Dot was given a vhc. and the special for best pointer puppy, the only award given in the class. This finished the pointer classes and certainly it would puzzle one to congregate a similar lot of worthless specimens of this famous breed of dogs. Of the twenty-six entries seven were absent. Nineteen competed and none of the lot were found worthy of a first.

In the English setter classes there were thirty-nine entries, of which number thirty-two were present. The majority of those shown were in field trial form, as at this season of the year their owners, at least such of them as reside in the South, avail themselves of every opportunity that offers to give their favorite animals a "spin" on quail, snipe, etc. Dick Laverack, winner of the extra champion prize, is now the property of Mr. Samuel McQuen, of this city. He was in magnificent

feather and won many encomiums from admiring visitors to his quarters. Paul Gladstone, who won champion prize, was in splendid condition, but shows the effect of field work as far as his coat is concerned. He is the peer of any dog in America either on the bench or in the field. He more nearly resembles Gath than any dog we have yet seen. Juno, a winner of first in the open class for bitches, is a sister to Bryson's champion Sue. She is one of the handsomest bitches we ever saw, and her head seems the perfection of symmetry. She has not the litheness of limb and muscular development of her famous sister. The race for second soon narrowed down to Bo-Peep and Countess House, sisters, though not of the same litter. Countess was in rather poor condition, having recently recovered from a sick spell. Bo-Peep was thought by many to be equal to Juno. She has a magnificent chest, and in her marking very much resembled Gath. She will have a dangerous competitor in her sister, whom she has just defeated, should they meet next year. In the puppy class Sweetheart won first and special, Paragon second and Daisy c.

In champion black and tan setters, dogs or bitches, the only entry was absent. In the open class first prize was withheld, as the dogs were not up to standard. One was absent, which left only two to compete, Jeff winning second and Dash vhc. There were no entries in the bitch class. In the puppy class there were only three entries and one was absent. First was awarded to El Madhi and second was withheld for want of merit.

Of the twenty entries in the different classes for Irish setters there were seventeen present, and they were by far the best display of any breed on exhibition. Megora, the winner of first and special in her class, was in perfect form, as was also champion Brush, who was closely pushed for first by Barry Clare. There were no entries in the puppy class.

In the Irish water spaniel class there were but three entries, Count Bendigo in the champion class and King Slash and Reno in the open class. Champion Count Bendigo is too well known to need further comment. Mrs. A. E. Rendle's Churly Black, ten years old, pedigree unknown, was the only entry in field spaniels and received second. His age and condition prevented his receiving a first.

There was but one entry in the cocker spaniel class, winning first and two specials. There were no entries in the puppy class. There was only one entry in the foxhound class, and he was absent. The beagle classes had only one entry, also absent. Only two were present in the dachshund class; both were good specimens. Three dogs, two bitches and one puppy comprised the fox-terrier classes, all except one receiving a prize. Of the sixteen collies entered only six were present. Dundee, winner in the puppy class, is a splendid specimen, and to our mind he is the best ever shown here. The entries in the bulldog class were an indifferent lot; the fact that they were transferred bodily to the bull-terrier class is perhaps sufficient comment. There were two very good Scotch terriers shown, although only one was for competition. Black and tan terriers had but one representative, an ordinary specimen. There was a very good Dandie Dinmont present, and two Skyes. Eleven of the thirteen entries in the pug classes were present. The Yorkshire terriers were transferred to the toy terrier and miscellaneous classes, except one, which was given a c. There were five toy terriers shown, Tipsy, a very good black and tan, winning first. The classes for King Charles, Blenheim and Japanese spaniels had no entries. In Italian greyhounds first was won by Miss Nellie Austin's imported Nellie, the only entry. The class for poodles had no entries. In the miscellaneous class there were seven entries, but as none of them were entitled to a prize, the prizes were withheld.

On Sunday afternoon the prize dogs were paraded on the grounds before an immense audience. On Monday, before adjournment, a meeting was held by all the exhibitors present. Mr. P. H. Bryson, of Memphis, Tenn., was elected President; Hon. James M. Thompson, of Covington, Vice-President, and Henry Fontaine, Secretary, at which the following resolutions were passed:

Whereas, It has come to the notice of the exhibitors at this show that unjust comment has been made on first, the efforts of Superintendent L. F. Whitman to make this bench show a success, and second, that from the same source scurrilous articles tending to bring into ridicule the judgment and standing of one of the judges of this show;

Resolved, That we, the undersigned exhibitors, deem it our duty to these gentleman to emphatically refute, by this means, all such comments, and give it as the sense of each and all of us, that the author of said articles simply desires notoriety in whatsoever shape it may come, for himself and the paper he represents.

Resolved, That the thanks of each and every one of us are due, and are hereby tendered to Superintendent Whitman for the able manner in which he has managed to bring "order out of chaos," and that it is due to his exertions and those of his able assistants that the present exhibition has given such satisfaction to all parties interested, and afforded such additional attraction to this already great exhibition.

Resolved, That the thanks of all of us are hereby tendered to Judges J. M. Taylor, F. G. Skinner and John H. Naylor, for the able and impartial manner in which their decisions have been rendered.

Signed by P. H. Bryson and thirty-nine others.

Following is a full list of

AWARDS.

MASTIFFS.—*Dogs:* 1st, Foster Olroyd's Duke, 9mos. (Duke—Duchess); 2d, withheld. *Bitches:* 1st, withheld; 2d, George Wilson's Duchess II., 14mos. (Duke—Duchess).

ST. BERNARDS.—ROUGH-COATED—*Dogs;* 1st, E. M. Hall's Tell, 18mos. (Chancellor—Portia). *Bitches:* Prizes withheld. Com., Theo. Schwartz, Jr.'s Bella, 7mos. (Barry—Waldine).—SMOOTH-COATED—*Bitches:* 1st, withheld; 2d, H. J. Clapham's Princess Ida, 3mos. (Don—Alma).

NEWFOUNDLANDS.—1st, J. B. Judlin's Miro, 5yrs. (pedigree unknown).

GREYHOUNDS.—*Dogs:* 1st, withheld; 2d, Jos. Forster's Swiss, white and black, 5yrs. *Bitches:* 1st, Jos. Forster's Lady, white and black, 4½yrs.

POINTERS.—OVER 55LBS.—*Dogs:* 1st, withheld; 2d, Theo. Schwartz's Don, 3yrs. (Dodge—Doxy).—UNDER 55LBS.—1st, withheld; 2d, L. Bolin's Duke, white and liver, 3yrs. (Faust—Diana). *Bitches:* 1st, withheld; 2d, Theo. Schwartz, Jr.'s Fancy, 2yrs. (Faust—Bess). Com., F. Foy's Dot, liver and white, 22mos. (Bow— ——). *Puppies:* 1st and 2d, withheld. Very high com., C. T. Armstrong's Dot, liver and white, 11mos. (King Bow—Olivette).

ENGLISH SETTERS.—EXTRA CHAMPION—*Dogs:* 1st, Samuel S. McCuen's Dick Laverack (A.K.R. 2051).—CHAMPION—*Dogs:* 1st, W. B. Gates's Paul Gladstone, black, white and tan, 2¾yrs. (Gladstone—Lavalette). *Bitches:* 1st, J. M. Avent's Bessie A., lemon and white, 3½yrs. (Dashing Lion—Armida).—OPEN—*Dogs:* 1st, J. A. McDonough's Count Glickstone, black and white, 3yrs. (Royal Blue—Modjeska); 2d, W. B. Mallory's Dave B., white, black and tan, 2½yrs. (Coleman's London—Belle of Hatchie). Very high com., E. H. Smart's Ponce de Leon, black and white, 2yrs. (Rollo—Gretchen) and C. T. Armstrong's Babe, black and tan, 3yrs. (Belton—Daisy Dean). High com., W. H. Coleman's London, blue belton, 4yrs. (Gladstone—Clip). Com., Chas. E. Wallin's Rex Gladstone, black, white and tan, 19mos. (Royal Gladstone—Mollie Druid) and John K. Renaud's Boyd, black and white, 2½yrs. (Brussels—Iowa Queen). *Bitches:* 1st, J. M. Avent's Juno A., black and white, 3yrs. (Druid—Ruby); 2d, Wm. Bowles, Jr.'s Bo-Peep, black, white and tan, 2½yrs. (Gladstone—Juno). Very high com. and reserve, Dallas Kenneis' Countess House, black, white and tan, 20mos. (Gladstone—Juno) and Minnie St. Clair's Chicago Pearl, white, black and tan, 2½yrs. (Lug Dhu—Ruby). High com., Hoz. J. M. Thompson's Lena, white black and tan, 22mos. (Gladstone—Flossy). Com., Henry Fountain's Tangipahoa, black, white and tan, 22mos. (Rake—Daisy). *Puppies:* 1st, Minnie St. Clair's Sweetheart, white, black and tan, 9mos. (Pembroke—Menekaune); 2d, C. E. Wallin's Paragon, black, white and tan, 5mos. (Count Gladstone—Melissa). Com., G. R. Westfeldt's Daisy, black, white and tan, 5mos. (Count Gladstone—Maggie).

BLACK AND TAN SETTERS.—CHAMPION.—Only entry absent.—OPEN—*Dogs:* 1st, withheld; 2d, E. Landry's Jeff, 4yrs. (pedigree unknown). Very high com., A. C. Winn's Dash, 14mos. (Dash— ——). *Bitches:* No entries. *Puppies:* 1st, P. M. Kelly's El Mahdi, 8mos. (Chip—Belle).

IRISH SETTERS.—CHAMPION—*Dogs:* 1st, J. A. J. Sprague's Brush, 5½yrs. (Elcho—Rose). *Bitches:* C. H. Buford's Mamie (Shot—Juno). OPEN—*Dogs;* 1st, W. D. & B. L. Mallory's Duke, 3yrs. (Biz—Lady Clare); 2d, C. H. Buford's Bally Clare, 20mos. (Dougald—Floss II.). Very high com., F. Fay's Hamlet, 3yrs. (Hamlet—Mamie). Com., Wm. Dupee's Bandit, 19mos. (Ranger—Juno II.). *Bitches:* 1st, J. A. J. Sprague's Megora, 1½yrs. (Elcho—Rose); 2d, J. Leicht's Belle Lucille, 4½yrs. (Rory O'More—Norah O'More). High com., Crescent City Kennels' Queen, 14mos. (Don—Kesmid). Com., Wallace Wood's Kilkenny, 5yrs. (Rory O'More— ——). *Puppies:* No entries.

IRISH WATER SPANIELS.—(CHAMPION—1st, T. Donoghue's Count Bendigo, liver (Bob—Bridget).—OPEN—1st, C. B. Rodes's King Slash, 21mos. (Pat—Tide); 2d, Minnie St. Clair's Reno, 3mos. (King Slash—High Tide).

FIELD SPANIELS.—ANY COLOR—1st, withheld; 2d, Mr. A. E. Rendle's Charlie, black, 10yrs. (pedigree unknown).

COCKER SPANIELS.—1st, Minnie St. Clair's Bene Silk, black, 9mos. (Hornell Silk—Bene). *Puppies:* No entries.

FOXHOUNDS.—No award.

BEAGLES.—*Bitches:* 1st, J. M. Avent's Phantom, black, white and tan, 10mos. (Prince—Daisy).

DACHSHUNDE.—1st, Mohawk Kennel's Waldine, 3yrs. (Bergman—Gretchen); 2d, Theo. Schwartz Jr.'s Max, 2yrs. (Waldman—Fuchs).

FOX-TERRIERS.—*Dogs:* 1st, E. L. Israel's Blucher, 4yrs.; 2d, Theo. Schwartz Jr.'s Trim, 1yr. (Rast—Minna). *Bitches:* 1st, Theo. Schwartz Jr.'s Sin, 1yr. (Faust—Gretchen); 2d, E. S. Israel's Gyp, (imported). *Puppies:* 1st, N. T. Harris's Tiny, 3mos. (Jack—Lucy).

COLLIES.—CHAMPIONS—*Dogs:* Only entry absent. *Bitches:* No entry. OPEN—*Dogs:* 1st, R. F. Henry's Woodlark. Com., M. Beck Bay's Sheppy B., white, black and tan, 5yrs. (pedigree unknown). *Bitches:* 1st, A. L. Redden's Nellie, tawny, black and white, 3½yrs. (Laddie—Lassie); 2d, R. F. Henry's Lassie VII., black and tan, 6yrs. (Rover—Lassie). *Puppies:* 1st, R. F. Henry's Dundee, sable, 8mos. (Woodlark—Madge).

BULLDOGS.—Transferred to bull-terrier class.

BULL-TERRIERS.—1st, George Arnold's Napoleon Jack, white, 7yrs. (imported).

HARD-HAIRED SCOTCH TERRIERS.—1st, J. H Naylor's Rosie, brindle, 20mos. (Tommy Dodd—Rosa).

BLACK AND TAN TERRIERS.—OVER 7LBS.—1st, withheld; 2d, Geo. Gillivan's Daisy, 4yrs. (Billy—Nellie).

DANDIE DINMONT TERRIERS.—1st, Mrs. John H. Naylor's Pansy, 12mos. (Minstrel Boy—Linnet).

SKYE TERRIERS.—1st, R. P. LeSassier's Crel, 18mos. (imported); 2d, John Young's Topsy, 6mos.

PUGS.—CHAMPION—1st, Mohawk Kennels' Bo Peep, 2¾yrs. (Fritz—Minnie May).—OPEN—*Dogs:* 1st, Geo, Gillivan's Solid Coin, 3mos. (Jo—Bo-Peep). Very high com., Mrs. H. S. Kellogg's Snoozer, 7mos. (Young Toby—Titania). *Bitches:* 1st, Geo. Gillivan's Peggy, 9mos. (Joe—Flora); 2d, Mrs. J. M. McCuen's Frou Frou, 2½yrs. (George—May). Very high com., W. A. Fletcher's Bessie, 6mos. (Barney Aaron—Lady).

YORKSHIRE TERRIERS.—OVER 5LBS.—Prizes withheld. Com., Mrs. W. A. Sand's Posy, 6yrs. (pedigree unknown).—UNDER 5LBS.—Awards withheld.

Schwartz, Jr.'s Dude, blue and tan, 1½yrs. (Dandie—Tip), and Mohawk Kennels' Zulu Princess, blue and tan, 1yr. (Billy—Topsy).

ITALIAN GREYHOUNDS.—1st, Miss Nellie Austin's Nellie, lemon and white, 17mos. (imported).

MISCELLANEOUS.—Awards withheld.

SPECIAL PRIZES.

Best English setter—bench show record—S. S. McCuen's Dick Laverack.
Best English setter dog—bench show and field trial record—W. B. Gates's Paul Gladstone.
Best rough-coated St. Bernard dog, E. M. Hall's Tell.
Best smooth-coated St. Bernard bitch, Harry J. Clapham's Princess Ida.
Best mastiff dog, Foster Orloyd's Duke.
Best mastiff bitch, Geo. Wilson's Duchess.
Best pointer dog, Theo. Schwartz, Jr.'s Don.
Best pointer bitch, Theo. Schwartz, Jr.'s Fancy.
Best pointer puppy, C. T. Armstrong's Dot.
Best English setter dog in open class, J. A. McDonough's Count Glickstone.
Best English setter bitch, J. M. Avent's Juno A.
Best English setter puppy, Minnie St. Clair's Sweetheart.
Best brace English setters, J. M. Avent's Bessie A and Juno A.
Best Irish setter dog, J. A. J. Sprague's Brush.
Best Irish setter bitch, J. A. J. Sprague's Megora.
Best brace Irish setters, J. A. J. Sprague's Brush and Megora.
Best Irish setter owned in Louisiana, J. L. Harris's Guy.
Best setter bitch shown with five of her progeny, C. H. Buford's Mamie.
Best black and tan setter dog, E. Landry's Jeff.
Best Irish water spaniel dog, T. Donoghue's Count Bendigo.
Best Irish water spaniel bitch, Minnie St. Clair's Reno.
Best Irish water spaniel dog in open class, C. B. Rodes's King Slash.
Best cocker spaniel, Minnie St. Clair's Bene Silk.
Best cocker spaniel puppy, Minnie St. Clair's Bene Silk.
Best foxhound, J. M. Avent's Fleato.
Best beagle, J. M. Avent's Phantom.
Best dachshund, Mohawk Kennels' Waldine.
Best fox-terrier, E. L. Israel's Blucher.
Best collie dog, R. F. Henry's Woodlark.
Best collie bitch, A. Redden's Nellie.
Best hard-haired Scotch terrier, John H. Naylor's Rosie.
Best black and tan terrier, Geo Gillivan's Daisy.
Best dandie dinmont terrier bitch, Mrs. John H. Naylor's Pansy.
Best pug dog, Geo. M. McCuen's Sambo.
Best pug dog owned by a lady in New Orleans, Mrs. H. S. Kellogg's Snoozer.
Best pug bitch, Mohawk Kennels' Bo-Peep.
Best black and tan toy terrier, Mrs. W. A. Fletcher's Topsy.

THE PITTSBURGH PIECE OF PAPER.

Editor Forest and Stream:

Mr. Wade explains that the Pittsburgh piece of paper handed by him from Mr. Mason to Mr. Mortimer, contained Mr. Mason's notes on the black and tan terriers. As the black and tan terriers had not at the time been judged, will Mr. Mason explain why he was handing notes of this kind to Mr. Mortimer, the judge; or will Mr. Mortimer, the judge, explain why he was receiving notes of this kind from Mr. Mason?

PHILADELPHIA.

Since the above was put into type we have received the following card from Mr. Mortimer:

Editor Forest and Stream:

As I see that Mr. Wade has thought proper to make a public apology to Mr. Chas. H. Mason, I will contribute my version of the "scrap of paper" business at the last Pittsburgh dog show: Mr. Lever, of Philadelphia, exhibited two black and tan terriers, Vortigern and Reveller, the latter dog having brought with him a crack reputation from England. I thought Vortigern the better of the two, and so stated to Mr. Mason, at the same time asking him to look over the pair, which he did, and agreeing with me, so expressed himself on the piece of paper which was handed to me by Mr. Wade. The whole affair was so trivial that I had forgotten it, until it was recalled to my memory by an article in a Western paper of Oct. 4, 1884.

JAS. MORTIMER.

DEERHOUND IMPORTATION.—Mr. Geo. Shephard Page, New York, has recently received from the kennel of the Duke of Sutherland, Dunrobin Castle, Scotland, the deerhound bitch Shelloch. She is by Lord Richard Grosvenor's Ossian and out of Brenda (Wallace—Loyal). Loyal is by Stag (Gillespie's Torrom—Duke of Sutherland's Loyal) and out of Kendrach (Cameron's Pirate—Loyal). Mr. Page, in 1883, imported the dog Dunrobin from the same kennel. They make a fine looking pair, and we hope that their owner will give the public a chance to examine them at the coming show of the Westminster Kennel Club.

NEW HAVEN BENCH SHOW.

NEW HAVEN, March 18, 1885.

The second annual dog show of the New Haven Kennel Club opened this morning in capital style. It is an improvement over the very creditable exhibition of last year. The entries number 493, as compared with 385 last year, and the managers were obliged to refuse 100 entries. The classes are well benched, the big dogs being on open benches around the outside. Four judging rings are provided, and the entire work of the judges will probably be completed to-day. Many new dogs are here, and we may look for hitherto unknown names in the prize lists. That the show will be a credit to the club and satisfactory to exhibitors and visitors appears to be already well assured. The New Haven Kennel Club managers have every reason to be well satisfied with the public indorsement given to them in such a happy way. The awards to 3 o'clock to-day (Wednesday) were as follows:

Champion mastiff dogs, Hero II.; bitches, Lorna Doone. Mastiffs, dogs, 1st, Ilford Cromwell; 2d, Homer. Vhc. reserve, Hector; vhc., Agrippa and Hildebert. Hc., Laylass. Bitches, 1st, Rosalind; equal second, Prussian Princess and Hilda V. Vhc., Queen II. Hc., Onyx. Puppies under 12mos., 1st, Minerva; 2d, Tarquin. Vhc., Druid and Cedric's Gurth. Hc., Hubert. C., Dumont.

Rough-coated St. Bernard dogs, 1st, Rene; 2d, Barry. Vhc., St. Elmo and Prince. Hc., Dare. Bitches, 2d, Venus. Puppies under 12mos., 1st, De Ette; 2d, Rajah. Hc., Ouisa and Pope.

Smooth-coated St. Bernard dogs, 2d, Ernst.

Newfoundlands, dogs or bitches, first, Sam; second, Major; vhc., Ben; hc., Larned's Bruno, Noble. Bitches, first, Juno; second, Fan.

Greyhounds, champions, first, Friday Night. Open class, dogs, first, Memnon. Class 19a, first, Highlander; second, Schoolboy; vhc., Stormy Night; hc., Harlequin; c., Paris. Class 20, greyhound bitches, first, Begonia; second, Mother Demdike; c., Leo. Class 20a, first, Hawthorne Belle; second, Haidee; c., Honey Bee.

Deerhounds, dogs, first, Mac; second, Bran; vhc., Heather; hc., Bruce; c., Roderick Dhu. Bitches, first, Perth; second, The Banshee.

Pointers, dogs over 55 pounds, 1st, Donald; 2d, Rattler. Vhc., Knickerbocker. Hc., Sancho and Pete. Dogs under 55 pounds, 1st, Bon Ton; 2d, Robin Adair. Vhc., Bangor. Hc., Ned. C., Fritz. Bitches over 50 pounds, 1st, Lucille; 2d, Flirt. Hc., Jessie. Bitches, under 50 pounds, 1st, Rosa; 2d, Mistrel. Vhc., Lady Bang. Hc., Lady Isabel. C., Nelly. Puppies, under 12 months, 1st, Lou; 2d, Bessie Black. Vhc., Brock. Hc., Mamie. C., Judge Black.

English setters, champion, dogs, Blackstone Kennels' Plantagenet. Open class, first, F. Windholz's Rockingham; second, Blackstone Kennels' Foreman; vhc, Blackstone Kennels' Mack B., F. A. Cannon's Yale Belton; hc, G. R. Nichols's Pride of the West; c, F. A. Cannon's Count Tip, W. N. Callender's Royal Coin, Rosecroft Kennels' Brant F., W. B. Peet's Ted Llewellyn. Bitches, first, F. Winholz's Princess Phœbus; second, Blackstone Kennels' Forest Dora; vhc, E. J. Martin's Countess Warwick, H. Pape's Lady May, Blonde; hc, H. J. Rice's Passion, Blackstone Kennels' Grace B. and Jennie III.; c, A. J. Callahan's Jolly Nell.

English setter puppies, dogs, first, withheld; second, E. K. Sperry's Lanman's Dan; vhc., R. P. Penn's Pilot, H. L. Cowell's King Philip. Bitches, first, W. E. Miller's Speckles; second, R. B. Penn's Nancy Dawson; vhc., Dan O'Shea's Speed, J. A. Horne's Speck Belton; hc., Riverview Kennels' Countess Zanette; c., Rosecroft Kennels' Hazel.

Black and tan setters, champion, dogs: H. C. Glover's Turk. Open classes, dogs, first, C. R. Taylor's Gem; second, J. Conner's Black Thorn; vhc., C. Smith's Chris, and Merrimac Kennels' Dick; hc., C. H. Redfield's Glen II.; c., J. Meacham's Ben and O. D. Washburne's Richard. Bitches, first, D. O'Shea's Heather Lass; second, Claire-Reeta Kennels' Dora; vhc., C. R. Taylor's Rhoda, C. H. Redfield's Beauty; c., Associated Fanciers' Edith. Puppies, first, J. E. Thayer's Argus II.; second, C. T. Fitch's Madge; vhc., W. G. Drew's Topsey's Boy; c., C. R. Taylor's Topsey.

Irish water spaniels, dogs or bitches, second, W. Scott's John.

Clumber spaniels, dogs, first, Miss N. B. Trowbridge's John Halifax; second, M. Richardson's Bateman. C., G. W. Lovell's Jockey. Bitches, first, G. W. Lovell's Romp; second, C. C. Trowbridge's Ursula.

Field spaniels, any color over 28 pounds, H. W. Huntington's Benedict. Open classes, dogs or bitches. 1st, A. Laidlaw's Newton-Abbot-Lady; second, A. C. Wilmerding's Black Prince. Vhc., A. Luckwell's Bob; C. S. Francis's Beppo; W. O. Partridge's Critic; E. W. Hotchkiss's Gloss. Hc., G. W. Schenck's Bonanza.

Cocker spaniels, liver or black, under 28 pounds, dogs, first, J. P. Willey's Obo II.; second, A. Laidlaw's Young Obo; vhc., J. P. Willey's Obo, Jr.; hc., J. N. Dewey's Dandy Zulu. Bitches, first, J. P. Willey's Shina; second, W. O. Partridge's Helen; vhc., J. P. Willey's Dinah W., Juno W.; S. R. Hemingway's Miss Nance, A. Laidlaw's Black Meg; W. Scott's Darling; hc., J. B. Robertson, Jr.'s Rose Obo.

Cocker spaniels, other than liver or black, under 28 pounds, first, A. Laidlaw's Sport; second, A. C. Wilmerding's Marion; vhc., W. Dunphy's Gilt Edge; hc., F. Smith's Queen. Puppies, dogs, first, A. E. Foster's Black Joe; second, S. R. Hemingway's Og; vhc., F. H. Meacham's Boy. Bitches, first, A. Laidlaw's Belle; second, F. Smith's Minnie; hc., Merrimack Kennels' Shammy.

Foxhounds, dogs, first, Dan O'Shea's Forester II., second, Associated Fanciers' Dixey Jim; vhc., S. Potter's Dime; hc., R. H. Meacham's Jerry; c., W. Scott's Colonel. Bitches, first, E. A. Baldwin's Fanny; second, W. Scott's Gipsey.

Collies, dogs, 1st, J. D. Shotwell's Ben Nevis; equal 2d, J. W. Burgess's Argyle and M. Dennis's Brack. Vhc., E. A. Mosely's Laddie, E. B. Nichols's Shep, J. Lindsay's Hiram. Hc., W. Scott's Shep, Associated Fanciers' Guy, J. Lindsay's Glencho. Bitches, 1st, J. Lindsay's Fairy; 2d, E. B. Nichol's Lady Bess. Vhc., J. Lindsay's Nanny O. Hc., M. Dennis's Daisy Queen. Puppies, dogs, 1st, A. J. Bruff's Kolly B.; 2d, J. Lindsay's Joe Nettles. Vhc., Mrs. W. J. Comstock's Dandy.

Collies, bitches, first, J. Lindsay's Gem; second, M. Dennis's Stella; vhc., Scotch Collie Kennel Club's Lothian Maid; hc., W. C. Powell's Toxie, c., Scotch Collie Kennel Club's Midlothian Lassie.

Bulldogs, champion, dogs, J. E. Thayer's Tippoo. Open, dogs, J. E. Thayer's Robinson Crusoe, J. Osborne's Boxer; vhc., Clovernook Kennels' Clover Grip. Bitches, first, Rhodora.

ST. LOUIS DOG SHOW.—St. Louis, March 7.—*Editor Forest and Stream:* Mr. Geo. Munson has been appointed manager of the coming St. Louis Gun Club dog show. His office for the present is at the roller rink, corner Nineteenth and Pine streets. The show will be held in the grand new exposition building, on Olive street, April 21 to 24, inclusive. The entries close April 11. Prize lists and entry blanks will be mailed in three or four days. A special cash prize of $50 will be given for the best kennel of six St. Bernards, rough or smooth-coated, or both, in addition to the regular cash prizes for champion dogs and bitches and open classes. Many handsome specials will be given, notice of which will be sent you later. The entry fee is fixed at $3.—W. A. ALBRIGHT, Secretary.

PHILADELPHIA DOG SHOW.—Philadelphia, March 13.—*Editor Forest and Stream:* A bench show will be held by the Philadelphia Kennel Club May 19 to 22, Mr. F. A. Diffenderffer superintendent.—E. COMFORT, Secretary.

THE BEAGLE STANDARD of the American English Beagle Club will be that by which these dogs will be judged at the coming shows.

BRITOMARTIS.—Champions and otherwise famous dogs are now so numerous, there must be something exceptional to justify special attention being given to one over another. The bull bitch Britomartis claims the right at present, from the fact that this country is about to lose her, as she has been sold to Messrs. R. & W. Livingstone, of New York. Britomartis has had the most successful career of any bitch of her breed; she was brought out as a wonder, and has well maintained the prominent position she took at once on being exhibited. She is a brindle bitch, very compactly built for the breed, immensely muscular, low set, broad-chested, thick-necked, and with a marvellously grand head—one such we expect to see on a dog rather than gracing a specimen of her sex—and that probably has largely contributed to her victories over acknowledged good dogs. Britomartis was bred by Mr. J. C. Lyell, of Dundee, an old bulldog fancier and breeder, although better known to the *Bazaar* readers as an authority on pigeons. She was whelped July, 1881, and purchased by her present owner, Mr. Alfred Benjamin, Vice-President of the Bulldog Club, for £100, entirely on his own judgment—and therefore the more to his credit—before she was brought out as a show dog; and the following list of her winnings proves how well he was justified in giving a long price for a novice. She has beaten the following well-knows dogs and bitches: Monarch, Monarch III., Bellissima, Nell Gwynne, Ida, Gladstonekoff, Diogenes, Rhodora, Sweetbriar, Acme, Lorne, Redowa, Ariel, Lady Stuart, Wheel of Fortune, Maritana, Farewell, and has won the following prizes: First prizes—Aston, May, 1883; Bulldog Club, Knightsbridge, May, 1883; York, July, 1883; Dundee, November, 1883. Champion prizes.—Frome, September, 1883; Bulldog Club Show, Hackney, December, 1883; Crystal Palace, January, 1884; Crystal Palace Bulldog Club Show, May, 1884; Crystal Palace, July, 1884; Crystal Palace, January, 1885. Extra prizes—Aston, Five Guinea Cup,; Dundee, Five Guinea Cup; Bulldog Club, Hackney, Ten Guinea Cup; Bulldog Club, Crystal Palace, Five Guinea Cup; Bulldog Club's Fifteen Guinea Challenge Cup, twice. Seven Medals and Bulldog Club's Challenge Cup eight consecutive times. The foregoing is a record not often reached; indeed, it has never yet been anything like approached and in so short a career. Britomartis is by that grand brindled dog Monarch, that Mr. Oliver, of Bristol, brought out some years ago—a brother to the noted Gamester, that was reported to have died rabid, but we think without proof—and her dam was Mr. Lyell's Peuzie, by Angus out of Topaz, a bitch full of old Cribb blood.—*London Bazaar.*

BOSTON SHOW.—Mr. J. A. Nickerson writes that "bitches with pups under eight weeks will be received for the regular fee, but puppies cannot compete for prizes." Dogs ages will be reckoned to first day of show, April 7. The following expresses will transport dogs to and from show at one-half regular rates: American (except from points competing with Adams), U. S. & Canada, N.Y. & Boston. Following railroads will carry three dogs free when accompanied by keeper paying full fare: B. & A., Fitchburg, B. & M., O. C., Revere Beach, Lynn, Providence. Boston & Lowell will make special rates. Fifty-three special prizes are announced.

ALWAYS AHEAD.—"Where's New Haven?" "She's hauled her wind and is working clear away from Construction, sir." "Where's Boston?" "She's trimming her sheets by New Haven, sir." "Where is New York?" "She's dropping Construction dead astern, sir." "Whither are we drifting? Shift your helm, blank your eyes, can't you see which way to steer? Rig your jury sail and take your course from the rest." And the water-logged craft wallowed clumsily around, and squared away in the wake of the others, just as their royalmastheads disappeared below the horizon ahead. And muttering "Can it be possible?" the skipper went below.

WHITEWASH.—*Editor Forest and Stream:* Thanks to "Whitewash" discovering my flush. I drop steadily to wing. The words I credited to Mr. Mason came from the pen of Col. Taylor; just a slip of memory, so take a point on a sparrow—for I only charged Mr. M. with inconsistency, anyhow—and I will secure a solid back. Was Mr. Mason's first statements about Bang Bang and his breeding consistent with his more recently expressed opinions of that dog? Even the immaculate "Whitewash" shows great inconsistency when he says he "hates whitewash," and still uses it to cover up his name.—LUKE W. WHITE.

PENNSYLVANIA STATE FAIR.—The Report of the State Board of Agriculture for 1884, has a report on the Pennsylvania State Fair dog show. Credit is given to the Philadelphia Kennel Club for having "aided and assisted largely in making this part of the show a success," and a summary is given of the FOREST AND STREAM'S report.

KENNEL NOTES.

NOTICE TO CORRESPONDENTS.

Kennel notes are inserted in this column free of charge. To insure publication of notes, correspondents MUST GIVE the following particulars of *each animal:*

1. Color.
2. Breed.
3. Sex.
4. Age, or
5. Date of birth, of breeding or of death
6. Name and residence of owner, buyer or seller.
7. Sire, with his sire and dam.
8. Owner of sire.
9. Dam, with her sire and dam.
10. Owner of dam.

All names must be *plainly* written. Communication on one side of paper only, and signed with writer's name.

NAMES CLAIMED.

☞ *See instructions at head of this column.*

William Tell. By Chas. A. Parker, Worcester, Mass., for liver and white pointer dog, whelped Jan. 2, 1884, by Prince (Mack—Bell II.) out of Belle II. (White's Duke—Eave's Daisy).

Mottle, By N. Elmore, Granby, Conn., for mottled beagle bitch, whelped Feb. 3, 1884, by imported Ringwood (Ranter—Beauty) out of Maida (Victor—Lucy).

Pink. By N. Elmore, Granby, Conn., for white, black and tan mottled beagle bitch, whelped Nov. 10, 1883, by imported Ringwood (Ranter—Beauty) out of imported Countess (Bismark—Gayless).

Fun and Silk. By N. Elmore, Granby, Conn., for white, black and tan beagles, dog and bitch, whelped July 6, 1884, by imported Ringwood (Ranter—Beauty) out of Jenny (Flute—Collette).

Katie. By N. Elmore, Granby, Conn., for white, black and tan beagle bitch, whelped Sept. 3, 1884, by imported Ringwood (Ranter—Beauty) out of imported Music (Rockwood—Faithful).

Bessie Gladstone. By Highland Kennels, Ashfield, Mass., for English setter bitch, whelped Nov. 2, 1884 (Don Gladstone—Bessie T.).

Music. By George W. Dixon, Worcester, Mass., for white English bull-terrier bitch, whelped December, 1884, by Dick Napoleon out of Nellie.

NAMES CHANGED.

☞ *See instructions at head of this column.*

Ruby to Yoube. Red Irish setter bitch (Elcho—Rose), owned by Max Wenzel, Hoboken, N. J.

International Kennels to Miami Kennels. By George H. Hill, Miami, O.

BRED.

☞ *See instructions at head of this column.*

Bessie—Emperor Fred. J. O. Donner's (New York) English setter bitch Bessie (Ranger—Belle) to Emperor Fred (A.K.R. 32).

Rose—Chief. Mr. von Zschuschen's red and white Irish setter bitch Rose to Max Wenzel's Chief (A.K.R. 231).

Daisy—Pete, Jr. Geo. Phillips's (Dedham, Mass.) pointer bitch Daisy (Bob—Sal) to E. C. Alden's Pete, Jr. (Pete—Nell), March 18.

Corrie—Hiram. H. E. Martin's (Jersey City, N. J.) imported collie bitch Corrie to Hiram (A.K.R. 883), March 10.

Grace—Gay. Grove Thomson's pointer bitch Grace (Sensation—Juno) to N. Elmore's Gay (Snapshot—Fanny II.), Jan. 17.

Birdie—Ringwood. N. Elmore's (Granby, Conn.) beagle bitch Birdie (King—Music) to his Ringwood (Ranter—Beauty), Jan. 21.

Music—Ringwood. N. Elmore's imported beagle bitch Music (Rockwood—Faithful) to his Ringwood (Ranter—Beauty), Jan. 31.

Fate—Count Noble. F. W. Seller's (Harrisburg, Pa.) English setter bitch Fate (Gladstone—Sue) to Count Noble, March 6.

Madstone—Bang Bang. The Westminster Kennel Club's pointer bitch Madstone (Tory—Moonstone) to their Bang Bang (A.K.R. 394), March 8.

WHELPS.

☞ *See instructions at head of this column.*

Lizzetta. Wm. H. Cox's (Newport, Ky.) red Irish setter bitch Lizzetta (Rory O'More—Queen Bess), March 7, seventeen (nine dogs), by Bob, Jr. (Bob—Flash). This is her third litter, and in each instance she has had the same number and by different sires.

Lady Sanborn. Dr. S. Fleet Speir's (Brooklyn, N. Y.) English setter bitch Lady Sanborn, Jan. 28, seven, by E. A. Herzberg's Emperor Fred (A.K.R. 33).

Lyda Belle. E. A. Starkey's (Brattleboro, Vt.) red Irish setter bitch Lyda Belle (A.K.R. 626), March 3, ten (four dogs), by champion Nimrod (A.K.R. 631).

Vic. Associated Fanciers' (Philadelphia, Pa.) red Irish setter bitch Vic (Acho—Lady Helen), Jan. 1, nine (six dogs), by champion Glencho.

Yoube. Max Wenzel's (Hoboken, N. J.) red Irish setter bitch Yoube (Elcho—Rose), six (three dogs), by his Chief (A.K.R. 231).

Dorcas. W. B. Peck's (Central Falls, R. I.) red Irish setter bitch Dorcas (Glencho—Syren II.), March 14, twelve (seven dogs), by Blackstone Kennels' Arlington.

SALES.

☞ *See instructions at head of this column.*

Music. White bull-terrier bitch, whelped Nov. 28, 1884 (Dick—Nellie), by Henry Richmond, Providence, R. I., to George W. Dixon, Worcester, Mass.

Cecil Glen. Black, white and tan English setter bitch, whelped Jan. 1, 1885 (Glen Rock, A.K.R. 1616—Leah II.), by E. W. Jester, St. George's, Del., to Dr. J. A. Hartman, Latrobe, Pa.

Criftobo. Black cocker spaniel bitch, whelped Jan. 16, 1885 (Obo II.—Critic), by E. W. Jester, St. George's, Del., to W. W. Davis, Philadelphia, Pa.

May Beaufort White and liver ticked pointer bitch, whelped Jan. 1, 1885 (Beaufort, A.K.R. 694—Nellie Bird), by Jos. R. Trissler, Lancaster, Pa., to John Monahan, Springfield, O.

Ringwood—Rosey whelp. Beagle dog, whelped Dec 18, 1884, by N. Elmore, Granby, Conn., to James Gallagher, West Hanover, Mass.

Hayes—Georgie whelp. Foxhound bitch, 6mos. old, by N. Elmore, Granby, Conn., to Thos. F. Martin, Marlboro, Mass.

Flute—Bunnie whelp. Beagle bitch, whelped June 10, 1884, by N. Elmore, Granby, Conn., to J. G. Abbee, Athol, Mass.

Ringwood—Rosey whelp. Beagle dog, whelped June 9, 1884, by N. Elmore, Granby, Conn., to B. Pierce, Alexander Bay, N. Y.

Ringwood—Maida whelps. Beagles, whelped Aug. 27, by N. Elmore, Granby, Conn., a bitch to B. Pierce, Alexander Bay, N. Y.; two bitches to A. Belmont Purdy, Hempstead, L. I., and a bitch to H. F. Heyward, Winthrop, Mass.

Spright. English setter (A.K.R. 1619), by Thos. Sperring to J. M. Bloomfield, New York.

DEATHS.

☞ *See instructions at head of this column.*

Bruce II. (A.K.R. 695)—Mistletoe (A.K.R. 1254) whelps. Pointers, three dogs and three bitches, whelped Jan. 5, 1885, owned by J. W. Houston, Stuart, Neb.

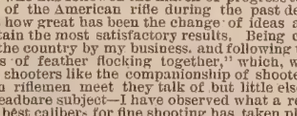
Snoozer. Pug dog (A.K.R. 1596), owned by Samuel S. McCuen, New Orleans, La., from apoplectic fits.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

W. C. L., Toronto.—A small cocker spaniel has a bad coat, which curls a little. How can the curl be removed. Ans. You cannot take the curl out, but by regular brushing you can improve the coat.

SUBSCRIBER.—A setter puppy 2½ months old seems to be perfectly well except that one of his forelegs bends up, or rather he does not seem to have any strength in that leg. He has not been hurt as far as I know. What treatment would you advise. Ans. Is the bone itself bent? If the dog is in poor general condition, it may be a condition analagous to rickets, and in such case cod liver oil and the lime salts would be beneficial. If the limb is painful and the pain is localized over a joint, it may be rheumatism, in which case Rochelle salts, in teaspoonful doses, would be of service. If due to injury, evaporating lotions like chloroform liniament would be called for. Give us more particulars.



J. B. B., Allegheny.—A bitch for two years has not been in heat. Can I with safety give her what is known as "Spanish fly?" Ans. How old is the bitch? Has she ever been in heat or whelped? If not very old, and if in other respects in good condition, you may try the "Spanish flies." The following prescription is a good one. Tincture of nux vomica and tincture of cantharides, of each a half ounce, simple syrup a half ounce, and water to make a four ounce mixture. Of this give a teaspoonful night and morning. Also have some aloes and iron pills made up to contain a grain of each and give one pill three times daily. If this does not work there may be some organic trouble. Report results.

Rifle and Trap Shooting.

A CURIOUS BULLET.

Editor Forest and Stream:

Will some of your readers explain this occurrence? A bullet of .44-caliber and 1¼in. long was fired one hundred rods into a gravelly soil and ricocheted some fifty rods. It now measures 1⅛in. in length and has an hour-glass constriction in its center which reduces its diameter about one-half at that point. At the point it is bruised a little as if it had struck a pebble. The creases of the rifle can be traced from the butt through the neck or constriction and some distance up the other side. It has the appearance of having been stretched. The butt half of another that had pulled in two is said to have been found. I have not seen it, however. W. A. A.

30 FURMAN STREET, Syracuse, N. Y.

MERIT IN SMALL CALIBERS.

TO one who has followed the march of progress toward the perfection of the American rifle during the past decade, it must be apparent how great has been the change of ideas as to the best caliber to attain the most satisfactory results. Being called to different parts of the country by my business, and following the ancient adage of "Birds of feather flocking together," which, when applied to a rifleman, shooters like the companionship of shooters—for I am certain when riflemen meet they talk of but little else than this never-to-be-threadbare subject—I have observed what a revolution of ideas upon the best calibers for fine shooting has taken place.

In almost every instance I find, where a new club has sprung into existence, the members are equipped with large-bore rifles, shooting large charges of powder, and facing the butts with heroic-like firmness to receive the mulish reminder from their favorite arm at each discharge.

The same idea takes possession of all new rifle shooters, which is, that they must have at least 60 or 70 grains of powder to overcome the force of the wind at 200yds. One of the amusing sights upon the rifle range, where this artillery is used, is to see a rifleman, when the tell tale marker records a two or a three, the result of poor holding, or trying to dodge the recoil, hastily glance at his wind gauge and in cold blood curse the wind for blowing his bullet into a wild shot. That sort of stuff would be swallowed a few years ago, when the "has been's" reigned supreme, but not now.

Improvement in rifle shooting commenced as smaller calibers and lighter charges of ammunition grew in favor. From .45-caliber to .40 was an improvement, clean scores began to be made when the .38-cal. was introduced. The .35-cal. had hardly sufficient time to become popular when the .32-cal. was brought out and the shooting done with this bore gun, is admitted by the strongest of big-bore, large-charge advocates, to be equal, and one after the other admit that for 200yds. off-hand or rest shooting, the results obtained with the .32-cal. 35 grains are superior in average shooting to the rifles of larger bore.

The Massachusetts Arms Co. at Chicopee Falls, Mass., deserve great credit for the perfect manner in which they have produced rifles of this bore, and being the first to place a .32-cal. patch bullet upon the market. A recent visit to their establishment, revealed the fact that still another and smaller caliber was soon to be offered to riflemen, and filling a want long felt for a long-range tiny-bore rifle. They have now perfected a .22-caliber rifle, using a central fire shell, which holds ten grains of powder. There is a patched and naked bullet used in this gun, the former weighing 42 grains, the latter 47½ grains. The shells are everlasting, the one we inspected having been fired over 200 times. In testing the merits of the two bullets, it is found that the lubricated bullets give as good, and it is thought better results, than the patched bullet. I can scarcely expect to favorably impress a majority of your readers with the wonderful performances of this .22-cal. rifle, but believe I hazard little in prophesying that great popularity awaits this arm. The shooting done with this gun is as follows:

At 100yds., with a 26in. barrel, 10 consecutive shots were fired within a group of 1 and 9-16th of an inch. At 200yds., with a 28in. barrel, 10 consecutive shots, all inside of 4 and 4-16 inches, and of the ten shots eight were inside 2 and 4-16 inches. In testing the merits of the shells 50 consecutive shots were fired at 200yds.; 40 of the shots were inside of 6 inches, the same distance was the widest variation up and down of the 50 shots; 48 out of the 50 were within a nine-inch ring. There were two wild shots out of the fifty, which were about twelve inches apart. All of the above shots were with a naked bullet, without cleaning, and fired in the open air with quite a little wind.

In conclusion I would say that having seen a great deal of off-hand and rest-rifle shooting, I must confess that the above test with a .22-caliber compares favorably with any I have ever seen with any rifle, and I am willing to go a long distance to see it excelled.

RALPH GREENWOOD.

RANGE AND GALLERY.

BOSTON, March 14.—The shooting conditions at Walnut Hill to-day were not very good, a fish tail wind blowing from 9 to 12 o'clock, and making good scores rare. The rest match will probably be closed on Saturday next, and a new one substituted in its place. When the members sat down to dinner, Miss Fannie Kendell, the daughter of the range keeper, who has assisted her father at the dinner for the past three years, was presented with a beautiful gold watch by the members of the association as a token of their esteem. The following are the day's events at 200yds.:

Team Match—First Team.

H S Harris	7	6	6	8	6	10	8	8	8	4—71
W Charles	6	8	6	9	6	9	8	7	7	5—66
C B Edwards	6	8	6	7	8	7	6	5	7	4—64
A S Brackett	2	8	5	9	10	7	6	5	6	8—56
N F Tufts	4	6	6	4	4	4	6	7	3	10—54—311

Second Team.

R Reed	6	8	6	8	8	5	8	6	7	9—71
J B Fellows	4	6	7	7	9	5	9	9	9	3—68
A Lowe	5	4	4	6	4	8	3	7	4	8—53
T Barton	4	8	3	5	4	5	8	7	8	1—52
B Duff	10	2	10	3	8	2	4	2	3	2—41—285

Decimal Match.

R Reed	9	8	10	9	7	8	9	7	8	5—80
J Lemons	9	4	7	7	8	6	9	6	10	9—75

M Williams	4445444445—42		

COLLEGE RIFLE SHOOTING.—Burlington, Vt.—A rifle match took place Wednesday in the University Drill Hall, between two college teams, the first taken from the junior and sophomore classes, and the second from the junior and freshman classes. The range was 50ft, and the target 12x8in. with a 1½-in bullseye. The weapons used were the Springfield cadet muskets, caliber .50 with a pull of seven pounds, and the charge seven grains of powder with round bullets. The juniors and freshmen won by a lead of 28 points, making 83⅓ per cent. of the possible score. The following is the record in detail:

First Team.		Second Team.	
Capt., C.S.Stone; scorer, E.B.Kent		Capt., W.F.Waters; scorer, B.Smith	
Fisher	45334—21	Waters	55455—23
Clark, W C	34444—19	Hayes	34454—19
Leavenworth	45444—21	Waterman	45535—22
Hopkins	33334—16	Lane	54444—21
Buckham	44343—18	Reed	45355—22
Hazen, Austin	24344—17	Shaw	53434—19
Button	34444—19	Story, M E	44544—21
Roberts	44443—19	Kimball	44343—18
Wheeler	44444—20	Chase, A E	55534—22
Robinson	43344—18	Woodbury	54544—22

Barnes	11	9	9	10	10	7	11	9	8	93

THE WILKINS SHOOTING.—*Editor Forest and Stream:* I notice an inquiry from "Wing Shot" wishing some one to explain my breaking 479 balls out of 500 out of a Bogardus trap at Franklin, May 4, 1880. The trap used on this occasion was what they called then a Bogardus rifle trap. I sent to Chicago for a spring, but it was a poor concern and did not work very well. It threw the balls about 25ft. high very irregular, some sidewise and some away and toward me. I missed the most of them in the last two hundred as a change was made from brown glass balls to blue, and the sky being blue it was difficult to see them. Had I had all brown balls I would not have missed more than ten. The Franklin sportsman club was present with a good many spectators. I shot single bullets, .44-cal., 21ft. distant. Some of my Franklin friends who were there can substantiate the truth of the above. In regard to the 985 balls shot out of 1000, I did it at Greenville, Pa., in 1879. Distance 18ft. I did not have a trained thrower, but got a young man, Will Hilands, to toss them in the air. He was inexperienced and threw the balls very irregular the last 500. I made 472 without a miss, shot a .32-cal. singleloader, solid ball. The balls were composition, made at Greenville. There was quite a crowd in attendance.—OTTO WILKINS (Meadville) Pa.

BULL'S HEAD RIFLE CLUB.—Twelve-ring target, possible 120: G. Zimmerman 115, M. Dorrler 115, E. Rein 115, V. Steinback 115, J. Jordon 113, G. Gunther 112, A. Stolzenberger 111, J. Schrarder 111, E. Holzmann 108, H. Heiser 107, B. Wragge 107, D. Holland 104, B. Walter 103, H. Wasmuth 102, S. F. C. Weber 102, J. Shaw 102, H. Sindlinger 102, J. Wettje 100, A. Miller 96, J. Campbell 94.—A. LOBER, Sec.

March 13.—12-ring target, possible 120: J. Schutz 118, C. Rein 116, G. Zimmerman 113, B. Walter 109, J. Schrarder 105, D. Lowitzki 90, J. Shaw 98, H. Wasmuth 94.

THE TRAP.

THE NATIONAL GUN ASSOCIATION.

ARTICLE XVI. of the Constitution embodies a feature which will doubtless appear new to most readers, but it is really a revival of an old institution, viz., the organization into volunteer companies of those who use a shotgun [for hunting purposes or for pastime amusement at an artificial target], and for the purpose of aiding the civil authorities in their own communities in times of riot and lawlessness.

The article reads as follows: "Whenever the membership of the Association reaches 500, the Board of Directors shall, if in their discretion it is practical to do so, organize the members into a volunteer gun corps. Such organization shall be upon the basis of the military system of the United States, the members elect their own officers and have the same privileges and duties as other volunteer military organizations; but there shall be no compulsion of members to join same. It shall be purely voluntary. If organized, such corps, or the various sub-divisions thereof, shall be subject to the control of the civil authorities, State and municipal, in time of danger to suppress riot, insurrection, or other lawlessness, and in every way to protect life and property and to maintain the public peace. Their headquarters and drill rooms shall be in the cities or large towns. Provided, however, that no service elsewhere than in their own communities shall be exacted from them without their consent."

At the present day such an organization will serve a double purpose. First, it will prove to the public, who now take no interest whatsoever in the gun, and who, if anything, are inclined to look with suspicion and distrust upon its present use, that an additional and meritorious interest attaches thereto, and for the reason that it thus becomes a useful public servant in time of danger and of its need, and hence thousands of public-spirited citizens will take an interest in its development, will join the Association, will encourage and attend its tournaments, and induce their friends to do likewise, who otherwise would remain the passive, indifferent spectators they now are.

And secondly, it will elevate the sportsmen themselves, not only by bringing a new and worthy element into their ranks, but also, and more especially, by adding a noble, patriotic purpose to the present objects of amusement at the trap and in the field only. The political and economical character of our American cities is such that they will ever be subject to times of riot. The doctrine of the communist is a growing one. The distance between the rich and the poor, the capitalist and the laborer, is spreading more and more. The reckless political agitation we see from year to year, adds fuel to the flames by bringing about a corrupt political state of affairs, which widens the distances and which leads to periods of excitement and of disrespect for the power and the justice of the law, and which results in violent outbursts of misled populace, detrimental to all law and order, and most injurious to the very instruments themselves who thus vent the popular fury. Such a state of affairs occurred in Cincinnati in 1884, resulting in the killing of about 56 and the wounding of about 200 misled enthusiasts, and the destruction of nearly $2,000,000 of property and innumerable and invaluable court records, all of which could doubtless have been avoided had the civil authorities had at their disposal one hundred organized expert sportsmen armed with the shotgun only. There are mobs and mobs. The above one was not composed of vagabonds and outcasts, but rather of "misled respectable citizen enthusiasts," aggravated by the previous failure of the Judiciary to perform its work justly, and further excited by the well-meant but heated condemnatory addresses in public meeting of many of Cincinnati's best citizens. Such a "mob" should not have been plowed down and slaughtered with rifles, which kill, but rather have been scattered with "buckshot," which only wound. This is not a despotic government—it is not a Russian or a Napoleonic Empire, where the people are regarded as so many "cattle," fit only to be slaughtered—but it is a republic, "for the people, of the people and by the people," and where the "people" are regarded as the peers of each other, and where it is the object to make every man feel that he has some interest at stake in the preservation of the government, of which he is a part, and where it is, and should always be, an object to persuade the people to do what is right, not with the cannon ball, *à la* Napoleon, but with lesser means which will not kill. What cared Napoleon whether he killed or sacrificed one or a thousand. His aim was not a republic but an empire. We, on the other hand, do not want an empire but a republic; hence his methods must not be our methods. For when you kill once you engender a feeling of bitterness and of revolt in the multitude, which only leads to additional repetitions of the same scene on a larger and larger scale, until finally a despotism of some nature results, as a lesser evil between two. Hence, it should be the policy of the authorities to employ such a force in dispersing mobs of the above character as will not kill, and will not, therefore, undermine the very pedestals of the republic. Such a force is at hand in the shotgun, if it be but organized in the general manner outlined in Article XVI. Let sportsmen, those who now own guns, give it their support, but above all, let all good citizens who appreciate the force of the above argument, give their support to this association by joining it as contributing members.

Many sportsmen will doubtless now ask, "But how are we individually to be otherwise benefitted thereby?" Primarily, by making large tournaments a financial success, so that the "guarantees" therein can be increased from year to year, and the number of attendants and participants likewise increased. But there is a subsidiary benefit to accrue to a large minority of the members who may desire to avail themselves of the same, viz., through the organization of the National Corps of Commissionaires, as outlined in Article XVII. and patterned after the Corps of Commissionaires as it now exists in various European cities. The attention of the visitor to the latter is at once called to the neatly, plainly uniformed commissionaire, whom he finds at his monthly service, whether it be as a faithful messenger or courier, a reliable watchman, an accurate clerk, a trustworthy nurse, an expert guide, or any service, whether temporary or permanent, for which the Central Office may recommend him; for the said office guarantees the honesty of its commissionaire in amounts varying from $15 to $50, besides acquainting the employer with his previous record should he desire same, and hence the confidence of the would-be employer is at once obtained. There are in this country to-day numerous hunters and shooters, and others whose occupation is confined to a very limited period of time yearly, all such could find lucrative employment through such an organization as "The Corps of Commissionaires," and which must be made an outgrowth of the "National Gun Corps," for the financial support required to organize the former must be obtained through the latter, and thus the confidence of the latter, and the support of the citizens who will aid the Gun Corps will be obtained for the commissionaires individually. Hence, it is to be hoped that all owners of a shotgun will lend their cordial support toward making a success of the above two features, with the assurance that the same will redound to the benefit of themselves and "the cause."

BROCKTON VS. MALDEN.—Brockton, Mass., March 14.—A clay-pigeon shoot for the State team badge took place here this afternoon between the Malden and the Brockton Gun Clubs. The Brockton team won the badge in 1884, and defeated their opponents this afternoon by a score of 79 to 77. Following is the score:

Brocktons.		Maldens.	
Bartlett	4444—16	Shaffer	4454—17
Allen	4554—18	Field	3323—12
Tirrell	5433—15	Sawyer	4545—18
Wilbur	5452—16	Parker	4335—15
Howard	2444—14—79	Dickey	4434—15—77

DENVER, Col.—A newly-organized club of this city had its third shoot on the 9th at 8 live birds, 18yds. rise:

R J Carpenter	01101110—5	L D Keller	01001010—3
W K Morton	00101101—4	J Bates	10010111—5
F Camp	11010111—6	G L Bates	00100011—3
C L Caster	00111010—4	D L Hurd	10111001—5
F C Cuenin	11011111—7	M L Hutchinson	01101111—6

Ties on 6: Camp, 101; Hutchinson, 111. Ties on 5: Bates, 100; Hurd, 110; Carpenter, 00w. Cuenin took the leather medal.—Member.

MERIDEN, Conn., March 14.—About a dozen members of the Parker Gun Club were out to-day on their grounds. The following sweepstake was shot at low birds thrown over 50yds. from trap:

Baker	11110—4	Venter	10100—2
Brown	11010—3	Avery	10101—3
Bristol	11110—4	Beecher	01001—2
Ives	11111—5	Cook	00101—1
Burges	11010—3		

WASHINGTON, D. C., March 13.—At the annual meeting of the Capital City Gun Club, this city, held on the 10th inst., the following officers were elected for the ensuing year: J. E. Hasford, President; J. P. Sousa, Vice-President; E. S. Mills, Secretary; C. McC. Taylor, Treasurer; Wm. Wagner, Director.

HAMILTON GUN CLUB.—Hamilton, March 11.—This afternoon one of the most successful shooting meetings that has taken place in this district was held on the James Driving Park, East Hamilton. The day, although a little cold, was clear and comparatively calm, consequently the shooting was good. The match continues two days—to-day and and to-morrow—to-day being the pigeon match, 10 birds each. There were 36 entries. The management called time at 2 o'clock and the sport began (Dominion rules), and was carried on to the finish without a hitch or a grumble, which speaks well for the club, considering the large number of contestants. Geo. Rogers, of St. Catharines, won first place in 10 straights; prize, $50. The shooting for the balance of the money prizes resulted in a division between the following five, each of whom shot 9 birds out of 10. The score stood:

Match at 10 live birds each, miss two and out. First prize, $50; second, $35; third, $25; fourth, $20; fifth, $12; sixth, $8.

G Rogers, St. Catherines	1 1 1 1 1 1 1 1 1 1—10
Robert Stroud, Hamilton	1 1 1 1 1 1 1 1 1 0—9
A Chidley, Hamilton	1 1 1 1 1 1 0 1 1 1—9
J Adams, Niagara Falls	1 1 1 0 1 1 1 1 1 1—9
J Wayper, Hespeler	1 1 0 1 1 1 1 1 1 1—9
W Ward, Dundas	0 1 1 1 1 1 1 1 1 1—9

The committee who are carrying out the affair so successfully is composed of the following gentlemen: E. W. Spencer, President; Thos. Crooks, Secretary and Treasurer; Messrs. M. Reardon, A. Chidley, W. Massie, A. Woodhouse and Fred DeLacy.

March 12.—The second day's shooting of the Hamilton Gun Club commenced this morning at 10:30. The first match was shooting for the gold medal presented for competition by Messrs. Davis & McCulloch, of this city. The teams shooting, four members each, were made up as follows: Brant and Waterloo as one team, St. Catharines and Niagara Falls as another, and Hamilton made up three teams, numbering respectively Nos. 1, 2 and 3, making five teams entered for the medal. Unfortunately the day was very unfavorable, being cold, windy and stormy. The sport, however, passed off very pleasantly and in the best of feeling to the close. The winning team made 14 birds out of the 20, and the closeness of the shooting is shown by the fact that each of the other four teams made 13 each. The winning team was No. 1 of Hamilton, made up of the following shots: E. V. Spencer, W. Stroud, M. Reardon and A. Chidley. Following the medal match came the consolation match for a gun presented by J. Holman, which was won by T. Westbrook, of Brantford. A number of sweepstake matches followed. The meeting was one of the most successful ever held in Hamilton.

STAUNTON, Va., March 3.—Clay-pigeon match at 10 birds, 18yds. rise:

A Ayres	1111111111—10	C Bargamin	1101011011— 7
T Bissell	1011111111— 9	C L Cooke	1011110011— 7
C Whittle	1111101111— 9	T J Crowder	0111011011— 7

Dr. Berkeley 6, J. A. Cochran 6, W. F. Summerson 6, F. West 6, W. Allen 5, E. Berkeley 5, J. M. Carroll 5, W. A. Bowles 3, E. I. Jones 1. Ayres silver medal, Jones leather medal.

March 10.—Match under same conditions:

A Ayres	1111111011—9	T J Crowder	1000011101—6
Dr Wayman	1111111101—9	J W Stout	0011001111—6
C Whittle	1111101111—9	W M Allen	1010010110—5
L Alby	1111100111—8	Dr Berkeley	0101111000—5
C Bargamin	1101011111—8	J A Cochran	1010001011—5
E Berkeley	0111101101—7	W H H Lynn	0101010010—4
C L Cooke	1011001111—7	W A Bowles	1100000000—3
F West	1111100011—7	E I Jones	0010000001—2

Ayres won silver medal on miss and out. Jones won leather medal.

ASBURY PARK, March 12.—Fully 800 people were on the grounds of the Neptune Gun Club, to witness the monthly shoot for the president's badge. The conditions were 5 pigeons each, 21yds. rise, 80yds. boundary, single barrel:

I L Cliver	00111—3	A Newman	00110—3
Wm Kelsey	11011—4	M Boyce	01111—4
C Borden	11101—4	W Bugle	10111—4
R B Cusack	11100—3	R Gravatt	01011—3

In shooting off the ties, W. Bugle won by 3 straight birds. The club has challenged the Freehold Association to a match, the teams to consist of ten men on either side, and compete for a prize.—C.

BROOKLYN, March 11.—The May-Be Gun Club monthly shoot at 20 clay-pigeons each, very strong wind blowing, making the shooting poor:

H Knebel, 19yds	11111100011111101110—15
T Short, 18yds	11111011101010110010—13
G Kuhn, 18yds	00111110011000100100— 9
J Link, 18yds	00001000000101000001— 4
C Munk, 19yds	01000000010000010000— 3

Canoeing.

FIXTURES.

March 24—Toledo C. C. Camp fire. Subject, "Cruising and Camping."
March 31—K. C. C. Camp fire, 106 West Forty-second street, 8 P. M.
April 7—Toledo C. C. Camp-fire, "Racing and Rules."
May 30, 31—Hudson River Meet.
May 30 to June 1—Connecticut River Meet.
July 18, 28—Western Meet, Ballast Island, Lake Erie.
July 24 to Aug. 8—A. C. A. Meet, Grindstone Island.

TORONTO C. C.

THE first camp fire of the season was held at the residence of the new secretary, Mr. F. M. Nicholson, on the 14th of January, Mr. N.'s birthday. Nearly every member of the club was present, each with his wife or lady friend. A most enjoyable evening was spent in canoe chat, singing and recitations. Mrs. Major Leigh gave a canoe song, with words and music by herself, and the new commodore, Mr. Tyson, sang a song to the air of the "Fine Old English Gentleman," bringing in the names of all the members in local hits.

On the 18th of February another of the same was held at the residence of Mr. H. Nicholson. That date was also his birthday.

On the 6th inst. Mr. Tyson gave his camp-fire, and again the members and their ladies had a good time. Mr. Tyson introduced, as a novelty to Toronto canoeists, the cooking of a portion of the supper by the members. I am privately informed that Mrs. Tyson—after surveying the wreck in the kitchen and dining-room—determined to allow the T. C. C. to cook anywhere but in her house.

Mr. M. F. Johnson is at present in Ottawa reporting the proceedings of the House of Commons for the official "Hansard."

Mr. W. McKendrick, of the Ubiques, has been elected a member of the Toronto Club, and Mr. Colin Frazer, of the same club, has had his name put up for membership. The new club house is proving a source of attraction to those intending to take up canoeing.

I inclose you a clipping about the formation of a skiff-sailing club. No doubt the T. C. C. will have some recruits from them as soon as they see the advantages of the canoe. Several of the members are already members of the A. C. A.

The Ottawa C. C. are moving in the direction of a local meet in May or June at Lake Deschene, near Ottawa. I am afraid the T. C. C. men will prefer something nearer home. The Peterboro and Lindsay clubs are talking about one at Sturgeon Point, near Lindsay. It is a first-class place for such a meet.

The Torontos have been thinking for a long time of making a raid, on the 24th of May, on the isolated canoeists of Hamilton. Burlington Bay is the finest water for canoeing in western part of Ontario. It is hoped that canoeists west of Toronto, notably those of Brantford, would join us in making it a success. What say the canoeists of Western Ontario? Boreas.

A CRUISE UP THE HACKENSACK.

IN the fall of 1883 three of us, Geo., Herbert W. and myself, started on a camping tour up the Hackensack River in two boats, with a full camping outfit. Our destination was Rockland Lake via Hackensack River, and we launched our boats at New Milford Dam, Hoboken Water Works. Our first carry was the Oradel Dam, from there we had easy paddling for about one and a half miles, but hard work then set in. Water being low, every snag and sometimes the bottom of the river were in the way, necessitating a carry every ten rods. After hard work for five hours, we reached Bogert's Dam (eight miles), made a carry of fifty feet, and at last slid into deep water. About one hundred yards along the dam we came upon a good place to camp, and, being very tired and hungry, we accepted the situation and went into camp on a high knoll, with a good spring of cold water close by. George and I made all things snug, while H., deputized as cook, prepared our evening meal. After supper, reclining on our blankets around the fire, we smoked and spun yarns until 9 P. M., when we turned in to be awakened about 1 A. M. with the silvery music of a pack of 'coon dogs which was in full chase. Sweet sleep returned once more only to be disturbed by H. saying, "C., they are calling us." I listened and heard Mr. Owl's "who, who-o-o," and told H. to answer up, "Herb. W. of Tenafly."

I awoke again at 5 A. M., and, hearing a gray squirrel barking, I wakened G. and told him to listen. He made for the tent door on his hands and knees. Asking what was up, was greeted with the reply, "Keep quiet, squirrels." We both slipped into our clothes, and, taking our guns, started off, giving H. an order to have breakfast on our return. We had good luck, for we were back in half an hour with seven beauties, which we skinned and made ready for breakfast. After breakfast we explored the river above, to see the height of water, and found it very low. We could go only about one mile further. We made up our minds to settle where we were for our allotted time, one week. During that time I had enough of camping on the Hackensack to last me for life. There are no fish in the Hackensack, but roach, pickerel and snags. Pickerel we shot when they were lying on the top of the water, sunning themselves. They would not bite at a hook or bait. I even tried them with red flannel troll.

On our return we got stranded at Closter Bridge, and, pulling our boats out, we sent for a horse and wagon to draw us home. So ended my first and last trip up the Hackensack River.

George and H. went again this fall and happened to be out in the equinoctial storm and found more water than they wanted. Case.

Tenafly, N. J., February, 1885.

PHILADELPHIA C. C. CAMP-FIRE.

THE P. C. C. held their second camp-fire on March 11, the subject being the interesting one of "Camp Cookery." The club, to the number of 23, turned out in the evening, many of them in camp dress. Besides the members, Messrs. Wilkin of the K. C. C., and Stephens, N. Y. C. C., were present from New York. Mr. Chas. Hegert read an amusing and interesting lecture on "Camp Cookery," after which the visitors were called on, and Mr. Wilkin spoke on the American Canoe Association, giving an idea of its aims and progress. Mr. Stephens also spoke on the same subject. A kerosene stove in one corner did good service in the meanwhile, and a lunch was served to all hands, after which a number of canoe songs were sung by the entire congregation. Captain Faulkner sang an original canoe ditty, and Purser Westlake sang his "Wooden Paddle," and also his "Captain of My Craft." The club have a house and a number of canoes, and expect to be afloat shortly. Some of them will attend the Newburgh meet, and also the A. C. A. meet. At 11 P. M. the meeting broke up, all well satisfied with the evening's entertainment.

A PACIFIC COAST MEET.

TO the Oakland Canoe Club belongs the honor of the first meet of the Pacific canoe fleet. On the afternoon of Saturday, Feb. 21 five canoes belonging to the O. C. C. rendezvoused at Yerba Buena Island, and there camped for the night. The yacht Gracie acted as convoy to inspire confidence in the minds of the canoeists, in case, as sometimes happens, the gentle breezes should blow with too much emphasis. Happily there was no occasion for her services, and the fleet made the first stage of its journey without mishap.

About 10 A. M. the next morning the eagle eye of the Commodore of the S. F. C. C., assisted by a first-class telescope, descried from his exalted perch in the "Castle" at Sausalito, the fleet wending its way toward him. Somewhere about two hours saw the fleet, consisting of the Mystic (flagship), Undine, Sunbeam, Zephyr, and one other, the name of which this veracious chronicler has stupidly forgotten, safely disporting in the waters which have come to be looked upon as the peculiar home of the Sausalito contingent of the S. F. C. C. The Gracie, as in duty bound, stayed behind to pick up any stragglers that might fall by the way, and came to anchor some two hours afterward. The skipper explained that the delay was in a great measure owing to the fact that the Gracie had sailed (?) so much in Oakland Creek during the early part of her career that it was almost impossible to get her to go anywhere else.

Moth and Folly endeavored to do the honors to the visitors, and the rest of the day was pleasantly spent in showing to them the beauties of Richardson's Bay. Moth being left to entertain in the flagship, Folly set out to show things to Undine, and together they cruised and smoked, chatted and lunched until late in the afternoon.

The fleet camped that night on Point Tiburon, with the exception of Mystic, who was most unfortunately recalled to his home, a telegram announcing serious illness in his family, and spreading his big Mohican he was soon but a speck in the dim distance.

Folly intended to join the fleet again the next day, but an unfortunate breakdown of the cable cars made him miss the ferry, and left Moth alone to do the honors.

The fleet spent the morning in camp, coming over to Sausalito after lunch, and after chumming an hour or two, took the tide at the flood, and with a fair wind and everything drawing, sailed gaily homeward. In actual distance covered, this cruise will not perhaps compare with that of Bishop, or Kendall and Neidé, but it seemed a very pleasant one to the participants, and was above all the first. Fulegula Valesneria was unfortunately unable to be present to represent "Squaw Point," a small chap with a very malapropos sore throat detaining her in the nursery. Modesty forbids my repeating the many complimentary remarks passed upon our sailing ground, but I think I may venture to score one for Sausalito. Folly.

Feb. 24.

CRUISE OF THE STONINGTON C. C.

THIS club is composed of ten members, with a fleet of nine canoes, all canvas. They were built very strongly on account of the rough water which generally prevails there. When completed the canvas was oiled, and four or five coats of paint put on, which made it impossible for any water to penetrate it. The boats were all about the same size, 14×32, and carried leg-o'-mutton sails and a jib.

Wednesday.—This being our first cruise we were a long time getting ready. Four of us started, namely, the Dot, Minnie, Flirt and Clytie. Launched the canoes at 3 P. M., bound for a three-days' cruise. The wind was blowing a regular canoe gale, and so had all we could do to carry mainsail. Our first stopping place was to be at the source of a small stream, which we reached in an hour and a half, having had a fair wind all the way. The only difficulties we encountered were the low bridges, and when going under two we were forced to unship our masts, but we soon become acoustomed to that. Coming to anchor at the head of the stream, the crews began to prepare supper, which did not take long, as we had made up our minds to rough it, and so left all luxuries at home. After all had finished their repast we set out for shore. There being only a few houses in that locality, there was not much to see except dogs, and we did not want to make their acquaintance. While preparing to go aboard our canoes again, a kind-hearted farmer came down to the shore and offered us the use of a tent belonging to him, which of course we accepted, and at once commenced putting it up.

On awaking in the morning we saw to our amazement the canoes all careening on their sides in the mud. The tide happened to be at its full height when we entered the preceding evening, and was now just coming in again. It being still early, and we in no great hurry, we did not swear as we might have done, but went to work to get our morning meal. We carried our coffee all ready to drink with the exception of adding the milk, which we bought of the farmers. Besides that we had pastry, canned articles, etc. After finishing breakfast we took down the tent, and then prepared to get under way. The wind was blowing in the same direction it had the previous day. While getting under way the only accident of the whole trip happened. The crew of the Minnie, in attempting to set his masts, not being yet up in that art, got his canoe to rocking, and before he was able to stop himself, he was taking his morning plunge, but with his clothes on, which put a different face on the matter. Luckily the water was not deep, or it might have resulted in a serious accident, he being the only member who could not swim.

The wind being dead ahead, the Clytie was the only one which attempted to sail, the others preferring the paddle. Upon reaching open water we were joined by the Dash, he not being able to start with us, as his canoe was not finished in time. The wind being fresh, the canoes all proceeded under mainsail except the Clytie, who, having smaller sails, carried both. Arrived at Watch Hill, a favorite summer resort, at 12 M., where a crowd was gathered to inspect our canoes. We waited for the slower boats to approach, and then continued our way up the Westerly River. Having a fair wind we winged out, and were not long in reaching our camping place for the night, which was about two and a half miles below the town of Westerly, and in a beautiful little cove bordered around the edge by trees, which, when the moon shone through, would make a picture fit for the brush of any artist.

We had just got through with our sumptuous meal and were getting settled for the night when the crew of the Dash proposed that we should go on to Westerly, as it was moonlight. We asked him if he knew the channel, and he said he did. This plan met the approval of all hands, except the crews of the Flirt and Clytie, who declared at first they would not go, but after a while gave in and we prepared to start. There was not a breath of wind, so we had to resort entirely to the paddle. After we had proceeded a short distance we discovered that the crew of the Dash did not know any more about the course of the channel than did the rest of us. As the Clytie was the lightest draft canoe and carried the lantern, her crew was requested to take the lead. We had not proceeded very far, and did not know where we were going, when the crew of the Dot said he saw a light dead ahead, and a steamer came around a bend in the river. There was some lively paddling then, as we were directly in her path, but we escaped with a wetting. Following the steamer, we arrived below the town at 9:30 P. M. We hauled our canoes up on shore, and then started to take a walk in the village. When we came back the dew was falling almost as fast as rain, which made us all sick at heart, as not one of us had a tent or any kind of covering to go over the cockpit. The crew of the Flirt and Clytie then devised a plan for their comfort. There was an old flat-bottomed scow lying upside down, and it was but the work of a moment for them to construct a comfortable shelter. Putting two large rocks under the edge of one side of the scow to prop it up, they spread their blankets underneath and turned in. The crews of the Dot and Dash had started down stream to find a suitable place in which to pass the night, but soon returned and took to their canoes as a last resort.

The crew of the Flirt commenced the programme of the day, by turning all out at 5 A. M. Upon completing our toilet we thought we would get our breakfast in the town, so accordingly visited a bakery and laid in a stock of provisions, which we stowed away in our canoes

and made preparations for starting. Two youngsters had taken possession of the Minnie, but after some calling and threatening the largest one jumped out and sent the little fellow back with it. We had to beat out, but it was more exciting, as we were continually racing. At first the Flirt took the lead, but after a while was passed by the Clytie, who kept it till a strong breeze enabled the 'Dot to pass her. The sail down the river was the best one yet taken on the cruise. The natives all along the shore stood looking at us and called their families out to join in their astonishment. About noon it commenced to blow so hard that we deemed it advisable to land for a short time. Where we landed there was a pond spaced off from the river that the owner keeps full of bass which he catches with a seine. At the time we stopped there were 700 in the pond. It is very interesting to see them fed, as they seem to know what time to look for their meals. When they are scarce and the price high the dealer sells them.

A paddle home terminated the first cruise of the Stonnington C. C., but next season we shall take a longer one.

WILL PALMER, Jr., Clytie.

SINGLE vs. DOUBLE.

Editor Forest and Stream:

In your issue of Feb. 19, "Single Blade" says: "Your correspondent 'Boreas' claims that the double blade has proved superior to the single blade for speed, which I deny, as the races of the Association do not prove it." In 1880, at the first meet, the user of a single blade distanced all the others. The event referred to in the last sentence was a contest for a prize canoe offered by the writer. The contestants were, with one exception, gentlemen out for a vacation. None of them were engaged in any business that gives wind and muscle strength to the back and arms, so necessary to the victor in a paddling race. All were novices in the use of the paddle. The single exception, the winner of the race, while no less a gentleman—in what we in America consider makes a gentleman, good behavior—was, nevertheless, an expert in the use of the single blade, a veteran backwoodsman who could have used the language of a certain Adirondack guide, who said he would as soon paddle all night as sleep in the shanty. He had the further advantage of paddling a light open canoe 16ft. 4in.x26in. (I think), while the others used a decked canoe 15x28 and upward. Thus it will be seen that the double blades were hopelessly handicapped. The gentleman who won came to the meet on purpose to win. To win the prize represented just so much cash, as is proved by his selling it within an hour.

In other cases, where the single blade has won, the double blade has been handicapped in like manner, though perhaps to a less marked degree. At a subsequent meet at Lake George, I remember a tandem race between single and double blades, each side selecting their two best men, and both using open Canadian canoes as near alike as possible. The double blades won. "Single Blade" may think I am prejudiced, but I am not; I grew up with a single blade in my hand, and might almost say I never heard of a double blade until within the last ten years.

For hunting purposes the double blade is useless. No one would ever think of using one for "floating;" and that word brings to mind many a night when I have drifted over the dark waters of lake or stream so noiselessly that one could easily imagine his craft propelled by invisible hands. For hunting you must use the single blade, and that only. But seat yourself in the middle of a modern decked canoe, and for either comfort or speed you must take the double blade.

To give an opportunity to put it on record that I am right or wrong in this assertion, I offer, subject to the approval and under the directions of the Regatta Committee—one or one dozen, as they may see fit to accept—of my best double-bladed paddles, to be contested for by double vs. single blades, under such conditions as shall satisfy every one of the superiority of one or the other for racing purposes. I would suggest several races (on days of the meet when there are no others), for all kinds of canoes, but classed or handicapped to make them equal, and an extra prize to the winner of the most races. J. H. R.

Editor Forest and Stream:

"Single Blade" has not read my former communication about paddles, or he would not mention the 1880 meet as any proof of the superiority of the single for speed. The winner of the three races in 1880 was Wallace, of Cobourg, admittedly the best paddler in Canada. He had a racing canoe, long, narrow and very light. His opponents were in very much slower canoes and none of them pretended to be able paddlers.

In 1881, Wallace—who had in the meantime become a professional—could not be present, but other single paddlers were. Dr. Heighway, using a double paddle in an ordinary 14ft. Rob Roy, won all his races quite as easily as Wallace won his. I think we may conclude that '81 fully balances '80.

In 1882, only one single blade—Mr. Emerson—entered for regular paddling races during the whole meet. In the first race—Junior—he was beaten by Johnson, but won on a technicality, Johnson being adjudged a senior. Emerson's canoe was, as the rules then permitted, longer and faster than any of his opponents' craft. In the senior race he was easily beaten by Vaux, Munroe, Johnson and others. An extra race for two men in a canoe was won by two double paddles against two singles.

In '83 Johnston, using a 16×31 canoe, was first in Class 3, but was disqualified for touching the buoy. The winner, and all the other entries had smaller and faster canoes. In Class 4 Johnson, using the same craft, beat R. Adams and others. In Class 1 he was not allowed to start, his canoe being adjudged too narrow. In the tandem race Blade and Fitzgerald beat Johnson and Kerr, who had never paddled together until a few minutes before the race.

In '84 there were three races in which Johnson, Weller and Adams met. "Single Blade" says, practically, that Johnson's canoe was faster than theirs. The official record contradicts this. Johnson's canoe being 16×28 against their 16×26, and 16×27. The first race was one mile, and Johnson won by ten seconds. The next race was the three miles and he again won by more than a minute from Weller, and two minutes and twenty seconds from Adams. In the Class 1 race Johnson used his 18×25 canoe, but I suppose no one will question his ability to have won the race without it. Having already won at one mile and three miles, he would have won at one and a half miles just as easily.

I again state that with equal canoes and equal men, the man using the double will produce the greatest speed. If "Single Blade" still doubts, I must refer him to Mr. Weller who will be considered good authority.

A single blade is good for cruising in a canoe suited to it, but it would be out of place on a regular decked canoe.

The writer handled a single blade for years before he saw a double, so he does not write from one side of the question. BOREAS.

A CHANCE FOR THE TORONTO C. C.—A meeting was lately called in Toronto for the purpose of forming a club of boat sailers, there being at present no club which recognizes such craft as small sailing boats and skiffs. A club was organized and the following officers elected: Commodore, Dr. B. L. Riordan; Vice-Commodore Evelyn Macrae; Captain, F. N. W. Brown; Secretary and Treasurer, H. S. Hall; and a committee consisting of J. Kilgour, J. T. C. Boyd, Percy Bath, N. Macrae, J. D. Thorburn and F. W. Greene. Toronto has already well established and prosperous yacht and canoe clubs, but neither offered the proper facilities to the boat sailors. While boats are not recognized by the A. C. A., and are not admitted to the races, there are many cases where it is advisable for canoe clubs to open their ranks to the owners of craft not strictly canoes. The increasing love of cruising has of late brought in many who wish a larger boat than the ordinary canoe, and who are animated by the same ideas as canoeists, except as to model of boat, and it really seems best that they should find a place in the canoe clubs. The Brooklyn C. C. have accepted this view and invite membership from boating men, with the result, in all probability, of many valuable members, and a similar movement would benefit the Toronto C. C. Of course, the club is distinctively a canoe club, and the races are mainly for canoes; but the addition of sailing boats to the fleet will bring in many new men, and the canoe of to-day need not be ashamed to appear side by side with any other small craft, sneakbox, skiff or sailboat. They are certain, when better known, to commend themselves to many who formerly preferred a rowing or sailing boat. The decadence of shell rowing, and also of the open sandbag boats, has left many persons of aquatic tastes without suitable craft, and canoeists can eventually draw many recruits from this number when they become familiar with the craft, and are freed from the prejudices which have long prevailed against canoes.

CANOE PILOTAGE.—Mr. Wilkin's idea is a good one, and should be carried out by all means. It would be a great help to the cruising canoeist to have an idea, if only a vague one, of the distances on the route of his cruise. It is also important to have some knowledge of the camping places, as one might camp in a wretched place, when by going on for a half mile or so, find as good a spot as can be desired or *vice versa*. Then the knowledge of the location of dams, rapids, portages, places where the provisions can be replenished, spots to be visited or to be avoided, whether the dams and rapids can be run and if so, how, if not, the best way to portage around, and many other things too numerous to mention, which fall to the lot of the cruising canoeist to encounter. The only objection to the plan is that the innate laziness of some men won't permit them to keep a log of this kind. If this objection can be overcome or the pilot idea be carried out in spite of it, there is no reason why the system suggested should not be of the greatest use.—FRIDAY (March 8, 1885).

LAKE MISTASSINI.—An expedition is now organizing in Quebec for the exploration of Lake Mistassini, the great inland sea of Northern Canada, discovered two hundred years ago by the French Jesuits, but never explored. It is situated about 300 miles from St. John, on the Saguenay River, and 600 miles from Quebec. The expedition will be under the direction of Lieut. F. H. Bignell, English Corresponding Secretary Geographical Society, who has lately returned from a visit to the lake. It will leave Quebec on June 10, going by steamer up the Saguenay, then by land, eighty miles, to Lake St. John, thence by the Chamouchouan and Nikoubau rivers, and Perch, Narrow Ridge, Whitefish, Abitagamou and Chibagamou Lakes, to Abatagoush Bay on Mistassini. Returning, the route will be by way of Little Mistassini Lake, Rupert River, Lake Themiscamé and a chain of small lakes to the Chipsaw and Peribonca rivers and Lake St. John. The trip is expected to occupy eighty to ninety days. The cost of the trip to each member will be $500, the organizers providing Indian guides, canoes and attendants, as well as provisions. Lieut. Bignell's address is Quebec, and the New York agents are Messrs. Wilson & Lang, 59 Wall street.

HARTFORD C. C.—The H. C. C. have closed the contract for a fine new house to be ready April 1. It will be built on the east side of the river where a lot has been leased for ten years, and will be 60x30ft. The plazza on the west or water side will be 70ft. long. The house stands 30ft. above high water, and the float will be reached by a railway. A boom arranged near the float will protect the larger boats which must be kept afloat. Rooms are provided for a janitor, who will attend to the house and boats, and also ferry the members across the river. The club has a fleet of fine canoes, and a number of new ones will be added this season. The building committee are Messrs. Parmele, Jones, Green, Goodwin and Abbott. The H. C. C. will join the Springfield men in a cruise on May 30.

CHICAGO.—The Chicago C. C., now only a year old, numbers nearly 50 members. They are in a prosperous condition, and expect soon to build a new club house with meeting room, dressing and reading rooms, and ample room for the boats. The club now owns nearly 35 canoes, and several new ones have been ordered. A two weeks' cruise of the club is proposed for next July on the "Eagle Waters," a chain of lakes in Northern Wisconsin. The officers of the club are: Commodore, G. M. Munger; Vice-Commodore, H. B. Cook; Secretary and Treasurer, J. H. Ware. Commodore Munger is now cruising in Central America.

VESPER BOAT CLUB.—The Vesper Boat Club held its tenth annual meeting on March 9, electing the following officers: President, Paul Butler; Vice-Presidents, Harry A. Brown and Fred P. Marble; Treasurer, Ralph F. Brazer; Secretary, Andrew G. Swapp; Directors, Frank W. Howe, Charles P. Nichols and R. F. Hemenway. The club is in a very satisfactory condition, with a fine clubhouse. Though widely known throughout New England as a rowing club, many of the members are enthusiastic canoeists, and the club will take a leading part in the New England meet in June.

RONDOUT.—The Roudout C. C. now owns five iceboats, and much interest is taken in the sport. In a blow lately two collided, one capsizing, while the other, the Kitten, broke her back bone. The club propose to start on Thursday or Friday preceding the Newburgh meet, and cruise down to the camp a distance of 36 miles. Canoeists from other points will join them and the cruise promises to be a very pleasant one.

CONNECTICUT RIVER MEET.—The Springfield and Hartford canoe clubs will join in a meet on Decoration Day, the former leaving Springfield on May 30, camping with the H. C. C. at the mouth of the Sciantic River, cruising down on the 30th and camping at Middletown, and making Saybrook Point on the 31st. About two dozen canoes will take part in the cruise. The S. C. C. has lately been incorporated.

NEW ENGLAND MEET.—The Vesper B. C., of Lowell, have decided to undertake the arrangements for a meet in June, the exact date not having yet been decided on. The meet last year, although an experiment, was a complete success, and it is proposed to have one on a larger scale this year, and to have canoeists from all the Eastern States.

WIRE FOR STEERING GEAR.—A correspondent writes us that he has used phosphor bronze wire cord for steering gear, and finds it very strong and pliable, and not easily corroded. It is made of various sizes, from 1-16in. up.

DUBUQUE.—The canoeists of this city expect to organize a club soon and join the A. C. A.

Yachting.

FIXTURES.

April 2—Mosquito Fleet, City Point.
May 25—N. J. Y. C. Match—Catamarans.
May 30—South Boston Y. C., Regatta, City Point.
May 30—Knickerbocker Y. C., Regatta.
May 30—Newark Y. C., Regatta.
May 30—Dorchester Y. C., Club Race, Dorchester Bay.
May 30—Fall River Y. C., Open Regatta.
June 11—New York Y. C., Regatta.
June 13—Boston Y. C., First Club Race.
June 15—S. C. Y. C., Annual Regatta.
June 17—Pentucket Y. C.
June 17—Dorchester Y. C., Open Regatta.
June 20—Boston Y. C., Second Club Race.
June 20—Hull Y. C., Pennant Matches.
July 4-11—Pentucket Y. C., Annual Cruise.
July 8—Beverly Y. C., Nahant, First Championship Regatta.
July 11—Hull Y. C., Cruise.
July 18—Boston Y. C., Third Club Race.
July 16—Cleveland Y. R. A., Annual Regatta.
July 17—Cleveland Y. R. A., Cruise to Ballast Island.
July 18-28—Camp at Ballast Island.
July 18—Hull Y. C., Club Race.
July 25—Hull Y. C., Ladies' Day.
July 25—Pentucket Y. C., Club Race.
July 25—Beverly Y.C., Marblehead, Second Championship Regatta.
Aug. 1—Hull Y. C., Club Race.
Aug. 5—Pentucket Y. C., Championship Race.
Aug. 8—Beverly Y. C., Marblehead, Open Regatta.
Aug. 15—Hull Y. C., Open Race
Aug. 25—Pentucket Y. C., Club Race.
Aug. 29—Beverly Y. C., Swampscott, Third Championship Regatta.
Sept. 5—Hull Y. C., Champion Race.
Sept. 9—Beverly Y. C., Nahant, Fall Regatta.
Sept. 19—Hull Y. C., Champion Race.
Sept. 18—Boston Y. C., Fourth Club Race.
Sept. 19—Pentucket Y. C., Union Regatta.
Sept. 28—Pentucket Y. C., Championship Regatta.

THE NEW SLOOP.

WHILE models are still pouring in and amateur yacht designers are springing up every day, but few of the rumors concerning new sloops have been verified. No contract has yet been awarded for the Ellsworth model, and it is not definitely known that she will be built. An order for an 80ft. sloop has just been given by some members of the Eastern Y. C., to Burgess Bros., who will furnish the design. The vessel will be built by Lawley & Son, but no work on her has yet been done. The only actual steps taken to provide a competitor is in New York, where the contract has been signed for an iron sloop to be built for Com. Bennett and vice-Com. Douglas. The builders, Messrs. Harlan & Hollingsworth, of Wilmington, Delaware, who built the Mischief in 1879, have agreed to complete the hull, ready for spars and rigging, in sixty days, and are already at work. When launched she will be towed at once to New York, where sails, spars and gear will be waiting for her, so that it is expected that no delay will be necessary in fitting out. It this programme is strictly carried out she should be ready for a trial trip by June 1, and should take part in the June races. The dimensions of this yacht are as given before in the FOREST AND STREAM, 94ft. on deck, 85ft. waterline, 22ft. 5in. beam, 7ft. 9in. draft, with 3ft. 6in. freeboard.

The club have taken the matter in hand in a manner that will insure the completion in good season of a fitting representative, and allow a thorough trial before the date of the Cup races.

YAWLS IN BOSTON.

THE big yawl Whitecap has made the "picturesque rig" familiar in Eastern waters, and it has found favor with the owners of other yachts, old and new. The latest accession to the list of yawls is the Vanitas, known for some years as a very fast boat in her class of small schooners. She was built by Lawlor in 1873, and has been remarkably successful as a prize winner. This year her owner, Mr. Hutchinson, will abandon the schooner rig in favor of the yawl, and as she has been tried for so long alongside of well-known boats, an excellent opportunity will be given to compare the relative speed of yawl and schooner. It is not to be expected that as a yawl she will win from similar boats with a sloop rig, but she should show greater speed and ability to windward than she formerly possessed. Her new mast will be 39ft. long, hoist 22ft., boom 23ft., gaff 20ft., mizzen hoist 16ft., boom 13ft., yard 10ft. The jib will be 14ft. on foot and 25ft. on leach; staysail 12ft. on foot and 25ft. on leach. The dimensions of Vanitas are: Length on deck 34ft., on waterline 27ft. 6in., beam 12ft. 3in., draft 5ft. 9in., or 3in. more than last year. Her accommodations are excellent for so small a boat, including a cabin 7ft. long, two staterooms aft, and a roomy forecastle and berth for man. The little yawl Fad, built last year, has been illustrated in the FOREST AND STREAM. A similar boat will be built soon by Mr. C. E. Pratt, of the Hull Y. C. She will be a little wider than the Fad, her dimensions being: Length on deck 30ft., waterline 25ft. 10in., beam 8ft. 6in., draft 7ft., ballast on keel 4 tons of iron.

In the vicinity at Boston a class of boats like the Vanitas has been very popular, boats about 30ft. long and schooner rigged, derived probably from the Eastern fishing schooners. While inferior to the sloop rig in point of speed and windward work, the rig has its advantages, as it is easily handled, and it has answered excellently for cruising purposes. With the yawl, however, all the advantages of the schooner can be had with increased speed, while the performance of the boat to windward will approach nearer to the sloop. The yawl possesses one great advantage over the schooner, especially in these small yachts, as in the latter the mainmast is always in the way below, occupying valuable room near the companion, and obstructing, in a greater or less degree, the entrance, or passage fore and aft. In the yawl, instead of the mainmast, is a small mizzenmast, stepped so far aft on the counter as to be entirely out of the way, while the mizzen itself requires little attention and is easily handled. No other rig offers the same number of changes as the yawl, while the difficulty of reefing a long boom projecting outboard is entirely obviated. There are still many small yachts about Boston, which could be advantageously changed to the yawl rig, and should the Vanitas prove a success, others will no doubt follow.

NOTES FROM LAKE ONTARIO.

ALTHOUGH the season has been more severe than usual in this latitude, work upon the local yachts has been in progress during the winter, and now that the spring is apparently not far distant, yachtsmen begin to look around and to take mental notes of what the local builder and his assistants have been doing.

The sloop Norah, which is the holder of the Fisher champion cup, through default on the part of the Atalanta's owners, has been thoroughly repaired. About one-half of her planking has been removed, additional frames have been put into her, and when the season opens she will be in the best possible trim.

The sloop Dauntless will receive some new planking, a new spar, and her bottom will be smoothed up.

The sloop Gracie has been lengthened 3ft. 6in. forward, which improves her entrance materially. She is expected to make a bold bid for the championship of the second class.

The cutter Sylvia has also been newly planked throughout the greater portion of her length, and will probably be used more this season than last, as an alteration which was made in her trim after the racing of last year had ended seemed to improve her speed very materially. She is one of the wide ones, about three and one-half beams to length.

The big sloop Atalanta and the second class champion Iolanthe have wintered well, and will be in perfect condition when the spring opens. The former is certainly the fastest craft on the lakes, and I believe, fully equal to the best of the New York fleet. Her performance in the Cup races was no fair test, as at that time she was oversparred, over-canvassed, insufficiently ballasted and very rough outside. With all these defects remedied, she has had no difficulty in winning every race in which she has started, except that at Toronto last fall, when half an hour was lost by the parting of the throat halliards, and she finished first but was beaten a few minutes on time allowance.

It is reported that Cuthbert is busy with a second class craft, which is intended to capture the championship of the second class. Racing in this class will be very hot in 1885, and the new one will have to be a veritable flyer to realize her clever builder's anticipations.

I have been much amused by reading the lucubrations of one of your contemporaries, in which he demonstrates to his own satisfaction and that of all other equally "candid" critics, that the sloop Gracie, by winning one out of her three races with the cutter Bedouin in the fall of 1884, proved herself the speedier yacht. PORT TACK.

A SHARPIE CHALLENGE.

Editor Forest and Stream:

I notice that in your issue of March 12, "Paterfamilias" describes a little craft he is having built as follows: "Length, 18ft.; beam, 47in.; draft, 44in.," etc. He also states that she will probably be unsinkable and non-capsizable, that she is to carry 1,018 pounds of iron on her keel, and that her cost will be about double that of a catboat of same length.

At the present time there appears to be a very strong movement in favor of safe, unsinkable boats of small size, which can in all respects take the place of the somewhat dangerous and usually unseaworthy catboats. I, for one, wish to do what little I can to further this movement, but my experience teaches me that the desired end can be gained at one-half the cost and far more satisfactorily than by building such boats as the one described by "Paterfamilias." His little craft is being built almost within sight of where I am now sitting, which fact adds to my interest in the experiment, and her nearness also suggests the following proposition: If he will let me know when his boat is to be completed, I will build one and have her ready at that time, in order to test the two craft on the following desirable points: Seaworthiness, weatherliness, stability, unsinkability, and speed in sailing to windward and free; also quickness in stays, and (if that be deemed desirable) the quality of being maneuvered to windward without using rudder, or any other appliance excepting sails, for steering purposes.

Some of the dimensions of my boat will be: Length, 18ft.; beam, 52in.; depth of hull, 30in.; freeboard at amidship, 15in.; draft, with rocker keel, 32in.; weight on keel, 500lbs. Boat to be built and rigged in the best and strongest style, and total cost not to exceed $250. Non-capsizability to be tested by heaving the boats down on their beam ends and then permitting them to raise themselves and rigging to an upright position. Unsinkability to be proved by filling the boats with water.

My proposition is made in the most friendly spirit, and with the earnest desire of a yachtsman to further all that is or should be of interest in yachting. THOMAS CLAPHAM.

ROSLYN, L. I., March 14.

[We cannot answer for the individual qualities of the boat referred to, as we have not seen it, but such a boat can be built to compete with the sharpie in the points named. The waterline of the little boat is but 14ft., and the sharpie, we suppose, would be at least 16, as Mr. Clapham compares them evidently by length on deck, so his proposed boat would be much larger, even though not as deep.]

YACHTING IN CLEVELAND.

Editor Forest and Stream:

To go to the meeting of yachts at Ballast Island in July seems to be the object of every yachtsman you meet. The committee who have the matter in charge, are doing their utmost to make things pleasant for every one, stranger yachtsmen as well as the home yachtsmen. Circulars containing a description of the islands and other valuable matter are out, and have been sent to every yacht owner whose address is known here. A meeting of all the yachtsmen of the whole chain of lakes ought to be crowned with success, and will have a wholesome effect upon yachting around here.

All the yacht owners are talking of getting out as early as possible. Mr. H. Gerlach has about finished the work on his boat, with the exception of the 3,000-pound shoe. He has strengthened her throughout, and has also raised the cockpit floor. As soon as he is through with the Lulu, he will begin work on a singlehander for Mr. Moran, the newly-elected member of the C. Y. A.

Mr. Jackson, builder of the Kids, is pushing the work on that boat. He has her decked, and the cabin is nearly finished. She will be 20ft. loadline, 7ft. beam, and 4ft. draft. Her greatest beam will be about midway from stem to stern, and from there, sloping by easy lines fore and aft, making a fine, clean entrance and a good clearance. Her overhang is very short and might have been run out another foot at least. Otherwise she is a fine looking boat, and with proper handling will beat the boats of her class and do her builder credit.

The Ida, the best known boat in Cleveland, will have a new suit of canvas this season, and as her new owners are up to her points, she will make herself felt in the races. As far as speed and a fine looking boat are concerned, the Rover will be right along with the rest of them. A housing topmast, double head sail and a 2,500lbs. shoe, for which the pattern is already made, are expected to contribute to her already well known speed and weatherliness. In her stern, near the sternpost, one or two of the planks were beginning to rot. Poor ventilation probably accounts for that. They have been replaced, making her as strong and sound as ever. One thing I would like to call the attention of the C. Y. A. to, and that is, that with all their push and enterprise they have never thought of inaugurating a ladies' day, as they have in New York. The Rover and C. R. Davis had many a pleasant party of young ladies and also some of the old folks out last summer, and will repeat the experiment this year. Let the women of our age know what aquatic sports really are, and then will that old German adage, "Das Wasser hat keine Balken" (The water has no beams) disappear. Those two boats deserve praise for starting a movement in this city that cannot help but have a beneficial influence upon yachting. BRASS.

CRUISE OF THE CORA.

PART I.

AT 7 P. M. we lay inside Government breakwater at Chicago waiting for a breeze. Dry goods, wet good and all supplies snug in the lockers below, crew all on board, a beautiful evening, and nothing wanting for an auspicious start, but that very necessary article,wind. Darkness came while we sat about the deck discussing the probable chances for a breeze. The long lines of gas lamps away down the avenue spaced off regular periods in the dark, and above the stars twinkled in boundless profusion and irregularity. After midnight came a breeze and we were soon outside with the wind S.W., everything set and drawing nicely; bound for the north end of the lake, Waukegan abeam at 11:15 A. M. and Kenosha Harbor at 1 P. M. Here we found the yacht Mamie, Capt. Kimbal, awaiting us to keep company on the cruise. Here we expected to be joined by Commodore Munger, owner of the Cora, but found instead, orders to proceed as he was detained and would join us further on. We lay here awaiting the Mamie till morning, and as Capt. Kimbal wished to stop at Racine, they got under weigh an hour ahead of us. At 9:35 A. M. we made sail with a good breeze from S.W., and at 10:45 A. M. we were at Racine. The Mamie's topmast could be seen at the dock just inside, but as we did not intend to land here, we lay to outside and fired a gun which was responded to by a gun from the Mamie, and in a few moments she came out to join us and both were headed north.

At 2:30 P. M. Milwaukee was abeam, at which place we had not expected to stop, but the Mamie stood in for the harbor, so the Cora, when abreast of North Point, came about and stood in also, not wishing to be separated so soon. We found the Mamie at anchor close inshore and Capt. Kimbal gone up to the city, so we anchored near by. On his return he came aboard the Cora and took supper with us. No person who has not enjoyed the comforts of a cosy, roomy yacht and partaken of the hospitality of generous and jolly yachtsmen on a cruise, can imagine the enjoyment of a hearty meal in the cabin after a long day's sail over blue water. Almost hourly surprise is expressed that with such a magnificent body of water as Lake Michigan at their doors, so few that are able to indulge in the sport avail themselves of it; yet such is the case, though I am happy to see that the love for it is yearly on the increase.

Supper and pipes were ended, the gig lowered, and Captain Kimbal returned to the Mamie. The boat was soon back and hoisted to its berth at the davits, and each yacht bore away on the northward cruise.

The Cora being the larger yacht and the faster sailer, it was decided, in order to keep company during the night, to give a line to the Mamie, and thus both yachts keeping the same course, we should get along as well and be together in the morning. The wind was steady and quartering, and this arrangement worked nicely and proved enjoyable.

A slight description of the crew would perhaps be in place here. It was discovered that our one able seaman was a veritable old salt, having sailed with Com. Wilkes in his expedition to the South Seas somewhere in 1838 or '40, and hence he was dubbed Com. Wilkes. Capt. Busser, the skipper of the Cora, was of course in command, and he, with the "Ensign"—so called because his name commenced with E and was nearly like Ensign only not quite so nautical—with Midshipman Easy—so called because he took things so easy, including all the easy places, on duty and off—composed the first watch, while "Mose," otherwise called D. D. ("dinner doctor"), managed the culinary department and served up rations with the skill of a Blôt, for which he was awarded due credit every time he piped to grub.

Port Washington was passed at 3 A. M. Its lonely light shone clear and bright high up on the bluff just before day began to break, and "Eight bells, turn out the watch," was the welcome call shortly after. Soon after daylight we came upon some fishermen at their nets two miles or more from shore, and procured from them some fine white-fish, which the "Doctor," with his usual skill, served up for dinner, and which certainly were the finest we any of us had ever eaten.

We passed Amsterdam at 6:30 A. M., and Sheboyagan at 9:30. Near the latter we spoke steamer Chicago, bound south, whom we requested to report us on arrival. Passed Manitowoc at 1:45 P. M., and Two Rivers at 2:15 P. M., and were soon abreast Twin River Point, which stands up bold into the lake; and here we leave the shore and lay our course for Les Portes des Morts (the doors of death) as the entrance to Green Bay is called. Gradually the shore dips into the blue water and at last,

> "Slow sinks more lovely ere his race is run,
> Along the western hills the setting sun,
> Not as in northern climes obscurely bright,
> But one unclouded blaze of living light."

At eight bells the first watch for the night is set, and the others turn in for a nap below.

Those who have never stood a night's watch on the deck of a vessel out of sight of land cannot realize the lone, silent grandeur of the scene. The vessel ploughs on her way, parting the crest of each dark wave as she reels and rises on its top, only to sink again into the trough of the sea, and the next moment she rises dripping from the plunge as if endowed with life. No sound is heard but the lashing of the waves, the sighing of the wind in the rigging, the dark water below and all round, with here and there topped with a white crest of foam as it curls over like sparkling molten silver into the trough of its mate before it. No lights to be seen, save the slight gleam of the binnacle light showing a man at the wheel, and the lamps of heaven—the stars twinkling above—such is the time when man may commune with his creator and realize his own insignificance.

It was on this watch that Com. Wilkes was guilty of a gross neglect of duty, for which, but for mitigating circumstances, he would have been keel-hauled at daylight. The master's mate was having his trick at the wheel, and the Commodore whiffed his pipe and walked the deck while he spun yarns of his adventures in the South Sea. In return the master's mate undertook to reciprocate by telling a very funny story for the entertainment of the venerable salt. He had hardly cast loose his jaw tackle ere the Commodore seated himself in the stern of the dinghy, and with an air of resignation folded his reefer about him in an attentive attitude.

The yarn was not a long one, and was one the master's mate rather prided himself on, always bringing a good laugh. However, when the M. M. had reached the end and the place where the listener was expected to laugh, there was only an oppressive silence. He was mortified to find the salted tar did not seem to appreciate the fun, or at least see the point, and instead seemed to be intent on inspecting the masthead of the stars. There he sat, head thrown back and mouth open, as if something up there filled him with wonder. The M. M. spoke to him, but he answered not, and the next moment his head dropped back—he was sound asleep. On being awakened by the indignant master's mate, he claimed that the story had been too much for his age, but while he didn't intend to do it, he must have fallen asleep from fatigue.

Eight bells and the watch was changed, and the relieved ones were soon snoring below. At 3 A. M. sighted Pilot Island Light, the entrance to Death's Door and Green Bay. While running in toward the "Door," the Mamie caught a magnificent Mackinaw trout on a spoon that that they had been trolling behind. The boys made things ring with shouts and laughter before the three hundred feet of line with the 10½-pound trout at its end was hauled aboard, and with great glee held it up for us to see what it was all about. It was unanimously resolved that his troutship should be served up for dinner in chowder, which the M. M. was known to be skillful in making.

In my next I'll tell your readers how he made it and how good it was.

DORSAL FIN.

ELECTION OF OFFICERS.

Atlantic—Commodore, H. H. Hogins; Vice-Commodore, J. C. Barron; Rear Commodore, H. E. Dodge; Secretaries, J. I. Marcellus and F. C. Swan; Treasurer, R. C. Field; Measurer, J. J. Pierrepont; Regatta Committee, J. T. Van Wyck, W. I. Wintringham, Charles T. Pierce; Trustees, William Peck, J. R. Maxwell, C. N. Hoagland, N. D. Lawton, A. C. Woodruff.

Newark.—Commodore, Edward M. Grover; Vice-Commodore, Stratford J. Cullen; Treasurer, Charles E. Cammeron; Secretary, Albert F. Adams; Measurer, Broderick H. Price.

Milwaukee.—Commodore, Frank Boyd; Vice-Commodore, Sam Joys; Rear Commodore, Joseph McC. Bell; Secretary and Treasurer, H. Wiborg; Measurer, G. M. Hunter

Jeffries.—President, Harry B. Tindall; Vice-President, C. P. Pike; Secretary, G. Frank Edgett; Treasurer, Frank H. Armstrong; Commodore, Fred H. Seavy; Vice-Commodore, Edward T. Pigeon; Fleet Captain, Jacob Rood; Measurer, A. A. Martin.

New Haven.—Commodore, J. G. Beecher; Vice-Commodore, George G. Dudley; Rear Commodore, J. J. Phelps; Secretary, H. D. Bristol; Treasurer, J. G. Gallagher.

East River—Commodore, Henry Andrus; Vice-Commodore, J. W. Cooper; Rear Commodore, J. G. Prague; Treasurer, W. H. Simonson; Secretary, J. R. Thomas; Measurer, Gustave Grahn.

YACHTING NOTES.—Mr. Joseph B. Gomez has presented the South Boston Y. C. with a very handsome vase of solid hammered silver to be sailed for in a series of races the coming season... Gitana is now at New Orleans....The catboat building by Geo. Garraway, of Boston, from the Cruiser's lines, will be called Thrasher. Her mainsail, by A. Wilson, will have 20ft. 6in. hoist, 23ft. on boom, and 14ft. 6in. head....The schooner Wanderer, G. W. Weld, left New Bedford on Thursday last, and arrived at New London on the same evening, leaving the following day for Bermuda and St. Thomas, Messrs. Robert Centre and David Austen, of New York, and Captain Rowell, of Maine, accompany Mr. Weld....Mr. Howard Paul, of Gloucester, is building a sloop on the lines of the Sassacus, described in the FOREST AND STREAM lately. She is 18ft. 4in. long and 7ft. 4in. beam, with 390ft. of canvas....The steam yacht Naja, built by Polk, of Poughkeepsie, in 1881, has been sold to R. H. White, and will be called the Edith. Her length is 96ft. over all, 79ft. waterline, 13ft. 4in. beam, and 5ft. 1in. draft ...The yawl Aneto will go into commission by next month....Work will begin on the Surf, cutter, in a few days. ....The Whitecap, yawl, will not fit out this year.... It is proposed to form a yacht club in Rockland, Me., to be called the Penobscot Y. C. ... Isis, cutter, has had new joiner work and cabins throughout during the past winter.

THE MOSQUITO FLEET.—The annual regatta of mosquito boats will take place April 2, at 10 o'clock A. M., off City Point. It will be an open regatta of all boats under 15ft. in length, measurement to be over all. There will be two classes. The first class will include all boats under 15ft. and over 13ft.; the second class, all boats under 13ft. There will be allowance in each of the classes. The courses for the first and second classes will be the same. Course No. 1 will be from the starting point, off South Boston Y. C. stage, to buoy No. 7, off Fort Independence, thence to buoy No. 4, off Thompson's Island, back to starting point. Course No. 2 will be from starting point off South Boston Y. C. stage to buoy No. 4, off Thompson's Island, thence to buoy No. 7, off Fort Independence, back to the starting point. These courses were made on account of the wind. If the wind should be east, southeast or northeast, course No. 1 will be sailed; if the wind be west, southwest or northwest, course No. 2 will be sailed. If the weather be stormy, the judges will make a course in along shore just before the race. Two valuable prizes will be awarded in each class. Entries are free and can be made up to the hour of the race by addressing James Bertram, 803 West Fourth street, South Boston.

SMALL BOATS IN BOSTON.—The great success of the New York sloop Cruiser in Boston last season has led to the construction of a number of boats of her type, both sloop and catboats. The Cruiser was somewhat of a novelty in Boston, and being very fast, created a favorable impression on yachtsmen, and quite a number will try the new boats this season. Sheldon & Son are building several of them, the Musidora, for W. E. Sheldon, 20ft. 9in. deck, 20ft. 4in. w. l., 9ft. 3in. beam, 1ft. 6in. draft; Fantine, Harry Hutchinson, 21ft. 9in. deck, 18ft. 10in. w.l., 10ft. 6in. beam, 1ft. 6in. draft; Dot, S. A. Freeman, 17ft. 6in. deck, 15ft. w. l., 7ft. 10in. beam, 1ft. draft, Thera, Harry Hutchinson, 17ft. 5in. deck, 15ft. 6in. w. l.; 8ft. beam, 1ft. 4in. draft; Crusader, A. Wilson, 19ft. 3in. deck, 19ft. 1½in. w. l., 9ft. 8in. beam, 1ft. 6in. draft. Besides these is the Thrasher, built by G. G. Garraway, 17ft. 5in. on deck, 15ft. 6in. waterline, 9ft. 8in. beam, 1ft. 6in. draft. Another catboat by Borden of City Point, 15ft. deck; and one by D. Belcher, 18ft. deck and 16ft. w. l., all intended for racing. The season promises to be a lively one, and arrangements are now being made for a race on May 15 for all boats under 20ft. w. l. for the championship.

OIL ON WAVES.—The steam yacht Zingara, after leaving Dartmouth on Feb. 9 for the Mediterranean, encountered on the same night a severe storm, increasing next day to a hurricane. A sea came on board and did some damage to bridge and skylights. After lying to for forty-eight hours, the vessel wore around and ran before the sea with a square sail set. After running all night, in great danger of being pooped, the vessel was still in a high following sea. Captain Hayward rigged a spar with a line rove through a block on the end off from the starboard bow. A canvas bag, filled with cotton waste saturated in oil, was then attached to the line, and towed abreast of the deck house, after which no danger was experienced from the waves, and on the evening of the same day, the 13th, the Zingara arrived in the Tagus. Leaving Lisbon on the 16th, she made Gibraltar on the 19th, and left on the 21st for Malta, which she reached in safety after passing through some heavy water. On one day a sea struck her with such violence as to stop her and cause her engines to reverse. The Zingara proceeded to Alexandria, whence she will go to Mauritius and Natal.

NEW HAVEN Y. C.—*Editor Forest and Stream:* At a meeting of the New Haven Y. C., held March 11, the following officers were elected for the ensuing year: Commodore, Jas. G. Beecher, cutter Rajah; Vice-Commodore, George E. Dudley, sloop Zephyr; Rear-Commodore, John J. Phelps, schooner Brunhilda; Secretary, H. D. Bristol; Treasurer, Jas. Gallagher, Jr.; Measurer, F. H. Andrews; Fleet Surgeon, Paul C. Skiff, M.D.; Trustees, E. F. Mansfield, C. W. Andrews, W. P. Tuttle, L. D. Chidsey, R. R. Hopkins; Membership Committee, C. W. Scranton, A. L. Dillenbeck, W. W. Price; Regatta Committee, J. F. Whittelsey, E. B. Lee, W. H. Hale, E. S. Osborn and W. A. Foskett, Jr. The total membership of the club at present is 237, and the fleet numbers 36 yachts, 14 having been enrolled the past year. The club is in a very flourishing condition financially, and the outlook for the yachting season is excellent.—H. D. BRISTOL, Sec.

YACHT FITTINGS.—We have received from Pascall, Atkey and Sons, Cowes, Isle of Wight, their catalogue of yacht fittings, of which they make a great variety. Their stoves range in size from a large galley suitable for a steam yacht to a small spirit stove for sailboats, including several sizes and styles well adapted to small yachts, and a variety of handsome heating stoves for cabins. They also manufacture binnacles of wood and metal, with compasses, hanging and bracket lamps for cabins, side and anchor lights, mainsheet and riding buffers, windlasses, and small articles of all descriptions. Messrs. Atkey have studied carefully the wants of yachtsmen for many years, and the articles they manufacture are all specially designed for yachts.

VENTILATION OF SHIP.—A new invention for ventilating the hold of a vessel has lately been patented by Mr. E. E. Ferrin, of Beverley, Mass. Two pipes are laid along the keel, connecting at their forward ends, where they enter a pipe extending through and above the deck, on which is a cowl or hood. The two main pipes have branches extending up the bilge between the timbers, and above each is an opening in the plank sheer. A current of fresh air is constantly drawn through the pipes, thoroughly ventilating and drying all parts of the vessel, especially beneath the ceiling, and preventing decay, and keeping the hull clean and sweet.

ALICE.—The yawl building from the model of the Windward by Powell and Douglass of Waukegan, Michigan, is progressing finely. Their foreman, Mr. Frederick Morten, who has the work in charge, is a thorough mechanic, and is turning out a first-class boat. The wood keel, stem, sternpost and iron keel, the latter of 2,000lbs., were up in place a week since; and she will be ready early in the season. The Windward is a new departure for her builders, but the manner in which the work is done is a proof of their ability as yacht builders.

STARLIGHT.—Mr. Frank Wilson, of Rockland, Me., is building a little cruiser 24ft. on deck, 20ft. 3in. on waterline, 8ft. 4in. beam and 3ft. draft. Her timbers will be of bent oak and planking of white cedar, with cabin and cockpit of ash, cherry and black walnut. The cockpit is watertight, with scuppers. Her mast is 25ft., masthead 3ft., topmast 14ft., boom 14ft., gaff 16ft., bowsprit outboard 11ft.

BANNERET.—This smart little keel boat is for sale, as advertised on another page, her owner having no time for yachting this season. She has made a successful fight against the centerboards in her class, and has made a good record as a racer, as well as a cruiser.

AMY.—Mr. Morgan's steam yacht was at Nagasaki, Japan, on Monday last, and was to sail on Tuesday for Hong Kong.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

D., San Francisco.—We do not advise the purchase of the arm.

PERCYVAL, New Haven.—The Massachusetts trout season will open April 1 and close Sept. 1.

F. M. C., New Jersey.—We have reason to believe that "Anti-Bow" and his invention were frauds.

W. M. J., New York.—No, it was not anything remarkable for the tortoise to have eaten the toadstool.

J. W. K. Philadelphia, Pa.—Where can I obtain Fowler's solution of arsenic I see you so often recommend for dogs? Ans. At any drug store.

E. B.—1. You will not be permitted to kill any game in the Yellowstone National Park. 2. See map in recent number of the FOREST AND STREAM.

C. T. L., Cincinnati, O.—A letter written to you at above address has been returned unopened to this office. If you still desire information on the points referred to in yours of Feb. 4, send full address.

SEVERAL READERS, Brooklyn.—1. Will you kindly inform me what fish would be best to stock a small inland lake (running spring water) with, would trout and German carp agree and where can we get them? 2. The lake is at present stocked with catfish and eels, and these, of course, would have to be exterminated; can you tell us how? 3. It is our intention to plant willow trees around the edge of the water, would you recommend French, red, or wicker willows, and where can the same be obtained? Ans. 1. We would advise trout alone. Apply to E. G. Blackford, Commissioner of Fisheries, Fulton Market, New York. 2. Catfish may be thinned by netting, but eels are difficult, if not impossible to exterminate 3. We think the native swamp willow is the best; it flourishes in most damp places.

VAN., Mt. Sterling, Ky.—A very singular specimen of *Ortyx virginianus* was shot by Capt. Coleman of this town. The partridge was slightly smaller than a full grown one, but very plump. So much so, that it drew attention to the legs as being larger or more stocky. The back was crow black, the breast solid dark brown, slight topknot, and the only white was on either cheek, a slight streak; wings very dark, and coverts slightly lighter on under side; general form like Bob White, only say one ounce smaller and more compactly built. Does it come anywhere near the migratory quail's description, or is it slight freak of nature? Ans. Probably a melanistic specimen of the common quail. The skin should have been preserved.

PUBLISHER'S DEPARTMENT.

WANTS A PEN-PARALYSIS CURE.—Boston, March 5.—*Editor Forest and Stream:* The time for which I inserted the small ad. in your paper (two weeks) is sufficient. You ought to send prescription for pen paralysis to every advertiser.—W. O. PARTRIDGE.

THE GREAT AMERICAN TEA COMPANY, of New York and other cities, is one of the largest and best concerns engaged in that trade. Its annual importation of tea, made into drink of ordinary strength, would float a navy.

READING POSITION

Mention this paper. Send stamp for Ill. Circular.

THE

This important work, now for the first time offered to the public, contains full life histories of all the quadrupeds of this State. These biographies are as different as possible from those too often found in scientific works; instead of being dry and dull

MAMMALS

they breathe the very fragrance of the woods and fields, and give us a close insight into the every-day life of their shy inhabitants. To the lover of nature the work commends itself by its title. The hunter will need it for the complete account it gives of the habits of the deer, the hares and the

OF

squirrels. The farmer should read it because it tells him all about his enemies, the shrews and field mice who devour his crops, and about their enemies whom he would like to protect.

NEW YORK.

This interesting work is published in two volumes, the first taking the reader from the *Carnivora* (flesheaters) to the *Cervidæ* (deer), and the second concluding the subject.

BY

C. H. MERRIAM, M.D.

The volumes are superbly gotten up and are printed in large, clear type on heavy tinted paper.

We offer a few copies for sale at the following prices: Single volumes, paper, $2 each. The two volumes, paper, $3.50. The two volumes, cloth, $5.

Explanatory and Suggestive.

FOR THE CASUAL READER.

Arma virumque cano—"Arms and the man I sing." And, indeed, it would take the genius of a Virgil and the roll of Latin hexameters fitly to tell the deeds of this man, whose arms are shotgun and fishing rod. Go where you will, he is there. You run into him on the crowded city street, encounter him on cars and steamboats; he perches atop the country stage, bestrides the burro, and doubles up like a jacknife in the kanim. Seek out the most distant, most tortuous streams, his line has been wet in their waters; penetrate into the wilderness, the tin can of the sportsman's camp is yet further on. He goes for game—if the fates shall send anything within reach of his ammunition; for fish—if by good fortune a trout shall rise to his fly or descend to his worm. But, good luck or bad luck, game or no game, fish or no fish—fun always, fresh air, ozone, quicker pulse beat, brighter eye, more elastic step, all the multitudinous rewards, which, after all, outweigh the biggest "bags," and tip up the longest "strings." Is it not true that only a poet could tell his deeds as they ought to be told? Perhaps so. Perhaps not. He can usually tell them himself. And he does, with a thousand different pens, in a thousand different ways.

You may read it in the FOREST AND STREAM.

And that is better than if it were put into verse between book covers.

One who does not understand these things might imagine that after being told so often, this story of the man—him with the rod and gun—might in the end become hackneyed. But it is not so. Why? Well for pretty much the same reason, we venture to say, that the fields themselves and the woods and the lakes and the streams never become hackneyed. However that may be, one thing is certain. Our columns every week, and month after month, give ample proof that there is still an abundance to tell of what is seen and what is done afield and on angling waters; and that hosts of people still delight to read the telling, our subscription books show with ever increasing emphasis. The FOREST AND STREAM is in the best sense

A Journal of Recreation.

It tells of the recreation found by busy men, in out-door, open-air life. It *is* recreation to these same men and to others. Explain it how you will, this recreation found in the pages of the FOREST AND STREAM is different from the diversion afforded by other papers. Why? Because (it may be answered again) the recreations of field and stream are always ten times more potent for good than are those found in almost any other way.

Look through the pages and you will see that the departments include a pretty large field. It is a wide scope of subjects. But if you look carefully you will see that the paper, from front cover to back cover is homogeneous. What is in it belongs in it. There is not the mistake of trying to foist upon the reader, who is interested in angling and shooting, a lot of stuff about horse racing or base ball or prize fights. There is no sawdust-ring odor. Everything is redolent of the woods. There are plenty of other papers devoted to the other subjects. If you are interested in them, you need hardly spend time to read the rest of this explanatory advertisement. The FOREST AND STREAM'S field is broad, but it is not broad enough to take in all creation. The editors are perfectly contented with the scope of the paper as it is at present. And now

A Word About 1885.

For fifty-two weeks of the year 1885 we propose to publish the FOREST AND STREAM, and to fill each number with the same rich abundance and variety of reading that may be found in this present number or in any one of the five hundred numbers that have gone before it.

There will be the same delightful accounts of the adventures and misadventures of the *Sportsman Tourist*, and whether the "tour" be across a continent or only across the pasture lot into the woods beyond, the story in either case will be well worth the time it takes to read it. We shall have, now and then, a description of such excursions in foreign lands, but for the most part these columns will deal with what is seen and done in our own country, for that, after all, is what the readers of FOREST AND STREAM are rightly presumed to be most interested in.

The *Natural History* columns will give attention to varied forms of animal life, more particularly such as may come under the observation of sportsmen in their rambles. This department of the FOREST AND STREAM we believe to hold a place altogether unique. It is neither the dime-museum sort of un-natural history affected by the newspapers, nor the abstruse, fine-spun and terribly dry lucubrations of the scientific associations. It is intelligent talk about animal life, intended for intelligent readers.

In the *Shooting* and *Angling* columns (we need hardly say it) will be accounts of hunting excursions and fishing trips—with luck, good, bad and indifferent; discussions about matters mechanical, ethical, sentimental, fanciful and practical; some, after much debating, will be settled; others will be left (and the reader with them) at the end just where they were at the beginning.

The *Kennel* will give in 1885 (as it has given in 1884) the earliest, most accurate and the only unbiased reports of shows and trials, and it will be the endeavor of the editors to maintain for the FOREST AND STREAM in this special branch the position it now holds away in advance of anything else published in this country.

The *Yachting* columns are in charge of an expert, whose highest ambition will be to keep these departments in the place already won for them in the recognized lead of journalism. Though the *Canoeing* interest of the country is of comparatively recent growth, the FOREST AND STREAM fully appreciating its importance, has provided for those who sail or paddle a (pretty generous) corner, which is so full of practical suggestions and recountings of cruising experiences, that a canoeist might almost as well try to get along without a paddle as without the paper in his mail every week.

In a word—this is what we started out to say—in 1885 the FOREST AND STREAM will be newsy, bright, wholesome—a journal of out-door recreation.

Terms:—$4 per year, $2 six mos., 10cts. per copy. Sold everywhere. Make orders payable,

New Publication.

CANOE

THE FOREST AND STREAM began a year ago the publication of a series of papers on canoe construction, by Mr. W. P. Stephens, of the New York C. C., widely known as an expert on canoe design and building. These papers, having appeared through the year in our columns, have since been rewritten, and with numerous additions are now published in a handsome volume under the title of "Canoe and Boat Building for Amateurs." Mr. Stephens is peculiarly fitted for the preparation of such a work, beginning as an amateur, and having after a long experience of the difficulties attending a learner, taken a prominent place among canoe builders, due both to the model and workmanship of his canoes. Realizing fully the difficulty of explaining to a novice an art in itself far from easy,

AND

and with which he is entirely unfamiliar, the book begins with a description of the various classes of canoes in general use, with their main features and dimensions, and definitions of the terms used in connection with them. Numerous examples of canoes are given, and in connection with them, such plain instructions in designing as will enable the beginner to select intelligently the proper craft for his pur-

BOAT

pose, and to plan her dimensions, details and fittings. To this end designs of all classes of canoes are given, with full dimensions and details. The object has been not merely to enable the tyro to build one boat as described, but to teach him the inciples of designing and building in such a way at he may construct such a craft as he desires. ollowing the chapters on designing, the construction of a canoe is taken up in detail, the tools and appliances being first clearly described, as well as the various materials, after which follows the actual work of building. Every operation is taken up in order, from the selection of the keel to the varnishing of the finished boat, and illustrated with numerous diagrams.

A chapter on sails describes all the varieties in use by canoeists, down to the new Mohican settee, with directions for making, rigging and measuring them, while the method of proportioning the sails to the boat is clearly explained, all the calculations

BUILDING

being worked out in detail. The many minor points of a canoe, paddles, steering gears, rudders, aprons, and camp outfit are also described at length, while a chapter is devoted to canvas canoes.

The subject of boat building is fully treated, a rowboat of the usual construction being taken as an example, and described in all its parts in such a manner as to make clear the principles involved; and their application to any form of boat, either lapstreak or carvel build. Each of the numerous technical terms belonging to the subject is defined clearly when it first occurs, and as the index is full and complete, the book is in itself a glossary.

In addition to the numerous diagrams in the body of the work, twenty-four large plates are printed on bond paper, containing the working drawings of canoes for paddling, sailing, cruising

FOR

and racing, with their sail plans, rowing sailing boats, large canoe yawls, and various boats for special purposes, such as gunning boats, yacht boats, and the widely known sneakbox.

The canoe yawl, a boat between a canoe and a yacht, is illustrated by examples of various craft from 17 to 20ft. long, and suitable for a crew of two or three on a cruise. This class of boat, while little known among us as yet, is admirably fitted for cruising, and will meet the wants of many who object to a canoe as being too small, and yet desire a boat with the same excellent qualities. The boats and canoes illustrated are in all cases among the best of their class, the list of canoes including English, Scotch and American craft, and are all drawn

AMATEURS.

to scale, so as to be available as working drawings. The plates, for convenience in using, are placed loose in a tough manilla envelope and accompany the book.

Pp. 168, with 24 plates of working drawings. Price $1.50. Address,

The following are his bench show winnings: 1st prize in Toronto, puppy class, 1880; 2d prize, London, 1881; 1st prize, Cleveland, also special for best Gordon setter exhibited, 1882, 1st prize, champion, Ottawa, 1883; 1st prize, champion, Chicago, 1883; 1st prize, Montreal, and special for best Gordon setter F, 1883; 1st, champion, London, also special for best Gordon setter dog in show, and special for best Gordon setter dog or bitch, 1883.

Argus has been awarded prizes under the following judges:—John Davidson, Major J. M. Taylor, Harry Malcolm, James Watson, W. J. Munson.

Stud Fee, $25.00.

STUD FOX-TERRIER

Champion Raby Tyrant,

(K.C.S.B. 11,179.)

Pupped October, 1880. Weight 16½ pounds.

Raby Tyrant is a white dog, with an even marked rich black and tan head. He is a thoroughly game and stylish terrier, possessing a beautifully shaped long punishing head, with perfect drop ears, small eye, rare neck and shoulders, deep chest, well ribbed and muscular quarters, short, straight legs, excellent feet, great bone and substance, with an exceptionally hard and dense coat.

Raby Tyrant is without doubt one of the most successful terriers of the present day. He has been exhibited 67 times, 33 different judges having adjudicated upon him, and has won 47. First 10 cups and specials; 12 second and 9 third prizes. His breeding is undeniable, combining as he does the choicest and most valuable blood that can be obtained. At the stud Raby Tyrant is proving himself eminently successful.

Fee, $15.00.

JOHN E. THAYER, Hillside Kennels, Lancaster, Mass.

ANSWERS TO CORRESPONDENTS.

PASS THE DEER HOUNDING BILL.

THE bill forbidding the hounding of deer in this State, which was sent from the Assembly to the Senate, and is now in the hands of the Game Law Committee, should be passed without delay and without amendments. The provisions of the bill are most important. It will end a shameful and brutal practice which has no redeeming features. Deer hounding should be abolished—

1. Because the practice, as followed in the Adirondacks, is not sportsmanlike nor ennobling. On the contrary, it is brutal and debasing. The deer are driven into the water and killed there. Sometimes they are shot from the shore, sometimes they are shot from a boat while the guide holds them, sometimes they are clubbed to death.

2. Because the meat of the animal killed after a long run is unfit for food, and in very many cases the carcass of a hounded deer is left to rot.

3. Because hounding is practiced in the breeding season. As a consequence the proportion of barren does is very large and, careful investigation shows, is constantly increasing.

4. Because the keeping of large packs of hounds by Adirondack residents leads to the winter killing (out of season) of great numbers of deer, because the dogs must have something to eat, and their masters prefer to feed them on venison.

5. Because the continued practice of hounding means the sure extermination of the deer in the Adirondacks. Residents, guides, and visitors are agreed on this point.

6. Because a cessation of hounding would be followed by an increase of the deer supply. This is not theory. It has been demonstrated in the State of Maine and in some of the counties of Pennsylvania, where, since the dogs have been driven out, deer have become very much more numerous.

7. Because the sportsmen of the State, the press and the Adirondack guides are agreed as to the necessity of prompt action. Public sentiment is a unit in asking for the change. The only opponents of it are an insignificant number of Adirondack hotel keepers who labor under the mistaken notion that if their so styled "sportsmen" patrons are not permitted to brain deer in the water the numbers of Adirondack tourists will be decreased. How totally unfounded is this fear is shown by the actual test in Maine, where the same objections were made against a law forbidding deer hounding, which objections have since been proven without support. The Maine deer have increased, and Maine pleasure travel is to-day greater than ever before.

Pass the bill.

MR. PIERCE'S DISQUALIFICATION.

TWO weeks ago we published two communications on this subject giving Mr. Pierce's side of the case. As we have heard nothing from the Philadelphia Kennel Club, we may assume that there is no dispute as to the facts, and that they have been accurately stated in the letters which have appeared. If this is true, there can be no doubt as to the view of the matter which will be taken by unprejudiced observers.

The conditions of the special prize in question read, "For the best kennel of Irish setters." The rule which would govern is, that the animals shall be entered by the *bona fide* owner or his authorized agent, and that where a kennel of dogs compete for a prize they shall all belong to one individual or association. The intent of the rule is manifestly to prevent any individual borrowing dogs and entering them together, so as to win prizes which he is not properly entitled to. Further, the rule no doubt intends that where two or more persons are the proprietors of a kennel they must own it jointly, *i. e.*, must have a part ownership in all the dogs claimed by it, and must not club their dogs, one person owning several individual animals and having no rights of ownership in others said to belong to it.

It is clear from the letters published, that Mr. Pierce was in doubt about the entry of Reeta, and he applied to Mr. Lincoln for information on the subject. The latter had been appointed by the Philadelphia club their superintendent. He was the person to whom inquirers had to apply for information on all matters connected with the show. He was the fountain of authority, for it is clear that a meeting of the executive committee could not be called to answer every question which an intending exhibitor might choose to propound. When the club appointed their superintendent and so gave him authority to determine all questions which might come up, they at the same time bound themselves to abide by his decisions. For the time being, so far as the details of the dog show were concerned, he was in fact the club.

Mr. Lincoln having assured Mr. Pierce that his entry of Reeta as belonging to the Glencho Kennels was legitimate and in proper form, that gentleman had every right to make the entry as he did, and there is no reason to suppose that he acted otherwise than in good faith. He had taken all means which were open to him to decide the matter, and we cannot see that he has been at all to blame.

The Philadelphia Kennel Club appear to have acted hastily and have certainly put themselves in the wrong. We should be glad to see them reconsider their action before the matter goes any further.

Shows must have rules and rules should be lived up to, but respect for them can never be enforced by doing an injustice.

The rules of the A. K. C. provide that any person who "has misconducted himself or herself in any way in connection with dogs or dog shows, or field trials, may in the discretion of the managers, be disqualified from exhibition or competition at these shows. Such disqualification shall be recognized by all members of this association, and such person can only be reinstated by the club or association disqualifying. The person disqualified may appeal to the executive committee."

It is not clear what the present standing of the A. K. C. rules is, but with some modification they have been adopted by several clubs. Thus the rule, of which we have quoted a part, is printed as Rule 16 of those under which the New Haven show was held. The rule is vague, indefinite and embodies a bad principle. It should not be possible for any one club to disqualify an exhibitor. The club sinned against should prefer charges against the offending exhibitor send in their evidence to the Executive Committee of the A. K. C., who should hear the defense and adjudicate upon the matter. All this, however, is by the way.

The New Haven club adopted this Rule 16 (17 of the rules as adopted originally), and having adopted it they should have lived up to it. Mr. Pierce had been regularly disqualified—unjustly, as it seems, but still disqualified—and therefore the New Haven club had no business to receive his entries, and by doing so to have violated the A. K. C. rules.

Their course, while it may have been morally right, was plainly a serious violation of the rules. Mr. Porter's note in another column shows that the violation was an involuntary one, but the club, without intending it, made a very good point in declining to accept the verdict of the P. K. C. until it had been passed on by the executive committee of the A. K. C.

We shall not regret the constant misunderstandings and blunders which are taking place in regard to these rules if the result of it all is the thorough revision of the whole subject. This should be done, however, by persons of judgment and experience. We do not want to have to tear to pieces the revised edition.

THE MASSACHUSETTS LAW.

A BILL, said to be supported by the Massachusetts Game and Fish Protective Association, is now in the hands of the Legislative Committee on Agriculture. We have been unable as yet to procure a copy of the bill, but we are informed that it shortens the close time on a number of species, permits the killing of the pinnated grouse, which still exists on Martha's Vineyard, where it has been carefully protected for over thirty years, takes off all protection from marsh or shore birds, except in the case of the Bartramian sandpiper and upland plover, as well as from killing gulls and terns.

These proposed amendments are regarded by the friends of game protection in Massachusetts as an effort at a compromise between the State Association and the game dealers. However this may be, the changes we have named seem very undesirable, and we should be sorry to see them made. The birds in Massachusetts have a hard enough time now, and to take off the protection which they have under the existing law would be a serious blunder.

A committee of the Nuttall Club has represented to the Legislative committee that the changes proposed should not be made, and that all present protection should be continued. They recommend that in draughting a new bill, the committee should follow Senate Document 242 of 1884. This will be remembered as the bill which passed the Senate last year, but was defeated in the House. The representations of the Nuttall Club are signed by Mr. William Brewster, President; Mr. William A. Jeffries, Vice-President; Mr. H. A. Purdie, Recording Secretary; Mr. J. A. Allen, Corresponding Secretary; Mr. F. Batchelder, Treasurer, and a number of other members. These gentlemen are well qualified to advise in the matter, and we hope that their recommodations will be carefully considered.

OPENING THE TROUT SEASON.

THE law of New York opens the season for trout on the first day of April. At present writing it looks as if the clerk of the weather may intend to disregard the laws and, by keeping the ponds and streams closed, practically prevent the opening at the legal time. In a contest of this kind the laws of nature will win, and the anglers will be disappointed. The severe winter weather, extending as it has to the 25th of March, has kept the ponds on Long Island coated with ice, and it is to these waters that the city angler looks for sport on the opening day. In the interior of the State there is little hope of fishing on the first of April, because it is usually too early for either comfort or fish, while in the Adirondacks the middle of May practically opens the season.

The outlook for a good trouting season is a very fair one, as far as can be predicted. There have been many streams stocked with trout which should show returns now, and from several parts of the country we hear favorable reports of the condition of the streams and their inhabitants.

THE MARKETMEN'S BILL.—Mr. Daly's bill allowing the sale of game at any season when not killed in the State was reported from the Senate Committee yesterday. This bill is thoroughly bad, it opens the door to wholesale game slaughter in and out of season. Such a bill should not be entertained seriously for a moment.

THE NEW JERSEY SONG BIRD LAW.—The bill introduced into the New Jersey Legislature by Senator John W. Griggs has been reported from committee in the House, and, we are informed, will pass. The $500 fine turns out to have been an error of the State printer; the fine is fixed at $5. The bill, as we have said, is most excellent.

THROUGH TWO-OCEAN PASS.

X.—THE PROSPECTOR.

THE Prospector and his Partner had, the day before, killed, with their revolvers, a white swan, and this slaughter having aroused the Partner's ardor he had started out this morning to kill a deer. As he rode out of camp toward the mountains on the east side of the valley he announced that he was not going to return without meat. It was a good day for hunting, for the rain that had fallen in the valley had been snow, even in the lowest foothills, and if there were any game there, the fact would become known to the hunter as soon as he began to climb the hills.

After dinner that evening the Prospector came over to our fire and after nodding a salutation, sat down on a log. He then drew from his pocket black a wooden pipe which he began very solemnly to clean out with the blade of his pocket knife. After the pipe was clear he put it in his mouth, wiped the blade of his knife on the leg of his overalls, drew from his pocket a small piece of tobacco from which he whittled off a pipe full and then returned plug and knife to his pocket. He next industriously broke up the fragments of tobacco with his fingers, and then ground it together between his palms, and when it was fine enough to suit him, filled his pipe, carefully returning the surplus dust to his pocket. Then taking a stick from the ground he drew out a number of coals from the ashes of the fire and selecting one of proper size picked it up between his fingers, threw it into the naked palm of his right hand, where he tossed it about for a few seconds so that it should not burn him, and finally dexterously placed it in the bowl of his pipe. Pressing it down with his calloused forefinger he drew deep long puffs through the pipe, and when the tobacco was well alight, tossed the coal back into the fire. Up to this time not a word had passed except good evening, and most of us had been watching the visitor's movements with the greatest interest. The pipe lighting ceremony over, the look of care and absorption left the Prospector's face and he sighed contentedly as he turned toward us.

"Has your partner got back?" some one asked.

"No," said Prospector, "he aint got in yit. He said he wan't goin' to come back 'thout a deer, and I reckon he aint killed nothin', and don't like to come in. He'd ort to taken the dog along, 'n' I told him so, but he said he didn't want no dog when he's huntin'. He's a great dog for deer, though, aint ye, Jack? I reckon ye didn't none o' ye see that deer he chased out o' the bresh that night ye got in. He just made him hump himself. He's a mighty well-bred dog he is—got considerable greyhound blood in him. Ye can see that from the way he's built. Seen any sign of mineral round these hills, Perfessor?" he continued. "I washed a few pans comin' down, and got two or three colors, but nothin' to sinnify. I'm just goin' down from Cœur d'Alene to Colyrado; goin' to take in the Wind River Mountains on my way down. May strike somethin' pretty good over there. I heard tell of some rich float in them hills."

With this exordium the Prospector opened on us the floodgates of his speech and a volume of words came tumbling forth in a wild current, whose rush and tumult silenced all other speech. He talked so fast that each word seemed anxious to be spoken first. No one else had a chance to speak, and for a couple of hours he held us there by the fire and recounted stories of the various mining excitements in which he had taken part, of the regions that he had prospected and the claims that he owned. It appeared from his tale that he was on terms of close intimacy with most of the millionaire mining kings of the West, and in fact had been instrumental in making the fortunes of many of them; but his labors had hitherto been wholly altruistic, confined to making those of others and he had neglected his own. All this and much more the Prospector told us, and so interested was he in his tale that when the sharp trot of his partner's horse was heard on the prairie and then coming down the bluff and through the willows up to the other fire, he only interrupted himself long enough to call out, "The beans is settin' by the fire and the coffee's just inside the tent door," and then went on with his story. When at length he left the fire we were all more or less in a state of collapse, and one of the men remarked:

"Well now, he aint no talker, I guess," to which another responded: "He'd ought to be a temperance lecturer, he had."

There is to me always something very pathetic about a prospector. As a rule no class of men perform so much severe physical labor for so little return as they. They spend their last dollar to get a "grub stake" and usually after working hard all summer find themselves at the beginning of winter absolutely without money. Perhaps they then get a job of winter work, for which often they receive only their board, and at the return of spring bend all their energies toward acquiring money enough to fit themselves out for another summer's campaign, selling or mortgaging for this purpose everything that they possess. Often, being wholly without funds, they make a bargain with some capitalist, or some one of their richer fellows to furnish them with the necessary provisions and tools to prosecute their work, agreeing that in return for this advance the man who furnishes the money shall have one-half interest in the discoveries which they may make. Often, too, they accumulate a load of debt which it seems hopeless to wipe out.

Occasionally, it is true, a prospector does "strike it rich," but even when he does so, unless the circumstances are exceptionally favorable, he is obliged, through lack of capital to develop his mine, to sell it out to some wealthier man for a very small fraction of its apparent value. Usually, however, he either spends the summer in vainly seeking for some rich lead of which he has found indications, or else works at the development of some "prospect," which, though not yet rich, he hopes may become so, or perhaps works some old claim which barely pays him ordinary day's wages.

And yet the prospector is almost always cheerful and hopeful. He has an abiding faith that some day he will "strike it," and always looks at the bottom of his pan, or examines the rock in the bottom of his shaft after each shot in eager expectation; for may not this at last be the lucky stroke which is to transform him from a mere shoveller of dirt or wielder of hammer into a "bonanza king"? I know of few things more touching than the simple, trustful fashion in which, after a hard day's work in the mountains, the prospector will come into camp at night, and after turning out of his pockets the bits of rock picked up during the day, will discourse of their possible value. He will tell you how this bit of ore looks rich, how that one appears exactly like a piece of rock that came from the "Gosh All Friday" mine in Colorado, which assayed $7,400 to the ton; how a third resembles the ore on the strength of which old Dan Murphy bought the "Bull Elk" mine in the Salmon River country, which has paid a handsome profit outside of working expenses ever since the shaft got down thirty feet; and so on through the whole list of specimens. Then he will sigh and tell you that he wishes he had his assaying outfit with him, so that he could determine the exact value of these specimens, and tell just which indications he had better follow up. He never loses faith in his ultimate success, and his hopefulness is, to one who knows how very rarely any real success is met with by men of this class, saddening rather than cheering. And yet the life is an attractive one. The prospector is more utterly independent and free than any other man in the world, and is always anticipating a reward for his labor, enormous—out of all proportion to it, and though always disappointed, hope springs eternal in his breast. He will go on climbing the rough mountain trails, and penetrating into the narrow defiles as long as he has strength to wield spade and pick and to pull on a lash rope. He will be a prospector to the end of the chapter.

Even as he left us that night, our friend announced that he was going down into Colorado, where he should spend the winter developing some claims that he had there, and, he continued, sinking his voice to a confidential tone, "One or two of 'em looks mighty rich, an' I reckon, if they turn out the way they look like they're goin' to, I'll hev to go East 'fore spring."

The Sportsman Tourist.

UNCLE LISHA'S SHOP.

XII.

THE prophet of the almanac had written along the June calendar, "Now, perhaps, a spell of weather," and his prognostication was being verified. For two days the rain had come down from the leaden sky, now in drenching showers, now in drizzles slanting to the earth before the gusty northeast wind, and still it came down. A robin in the apple tree where his mate shingled their nest with her half-spread wings only left off "singing for rain" to preen his wet feathers, and then began again his broken song, cheerful enough but for its import to seem unsuited to its accompaniment, the splash of the rain, the doleful sighing of the wind, and the sullen roar of the swollen streams. The beaten-down blossoms that whitened the ground beneath the apple trees, as if an unseasonable flurry of snow had fallen there, looked unlike blossoms now, but added another dreary feature to the dreary landscape; the little brown house without light or shadow on its walls; the dripping, wind-swayed trees; the sodden fields and woods ghostly behind the gray vail of rain, bounded by the blurred, flat wall of mountains, and roofed by the low sky.

When some of Lisha's friends, troubled by a vague rumor that had floated about the valley, visited the shop that day, they found it was as cheerless inside as out, chilly, damp and fireless, and unoccupied by its owner, whose apron lay upon the shoe bench. Sam Lovel seated himself there, and when presently Lisha entered from the "house part," and he arose to give him his accustomed seat, the old man said: "Keep your settin', Samwill; I haint workin' none to-day," and after pottering in an aimless way among his stock and tools, set about lighting a fire. After repeated clearing of his throat, wherein the words seemed to stick, he said as he whittled the kindling, "Wal, boys, where ye goin' to loaf evenin's next winter?"

"Why, right here, of course, Uncle Lisher," said Sam, "you haint goin' to turn us aou'door be ye?"

"No, I haint a goin' to turn you aou'door, I'm a goin' to turn myself aou'door. The fact o' the business is, Jerushy 'n' I has 'baout made up aour minds to go aout West an' live 'long wi' George."

"Wal, we heard some such talk," Sam said, "but we didn't scasely b'lieve the' was nothin' on it only talk, the' 's so much dum foolish gab a goin' nowerdays. An'," he added, "I haint heard none 'at saounded foolisher 'n this, tu me."

"Wal, naow, ye see," said Lisha, shutting the stove door and after watching the fire a minute, seating himself upon a sap tub, "me 'n my ol' woman 's a gettin' ol' 'n' out' the daown hill side, 'n' 't won't be many year 'fore we can't du nothin' scasely on'y set raound, 'n' we haint got nobody to ta' keer on us then on'y aour boy. He 's sol' aout in the 'Hio, an' is goin' to Westconstant to live, a gret ways furder 'n the 'Hio, tew, three States beyund it, I b'lieve. 'Taint a State yit, I guess Westconstant haint, but on'y a terry-tory. Seems 'ough we couldn't stan' it to hev him no furder off 'n what he is naow, an' so ye see, we've c'ncluded to go an' live 'long wi' him. He 's ben a teasin' on us tu this ever so long, but I kinder hated tu, for I'm sorter growed in here, 'n' I hate tu naow, but I guess it's the best way."

"Wal, I guess 'taint," said Sam, very decidedly. "You hev growed in, both on ye, an' it'll be julluk pullin' up tew ol' trees an' settin' on em aout agin, 'n' ye won't stan' it no better. No, Uncle Lisher, not a mite better 'n tew hemlocks took up an' sot aout. It'll be a diff'ent s'il o' land for ye, diff'ent breed o' neighbors—'f ye hev any—'n' they say 't that 'ere western country 's flatter 'n a pancake, 'thaout a maountin er a big hill tu be seen, so 's 't it tires a feller's eyesight clean aout a trav'lin' so fur 'thaout nothin' to stop it. An' no woods like aourn, they say. Haow long ye think ye can stan' it 'thaout the smell o' spruce in yer nose, er 'thaout seein' the ol' Hump er Tater Hill, er so much as little Hawg's Back a stan'in up agin the sky?"

"Yas, sah, Onc Lasha, dat so," Antoine put in. "You was be so lonesick you come dead raght off, bose of it, An' Jerrushy too, you see 'f he ant!"

"An' if ye don't die," Sam continued, "the dum'd Injins 'll kill ye."

"Sho!" said Lisha, smiling grimly at Sam. "You're a putty feller, a talkin' 'baout dum'd Injins arter bein' thicker 'n puddin' with 'em for a fortni't, 'n' they riggin' on ye aout wi' a canew 't you c'n navygate 's a mushrat can his own body. Naow, r'aly, Samwill," he went on, hoping to change the subject, "when I seen ye gittin' into 't over there t' the Forge Pond, I didn't expect nothin' on'y to see ye git a duckin', 'n' 'f I hedn't a knowed ye c'ld swim like a duck, I wouldn' ha' let ye git int' the dum crazy thing."

"O, wal," said Sam, impatiently, "my Injuns is tame. I guess 't you'll find aout 't them painted, turkey-feathered cusses aout West is a diff'ent breed o' cats, with their war-whoop in' an' screechin', an' skelpin' ol' folks an' babies, 'n' the Lord knows what the devil's own work they haint up tu."

"Sammywell's argyments is good," said Solon Briggs. "The' haint nothin' more sartiner 'n that old, ann-cient indyviddywills hed ort to continuer to remain in the natyve land 'at they was borned in."

"Good airth an' seas!" the old man roared, "what's the use o' yer talkin'? I tell ye I'm a goin' 'f I don't live a week arter I git there! Haint I tougher 'n a elum gnurl? Haint I fit your Injins gran'thers to Plattsburg? I c'n stan' the rackit, I guess! I c'n fight Injins agin, I guess! H'mph! ye talk 's if I was a ten ye'r ol' boy, or a skeery little gal!" And then lowering his voice to a kindlier tone, "I hate to go, 's I said afore. I allus luffted to hev my neighbors 'raound me, 'n' I've hed good uns, an' got 'em yit, an' I hate dreffly to leave 'em, 'n' hate to leave the ol' place 'n' everything. But blood 's thicker 'n water, 'n' I wanter see my boy, the on'y chick or child his mother 'n' I 's got, 'n' cend my days with him. An' his mother y'arns arter him more 'n I du, an'—wal, we're a goin', an' the' ha' no tew ways 'baout it, ner no use a talkin'. I've sol' aout tu Joel Bartlett, an' we've drawed writin's—an' that's the long an' short on't."

"Wal," said Sam, "if you're sot on it, 'n' everything 's all cut an' dried, the' *haint* no use a talkin'. But I sh'ld think 't you *might* ha' said suthin' to some on us 'fore ye went so fur. 'T would ha' ben friendlier. I swear! I wish 't the dum'd torment 't invented that ere cussed western country hedn't never ben borned! A breakin' up fam'lies an' puttin' notions inter ol' folkes' heads, blast him!" and said no more, but sat staring out at the gloomy landscape that, seen through the green and wrinkled panes of the long window, looked gloomier and more dismal than ever.

They spoke no more of Lisha's intended departure, and after a few feeble attempts at conservation, sat and smoked in silence till the day grew darker with the coming on of evening, and then the visitors departed.

Toward the end of summer Lisha and his wife were ready to begin their journey, and after the kindly fashion of those days, some of their neighbors accompanied them to the place where they were to embark in the canal boat that would take them the length of "Clinton's big ditch" on their way. Pelatiah drove the lumber wagon whereon was piled the "housel stuff" reserved from the "vandew." Then came a like coveyance, driven by Sam Lovell, and carrying Lisha and Jerusha, Joe Hill and his wife, Solon Briggs and Antoine, and a day's provisions for the party. They jolted over the rough road and through the little hamlet that the forge and store and tavern gave life to, and then taking the road along the bank of the noisy little river, the old people turned their backs upon the green wall of the mountains and entered on their long journey westward. Lisha was as cheerful as could be expected when his heart was heavy with the sorrow of leaving his old home, and he was suffering the discomfort of his high-collared, tight sleeved best coat and the weight of his bell-crowned hat. He pointed out the farm where the first settler of Danvis had "pitched," the hill where Pelatiah's grandfather killed a panther, discoursed of the changes that had come since he first knew the town, made some strained efforts at joking with Antoine, and talked on and on when he had nothing to say. Aunt Jerusha wept silently in the seclusion of her new gingham sun bonnet, comforting herself with frequent pinches of snuff that afforded her an excuse for as frequent use of her handkerchief.

At noon they stopped to bait their teams and eat their lunch under some wayside trees and then went on. In the middle of the afternoon they entered the little city that marked the end of the first stage of the old people's journey, and the wonders of its few three-story buildings, its three churches, and the court house perched upon the crest of a ledge, in which, Lisha told them, "the leegislatur sot onct,' so dazed Pelatiah that he nearly missed finding the way to the wharf where the canal packet lay. There new wonders met his astonished gaze. A rifle shot up stream the river almost as wide as the length of the forge pond, the largest sheet of water he had ever seen till now, foamed and thundered down a precipice forty feet high, and then its vexed waters writhed along a deep, broad reach, past the wharves, where lay the canal boats and the little steamer that was to tow them to the lake and then to Whitehall.

Lounging about these strange immense craft were the surly or saucy canal boatmen, upon whom the young mountaineer looked with awe, for they were traveled men who must have seen nearly all of the great world, having been more than once to the end of the canal and back again, and some, it was said, had even beheld the wonders and glories of that almost fabulous city by the sea, New York.

"In an airly day," said Lisha, "some o' the Yorkers built

'em a gris' mill on them falls, an' Ethan Allen an' his Green Maountin Boys come an' drove 'em off an' hove the millstuns over the falls, or some says inter a big poithole nigh the top, 'n' 't they're a layin' in the bottom on't naow. Right along here where these 'ere wharfs an' stores be, McDonner's ships was built time o' the last war; ships a gre' d'l bigger 'n them canawl boats be, Peltier. I worked here a haulin' timber to build 'em on, an' 'twas hurryin' times, I tell ye, with the British threatenin' the hull time. We hauled a big stick here aouten the woods, for a keel, it was, wi' three yoke o' oxen, an' at it the ship carpenters went full chisel, an' in six weeks I b'lieve, it wa'n't no more, from the day 't was cuddaown, the ship was all ready to go int' the water! That's the way they did things in them times. A spell arter that the British come in their gunboats to destr'y the 'Merican vessels here, but they didn't git no furder 'n the maouth o' the crick, for aour folks hed a little fort there, a leftenant name o' Cassin commandin' on't, an' they drove the British boats off They call it Fort Cassin' yit, but 't aint nothin' but some banks o' airth, an' wa'n't then. When aour ships got all ready they went off int' the lake, an' bimeby come Plattsburg fight. We all rallied aout, an' th' was lots o' Green Maountin Boys tu it, me 'mongst the rest on 'em, skeered 'enough, but no notion o' ruunin'. We fit an' fit on land, an' the ships fit on the water, till arter a good spell aour ships licked their'n, an' then the British we was fightin' run, an' I tell ye the backs o' their 'tarnal red cuts was a dum sight the best lookin' side on 'em 't we'd seen yit. That's all the folks-fightin' 't ever I done, or ever wan' tu. That 'ere big stun buildin' over yunder where the flag 's a flyin' is the gov'ment a'snal. The's muskits an' cannon 'nough in it tu rig aout a hull army. 'N' there! that pussy ol' red-nosed feller comin' a hossback 'long the road 's the major 't bosses it. Nothin' to du but draw his pay, fo' five hunderd dollars a year I s'pose, an' drink ol' Jamaky sperits an' sweet wine, an' loaf 'raound."

With such discourse Lisha entertained his friends till nightfall, when he and Jerusha went to their berths in the packet and they to their inn, excepting Antoine, who having dug some worms and borrowed a pole and line of a compatriot, went fishing for bullpouts.

Next morning came the sorrowful leave taking, and after much bustle and shouting and swearing by the captains and crews of the steamboat and canalboats, wherein the bold mariners of the canal having had the practice and experience of greater and more frequent opportunities, greatly outdid their rivals, the little flotilla got under weigh. The fussy little steamer coughed and churned its way down the beautiful river, and as it dragged the packet out of sight behind a wooded bend, the sturdy figure of the old shoemaker was seen standing in the stern beside the bowed form of his wife waving a last farewell with his red "bendina."

"There they go," said Sam Lovel, turning sadly away. "There they go, julluk tew ol' trees tore up by the ruts an' driftin' daown stream."

One day, a little more than a year later, when the blue September sky arched the valley and the afternoon sun shone warm into it, Sam Lovel came slowly out of the woods into the pasture above Uncle Lisha's old homestead. Under his arm he carried his bee box, which presently he set upon a small boulder, and after watching its two or three little prisoners for a minute through the glazed top, carefully opened the cover and backed a few paces away, keeping his eyes constantly upon it. A bee climbed to the edge and took wing, circling a few feet above it and then sailed straightaway toward the house, and then another and another arose and went off in the same course. "Wal, naow, that's curous, haint it, Drive!" said Sam, addressing his dog, who was making himself comfortable on the grass near him, and now answered his master with a lazy beat of his tail. Sam had hardly got his pipe alight and begun to take his ease beside the dog, when back came the bees with some companions and settled into the box. "All right," said Sam. "Le's move up," and going cautiously to it, he shut the lid, tapped the side till the bees arose from the comb in the bottom, when he shut the lower slide, took up the box and moved on in the direction the bees had taken to within a few rods of the house. Then he opened the slide and then the cover, and when the bees had filled themselves again, they sailed away with their freight as before. They soon returned and were again imprisoned till Sam had set the box on one of the posts of the garden fence. Again he gave them their liberty, and in ten minutes a hundred bees were buzzing to and fro between the box and a knot hole high up in the gable of the shop.

"Yes, sir," said Sam, laughing softly, "the's a swarm under the cla'b'rds o' the shop, jes' as sure 's your name is Drive! Wal, they c'n stay there for all o' me."

He went around to the front of the house, stepping carefully lest he should tread on Aunt Jerusha's posies, uncared for now and running wild; China asters, sweet Williams and pansies struggling in a matted tangle of May weed, posy beans and morning glories wandering away from the posts of the stoop to climb the tall pig weeds. Two squirrels stopped chasing each other over the roof and along the rattling clapboards to scoff at the intruder, and a woodchuck sounded his querulous whistle and scuttled under the shop as Sam approached it. The door was half open, and he almost expected to hear the hearty hail of his old friend; but a chance-sown poppy growing in a crack of the sill, and the fallen petals of its last flower withering undisturbed on the worn threshold, told mutely how long it had been untrodden by the foot of man. When Sam looked into the empty shop, where nothing was left to tell of its former use but a faint waft of the old, familiar odor, the sconce and its mouse-nibbed candle end, a broken last and a rubbishy heap of leather scraps, a partridge sprang from the floor and, hurtling through the open, long window, went sailing away to the woods.

"The fog o' the ol' stories hangs 'raound here yet," Sam soliloquized, "an' wild creeturs takes as nat'ral as tu the woods tu Uncle Lisher's shop! Come dawg."

Protecting the Wheat.—Henrietta, Texas.—A wheat field was being ruined by the geese. I had a good blind and profile decoys out around it. Just as the well-known honk was heard I crept into my blind. The first string of geese circled around the field and made for the decoys. I had my new Spencer six-shot repeating 12-gauge. The line lay on my left, and sailed down within twenty yards, when I raised my gun, and at the crack down went the leader. Pumping in another load I downed the second, then the third, then fourth, then the fifth, then the last of the string. The string had nine. I had six dead geese.—Almo.

Natural History.

HORNS OF THE FEMALE CARIBOU.

Editor Forest and Stream:

It should not be necessary for me to say that Mr. Chamberlain, in his letter printed in your issue of the 19th inst., totally misunderstands my position, and attributes to me statements which I have not made, and which no intelligent and well-informed person would be likely to make. Whether this misconception of Mr. Chamberlain arises from my inability to make a clear statement of the way I regard the subject, or his inability to comprehend my statement if it was clear, is not for me to say.

It is quite apparent that there is a conflict of testimony on the subject, and with all possible respect for the evidence brought forward by Mr. Chamberlain and his witnesses, I submit that it is impossible to dismiss, as being of no value whatever, the testimony of a number of observers, such as Campbell-Hardy, Major King, Dr. Lieth Adams, Mr. Rowan, Dr. Gilpin, Mr. Ward and others who have studied the caribou in the region under discussion, and whose testimony is directly opposed to the view held by Mr. Chamberlain. To assume that all these men who have spent long time in New Brunswick, and who have recorded their observations—in several cases apparently with much care—were all merely repeating the statements of naturalists who have written of other localities, and that they themselves never made any observations on the caribou, appears to me to be taking altogether too much for granted.

Mr. Chamberlain appears to imagine that I wish to throw discredit on the testimony brought forward by him, whereas the fact is that the question turns wholly on accuracy of observation.

It is very evident that the truth cannot be arrived at by a continuance of this discussion. Facts are what we require to settle it, not arguments, and as I am not at present able to contribute these facts, and am besides much occupied, I may perhaps be excused if I decline to continue the correspondence. I may say, however, that I do not regret having taken part in it, since it has brought out a very considerable amount of information and a possibly new fact in regard to one of our least-known deer. Geo. Bird Grinnell.

New York, March 24.

MONGOLIAN PHEASANTS.

Editor Forest and Stream:

Several weeks since there were received in Portland, Oregon, a consignment of living pheasants, of several species and numbering sixty individuals, sent by Consul Denny, of Tientsin, China, to the people of Oregon, in the care of a sporting association of this town. The classified list of birds is as follows:

Copper pheasants, three cocks and three hens; green, five cocks and seventeen hens; silver, three cocks and three hens; tragopan, two cocks; golden, eleven cocks and fifteen hens. The birds are a free gift to the people on the part of Mr. Denny, and were sent with the design of stocking our woods with them, the most beautiful of game birds.

The Oregon Legislature, lately in session, was petitioned to pass suitable laws for their protection, and was asked to provide an appropriation of $2,500 for their safe keeping as long as necessary. But the Legislature, with characteristic stupidity, sharply refused to appropriate a dollar, and even declined to pass the wished for legislation. Individual members insolently asked if the organization referred to would not like to have the State build hunting cottages for their entertainment and provide hammerless shotguns for their use while engaged in the exclusive sport of killing these "tenderfoot" birds. This is considered a rather good joke in Oregon, the scrubby part of whose population have no sympathy with such refinements as game preserving, the introduction of new species, etc.

The sporting club still lives, however, and have shipped the birds to an island in Puget Sound, called Protection Island, where they will be set free to breed at will, and cannot be disturbed, as the islet is the property of one man, apparently a philanthropic individual, who promises to entertain the strangers without money and without price. It was a stepmother's welcome that the poor feathered creatures got in Oregon, and but for the kind fellow on his lonely domain, they might have been adorning some taxidermist's window now. Hang the Legislature, says everybody. They only represented the mean side of Oregon human nature, and not a particle of its manliness and generosity. The hunting club can exist without their aid, and the pheasants may live to scratch the dirt over the graves of senators and representatives. If you like to see handsome birds you should have gazed upon these sixty. They are a bewildering mass of silver, bronze, golden, speckled, green. They look when moving like a dozen solar spectrums all mingled and tangled together. Some of them have tails two feet long, and like that of the bird of paradise. They look too gorgeous to be eatable, but are said to be surpassingly good broiled or roasted. May their beautiful tribe increase! Barron.

Portland, Oregon, March 5, 1885.

GRUBS IN A DEER'S FLESH.

Editor Forest and Stream:

An article in your issue of March 12 interested me, as I have seen something of the same nature. A month ago I was in the mountains and forced to kill a deer for meat. On cleaning out the entrails I found under the angle of the jaw on the left side a cyst, size of a goose's egg, crammed full of large yellow maggots half an inch long. I have often tried to account for it, but have hitherto failed. Could a blade of grass or leaf covered with fly blow have become encysted in some wound or otherwise, and thus get hatched out? It can't be the result of decomposition of a true tumor of the salivary gland, as there would be no means by which a fly could blow it. I am sorry I did not keep the cyst, but the fact of the maggots is beyond doubt. The deer was fat and in good condition. Medicus.

Colorado Springs, Col., March 18.

[We have killed deer in August and September which contained grubs in the upper throat and posterior nares. These were no doubt the larvæ of a bat fly somewhat like the sheep bat fly (*Œstrus ovis*, Linn.), which, during spring and early summer, inhabit the frontal sinuses and nasal cavity of the common sheep. We understand, however, that the grubs described by our correspondent were encysted in the flesh. We have seen nothing like this in *Cervus macrotis*, but reasoning from analogy we might expect it to occur. It is well known that in certain regions cattle, reindeer and even men are infested with a bat fly, the larvæ of which take up their residence beneath the skin. The egg is laid on the hair, and the grub burrows through the skin and passes the larval period in a sack there, finally making its way to the surface and falling to the ground, where it passes the pupa state. Among the animals known to be afflicted with these parasites are man, cattle, reindeer, sheep, hares, squirrels, mice, the opossum and frogs. Usually their presence does not appear to injure the host, nor even to be attended with any very great inconvenience. We should be glad to know the species of deer on which these observations were made. Was it a "blacktail" (*C. macrotis*) or a whitetail (*C. virginianus*)?]

BELLS ON BIRDS.

Editor Forest and Stream:

For a week or more, about the first of this month, the good people near Justice's sawmill were much agitated by the mysterious ringing of bells in midair. Once it seemed to be near two men chopping in the woods. It would ring, ring by the hour, bafiling their investigation, until finally they left the wood in a hurry, satisfied that it was either an angel or a spirit. But it continued to be heard for days, and some heard it by night. The mystery was at last solved. A farmer, who had been troubled with hawks, the other day set steel traps and captured a large hawk, with a fine-toned bell attached to its neck by a strap. The bird was secured by a toe and so was not hurt. It made no resistance to being taken, and the farmer was soon convinced that he had caught a pet hawk. The bell was about 2½ inches across, and on it was roughly engraved:

L. Perry,
Athol,
Mass.

Can anybody in Athol give us any information as to when the hawk escaped and how he came in Jersey? The bird measures 3 feet 10 inches in spread of wing. It is tame and gentle, eating readily from the hands of the children.

Some snipe appeared on our meadows last week, but were too wild for our sportsmen. C. D. L.

Swedesboro, N. J., March 17.

AN AERIAL COLLISION.

"And figuring his flight, the mind is filled
With thoughts that mock the pride of wingless man.
True, the carred aeronaut can mount as high;
But what's the triumph of his volant art?
A rash intrusion on the realms of air.
His helmless vehicle, a silken toy.
A bubble bursting in the thunder cloud;
His course has no volition and he drifts
A passive plaything of the winds."

—Campbell, *The Dead Eagle.*

READING this poetic homage to the bird of Jove, sailing "in gyres and undulations full of grace," in the orient sky, we might fancy that nature's winged aeronauts never had collisions. You shall, however, be told of a veritable and amusing one, witnessed between two feathery murderers, occurring, at that, in the unpoetic task of obtaining a breakfast.

I was hunting quail in Richlands of Tazewell, the Valley of Clinch. It was on one of those delightful and happy October mornings. I had been slipping along the bank of the river to shoot a gaudy little dude of a wood duck, and not succeeding, stepped into a canoe, accompanied by my setter—now in the good dogs' happy hunting ground. The canoe's movement was so pleasant and restful that I sat down and let it float leisurely along. I yet remember that morning. It was one of those that every lover of the field remembers—of perfect peace—oblivion of the past; no thought of future; elysium without bodily change to reach it. The gentle flowing stream beneath was as clear as the autumn canopy above. The birch and willows on the banks twined their boughs, gently bending as if to see in the liquid mirror their lovely habiliments of fall attire, sparkled with the sunlit jewels of the melting frost. On all sides was a panorama of valley, hill, the mountain and the wood. Nothing can strike the gentle chords of perfect happiness like the magic charms of nature.

Away high above me I saw, carelessly hanging and flitting about, some distance apart, two of these keen and despicable little hawks that kill each more quail in a year than any one man. I hoped that they would come in range of my gun, that I might fulfill the bounden duty of slaying them. Presently I saw one dart down with half closed wings, like an arrow, and give chase to a crying little field lark. Over me they came, splitting the air with the noise of a shrapnel. The other one saw the chase and flew directly, meeting the darting fiend to supplant him, and just as the pursuer caught the lark, a hundred feet above the ground, the piratical aeronauts collided with an astounding thump that stunned both. The lark was dropped, and it is needless to say that it made a yellow streak for the first covert in the grass, and the hawks slowly sneaked away in a most amusing manner, making the whole thing quite laughable. My setter wanted to take a hand in the melee, and I forgot my gun, though I could have used it easily. Graeme.

Southwest, Va.

Tame Ruffed Grouse.—Cortland, N. Y., March 2.—The mention of the tame grouse, owned by a gentleman living in Poughkeepsie, coincides with the following: Mr. James Haight, living in Haight's Gulf, a wild and picturesque ravine near Cortland, relates that a partridge selected for its nest a location by the side of an old log but a short distance to the rear of his house. Mr. Haight was much interested in the success of this confiding bird, and often stepped over to see that she had not been disturbed. In time she became very tame and would allow Mr. H. to approach to within a few feet of where she was setting. The greatest trouble was to keep a spaniel dog from driving the bird away and destroying the eggs. Often the dog frightened her from her nest, but with maternal tenacity she was true to her purpose, and would as often return and resume duty. In due time the brood of young came forth and instantly disappeared. This was the last ever seen of the mother or her chicks.—Mig.

Bristol, Pa., March 17.—Seen to-day: Canada geese, broadbills (lesser blackheads), bluebirds, robins, redwing blackbirds, and yellow-billed loon. Thermometer 20°.—Bay Snipe.

Game Bag and Gun.

IN GOSHEN'S HOLE.

III.

SUNDAY came and we rested. It may have been because we really had conscientious scruples about shooting on that day, or there may have been other good and sufficient reasons; but at all events we spent most of the day about camp, paid a visit to the ranchman below us on the creek, taking to him a quarter of venison, and altogether put in a day quiet and uneventful.

Our dinner late in the afternoon was "swell." These old cañons never scented a more savory smell than was wafted with the smoke of our fire through their rugged fastnesses. Graham spread himself, and we did ample justice to his spreading. We sincerely complimented every dish, and he appreciated it. He was always a little vain of his talents as a cuisine professor.

Says Graham over the pipes: "Boys, I am well pleased to see you looking so comfortable and contented, with good health, good appetites and good digestion, though I am afraid your appetites have been destroyed, but with your digestive organs unimpaired, they will soon mend. You have been very fulsome in your commendation of the dinner you have just knocked into 'smithereens,' and I thank you. It makes me tired to sit at a table and listen to the senseless criticism about the dishes placed thereon. Now, if one is an acknowledged authority on gustation and merits the reputation, I can take some pleasure in listening, but there is not one in a thousand but can rock me to sleep. Delicate is a great word with them. They ring it in on all occasions and play tunes on it. 'I don't think this pork and beans have quite as delicate a flavor as the boiled beets and cabbages we had day before yesterday.' 'This Dublin stout is not quite as delicate as the California claret we had four years ago.' Delicate be hanged, for it does make me tired. I don't believe a lady or gentleman finds fault, but it's a wearisome fashion, this criticism of a good dinner by people who have been brought up on boiled beef and cabbages, on bacon and potatoes and muddy coffee. Men and women will find fault with the best dishes that are placed on their tables, and the best so-called judges will disagree as to their merits. One says the rice is burned a little, while the other says it's not, and so on to the end of the chapter. If they would only let their eatables stop their mouths and their fault-findings. As Pat says: 'Give me pace and quietniss fur supper an' moighty little o' that, too.'"

Monday was devoted to moving camp to the Josh cabin, four or five miles away, and in the absence of Mr. Josh we made his cabin our temporary residence. We found that during the few days longer we remained in Goshen's Hole, our sport was very much like that at our old camp. We killed six deer by trailing. No wounded ones escaped, so we had not to shoulder the sorrow of allowing any of our game to elude us only to die in some unfrequented spot a slow and painful death. We had several shots at a mountain sheep, but he was hitting the breeze too hard and too far away to afford any of us a fair shot. We tried to follow him, but abandoned the pursuit when he commenced climbing where we could get no certain footing. A few jack rabbits and some pin-tailed grouse were added to our load and our hunt was over.

Saturday morning at daylight we started on our return trip. Doc was to drive home, while the others rode their saddle horses, and when they had reached the high open country above, they scattered toward the Fox Creek draw and off toward Kelly's pasture for antelope, while Doc and the mules were left alone in their glory to wend their weary way toward Bear Creek. It's a lonesome kind of position to place an active fellow in, this skinning mules on a lone prairie road, and the time hung heavily. Doc finally struck an idea to drive the time away. It was nothing less than a speech. His supposed audience was the Wyoming Stock Association; scene, Library Hall, Cheyenne. Doc rises:

"Mr. President and Members of the Wyoming Stock Association: Though an entire stranger to most of you and a comparative stranger to all of you, I feel no hesitancy in rising to present to your kind consideration a proposition which vitally concerns every man whose interests are centered upon these large and magnificent ranges now under your control. It is one upon which depends the life or death of the vast animal industry in which you are engaged, for by its acceptance or rejection hinges your prosperity now or in the near future. Without infringing upon your time and courtesy one moment longer than is absolutely necessary to a thorough consideration of my idea, I beg to submit the following preamble and resolution:

"*Whereas*, As is well known to the consumers of canned corn beef, the packers of said corn beef use upon the tin boxes containing said beef a red label to designate the contents of said tin boxes, be it hereby

"*Resolved*, That it is the sense of this association that there be substituted for the aforesaid red labels on the aforesaid tin boxes a green label, colors emblematic of our love for the Ould Dart, and be it further

"*Resolved*, That if the large houses of Chicago will not make the substitution suggested, we pack our own beef and save commissions and the Irish trade, and be it further

"*Resolved*, That in order to protect ourselves, we demand an immediate change of labels from red to green upon all canned meats.

"Gentlemen: You have got to cater to the immense trade and growing influence of Ireland and its representatives in our country. Already there are murmurs of discontent borne from the sheep ranches of the South, from the lumber regions of Washington and Oregon, from the mines of California and Nevada, from the wheat fields of Dakota, and will you lend no listening ear? Will you steel your hearts to your own interests, endangering the future of yourselves, your children and your children's children?"

"I have nearly done. My scheme is unfolded, and its furtherance rests with you. Will you take the initiative, the forward step which leads to plethoric bank accounts and unlimited credit? or will you fold your hands in fancied security, while others more enterprising and far-seeing, step in and reap the golden harvest of financial success, leaving your cattle to become food for the buzzards and the coyotes, their bones to bleach in the moonlight and the sunlight, while the gentle zephyrs of Wyoming whistle through the denuded ribs of your herds a sad requiem of departed prosperity?"

"One word more, gentlemen, and I have done. It is an established fact that since the introduction of the Hereford element, and with the increasing knowledge we have——"

Doc had reached this point in his maiden speech, when chancing to look behind him was a team with four men in the wagon. They had an amused expression on their faces. Whether they thought the orator was a crank or slightly intoxicated, or practicing for a public effort they never said, but seeing that the exhibition was over when the crestfallen orator dropped into his seat and commenced to whistle "The Girl I Left Behind Me," they pulled out, whipped up their team and drove by.

Our party reached the ranch in the middle of the afternoon, Griff and Graham each bringing in an antelope. Ten deer and two antelope hung that evening in the trees between the storehouse and the kitchen.

There goes the score. Ought it to have been sent? Does it smack of the pot-hunter? If so, please pardon, for not a pound hangs there to be wasted nor sold. We idled away too much time in camp for hunters after profit. We enjoyed the fruitless chase after the mountain sheep, and though we returned many a time empty-handed, we never cared the snap of a finger.

Break, jump, skip,
By the cold gray bluffs, oh, deer,
But the tender chops of a buck that has dropped,

make a welcome addition to the good things the ranch cook shoots at us three times a day. MILLARD.

SOME REMARKABLE SHOTS.

Editor Forest and Stream:

On Thanksgiving morning, after a late breakfast, I put the gun together, and with a few shells in my pocket started out for a ramble, more for the sake, however, of giving the old dog a run than anything else, as there is but little enjoyment to be found in the woods at this late season. Tramping about until noon without seeing a feather, and coming out on to an old wood road I sat down to have a quiet smoke, when I heard a grouse get up and fly into a dense scrub pine. Catching up the gun I was making for the tree, when it suddenly occurred to me that my chances were just about as good to "go it blind" from where I was as to walk up and have her come out on the opposite side, a game you can count on being played every time. Having a shell in my left barrel loaded with No. 5 I drew up, held on the tree as near as I could calculate at the point where I saw the bird go in, and pulled, with very little expectation, however, of killing, and a fellow with a hole in his pocket might have bought me out. But I feel something as I do when fishing—it is a satisfaction to get a response occasionally, even if one goes home with an empty creel. I walked up and found a fine old cock lying on his back under the tree, shot as squarely as could have been done had he been in sight. I did not feel that I had taken any mean advantage either. Would you?

WORCESTER, Mass., Dec. 4. B.

Editor Forest and Stream:

Some years ago the Washington Iron Works made a specialty of circular saw mills and engines for driving them. Col. H., coming into the office one day from an extended trip, inquired for Mr. Ford the foreman millwright. As soon as he came in sight, Ford was greeted by the irate Colonel with a tirade of abuse about sending work away unfinished. The trouble was about a cast steel circular saw four feet in diameter, and about five-sixteenths of an inch thick, which had not been drilled for the pins, and that was quite a serious matter in the wilderness hundreds of miles from a machine shop. Ford felt very sore over it, and the Colonel, after working off his high steam, tapped him on the shoulder and said: "It was lucky I was there, as I don't know what the boys would have done." Ford brightened up at this, and said: "Well, Colonel, how did you manage it?" "Easy enough, easy enough," said Col. H., "I had the holes carefully marked with black paint, then set the saw firmly against the end of a saw log, and shot them through with my rifle."

Editor Forest and Stream:

While hunting near a hedge, a large flock of quail flew up and went down the hedge. I followed them up, and fired at what I supposed to be one of the quail. Going up to the spot, I found it to be a large stone which I had fired at, but about two feet away lay three quail dead. R. H.

PAOLA, Kansas.

A Disputed Bird.—One day Dr. Kirkendall, of Ithaca; Dr. Gee, of Vanettenville; F. W. Kendall, of Swartwood; Arthur Meadow, of Sayre, and Dr. Fisher, Charlie Butts and Fred Rogers, of Spencer, most of whom are members of the Spencer Shooting Club, and all of whom occasionally break ten glass balls straight, enjoyed a half day's shoot near Spencer. It was one of the few days that fall when the birds had all gone down into Pennsylvania to attend a reunion. The game was loaded into an empty primer Rogers had in his vest pocket, and the party started to enjoy one of Mrs. Fisher's well-known dinners. When crossing a flat near Spencer, a solitary woodcock was flushed about six rods from the party. Every gun was fired except Meadow's which missed. The bird flew on, another broadside was given; this time Meadow's gun worked, and the bird died. Of course, under the circumstances, Meadow claimed it, so did Fisher, so did Kirkendall, so did Butts, so did Kendall, Gee knew he had not missed it, Rogers swore the bird was his. A small boy sitting on the fence claimed it because he had picked it up. The latter claim was disallowed. On investigation it was found that no two of the shooters had shot of the same size and degree of hardness. To determine the matter was easy. While the shooters were discussing their dinner the bird was dressed, and brought on with the dessert. It was examined by Fisher. He looked at it carefully and sadly said: "It is not mine." Each in turn examined it and relinquished all claim to it. There was not a shot mark on it. The thirteen shots had scared the bird to death.—K. (Vanettenville, N. Y.).

Domesticating Wildfowl.—Cold Spring Harbor, N. Y., March 14.—*Editor Forest and Stream:* At this date all my wood-ducks, fourteen pairs, are mated, and are usually seen swimming in pairs and only group when on shore. The mandarins are also mated. The spriggtails keep together as do the mallards, but have not been observed to couple. A pair of green-winged teal arrived from Iowa last week, but the drake was dead when received and the little widow is followed about by a solitary baldpate or widgeon drake, to whose courtship she pays no further attention than to fight him off when he gets too familiar. This little duck, not as big as a man's fist, seems to be the master, or mistress of the whole flock, and it is amusing to see her drive off a mallard that intrudes too near her majesty.—Fred Mather.

ROUGHING IT IN THE NATIONAL PARK.

I.

WITH a friend, Frank F., of Detroit, I arrived at Livingston, Montana, Sept. 1, bound for a trip roughing it in the National Park, and then a hunting expedition in Idaho.

Livingston is the point on the main line of the Northern Pacific Railroad, from which the National Park branch line, fifty-seven miles in length, is built through the upper valley of the Yellowstone, terminating near the Mammoth Hot Springs, and this will be always the principal route to the Park for visitors, whether they travel the region by rail, wagon or horseback.

We put up at the Albemarle, and the next day began to look around to buy an outfit, but did not see any to suit our purpose, so we took a trip to Bozeman, a much older place than Livingston. At Eastman's Hotel, we had the pleasure of meeting Dr. Hayden, the veteran explorer, who made quite an extensive tour in 1871 through the Park, and whose geological reports, maps, etc., were published in the annual report for that year, who also presented to Congress a proposition to reserve this section from settlement as a National Park and game preserve.

After inspecting a number of horses we decided upon a pair of bronchos which we bought. The best horses for such a trip are ponies raised in the West, as they are tough, good in harness and saddle, and last, but not least, rustle (a Western expression, meaning that they will take care of themselves) so that you need carry no grain, or at least very little, as they are accustomed to look out for their own food. We also bought a covered Bain box wagon, harness, saddles, blankets, buffalo robe, etc. We also got a dog—Jack—a cross between a pointer and hound; he improved the appearance of the outfit, as he was large, powerful and a good watchdog. Here also we had Cooper's improved rifle sights adjusted to our rifles. In the top of the front sight, which is crescent shape, is inserted a rounded piece of gold or ivory which is always distinctly visible, in all trying weather, glaring sun or dashing snow. The rear sight has a movable slide, by which you can raise your sight at running game, always sighting through the same notch, and not removing your gun while firing. Trying our rifles at the range with those sights, we were astonished with the results of this improvement.

Having returned to Livingston, and being delayed there by stormy weather, we finally pulled out on the 10th of September. The road was fairly dry, as the alkali soil soon absorbs the rain. Keeping the river on the left hand after leaving town, the road passes for two miles or more over a gravelly plain and enters the shadow of the terraced and rock-ridged peaks, 3,000 feet in height, through which the stream has carved its way for a distance of three miles, forming its third or lower cañon. This gateway of the mountains leads into a gorge just wide enough to admit the road along the river, the mountain walls rising precipitously on either hand. Emerging from the lower cañon, the road enters at once upon a large fertile plain, Paradise Valley. The Yellowstone, all through its course in Paradise Valley, is fringed with trees, and has a stony and gravelly bed, with an impetuous current of six or seven miles an hour, a depth of as many feet, and a width of about 100 yards. Its waters, constantly freshened by mountain springs and torrents, are cold and clear, and alive with trout and grayling.

Here we struck camp about 5 P. M., set the tent, picketed the horses, and began preparations for our supper. Wood and water being handy, we enjoyed immensely our first outdoor meal, and turned in about 9:30. Our bed was comfortable and warm, for we made it up of two rubber blankets buffalo robes, and three or four woolen blankets. Early in the morning we "pulled up sticks" and were off, through the beautiful valley. The scenery and mountain views, as we went on, day by day became grand and superb. A panorama of stately domes is constantly unfolding a succession of the grandest pictures. But the eye is not alone fascinated by the glorious mountains; yonder is the stately river flowing swiftly on past wooded islets, where miriads of waterfowl flock to the feeding grounds along the shallows.

Sept 13 we had some fine trout for breakfast, which F. had caught night before. We started about 9 o'clock and drove along the noble stream, where I killed and succeeded in getting several fine mallards. The road we traveled was made by "Yankee Jim," whose toll house we passed about a mile beyond the cañon, and arrived in the afternoon at Cinnabar. Here is the terminus of the National Park Branch Railroad, and the stage station of the Park. Cinnabar is a dull, unprepossessing place, and consists of a limited hotel, a store, and few log houses. The location of this town is very beautiful. On the right, Cinnabar Mountain is a striking feature of the landscape; this is a handsome peak, standing out from the other elevations and making a fine picture. Its name was probably given because a broad stripe of vermillion hue girdles the height half way up its face. The south face of this bare mountain is traversed from apex to base by two enormous dikes of traprock. These walls are 200 feet high and 50 feet broad. The material between the dikes has been washed away, leaving the gigantic walls as smooth and vertical as if built by mason's skill. Nature has seldom shown so wonderful a specimen of her handicraft. This is named the Devil's Slide.

After a four miles' drive we came to Gardiner's City, a characteristic frontier town, with a motley collection of shanties, saloons, log houses and dirty canvas tents. Here we bought a regular western mining cooking stove, as the one I sent from the East was no good. It was the Duncan camping and cooking stove. The stove was too fancy and complicated, the oven had to be hinched on the stove, and could not be sufficiently heated to bake bread, as the fire could not reach it. This is a most important item in camping out, as you have to bake two and three times a day. The regular Western mining camp stove is made out of sheet iron and is about two by three feet, the baking oven is a separate apartment in stove, where the fire and heat can go all around it; you can regulate your heat by a draft check, and feed fire by a separate door.

Arrived at the hotel of the Yellowstone Park Improvement Company, but not being willing to pay the extraordinary high rates at the hotel, we drove on near a mile, in a most secluded grove, with plenty of wood, water and good feed, where we made camp. Turning the horses loose and eating a hurriedly-prepared lunch, I took a walk to the springs, leaving F. to guard camp. Arriving at the top of the white marble-like terraces, there are innumerable basins, in the center of which great springs are boiling from the regions of eternal fire. The novelty and magnificence of the scene are bewildering. The brilliancy and variety of the coloring matter about the pools, as well as the delicacy and beauty o

the formations are indescribably wonderful. Over the rims of the basins the water gently pours until it finds its way to the bottom of the hill, where the flow is collected and carried off by several channels to the Gardiner River. Among the principal springs is the Cleopatra; it is the most beautiful in the basin, and has light blue tinted water in a white basin with light yellowish red edges. A large basin surrounds the spring. At the east end are basins lined with reddish tufted material. The greatest overflow escapes at the west end, and the basins here are fringed with stalactitic masses. As the water escapes it flows over a ladder, that has been placed against the edge for the purpose of coating articles that are hung on it. Columns of steam clouds are arising and drifting to and fro with the wind of the mountains, pregnated with a strong sulphur odor. Up the hillside are terraces of extinct springs and pits. The night was cold, but we slept well and warm. Monday morning, Sept 15, I kept house, as Frank went to see the springs. Tinkered around in camp, and had dinner ready as Frank returned, after which I went once more to see the beautiful sights and get some coated specimens as souvenirs.

BATTERY-SHOOTING.

Editor Forest and Stream:

On reading "Sagamore's" article, in your issue of March 12, I must pay him the compliment of saying that his side of the argument is in skillful hands; still his assertions, though well written, are no arguments, and he is by no means fair to me in selecting certain remarks in my articles without giving the whole context. Thus my conclusion was a fair one that he "had drawn almost entirely on his imagination for his points" when he described the waters being beaten over by the sailboats of the tenders like dogs hunting a field, such being not the method of sinkboat shooters in the waters of the Chesapeake, about which vicinity I was writing. His claim to a more varied experience with batteries I do not dispute, as I have never used them except on the Chesapeake and years ago on the Delaware River; but as I have a thorough knowledge and acquaintance with their use from Havre de Grace down the bay wherever used, I think my experience as good as "Sagamore's," although not extending over so large a territory, and you will remember I have only described the uses of the battery on the Chesapeake, where I have and do maintain that it is not the destructive thing he tries to make it, although a successful way of killing fowl. Of course if "Sagamore" only desires to stand on the bank to look at the game without having the power to kill it, that is a matter of taste on his part, but I think he will find few to follow him; for my part I would rather not see fowl at all than to be unable to put myself in the way of getting shooting. With all due deference to his claim to superior knowledge and long-extended experience, I can only state what I have before written, that what I know on the subject has been gained by thirty-five years of wildfowl shooting, both at deep and shoal water ducks—or as I make the distinction, marsh-fowl and diving-fowl—during which time my pursuit of this sport has been almost incessant, in the season for it. I have vanity to think I know something about the subject of which I write.

In the matter of the sailboat as "tender," I think we are at cross-purposes, when I state that in this vicinity (I mean all over the Chesapeake) the shooter in the box is not tended by a sailboat; that is, that the person retrieving for him uses a rowboat. Of course the battery is carried from place to place on a sailing craft of some kind; that this craft does sail occasionally (notwithstanding his e-x-a-c-t-l-y) to break up the beds of ducks "on days when they will not fly" I have never disputed. The point is not whether they do it or not, but whether it is the pernicious practice he claims it to be, and whether if a pernicious practice as regards driving the fowl away, whether it is necessary to box-shooting. My claim is that it is not done to any extent, or rather to a harmful extent. That the mere boat or yacht sailing over the ducking ground will not frighten the fowl off their feeding grounds not shot at from the sailing boat any more than the numerous craft that ply over the waters in all directions here in the Chesapeake, is evident from the fowl not being driven by them. "Sagamore" states that he has shown the sailboat to be more hurtful even than the batteries. He has stated this to be the case, but how he has shown it to be the case, meaning in his use of the word "proved," I fail to see.

Again, "Sagamore" is unfair when he quotes me as acknowledging that batteries are an evil, when I say that "the over-killing of ducks out of them is an evil that soon corrects itself." I say that the over-killing of ducks is an evil, not that the use of the sinkboat is. He proves this in his former letter, viz.: that the over-killing soon corrects itself, when he cites the cause of the Currituck box-shooters, who, although making large bags at first, yet by his statement, fail to make a living at it, from the fact that the fowl soon learn to know the batteries and are not killed in large numbers. This is the case here when the shooting out of boxes is good enough to satisfy amateurs, but would be a very poor dependence for a living.

"Sagamore" says that what he quotes in reference to Sandusky Bay, proves that in a locality where fowl were naturally abundant, they gradually disappeared on the introduction of batteries. If he has proved that by his assertion, is not my statement of just the opposite effect, viz., that in the waters of Easton Bay and its tributaries and in the Choptauk River, that the duck shooting has not been injured in the least by the use of boxes, that they cannot be held accountable in any way for the failure of the shooting from the shore, as that had completely failed before boxes were introduced here, entitled to equal credence? I will not be ungenerous enough to those who take "Sagamore's" side to claim that if any one cause could have destroyed the shooting from the shore here, we might accuse the point and shore-shooters, for talk to any old sportsman here, and he will immediately entertain one with what he used to do in his young days, how he and his neighbors stood on the points and killed ducks by the cart load, etc. This same old sportsman will say that we have no ducks about now, yet when you sail him by one of our large beds of redheads, he will declare it one of the largest rafts of ducks he ever saw.

I claim that the decrease in the numbers of our wildfowl is more apparent than real; they have changed their habitat, it is true; they don't go into narrow waters as they used to and avoid flying over the points and bars on all possible occasions. Geese have been growing markedly more abundant in the lower Chesapeake within the last five years. This past winter I have seen them by the thousands. No, "Sagamore," the fact is that when we have an abundance of food we have thousands of ducks, and when the food is not here the ducks go to other sections. I do not mean to make the statement that the wildfowl are as abundant as they were when the country was first setttled, but I do say that they are fairly holding their own against the advance of civilization and the numerous army of sportsmen.

Now as to riparian rights, can "Sagamore" find that I anywhere claim to "know all about riparian rights," although as an owner of property bordering on the water I might claim without arrogance to know something about them. This was the extent of my offending. I distinctly stated that I was writing on the subject of battery-shooting as practiced on the Chesapeake and its tributaries, in other words, where the tide ebbs and flows; my remarks were that the water was "free to all," and that a "trespass (in the form of battery-shooting) could not be committed on the water." The law, I believe, makes a material difference in treating of riparian rights in water where the tide ebbs and flows, and what it terms unnavigable water, where it does not. The cases "Sagamore" cites are familiar to me through FOREST AND STREAM, but do not at all apply to our tide waters, of which I was writing. I ask him again what he meant when he asked me if I had ever heard of riparian rights, knowing as he did, from my statement, that I was writing of shooting on tidal waters.

In regard to the shooting on Bush and Gunpowder rivers and vicinity, continuing to be good while ours failed, I think I can make a very satisfactory explanation of why it should, without attributing it to the use or disuse of batteries, and this is the fact that we have oysters while they have none. The oysters involve a numerous fleet, numbered by the hundreds, if not thousands, of canoes, buckeyes, sloops and schooners, which do indeed fulfill "Sagamore's" description of the box-shooters' tenders, every one carrying a gun and shooting at everything that flies within possible or impossible shooting distance. This does indeed drive the ducks and other fowl. When this is understood, together with the fact of an abundance of food, including the famed wild celery, of which we have little or none owing to our salt water, I think it will account for the good shooting from the shore which he claims to have, and which I most sincerely hope he and others will continue to enjoy. In his allusion to sneakboats does "Sagamore" wish to be understood as indorsing the sneakboat and swivel gun? I might suppose so with equal justice, as that he should recommend it to me after what I have written.

In regard to what he says about throwing the points open and "lay" days for the shore shooters, if it could be proved that his manner of shooting was as destructive to the fowl as box-shooting, he would consent to it. I think I have proved that the point-shooters kill more fowl than the box-shooters, for what is the difference so far as the diminishing of numbers is concerned, whether fifty men kill fifty ducks off points, or ten men kill the same number out of boxes, and this is about the proportion that the two classes of shooters bear to each other. "Sagamore" mixes up assertion with proof, he wishes to claim that battery-shooting is proven to be the terrible thing that he asserts because he so asserts it, this is no proof nor argument, and until it is proved to be an "engine of destruction" that will drive the fowl away, I must beg to stick to my box. I think he shows the weakness of his cause when he says the marsh cannot be moved and the sportsmen cannot reach the fowl j-u-s-t s-o. Therefore we want to get somewhere in position to reach them. You, if you prefer it, can sit in the marsh "that cannot move" and look at us.

In judging of the destructiveness of battery-shooting it must be remembered that in all waters that are at all open, the weather regulates their use, it being only in moderate days that they can be used with success, or when the wind is off shore, for although it is astonishing the amount of sea they will live in with the "leads" turned up, yet they cannot be shot out of in heavy winds to any advantage, as the splashing and jumping of the box frightens the fowl. This it is important to remember in summing up the pros and cons on the subject of battery-shooting. "Sagamore" prefers to "sit in the marsh" where he cannot reach them every day in the week, getting an occasional shot at a straggler, while I will take some good day or two in that week and kill as many as he does. When Saturday night comes we both have the same number of ducks. If he is satisfied, I am sure I am; it is only a difference of taste. I have only had two shooting days out of two weeks in the lower bay in winter.

To sum up I think batteries are right in narrow waters where good shooting can be had, otherwise it is folly to use batteries, not that they frighten away the fowl but that where other means will answer the ends they are preferable on the score of comfort, and there being less labor attached to shore-shooting. But in the wide and bleak waters of the Chesapeake, such as the flats and all points on the bay and the large estuaries of the same, the box is the only available means for the shooter who is fond of killing game and not "standing in the marsh looking at it."

If "Sagamore" could have been with me on Thursday of last week in my box on one of our bleakest points that jut into the bay, and helped in the beautiful swan shooting we enjoyed for a few hours, I think, good sportsman as I believe him to be, he would have been a convert for the time being, at least, to battery-shooting. Nine beautiful swan decoyed to us at different times and we got eight of them. Don't call it slaughter. Remember not more than one day out of the month in that locality can a box be used on account of its bleak position. "Sagamore" might have killed the same number of swan had he spent every hour of daylight for a month on the point within a mile of us, over which the swans occasionally pass. Which of us would have had the better sport at the end of the month is again a matter of taste. I wish he had been in the other box with me (I was using my double one), I would have had great pleasure in making a convert of him for the time being. It is not the fact that eight swan were killed that makes the enjoyment, but that at four different times we had all the glorious excitement of seeing bunches of this noble game coming slowly against the fresh wind blowing up to the decoys, and being conscious that a single false note in our answering call of "who, who" would make the wary game turn off; the waiting for what seems minutes until they are near enough, and the time does seem astonishingly long; then comes the supreme moment. Friend "Sagamore," it can't be had unless in a box.

SINKBOAT.

EASTON, Md.

Editor Forest and Stream:

It is of no use for me to tackle battery-shooting after reading "Sagamore." We have no battery-shooting in Ohio, as it has long been prohibited by law, after discovering its pernicious effects where water fowl resort to feed. These batteries are necessarily stuck down on the very feeding grounds of the birds, and if they do not come fast enough to the slaughter sailboats are employed to "sail them up." This process leaves them no time to feed, and soon drives them away to return no more that season, if ever. Passing birds shot at from points on their way to and from their feeding grounds seem not to be affected in that way, but go straight onward to their food, and if unmolested there will continue to fly back and forth time after time and year after year, thus securing to the sportsmen the continuation of this sport.

X.

CLEVELAND, O.

WILD TURKEY METHODS.

SEVERAL weeks before we had our first snow, two men, father and son, prepared a train of corn through a track of woods inhabited by a few wild turkeys, one of which was a very large gobbler. The blind consisted of part of a hollow tree and a small pine, behind which both hunters were concealed. After the two men were in ambush for the greater part of a week, the birds advanced on the train, picking up the corn while the blind was occupied. The large gobbler was destined to be the victim. Turkeys walked up within ten steps of the blind. Left barrel containing buckshot missed fire. Bang! went the other barrel loaded with ball. Result? Half of a tail feather. No damage sustained, the frightened turkeys returned to the mountain to consider for another week.

That week sorely tried the patience of the younger hunter (Age having retired in disgust) though he being one of the patient kind was bound to succeed in the end. Again came those silly birds, the patriarch fowl being second in order, perhaps he feared to lose the other part of that tail feather. Alas, it should not be the single ball this time. The single old smooth-bore rang out, and a stray buckshot carried away the end of one wing. The large gobbler made a few unsuccessful jumps. Another moment and the young man was on the bewildered bird. Breathing hard with excitement, he drew his knife across that already red throat, almost severing the proud head from the shining body. The poor bird was murdered. His beard measured ten inches. His plumage vied with the sheen of a humming bird. His weight was twenty-two pounds; and he was sold in the market.

A friend of dog and gun, who admired the superb coat of this noblest of game birds more than its flesh in pot or pan, secured it and handed it over to a taxidermist to be mounted. He expects to feast his eyes in the near future on this fine bird, to enable him to dream of another turkey, the counterpart of this one until next season again opens, and to indulge the anticipation that he by chance may meet one some day, bring him down in an honorable way, as a sportsman ought, and return home in triumph.

About the time of the above occurrence, the writer was out with several friends for deer. On the last day of the hunt one of the party reported that he had started a flock of turkeys in our last drive. Those turkeys were met some fourteen miles from our home. In the course of a week we had a favorable tracking snow, just the kind of snow I was longing for. However, we can not always have it our own way in this world. I could not go and was unhappy. Rain followed the snow; a bad crust formed and made hunting impossible. Another light snow followed in a few days later and induced me to try. The close season for deer had just commenced the day of my chase, and the weather was cold and windy. The summit of the mountain gained I soon crossed a fresh deer track and heard two dogs on the war path—this was December 17, the second day of close season. My object being a hunt for turkeys (shooting deer out of season would cause me as much satisfaction as the finding of carrion), I turned down the mountain in disgust. Expecting to find tracks of turkeys in the bottoms and near the fields, I began to look there first.

After following the lower woods for several miles, the presence of a number of men getting in their fuel for the winter convinced me that the looked-for birds must be higher up. I next tried the foot of the mountain and soon found two tracks, a large and a small one. The birds were feeding. My duds were of neutral tints, but the snow crunched badly under foot, leaving me but little hope for success. Following as still as possible, under these unfavorable circumstances, avoiding every little stick and brush, I noticed that the birds had suddenly stopped feeding and taken a straight course for the hill. Had they heard me? Arriving at a sudden rise, a small bench allowed me to make my appearance very suddenly. My 10-gauge was loaded with six drams of powder and one ounce of No. 1 shot. Looking about very carefully, while stepping up the bench, my ears detected a faint rustle. Turning my head, I observed two turkeys running in different directions, some sixty yards away. A quick shot at the largest was not immediately fatal, but when taking his last rise the gobbler succumbed to the second barrel. Almost the same instant the smaller bird came sailing over my head. A new cartridge was quickly inserted, and there was no time wasted in bringing up the gun—just a trifle too late. A rear shot, seventy to eighty yards away, at so noble a bird as a wild turkey is cruel. I did not shoot. On examining the dead bird I ascertained that the first shot would have secured it; one pellet had gone through its gizzard and clean through the body. The second barrel might have been retained for the other bird, but one turkey was enough. However, human nature has its weaknesses, and I could not help thinking that two birds tied together would carry so much easier over the shoulders. This fowl was certainly earned by hard work, more work than several good turkeys are worth, though I valued it more than a number of them potted on a train of corn, while I myself would lie cramped, with agonized body and distorted face, jammed into a blind, waiting for the unsuspecting victims.

While ascending the mountain on the homestretch several grouse started up wild into a strong wind which carried them out of sight in an instant. Flocks of crossbills were calling and chirping to each other, ever on the move, but making short halts when scissoring out the seed from numerous pine cones. The small woodpeckers were not missing, they also had their share of seed, occasionally taking out the chilled worm or insect from the bark, while going up or coming down a part of a tree. A short upward swing would land them near the top of another tree—all the small birds were unusually vociferous, the cold and windy weather being the cause. Again I reached the top of the mountain. It was now 2 o'clock, and feeling hungry I got out my lunch; lo! it was hard as stone. A good fire would soon make that frozen grub eatable. The wind was blowing a gale up there. My small camping axe (just the thing for such a dilemma) attacked one of the numerous old and rich pine logs; ten minutes later a roaring fire blazed up and I enjoyed myself.

Two hours later, when nearing the clearing where my horse was kindly cared for, I came on fresh signs of a ruffed

grouse. This time no setter followed my bidding. While following this trail, gun on one shoulder and turkey on the other, the grouse took wing, but a charge of No. 6 secured it.

I reached home somewhat tired, but well pleased with my tramp after birds, health and recreation. WOODTHRUSH.

WILLIAMSPORT, Pa.

MIGRATORY QUAIL.

Editor Forest and Stream:

In your issue of Dec. 11, "G. M. S." expresses full belief that the Sicily (Messina) quail imported into this country have survived all the dangers and perils that beset them, and that they are now prospering and doing well. "They are here," he says, "and here to stay."

The whole country is interested in this matter of introducing Messina quail. It would add another game bird to our scanty stock—"a consummation devoutly to be wished," and moreover, would increase our food supply, a subject of no little importance to our people. So anxious are we to learn of the accomplishment of this end, that we are ready to believe almost any statement, however extravagant, put forth in this direction. Nor has there been a dearth of writers ready and willing to lend a hand to help on the delusion. Every little while for the past four or five years, some one in some remote corner has discovered these birds in a flourishing condition. Now in Pennsylvania, now in Maine, now in Massachusetts, and apparently without very thorough scrutiny, has rushed into print with his story, which has been eagerly devoured by willing ears. All of these declarations, except the one put forth by "G. M. S.," have, we believe, under investigation fallen into very minute fragments and disappeared, and even this last hangs upon a very slender thread—the result of the examination and report on the two specimens that were to have been sent to "R. O. Morris, Esq., clerk of Hampden county," for identification and classification. We have waited all these long weeks with tremulous anxiety for this report, but none has been made, nor have we seen a word of explanation or consolation from "G. M. S." This whole account of the Sicily quail seems to us somewhat conflicting and contradictory.

A correspondent in the FOREST AND STREAM expresses the opinion that if foreign birds were planted in warmer climates they would spread north, to which "G. M. S." replies: "This view as applicable to song birds may be true, but the migratory quail or Sicily quail are hardy. Stock the fields with them."

Again, he says the quail were imported because it was thought that they would breed here, migrate south, return in the spring, and still further on he makes this most singular remark: "No bird has instinct nor intelligence enough to find its way south to a warmer climate; they must have a leader." These things puzzle us exceedingly. "Sicily quail are hardy." Of course they are or they would not be rooting around here in the snow after food on the ninth day of November. But are they so "hardy" that they can live all winter under a snow bank three feet deep, and come out in the spring fat? If so, they are good birds to have; just the thing for this climate, and if "G. M. S." knows whereof he speaks, then we congratulate the country on this splendid acquisition. If the birds are here as late as November 9, we must infer that they are here for the winter. This conclusion is inevitable, since they have neither "instinct" nor a "leader" to carry them south. In other words, when they are imported they become non-migratory; then what have we gained by the importation? Our native quail are certainly larger, and about as prolific, and although not regarded as "hardy," are, we think, about as capable of taking care of themselves.

We wish, however, to have it understood distinctly that the idea that "no bird has instinct nor intelligence enough to find the way south" originated with "G. M. S." and not with us. All our experience and observation lead us to a contrary conclusion. How is it with our non-gregarious birds that arrive silently and alone in spring time, and depart in autumn in the same silent and solitary way? Have they a "leader," one that has been over the road and weighed its far journey by certain land marks? We trow not. If the parent of a gaggle of geese is killed, do not the young birds instinctively find their way south? Possibly our *Scolopacidæ* may better illustrate this. Did any one ever see any number of woodcock, or even a single individual under convoy? Any one familiar with the habits of our *Limicolæ* knows very well that the adult males leave the females and the callow brood on the breeding ground in midsummer, that some weeks later the adult females follow their lords, and that several weeks still later the young birds, under no leadership except "instinct," find their way south, not by land, but striking out boldly across the ocean to spend the winter in the luxuriant climate of South America. The migratory habits of Messina quail are quite similar to those of other migrants. They breed far north in Europe, and about September start along south, crossing the Mediterranean into Africa, where they pass the winter, returning in April or May. If they retain their habits when transported, as they would be likely to, then they would not be found above 42° north latitude, so late as Nov. 9, especially if there was snow on the ground.

It is now about ten years since this matter of importing European quail (*Coturnix communis*) was first agitated. Some of our sportsmen became deeply impressed by the fact that our game birds were becoming scarcer and scarcer every year; our game laws were weak, inefficient and feebly enforced, and offered very little protection to the birds, and that unless something was done in a few years there would be no birds here worth hunting or keeping dogs for. How to supply the deficiency was a question not so easily answered. Some would have more stringent laws to preserve what few birds we have left; some would prohibit killing altogether for a series of years, while others would attempt to restock the country by importing foreign birds. Of the several species that were discussed, the Messina quail, from its known migratory habit, was, of all the European birds, thought to be the best adapted to our climate and condition of things, and the most likely to propagate and thrive here. As early as the year 1875 this matter was discussed, and a plan formed for importing some of the birds as a sort of experiment.

Among the first and most prominent projectors of this scheme was Hon. Martin G. Everts, of Rutland, Vt. Various causes interposed to prevent the immediate execution of the plan. Parties were ignorant of the habits of the birds, the time of their migration, the method of capture, and means for shipment, as well as the proper person to apply to in Messina for such aid as would be required. The first invoice of about four hundred of the birds arrived in New York on June 5, 1877, one part of them going to Vermont, the other to Massachusetts. The birds were often seen during that summer, and it was certain that, like most immigrants, they prospered and reared large families. From different sections where they had been planted, the most encouraging accounts were received of the entire success of the enterprise. This fired the hearts of other sportsmen, nay, the whole of New England was in a blaze. The next year other parties ordered out more of the birds, and these were supplanted by larger invoices each year up to 1881, at which time some fifteen thousand had been landed upon our shores, about ten thousand of which were imported through the agency of Horace P. Tobey, Esq., of this city, who kindly volunteered his services for that purpose. These birds were scattered up and down the land from Maine to Virginia.

There was no doubt whatever that the birds bred well in the year they were liberated, but did they migrate and return the following spring? This was the grand question that puzzled the minds of those most interested. It was a problem not so easily solved. Young quail were undoubtedly seen in several places during the summer of '78, but were they the offspring of the importation of that or the previous year? Upon this question opinions divided, but the closest observers began to suspect that the birds did not return, and the whole scheme would prove a failure. So universally did this notion prevail, so discouraging was the outlook for the future, that no birds, to our knowledge, were imported subsequently to 1881; yet "G. M. S." quotes from the papers to prove that two years ago (1882) these birds were imported and "turned loose in the town of Wilbraham." As we understand the case, nothing more was heard from the plant until August last, when Deacon Preston stepped upon a young bird, crushing out its dear little life, "and this proved to be a young one of this species"—Sicily quail. It is strange, it is marvelous, that for more than two years these birds were here, where so many people were solicitous for their welfare, our sporting journals were eager for tidings of their whereabouts, that they should have remained here so long and not be seen of any until that one fell beneath the ruthless foot of the deacon.

How could we account for the survival of the little handful of quail planted there, while some fifteen thousand of them imported year before should all perish? Those imported first "were let loose here strangers to land and climate," just the same as the last, and yet the one fails, the other succeeds. Can "G. M. S." explain this apparent antithesis? We hope the Wilbrahamers will have quail as plenty as they were around the camp of Moses, "as it were a day's journey on either side * * * round about the camp, and as it were two cubits high," so that each sportsman, together with the "deacon" and the four "witnesses," may be able to gather or "bag" his "ten homers."

The description, however, of the birds seen by "G. M. S.," and which he pronounces "migratory quail," answers but too well for the young of our native quail. The call note of immature natives is generally a syllable longer than that of the adults. Nor should we think any one could easily recognize specific characters so early as August, especially if the birds were so young as to be trod upon.

In summing up the whole matter we cannot help thinking the quail seen by "G. M. S." and his friends were young native quail about half or two-thirds grown. It is a well-known fact that the young of most species of birds, whether male or female, resemble each other in color, and that in their plumage they copy the maternal rather than the paternal relative. Another fact is patent, viz.: that but very little is known of European quail in this country. Few people have ever seen one. Possibly "G. M. S." is one of these.

That this country will ultimately be stocked with Messina quail we have not a doubt. They are too valuable a bird, have too many good qualities and adaptabilities for our wide-spread territory and variety of climate to be much longer neglected, but we must adopt some different method from that hitherto pursued. We should like to see the experiment tried of planting them far south, say as far as Mexico or the Isthmus of Panama, late in winter or early spring, and then let them work their way north gradually as they possibly might. Then if they migrate south, as is their wont in autumn, they would not be so likely to quit terra firma and be lost at sea, as they would if planted further north or east, where the first experiment failed. If we could educate out of them the instinct to cross the Mediterranean, we should have accomplished about all we desire. There is no manner of doubt, with their prolific tendencies and migratory habits, they would in a few years so multiply as to cover and stock our whole continent. We might instance the European sparrow as an example of the rapid propagation of foreign birds. It is only a few years since the unpardonable sin of importing a small number of these pests was unwittingly perpetrated, and see! They are everywhere and all over the land, a useless, filthy, quarrelsome, unabatable nuisance. Why not have these useful and beautiful little quail as plentiful if once they get a permanent foothold here? W. HAPGOOD.

BOSTON, Feb. 25, 1885.

PHILADELPHIA NOTES.

THE unexpected cold weather of this week upset the calculations of many Philadelphia sportsmen who had intended to devote a portion of the time to snipe shooting. The arrival of the birds in fair numbers south of us and the coming last week of a few stragglers in close proximity of our city proper, were good indications that sport could be had. Jack Frost, however, has attacked the feeding grounds again, and the wet spots bordering the rivers and creeks are at present writing in an adamantine condition. The ice which had almost entirely disappeared from the streams, has again formed, and is once more floating with the tide. Many fowl are showing themselves in the Delaware, and a great many are being killed below Bombay Hook, the Delaware State shore attracting the greater numbers. Slaughter Neck and Prime Hook marshes are alive with sprigtails, and will continue to be so until the warm days of spring come upon us, when they will leave for the breeding grounds. At Barnegat and Tuckerton bays the arrival of numbers of brant is reported, but the heavy ice of the past winter, when it broke up and drifted out, has closely shaven the sedge growth on the islands where hides are made while decoying for fowl, and the baymen find it impossible to now keep their boats out of sight. Not only does this make it difficult to secure good darts to the stools, but the brant returning from the south to the New Jersey bays in the spring, so well remember the reception they received on their arrival from the north in November, it is seldom a bunch can be induced to notice their wooden counterparts.

Many young fowl are in the flocks when they come to us in the autumn, and these answering the honk of the fowler, are more readily lured, leading the older birds with them; but they learn wisdom by the time they reach their southern feeding grounds, and return in the spring with not a particle of "green in their eyes." The days of good fowl shooting, especially for brant, are about ended on the New Jersey coast. It has been told me that during the very severe weather of last month, a great many black ducks were killed in the air holes when both Tuckerton and Barnegat bays were frozen over, and that the fowl were little better than feather-covered skeletons, unfit for market, being fishy and tough, and were utilized only for their plumage. The fowl that now come to the Philadelphia market from our own rivers have greatly improved in condition. We look for the very cold weather to be followed by a pleasant season of sunshine and perhaps a warm rain with it, which will hurry up the flights of all migratory birds. When the snipe do come now, they will arrive in good numbers, and will not straggle along in small flights as it would be the case if the weather had been warmer. HOMO.

CALL OFF THE DOGS!

Editor Forest and Stream:

Congratulations! Dogging deer has had a knock-down in the Assembly. "Call off the dogs," say the representatives of the people.

It does seem that at last manly sense and rational appreciation are getting on top. It does seem that the listless and utter abandonment of the people's interests that has prevailed in the matter of fish and game protection is near an end. May we hope the reformation is not too late? There are still important interests to preserve, and everything encouraging in the purpose to protect them. The slow, lingering processes by which public abuses are brought home to the public sense have been effective to lay open to the most careless and to the most indifferent the practices so rapidly depleting our waters of fish and our forests of game, and we have now approached a practical test, whether there is in the awakened public sense such consistency and tenacity of purpose as will enforce needed remedies.

It is the million against the mite, just as it is in a crusade against any intolerable wrong, for it is in precise proportion to the development of citizen manliness that wrongs become rare; are made, in the expressive slang of the time, to "hunt their hole." The cupidity and brutality that characterize present methods of game extermination have created a revolt in the better sense and humanity of the State—that is to say, in the million, and this is but saying that antagonism exists and that if it be maintained the mite must succumb.

The history of the last few years' experience could scarcely have failed to admonish all. In utter despair of ever effecting general reformation, game protectionists in the State have been driven, in localities, to associated effort in the purchase and dedication to private uses of large and the best game and fish preserves. Private means and exertion have so secured exclusive rights, and the poor man, poor in the accumulation of the "filthy lucre," but (forsooth) with as keen a relish for manly pastime as his rich neighbor, is forbidden a footprint where in recent time he has felt himself at home in a common enjoyment of air and sunlight. He finds the "aristocracy" have appropriated even out-of-doors—have taken possession, for the mere willing it, of the fish in the waters and the game that inhabits the woods, and made the people the objects of private espionage and prosecution; monition this, which ought to awaken public attention.

With attention aroused, will there be mustered the forceful energy to take the cause of game protection out of the hands of the monopolists? Will the people's representatives, having the fiat to pronounce, say nay to these self-appointed wardens? Ought they to do it? Most assuredly; but upon the single condition that they do effectually protect and preserve for the many what they have thus far abandoned to the few.

'Tis too bad, 'tis mortifying, an insult to popular sovereignty; these exclusive privileges to capture and kill the fish and game, yes, almost as bad as its abandonment to indiscriminate and wanton destruction. Game protection as a public sentiment pervades the million, while game protection as a duty is, unfortunately, potent only with the few. And this has grown, legitimately, out of the alternative that was presented, whether game should be preserved for a few, or exterminated for all.

There is no diminution in numbers resorting to the woods and waters for mere sensational excitement, and money is more lavish than ever in its purchase. This is the element that would, willingly, in urgent need of present enjoyment, share the extinction of the deer of the State. It is dangerous mainly in its command of money. Money moves the numerous agencies that pander to depraved tastes, and to say that money is an innocent factor in game extermination, is to say that the woods are not filled with hostelries advanced in popular attractions and demands, and as unscrupulous as the tastes to which they cater; that the woods do not swarm with "tourists" in vehement pursuit of whatever sport or venture—the midnight assassination with jack and buckshot, and when assassination fails (for the game is not entirely defenseless against it), the deer dogged next noonday to certain murder by gun or bludgeon in the water; that the outcome, the growth, the legitimate progeny in all his brain and bone, and muscle, of this depravity, is the guide, who accepts extermination in advance, and makes its wreckage his hand-to-mouth existence. He serves a master; and this fixes responsibility. Is there anything more painfully amusing than the simplicity that, occasionally, in an exuberance of happy memories of the chase and shanty-fire, parades the "trusted guide" who shares them, as the fast and constant enemy of prevalent methods of game extermination? What a pity that complicity in participation so shuts all other mouths against answering denial. It is the relation of master and servant, this of guide and tourist, and what if tourist care as little for game protection as for the clothes he soils and gives to beggars?

Let the friends of game protection in the State be on the alert and watchful. There will probably be no pronounced open, manly opposition to the Curtis bill in the Senate, for manly opposition has not a leg to stand on. Covert opposition will do its utmost. But with attention from the candid men who sit as senators, it will avail nothing. Indifference should not be excused to one's self when it gives away to the hotel-men and the market-men what should be saved for the people. In the unreasoning cupidity that always characterizes narrow selfishness, they would sacrifice the interests of their own future to greed for present profit. Shall this purpose dominate the Senate? It would seem to be impossible. The marketmen are massed in open hostility. This, so far, is manly. If other enemies lurk unseen, game protectionists must fight them at a disadvantage—but, fight them.

"Up, Guards, and at them!"

ADIRONDACKS, March 7, 1885. FORKS.

Canada.—A bill now before the Provincial Legislature to facilitate the formation of fish and game protection clubs in the Province, provides that the Lieutenant-Governor in council may, on the recommendation of the Commissioner of Crown Lands, grant a corporate existence to any number of persons, not less than five, who petition therefor, constituting such persons, and all others who may afterward become members of the club thereby created, a body corporate and politic, for the purpose of enabling them to acquire and hold such property, real and personal, as may be necessary and requisite to accomplish the objects and purposes of their incorporation. The aim and end of all such clubs shall be to aid in the enforcement of the laws and regulations for the protection of fish and game in the Province; and whenever the Lieutenant-Governor in council is satisfied, upon satisfactory evidence, and upon report that any club created under this act is engaged in any other pursuit than the foregoing, the powers conferred in virtue of the preceding section shall be revoked. The members of any such club may adopt such by-laws, rules and regulations for the management of their affairs as they see fit; and whenever and as soon as the same shall have received the approval of the Commissioner of Crown Lands, they shall have full force and effect. In so far as applicable, the provisions of law respecting joint stock companies shall govern clubs formed and organized under this act.

Michigan Deer-Hounding Bill.—The game bill, which makes it unlawful to hunt deer with dogs, came up in the Senate last week. All amendments were voted down. The friends of the bill had a perfect organization and obtained support for it from reluctant Senators. They were, however, unable to carry the measure through, lacking one vote. Those who voted yea were—Messrs. Cline, Davis, Edwards, Francis, Heisterman, Henry, Hubbell, Monroe, Moon, Phelps, Pulver, Shoemaker, Geo. A. Smith, Sam W. Smith, Stephenson, Woodruff—16. Nays—Messrs. Austin, Belknap, Brown, Carpenter, Hawley, Hertzler, Hueston, Kempf, Manwaring, Hennell, Sherwood, Spencer—13. Absent—Messrs. Carveth, Davenport, Greiner. The bill was reconsidered and tabled. The best speech of the day was by Senator Brown, of Kalamazoo, who made a decided impression by the vigor and originality of his remarks.

Montreal Notes.—March 16.—Saw a number of crows here yesterday, which must mean spring, or else the crow's almanac is wrong, which latter I think is the case, as thermometer to-day shows zero with stiff N.E. wind blowing. Guns are being cleaned up, etc., preparatory to the usual spring slaughter of ducks, as soon as the ice breaks up. There is one certain cure for spring shooting, which all civilized communities seem to be willing to adopt, and are doing their utmost to bring about, and that is extinction. Any observant man can see it coming slowly but surely. Dr. Thos. C. Brainerd, president of the Hamilton Powder Company, has been elected president of our fish and game protection club, and we hope his influence, energy and ability may be productive of some much-needed reforms in our game laws.—Caribou.

A St. Patrick's Day Dinner.—Dorchester, N. B., March 18.—The first wild goose of the season was bagged by Deacon Millard Lawrence, on the 16th inst. We celebrated the occasion by giving a St. Patrick's dinner to a number of the local sportsmen. There have been few geese reach this far north as yet this season. "Mine host" Wilbur of the leading hotel here has had constructed a new gunning boat for the spring shooting, with which he threatens to distance all competitors. A number of the crack shots of the town are discussing the formation of a shooting club for trap-shooting practice.—B.

Iowa Spring Shooting.—Anita, Ia., March 13.—Spring has fairly opened and the geese and ducks have been winging their way northward for two weeks. The old line nimrods have been overhauling their outfits and shining up their guns. The quail had hard rustling this winter, but noticed several bevies recently that seemed lively.—C. B.

An Odd Conceit is that of a correspondent who, having missed his first rifle shot at a squirrel, has ever since wished that the rodent might have known that it was the first shot.

Kentucky Sportsmen will meet in convention at Louisville, April 8 and 9, at the Louisville Hotel.

Forest Fires.—The *Lumber World* makes the astonishing assertion that the loss to this country through forest fires is now not less than $300,000,000 a year, simply through the destruction of available timber, without counting the additional loss from the annihilation of the young growth and the seeds scattered on the surface, and the scorching of the ground, which often renders it sterile for a generation. This enormous sum, about equal to the interest on the public debts of all the civilized nations of the world combined, is, according to the reports of experts, annually thrown away forever by the people of the United States, without the smallest return in the way of comfort or satisfaction, but, on the contrary, at the cost of many lives every year, simply through the carelessness of boys and hunters, and of those more intelligent persons who ought to know enough to keep a sharp watch over these destructive animals. Next to human beings of feeble intellect, railway locomotives do most injury in forest countries, and the *Lumber World* inquires seriously whether the owners of such locomotives should not be compelled, in the public interest, so furnish them with spark arresters during the dry season. The idea that railway companies are responsible for the value of timber destroyed by fires set from their locomotives undoubtedly has some effect in preventing legislative interference with their management; but it is so difficult to fix the kindling of a forest fire with certainty upon locomotive sparks, to say nothing of the obstacles in the way of collecting large debts from newly established railway corporations, that the safer way would be to provide as far as possible against raising the question of responsibility by compelling the use of spark arresters. Against animated incendiaries a forest patrol might be tolerably effective, but it would be still more useful to provide in some way for the removal of underbrush from the woodland. Trees by themselves are not easily kindled, and the mischief is usually done through the ignition of dry leaves, ferns or bushes, which burn long enough to char, and at last to kindle the branches of the trees above them.—*American Architect.*

Sea and River Fishing.

THE SEASON'S OPENING DAY.

With joyous heart the angler hails
The season's opening day,
Nor lingers long in city streets,
Where men of business stay.

His trusty rod again he takes,
His silken line and reel,
A well-filled book of chosen flies,
A lunch-box in his creel.

He wends his way 'cross meadows green,
And leaps each fence and wall;
He plucks the violet in his path
And notes the bluebird's call.

The country air is fresh and pure,
And bright the landscape seems;
The mountain stream leaps down the glen
In sunshine's flashing beams.

He nears the brook with cautious tread,
And casts th' alluring fly
Upon the surface of the pool,
Where speckled beauties lie.

In skillful hand his pliant rod
Most gracefully he wields,
The music of his reel meantime
Is heard across the fields.

With flashing eye the lusty fish
Has seized the tempting bait,
And now, alas! too late he finds
His life is sealed by fate.

Thus hour by hour the angler casts
Upon the ripples' crest,
Or whips the deep, dark pools for trout
Till daylight sinks to rest.

Then homeward bound, with hungry look,
He hastens on his way,
And by the evening fireside tells
His luck on opening day.

C. T. Mitchel.

TROUT FISHING IN UPPER COOS.

Having spent from four weeks to as many months in the woods of northern New Hampshire and Maine every season for the past fifteen years, the most of the time trout fishing, I have often been asked to give an account of the haps and mishaps of some of our excursions to the lakes and streams of this region. I will begin by giving my first experience in trout fishing with a fly-rod. I have learned a great many things of angling and woodcraft from Forest and Stream in former years, and now scarcely ever take up a number without getting some new idea on the "gentle art." As there are always new recruits joining the ranks of the fly-casters, perhaps this sketch may be of interest to them.

When I was a boy fly-fishing was comparatively unknown in this vicinity. A common Limerick hook on a five-cent line, with a piece of tea-lead for a sinker, and a slim tamarack pole, made a pretty good rig for us boys. Many a fine string of trout was the reward of our half-day excursions that we won by taking our "stints" in hoeing time; and sometimes we got a whole day's fishing when it rained so hard that we couldn't work out of doors. But after summer travel began to come this way, and trout were plenty and scientific fishermen came; their fine tackle was almost a wonder to us who had never used a fly-rod. But after seeing W. C. Prime and Dr. Elmendorf use a fly-rod with such effect on Profile Lake and Millsfield Pond, I was never satisfied until I went to the extravagance of getting a $3 fly-rod, two dozen flies and two or three leaders, and took a boat and with Charles Cleveland and John Spalding, started for a week's camping and fishing at Millsfield Pond.

This was about the middle of May, and we took plenty of worms in case the flies did not answer the purpose, for some of the old fishermen told us it was too early for trout to rise to a fly. We fastened our boat on a one-horse express wagon, put in our luggage and a paddle, took a couple of pieces of boards for seats, and one morning we mounted our vehicle and were "off for the woods away."

Nothing of particular interest occurred till we arrived at Uncle Tom Wentworth's, thirty miles distant and the last house on our route, five miles from our destination. The rest of the way was through the woods and over a "tote" road, as the roads to the winter logging camps over which they draw their winter supplies are called. It had only been used in the winter, and was too rough for us to take in our boat on the wagon; so we fastened a moose sled behind the forward axle of our wagon, put on our boat, the forward end resting on the axle and the other on the sled. We hired a boy to return with the horse, put our baggage into the boat and started, our boy leading the horse, the boat on the impromptu vehicle, John with a long ducking gun on his shoulder, Charley with the axe, and "ye scribe" with a fly-rod bringing up the rear. As we wound through the thick alder woods and through the old Tyler opening, across Newell's Brook, over the mountain and through the long stretch of hardwood growth, where John shot the ruffed grouse as we neared the pond, made a picture that was immortalized on the sides of our bark camp with a piece of charcoal and will be remembered by all of that party long after many more important things have been forgotten. Everything went along nicely, the moose sled sliding over the logs and stumps without an accident until within a few rods of the pond, when the nose of one sled-runner struck a stump and the sled went to pieces very much like the "Deacon's one-horse shay." But after taking our baggage to camp, we carried the boat to the pond and found it perfectly water-tight, which was much better than we expected after so rough a ride. It was the first time a boat was ever on that pond. It remained there several years, and Dr. Kingsbury, J. Menzie, Dr. Elmendorf and many others can testify to its being a great improvement on the rafts that we had to use before, especially for fly-fishing. I took a bait-rod and caught a half dozen trout for supper, while the others broke a few fresh fir boughs for a bed and cut the wood for night. Our camp was a lean-to roof and ends covered with spruce bark, and had been substantially built the year before, and after an extra covering of white-birch bark was tight as a cup. Four or five miles distant was an ice-cold spring, about bree feet across and perhaps twenty inches deep, where we proposed to keep our large trout alive, if our flies proved a success. After a supper of fried trout, flap-jacks and coffee, we built a fire to last all night and turned in early. There were no flies or mosquitoes to trouble us, and we slept undisturbed till broad daylight.

The woods were vocal with music, the rose-breasted grosbeak taking the most prominent part in the concert, but the other feathered songsters seemed to be trying for a prize in vocalization. The rose-breasted grosbeak is ahead of the bobolink as a songster, and is more plenty around Millsfield ponds than at any other place in this county; it seems to be a favorite meeting place for them. Cow Mountain, near Cow Mountain Pond, in Vermont, is another favorite spot for them.

After breakfast we put together our rods, found a stone for an anchor, John took the paddle, Charley the fly-rod, and myself with a bait-rod we started out. The pond contains thirty acres, one-half of it from one to three feet deep and the other half running to fifteen feet deep. There was not a ripple on the water, and we could not get a fish in the shallow part of the pond, but they began to take the bait as we moved into deeper water, and I soon had several flopping around our feet in the boat. But Charley had got none yet, although he had two or three rises; but every little while would wind the leader around his head or hook John in the back. John began to get excited, and wanted us to put him ashore and let him take the raft and go by himself, so I took the paddle and put him ashore, and after cutting a long pole for an anchor pushed the raft out into the middle of the pond and commenced fishing. "I feel safe now anyway," said he, "and if you don't come within reach of me I shan't feel as though I am liable to lose an eye at any moment." "No, but that don't seem to help me any," said Charley as he turned round for me to take a fly-hook out of the back of his coat collar. "If you will get that out of my coat I will give up fly-fishing for the rest of the day."

Just then there came a shout from John that might have been heard half way to the settlement, as he took out one that weighed about three-quarters of a pound. He came very near falling into the pond before he saved him; but finally he got hold of him, and a Modoc shout went up from his throat that must have awakened the owls on the mountain. I took the fly-rod, but only got a few more; but when we went in for dinner we had more than we could use for the meal. We had four or five nice ones to put in the spring. In the afternoon a breeze sprang up, and taking the fly-rod again, we started out about 2 o'clock and found that the trout had begun to move down into the shallow water feeding, and they began to rise quite freely. My cast was a Montreal and Jew for droppers, and brown caughlin for tail fly. I supposed that I must have three flies on the leader, and I was going to begin right anyway. It was a partly cloudy afternoon, and trout seemed to rise about alike to each fly. After I had taken several and Charley had netted them for me, we put them in the spring. Charley took the rod again, but after winding himself up in the leader two or three times more, he concluded he had rather paddle the boat and land the trout, and let me do the casting for the rest of the trip. I began to get nervous as the trout began to rise at nearly every cast, and I did'nt hook more than one in six that rose to the flies. We were drifting in shallow water, and I was casting with the wind, when two large trout came clean out of the water for the flies, but I struck too quickly and missed them both.

"Stop the boat," said I, excitedly, "and hold it, and I will try and get one or both of those fellows," and shortening my line I made another cast, as I thought, over the same place, but no sign of either of them. "They seem pretty easily discouraged," said I, reeling in more line and making another cast with the same result. Another cast still nearer the boat, when I said, "If you had held the boat so it had not drifted over them, I should have one of them any way. They would weigh a pound apiece sure; but we have frightened them now with the boat." This was probably spoken in a vexed tone, when he looked up and coolly said:

"The boat is just where it was when you first spoke, for I put the paddle in the mud and have held the boat in just the same place ever since."

It was even so, the moving waves making the water and boat appear to be moving when they were not, and I had been casting further from the fish every time. I don't know whether I ever got either of those fish or not, but whenever I meet Charley on the street, even to this day, he will stop me to inquire why I don't jaw him about holding that boat.

We caught quite a number of large ones that we managed to keep alive, and as the spring was only two or three rods from the shore, after we had caught a half dozen or so would take them in the landing net and carefully put them in the spring, and when we quit fishing at night, it was a fine sight to a lover of the *Salmo fontinalis* to see them swimming around and seeming quite at home.

The trout in this pond are the genuine brook trout, running up to two pounds weight, very fat, for they have all the food they want both summer and winter; small heads, for they grow very fast; the head of one weighing one pound is about the size of one weighing half a pound caught in a stream. Almost black backs in deep water, turning to darkish green in shallow water; white bellies and red-meated, and of the most exquisite flavor, feeding almost entirely on flies in summer, and in winter there are plenty of flies and worms. Sometimes they are lying in the mud and it is of no more use to fish in the pond for them than it would be to fish on dry land. If you don't happen to know of a spring hole where there may be a few hanging around, you had better go ashore and pick a few more boughs for the camp, cut wood for the fire, and get ready for the time that is coming when they will bite again.

Well, let us go to camp, for John has supper ready all but making the coffee. The trout that he caught with bait were hurt so that they had to be killed, so we had adundance of trout every meal, and we never tire of them, for they are cooked just to a turn in pork fat with a piece of butter put in the pan near the finish, to give them a perfect brown, and is it not marvelous what a quantity can be disposed of by three outers, after they have been in the woods two or three days, and how soon they are hungry again. I believe John ate six meals in one day, but he denies it now and says it was only five.

After supper we got out the beans, washed them, put them to soak in warm water, and when we go to bed we will put them on the fire in the camp kettle and let them parboil, and as we leave a small fire to-night, whoever gets up at 2 o'clock to fix the fire, will drain off the water, put in some more with a piece of pork, and stewed beans are on the bill of fare for to-morrow noon. If we don't have company to dinner to-morrow there will be enough left for supper; so we shall have nearly all day for fishing if we want it.

Morning again, and we are off for another day; with the wind blowing enough for just the right ripple to delight the heart of an angler. We start across the pond and when we get where the water is about seven or eight feet deep, two trout rise, and a sharp turn of the wrist they are securely hooked on the two last flies. They make a dash for the deeper water and as I turn them toward the boat, and the first fly comes to the surface, it is seized by a large fish and a hard strike, made involuntarily, securely hooks him also.

"Jerusalem! you have got three of them, haven't you?" said Charley, as he swung the boat around and I stood up, the better to see what was going on.

"Yes, there are three on now, but I can never save them, and I am afraid they will smash the tackle sure, but keep the boat away from them," said I, as they made a sudden rush under the boat, and the little rod bent double under the strain. The boat backed away from them and I gave them more line.

"Keep cool and you will save them yet," said Charley, "you are getting nervous."

"Yes, but who wouldn't be nervous to get into a scrape like this?"

"Got a whale," says John, as he coolly hauled in a half-pounder with his bait-rod, "why don't you take him in as I do?" and he quietly put on another angle worm.

"I wish I could, but we have got more than we know what to do with," I replied. Just then one of them made a lunge out of the water, like a bass, and suddenly went for the bottom. "There's one the less to look out for now, anyway," said I.

"Yes, that one is a goner, I guess," said Charley, "but don't lose the others if you can possibly help it."

After that they became more quiet, and I began to reel in slowly. Charley dropped the paddle, threw over the anchor, and I slowly swung them toward the net, and the one we hooked last turned up on his side and Charley quickly slipped the net under him and drew him toward the boat. The other seemed as lively as ever, and just as he released the fly gave a sudden dart under the boat, and fastened the loose fly in the meshes of the landing net.

"Unhook it quick or I shall lose the other one, for he is pulling like a Trojan," said I, and it seemed as though he would never get that hook loose. "I can't unhook it, he yanks 'round so. I wish you would hold him in a little harder till I can get the fly out of the net, and I can't get this trout into the boat with this hook fastened in the net. I wish the other one would get off or keep quieter," and my rod seemed to have all it could stand, and I couldn't draw the other fish from under the boat, and every little while he would make a dash and it seemed as though the rod must go. "Break the hook, turn the net, do something or we shall lose them all, and be quick about it," but it seemed a full minute more before the hook was liberated. At last it was unfastened and he took in the anchor, backed the boat away, and I reeled off more line and eased up on the rod.

"Do you know how may fish you have on your flies now?" asked Charley, as a steady rise on the rod brought the flies near the surface and gave him a view of the fish.

"I had one," said I, as he made another dash under the boat and one of the flies caught on the side, "but now I don't know as I have any." I reached out and unfastened the hook, and he backed the boat away, and said, "There were two when they came up the last time, for I saw them!" After playing them a while longer, I saw that they were both on still, and one of them was hooked in the side, and that was the reason he was able to fight so much longer than any I had ever caught before. Finally I reeled them up so that he netted them both and took them into the boat at the same time.

"Hurrah!" shouted Charley, swinging his hat, but "what is the matter with you," as I sat dow in the end of the boat and began to reel in my line.

"Nothing, only I am as weak as a baby."

We marked those three trout, and when we got back to L., the smallest one weighed three-quarters of a pound and the largest one and a quarter pounds. We thought it a big thing, and it was many years before I again saved three trout as large as those at one time. We continued our sport until the spring looked as though we had all the trout we wanted to take home, and we concluded it would be wicked to take any more, so we wound up our tackle and began to make preparations to leave the woods the next day. We cut a few extra sticks of wood, so that we could have a big fire for the last evening in camp, and after supper we built our fire a little further from camp, so as not to get roasted out, and we lay back on the soft boughs and watched the sparks in the darkness, and told stories and wondered how it could be possible that our week could be so nearly gone, and why time passed so much faster in camp than anywhere else.

Some of the pleasantest hours of an outing that we remember in after years are the evenings spent in camp before a blazing log fire, without which no camp can fill the wants of an old camper. A rabbit hopped along and sat down behind our fire and looked around fearlessly, as though campfires were an every-evening affair to him. After John had fired all the cartridges of his seven-shooter at him, and the rabbit had quietly hopped back into the darkness, John said, "Well, we couldn't stay in here all summer to eat him, and probably he was tougher than tripe anyway." By and by the owls came around the fire and gave a concert such as you never hear anywhere else but in the woods, and we listened to them half asleep and half awake, till finally we fell asleep and knew not when the concert ended.

We were astir early, for we had considerable to do to get ready for an early start for "Uncle Tom Wentworth's." After breakfast we packed our dishes, put out the fire, and went down to the spring with the landing net to get our trout. We dipped them out, killed and dressed them, packed them in our boxes with a sprinkling of granulated sugar, securely fastened our boat, and are ready for the five-mile walk. Two hours' travel took us to our team, and after getting a bowl of bread and milk, that seemed to have a very satisfactory effect on our stomachs after our woods cuisine, we got started about noon for our thirty-five mile drive to Lancaster, where we arrived safely before dark. We shall always remember the trip, as including some of the many "red-letter days" that we have passed trout fishing in the upper Coos region.

Perhaps sometime I will tell you of some other excursions to the same pond with parties whose names have been "household words" with FOREST AND STREAM in former years, and if they happen to see this sketch of my first fly-fishing, will remember other excursions, where a different fly-rod bore off the honors of the day. Now, an eight-ounce split bamboo takes the place of the three-dollar one. But there was a great deal to be learned before we thought it policy to put twenty-five dollars in a rod. I thought the other day, when a friend invested seven dollars and fifty cents in a split bamboo, that probably before two years he would be looking for one made by the best makers. Scarcely any of us bought a very expensive rod at first, but as the years go by and we learn more of the "gentle art," we find that the finest tackle pleases us the best. S. J. G.

BASS FISHING IN LAKE CHAMPLAIN.

LIFE in a secluded valley among the Adirondacks is very pleasant, especially in November, when the mountains flame with crimson and gold, for at this season they seem to express a wonderful life and sentiment. The sunshine and drifting cloud-shadows throw over them a magic spell. One moment they will smile at you, another frown darkly, then perhaps follows a look of settled repose and sadness. I live in such a valley, where the companionship of the grand old mountains and pleasant friends make life very quiet and sweet.

This is all very fine, but it is human nature to wish for a change; something seems to be lacking. Suddenly I say to myself, "Ben, why don't you go fishing?" I will, of course I will, and won't I have a good time out on the broad lake in my little Adirondack boat, fighting the big waves, and laughing at the wind and flying spray, and isn't it fun to fight the gamy bass and wall-eyed pike with an eight-ounce rod? On the spur of the moment I rush out, catch up my minnow pail and net, and start for the Boquet River on the run. The Boquet is a dream of a river. Clear as a crystal, its long shallow "reaches" murmuring over beds of clean bright sand and pebbles, its bottom a "moving mosaic" of golden lights and shadows, beautiful as the iridescent sides of the trout that inhabit its depths. Its banks are covered with wild flowers, and from this it was named Boquet by the old French explorer Champlain, who first discovered it and camped upon its banks.

I drop my little net on the sandy bottom. Soon a school of minnows draw near and curiously examine the strange thing that has fallen into their quiet pool, but suddenly it rises and takes a crowd of them into the upper air, from which the little beauties are transferred to the bait pail. This is repeated again and again until enough are secured. Dear reader, let me advise you to catch your own bait when you go fishing, for it is part of the fun. I haven't told of the big trout that made a dash to hide and got entangled in my net, how near I came to getting him and how he escaped, and of the big turtle that came rushing along, scaring away the minnows, much to my disgust, nor how the bank caved and let me into the water. This was part of the fun, of course it was.

Returning to the house I harness Jerry, throw into the buggy a "camp kit," and with rod and bait start for Westport, on Lake Champlain. Arriving there after a pleasant drive of twelve miles, I leave Jerry in care of my pleasant friend Clark, of the Richards House, and walk down to the lake shore. I find the wind rapidly rising, and a rather heavy sea running. It is now nearly 4 P. M., and I must cross the lake to my favorite reef at Button Bay, where I intend to camp for the night.

Pushing off my little "Adirondack" I jump in, seize the oars, and with long, steady strokes soon pass out of the bay into the broad lake. Casting my eye to the north they meet a fearful sight. Is it a stampede of great black horses tossing their white manes in the air? a low, dark cloud hovering over them like a pall, and the whole vision sweeping down with resistless power. This means business, and hurriedly stripping off my coat, I set my teeth and spring to the oars. Can I get under the shelter of the Vermont shore before the weight of the squall strikes me? This is the question now. My little boat rushes up the long waves, throws one-third of its length out of water, and comes down on the other side with a crash, staggers and rushes forward again like a frightened deer. I cannot keep my eyes from the black terror coming down from the north, and unguardedly striking a breaking wave I get drenched with water. But no matter, the boat must not slacken its speed, and on and on we struggle with dogged resolution. The squall is on us, but suddenly the waves grow milder and I turn my head. O, joy! it is the influence of the Vermont shore.

Passing around the point into Button Bay the boat gently slides up the inclined beach with its skipper badly blown. After a few minutes' rest, I hastily turn the water out of my boat and cross over to the reef to get a bass for supper and secure a good one. It is now nearly dark with a cold wind blowing. At the head of the bay, under a high bank covered with evergreens, I find a nook completely sheltered from the winds, and turning the boat on its side, with a buffalo robe spread under, and plenty of driftwood for my fire, I think I am comfortable for the night. The bass with plenty of hot coffee and toast give me a splendid supper.

Stretched at length under the boat, listening to the waves on the other side of the point and the music of the wind in the pine trees and enjoying the warmth of the fire, I go to sleep. About midnight I awake with a chill to find that the wind has changed and is sweeping on me in a pitiless manner, so I spend the rest of the night watching for light in the east and comforting myself with a good fire and plenty of hot coffeee.

I do not wonder the little birds sing when they see the morning breaking in the east, if they felt as I did when I discovered the light slowly rising from behind the Green Mountains. The whole eastern sky was soon in a blaze of gold, crimson and purple, a sight fit for the gods. The wind had gone down to a gentle breeze, giving promise of a good morning's fishing. So making a hasty toilet by the lake shore, and eating a lunch, I started for the fishing ground. I tried different parts of the reef, but without success. What did it mean? I had plenty of live minnows and fine tackle. It was the last part of November, and I began to think it was too late in the season. It was a splendid morning, and the water was covered with a light ripple; but I had noticed two small spots of smooth water out in the lake, one perhaps ten yards across and the other larger. They had excited my curiosity, for I could see no particular reason for it, so I rowed out there and cast anchor.

I threw over a live minnow, which had hardly reached the bottom before it was taken, and I found I had a heavy, "logy" fish on my line which made some hard runs but soon came to the surface. I led it up to the boat. "Great Scott! what a fat bass." Slipping the net under it I took it in out of the wet, and as it lay in the bottom of the boat I gazed at it with astonishment, and can only compare it to the "prize porker" at a county fair. It was a small-mouth, and would weigh about four pounds, and I christened it Daniel Lambert. I threw over another minnow, which was immediately taken by a heavy fish, but alas! was too lightly hooked. "Good by, old fellow, may you live to fight another day." Another minnow—hurrah! a mate to Daniel! I took in six or eight fine ones before they stopped biting, then paddled over to the other calm spot and threw out a minnow. An immediate response—another fat bass. And so it went until I had fourteen magnificent fish, not counting five or six I lost because they took hold in such a dainty manner. I found the bass in about twenty feet of water on a smooth bottom not far from a sunken reef. There must have been quite a school of them getting ready to hibernate, and they had certainly laid in a big store of fat for their winter's sleep.

It was the first time I ever thought schools of fish made such calm spots on the water, but it seems others have noticed it. I here quote an English writer, Phillip Gilbert Hamilton, in his book called, "Painter's Camp in the Highlands," writing of Highland landscapes:

"Loch Awe after Sunset.—In the middle of these thousand acres of breeze there is one spot, perhaps in reality, about a hundred of yards across which the breeze has not touched at all. It is a little isle of enchanted calm in a rippling sea. I have often gone in my boat to examine these isolated calms. I have found them no bigger than the floor of a good-sized dining-room. I have crossed lines of calm as narrow as the lobbies in the House of Commons, and apparently as well protected from the wind. The fishermen on Loch Fyne who have observed this phenomenon, account for it by the theory that it is produced by oil rising from fish. It is certain that the thinnest films of oil will prevent the wind from rubbing water into a ripple."

I think the theory of the fishermen of Loch Fyne is correct, at least in regard to the isolated calms I fished in, as they were in the same place for over an hour. I'd like to know if any other fisherman has noticed them.

I had a pleasant row back to Westport, and with pardonable pride showed my magnificent string of bass to my friends in the valley. The combined weight of the fourteen was nearly forty pounds. B. BISHOP.

NEW RUSSIA, Essex County, N. Y.

ARKANSAS FISH LAW.

SECTION 1. No person shall be allowed to place, erect, or cause to be placed or erected or maintained in any of the waters of this State, or in front of the mouth of any stream, slough or bayou, any seine, net, gill-net, trammel-net, set-net, bag weir, bush drag, or any fish trap or dam, or any other obstruction or device or devices or by any such means to take or catch any fish in any of the waters of this State; provided, that the prohibitions of this act shall not apply to waters wholly on the premises belonging to the person or persons using such device or devices; and, provided further, that it may be lawful to use a very small seine, not to exceed in length fifteen feet, for capturing very small fish, usually called minnows, which may be caught to be used as bait or for stocking other waters with fish, but for no other purpose; and, provided further, that it shall not be unlawful for any person or persons to use a seine, not exceeding sixty feet in length, in any of the unnavigable streams or lakes in this State to catch fish for family use or for picnics, and not for sale; nor shall it be unlawful for any person or persons to place traps in the unnavigable streams of this State, provided such traps do not obstruct the free passage of fish in ascending or descending such streams; nor shall it be unlawful to use a net, seine, or gill-net in any of the navigable streams, provided the meshes of such seine, net, or gill-net be not less than three inches in size, and that such seine, net, or gill-net does not obstruct the outlet or inlet of any lake or stream emptying into any other lake or stream. Any person violating any of the provisions of this act shall, upon conviction, be deemed guilty of a misdemeanor and shall be fined in any sum not less than five nor more than two hundred dollars.

SEC. 2. The term waters in this State, whenever used in this act, shall be deemed and held to mean all streams, lakes, ponds, sloughs or bayous, or other waters wholly or in part in this State.

SEC. 3. All laws and parts of laws in conflict with this act are hereby repealed, and this act shall take effect and be in force within one hundred and twenty days after its passage.

HOW TO FASTEN FLIES.—*Editor Forest and Stream:* I have my way, and everybody else has his way of attaching flies to the leader. Of course we all have not the best way. So far as I know there is only one way of attaching the tail fly, but there are more modes of putting on the droppers. Will some of your correspondents tell us "how they do it?" I believe that the long snell which was universal some years ago has gone out of use, though some flies that were sent to me from England, not very long since, had the old-fashioned long snell. I think that information about putting on the flies that are tied with a loop instead of a snell would be welcomed by a good many anglers to whom this mode of tying is new. I know that they have occasioned not a little trouble to some who had never seen them used before, and whose inventive genius was not well developed.—M.

TROUT OF BEAR RIVER.—In article by Mr. A. N. Cheney, on this subject in issue of Feb. 26, for "characteristic red blotch on the lower fin," read "characteristic red blotch on the lower jaw."

FLY-RODS AND FLY-TACKLE. By Henry P. Wells. This book, long announced, is now ready, just in time for the opening of the season. It is a practical book, as may be inferred from its authorship. Sent post-paid on receipt of $2.50

ESCANABA, Mich., March 19.—Three feet of snow in the woods, ice two and a half feet thick, trout will not bite here yet awhile;—15°.

WALLACE'S GUIDE TO THE ADIRONDACKS will be issued in new and enlarged form for next season. It is said to be very complete.

Fishculture.

TROUT CULTURE AT THE SOUTH SIDE CLUB.

SEVERAL gentlemen inspected the hatcheries and ponds of the South Side Sportsmen's Club of Long Island, by invitation, on Saturday last. Among them were State Fish Commissioners R. B. Roosevelt and E. G. Blackford. The club began trout culture in 1876, and has been very successful, some six thousand fish having been taken from its waters last year with the fly, while something like a thousand pounds were netted and sold to cover expenses. The rainbow trout has grown well here, but it is closely confined or it would, as in other waters, have gone to sea and disappeared. At present the club has over five hundred of these fish, which we claim

are the steel-head salmon (*S. gairdneri*), which will weigh three pounds each. Of native trout they have thousands, both in the ponds, the lakes, and the miles of trout streams owned by this enterprising club.

Although mainly an angling club, there is much attention paid to other field sports and the propagation of game birds and animals. The fish are liberally fed, and it is believed that the receipts balance the expenditures, a rare instance where trout are confined. The catch of members is limited to a certain number each per day—fifteen, we believe—and no more must be killed no matter how freely they rise. The membership is limited to one hundred, and many applications are on file for admittance when the next vacancy occurs. The property has increased in value many fold since its purchase and will continue to do so for some time.

The success in trout culture is believed to be as great as that of any establishment in America, public or private, and is an instructive instance of what can be done with proper facilities and care.

FISHCULTURE AT THE FARMERS' CLUB.—The New York Farmers' Club met at the Hotel Brunswick on the evening of Thursday, March 19. Legrand B. Cannon presided, and among the gentlemen present were Samuel Sloan, Francis R. Rives, James S. Stillman, Smith Clift, F. Bronson, William H. Dinsmore, Frederick A. Potts, Prof. Charles F. Chandler, R. B. Roosevelt, Eugene G. Blackford, John S. Barnes, Hugo Fritsch, George B. Post, Gen. Horace Porter, Edwin Thorne, George H. Brown, D. F. Appleton, and John D. Wing. The theme for discussion was fishculture and it had been announced that Prof. G. Brown Goode would address the meeting on this subject. He was not present, however. Mr. Roosevelt said that although great advances had been made in fishculture there was a great deal yet to learn. The benefits already achieved have been as miraculous as the famous draught of fishes. We could now plant fish with as firm a confidence in assured results as though we planted corn. The greatest successes had been made with shad and black bass, but in the near future the experiments in crossing the California trout with brook trout would also probably end in an immense triumph. The German carp, though inferior from an edible standpoint, could be cultivated in rural regions where otherwise the taste of fresh fish would be an unknown luxury. Better a poor fish than none at all. Mr. E. G. Blackford gave some very interesting statistics showing the exaggeration in the calculations of early American writers on the subject, quoting the tables of profits given by Ainsworth, Norris, and Stone. The day for such figures had passed and fishculture is on a more stable basis. He showed young salmon just hatched and eggs of the rainbow trout and whitefish from the State hatchery at Cold Spring Harbor, Long Island. He said the daily consumption of fresh fish in New York city was 155,000 pounds. In spite of the fact that our population had quadrupled, and that the market had been widened by improved facilities of transportation, the supply of fish remained the same as it was when our grandfathers bought shad for five cents a pound. Nor was the price very much higher now than then. Codfish had been sold recently for seventy-five cents the 100 pounds, and bluefish at two cents a pound. What was needed now to further increase the supply of shad was the passage of a law making one day in the week at least a close day for netting. From Saturday night to Monday morning would be enough to give the fish a chance to get up the North River to their spawning beds. Even now they managed to get up the river as far as Albany in spite of the nets that were spread out at every point to intercept them. Mr. Cannon followed Mr. Blackford and stated that in his opinion the money spent by the Legislature in supporting the Fish Commission was the very best investment ever made by the State. In the restoration of shad to the Hudson River the State had been more than paid for all its expenditures, for the fish was becoming extinct and are now more plenty than ever. He regretted extremely that during the last two or three years the Legislature had not been as liberally inclined in this matter as formerly, and he therefore would suggest that the "farmers" unite in a memorial to that body, requesting them to perennially hold up the hands of the Fish Commission in the good work it was doing. This motion was formally made and carried, and Messrs. John Jay, Francis R. Rives, and Prof. Charles F. Chandler were appointed a committee to frame a fitting petition. The exercises closed with a witty address by Gen. Horace Porter.

THE FISHCULTURISTS' ASSOCIATION.—The executive committee met again at Mr. Blackford's, in Fulton Market, on Monday, 23d inst, George Shepard Page in the chair. Letters from Col. McDonald and Hon. Theo. Lyman were read. The dates of meeting, May 5 and 6, were approved and the 7th was added at the suggestion of Col. McDonald for an excursion to the shad hatching grounds. The local committee at Washington was empowered to decide on all questions which may arise and to arrange for addresses and papers to be read. In addition to the opening address of the president of the Association, it was suggested that Prof. Baird be asked to deliver the address on the evening of the first day, or, in case of his declining, that Prof. Goode be invited to deliver it. It was also suggested that there be a reception at the National Museum on the evening of the second day, and that Hon. L. Q. C. Lamar, Secretary of the Interior, be invited to deliver an address.

The Kennel.

FIXTURES.

BENCH SHOWS.

April 7 to 10, 1885.—First Annual Dog Show N. E. Kennel Club, Music Hall, Boston. J. A. Nickerson, Secretary, 159A Tremont street.

April 21, 22 and 23.—Annual Dog Show of the St. Louis Gun Club. W. A. Albright, Secretary, St. Louis, Mo.

April 28, 29, 30 and May 1.—Ninth Annual Dog Show of the Westminster Kennel Club at Madison Square Garden. Entries close April 14. James Mortimer, Superintendent, 48 Broad street, New York.

May 5, 6, 7 and 8, 1885.—Second Annual Dog Show of the Cincinnati Sportsman's Club, Cincinnati, O. W. A. Coster, Superintendent.

May 13, 14 and 15.—Third Annual Dog Show of the Toronto Dog Show Association. W. S. Jackson, Secretary, Toronto, Ont.

June 2, 3, 4 and 5.—First Annual Dog Show of the Illinois Kennel Club. John H. Naylor, Secretary, 3,182 Archer avenue, Chicago, Ill.

FIELD TRIALS.

November.—Seventh Annual Field Trials of the Eastern Field Trials Club, High Point, N. C. Entries for Derby close May 1. W. A. Coster, Secretary, Flatbush, L. I.

Dec. 7.—Seventh Annual Field Trials of the National Field Trials Club, Grand Junction, Tenn. Entries for Derby close April 1. B. M. Stephenson, La Grange, Tenn., Secretary.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **2200.**

THE NATIONAL DERBY.

Editor Forest and Stream:

The executive committee of the National American Field Trials Club, yielding to general request, have extended the time for closing the entries for the Derby to May 1, owing to the prevalence of distemper. B. M. Stephenson, Secretary.

Memphis, Tenn., March 21.

BENCH SHOWS AT AGRICULTURAL FAIRS.

Editor Forest and Stream:

As the season is now approaching when agricultural societies throughout the country will be arranging their prize lists and making general preparation for the annual autumnal fairs, I beg to call attention to the desirability of adding bench shows of dogs and collie trials to the usual live stock exhibit.

The Pennsylvania State Agricultural Society made a departure from the stereotyped programme at its annual State fair last September when it added a dog show, and jumping trials of hunters to its other attractions. The result was so satisfactory to the managers that we have decided to make them a part of the regular exhibit at future shows.

Horses, cattle, sheep, swine and poultry, with agricultural machinery and products of the soil are legitimate to an agricultural fair, and should properly have a prominent place, but we must not forget that they only interest a minimum of the visitors, that for every farmer who attends, there are a dozen or more sightseers who go to be amused; city people, who know nothing (and care less) of the difference between a thoroughbred horse and Clydesdale, a short horn and a Jersey, a South Down and Cotswold, and so on to the end of the chapter. It is this vast throng of the uninitiated, the curiosity hunters we may call them, that makes a fair self-supporting, the money they bring into the treasury enables the management to meet the heavy outlay.

Therefore we have to vary the entertainment to keep up the interest and induce this class of visitors to attend. How shall we do it? The modern idea is to add the attraction of trotting horses, and most well-appointed fair grounds have half mile tracks, and hang up purses for the different classes of trotters.

This we know draws largely, but it is no longer a novelty.

The writer attended an agricultural fair in Lancashire, Eng., some years ago, where a trial of hunters at hurdles, and a bench show of dogs were prominent features, and the crowds they attracted was abundant proof of their value as a drawing card.

Collie trials, where the show grounds are of sufficient extent to admit of them, are a pleasing addition to a fair, and will be the means of extending a knowledge of the value of this interesting race of dogs in its particular sphere.

In this country the collie is mainly known as a fancy animal, valued for his beauty and companionable qualities. In Great Britain the dog finds his true mission, and is a necessity on every well-regulated sheep farm. And it is to be hoped that our farmers, on a better acquaintance with his merits, will substitute him as the farm dog in place of the present worthless nondescript.

I have selected the Forest and Stream in preference to the agricultural press as the proper medium to make the above suggestions to fair managers, for the twofold reason that it is the organ of the canine interest, and that it visits rural homes throughout our country, whose occupants are identified with agriculture, this leading pursuit of our people.

L. H. Twaddell.

THE PITTSBURGH PIECE OF PAPER.

Editor Forest and Stream:

I was not very much surprised when looking through my Forest and Stream of last week, to find the following letter from the Westminster Kennel Club's kennel man and dog show manager, James Mortimer:

Editor Forest and Stream:

As I see that Mr. Wade has thought proper to make a public apology to Mr. Chas. H. Mason, I will contribute my version of the "scrap of paper" business at the last Pittsburgh dog show: Mr. Lever, of Philadelphia, exhibited two black and tan terriers, Vortigern and Reveller, the latter dog having brought with him a crack reputation from England. I thought Vortigern the better of the two, and so stated to Mr. Mason, at the same time asking him to look over the pair, which he did, and agreeing with me, so expressed himself on the piece of paper which was handed to me by Mr. Wade. The whole affair was so trivial that I had forgotten it, until it was recalled to my memory by an article in a Western paper of Oct. 4, 1884.

Jas. Mortimer.

I need scarcely say that Mr. Mortimer's "version of the scrap of paper business" is very shaky. How little foundation it has I will show. If, as Mr. Mortimer says, the whole affair was so trivial that he had "forgotten it," I fail to understand why he now tries to gloss it over in such tricky style.

Many of your readers are doubtless aware that during the last twelve months my reputation has been assailed time after time by a disreputable character in charge of a public paper. The cause of all the silly cant that has appeared is also well known—*i. e.*, my refusing to sell my convictions, the Washington report, the Meteor-Vanity business, the seven queries, the patronage of a kennel club, etc. The slip of paper story was spun out to a yarn of fraud, and it was retailed out as having been an attempt to influence a decision in favor of one of my dogs. The poor fellow who has fought himself out in trying to "kill Mason," Mr. Davidson and Mr. Watson, now finds himself beset with foes on every side. The little influence he once had over a certain clique no longer exists, and he is now compelled to bury his head in the sand and mud he has been throwing at others. Yes, sir, the skipper (?) has gone below, and it won't be the fault of honest people if he ever comes up again. May the salt water cleanse him.

It was put forward that I tried to influence a judge's decision. That looked bad. Mr. Mortimer denied the charge, and denied it promptly; but why did he not say what was on the slip of paper, and especially when he knew that the columns of the sportsman's independent (?) journal were closed to my defense? Now it's my turn. Mr. White asks why you don't defend me in your editorial columns. Many thanks to Mr. White, but I can defend myself, and that's why the columns of the independent (?) journal were closed to me. Do you see it now? *En avant!* If Mr. Mortimer's "version," translation or "construction" of the slip of paper business as now printed is correct, why did he not give it at a time when by doing so he could have cleared me of the cowardly slander without detriment to his own reputation? He dodged behind the statement that the sportsman's independent (?) journal was mistaken, and never said another word until "Porcupine" called on me to explain the case in the *Sporting Life*, and I replied that I would, when he immediately rushes his "version" into three papers. Why this anxiety after so many months of silence? Is it because "the whole affair was so trivial," or because he had "forgotten it," or is it a bit more "Owleglass stratagem?" If Mr. Mortimer had "forgotten it," why does he now undertake to present the readers of three papers with his "version" of something he knows nothing about? *Pardonnez moi*, Mr. Editor, but some queer things come to light in these columns, and by your courtesy I will place my facts by the side of Mr. Mortimer's "version," and may his friend the Poolseller help him out of the difficulty, "The whole affair was so trivial" that Mr. Mortimer had "forgotten it," and just so important that I remember it well.

Mr. James Watson was invited to judge the non-sporting dogs at the Pittsburgh show two years ago. Press of business (not of the sort that keeps a Chicago editor at home) prevented him accepting, and Mr. Kirk was appointed in his stead. The night before the show Mr. Kirk telegraphed his inability to attend. Several names were suggested to fill the vacancy, and as a *dernier resort*, Mr. Mortimer (who had previously conferred several favors on Mr. Lincoln, the superintendent of that show) was communicated with and accepted. Mr. Lincoln made known to me the fix they were in, and asked me if I objected to Mr. Mortimer's appointment. I told him that under the circumstances I did not, but said it was hard lines having one's dogs judged by a man who had had no experience at home or abroad, either as breeder, owner or exhibitor of good dogs. Mr. Lincoln replied: "He knows a bit about bulldogs and bull-terriers, and has been around to the shows and knows most of the winning dogs, so he can't get far wrong." I told Mr. Lincoln that was not dealing fairly by the public, to which he replied: "We are in a fix and must make the best of it."

There is no need to unearth all the blunders made by Mr. Mortimer on that memorable occasion, but I never saw a man try harder to give satisfaction or award prizes to the best dogs. It was a conscientious endeavor on the part of a man of limited experience to place the dogs correctly. The Pittsburgh show committee presented Mr. Mortimer with a gold-mounted cane in memory of the event. I don't think they gave it to him as an appreciation of his collie judging, seeing that he gave Robin Adair first prize and left that good dog Guido out in the cold. How much has that one decision cost collie breeders in this country? "Billy" Graham was standing next to me when the award was made, and I shall not soon forget his remarks. By the time the judge got to the black and tan terriers he fairly broke down, and asked me to judge the class for him and send into the ring to him the names of the best three dogs written in the order in which they should be placed. I felt sorry for Mr. Mortimer, and at once complied with his request, and intrusted the now notorious slip of paper to Mr. Wade to convey to Mr. Mortimer. The contents of the note were as follows:

First prize—Vortigern.
Second prize—Reveller.
Vhc.—Kistemann's dog.

Mr. Mortimer read the note, then put it in his pocket and proceeded to judge (?) the class. He examined the dogs very carefully, looked very wise, kept people waiting about twenty minutes for his decision (he didn't want to make a mistake and was rewarded in the press by being told he was a careful judge), booked the numbers of three dogs, as per my note; explained to the exhibitors why he considered Vortigern the best dog; went home to bed, dreamt he was a judge, got up in the morning and has been a judge ever since. Mr. Mortimer winds up the farce by saying that I agreed with him. I call it agreeing with myself. Mr. Mortimer's letter goes into the lobby with the Bang Bang and Rule 12 letters, the Meteor-Vanity and mastiff puppy cases, and will no doubt be indorsed by the author of "The Missing Fishing Rod," "A Night in Baltimore," "Tom Jerome's Gordon Setter Retrieving Grousedale's Cup," "The Judges I Have Killed," "The Effigies I have Set Up," and other charming souvenirs of a chaste life.

I never have had a wrong word with Mr. Mortimer in my life, and am glad to see him appointed kennelman for the W. K. C. and manager of their show, but I shall always blame him for having done himself a great injustice and his brother fanciers a still greater one, in accepting the judgeship at dog shows where his tongue and the record prove him to have had very little experience as an exhibitor, and none whatever as a breeder or owner of good dogs. My having made known the facts of the case, cannot now do Mr. Mortimer great harm, as the influence that put him into the judges' ring and kept him there no longer exists.

Charles H. Mason.

March 23, 1885.

THE NEW HAVEN DOG SHOW.

THE show which was held last week in the Second Regiment Armory, at New Haven, was noteworthy in many respects.

The number of entries has been exceeded, though only, we believe, at New York, but in the excellence of its arrangements and the smoothness with which matters moved, the New Haven show has not been excelled. Four hundred and ninety-three dogs were entered in the catalogue, but the club refused nearly one hundred and fifty entries.

It was generally remarked by those who were present that the show was the best that has yet been held in this country, and we have no hesitation in saying that it was the best that we have ever attended. There appeared to be no one to give orders or attend to matters, yet everything was done at the right time and in the right way. In fact matters were so admirably systematized that the show seemed to run itself, and everything about its management gave evidence that executive ability of a high order had been brought to bear on the exhibition.

The hall was well adapted to its purposes, being roomy and well ventilated. The comfort of the dogs was well looked after. The attendance was good.

Much of the credit for the excellence of the show is due to Mr. J. B. Robertson, the manager, but Messrs. Porter, Osborn and other members of the club were active and efficient, and contributed largely to the success.

A significant fact about the show was the heartiness with which the exhibitors almost to a man indorsed the action of the club.

With a few exceptions the judging appeared to give great satisfaction. This work was begun promptly at the opening of the show, and for the first time in the history of American dog shows, was completed the first day. The catalogue was a model of neatness and accuracy, and so was very useful. Copies with the awards printed opposite the names of winners were on sale the second day of the show.

In speaking of the animals exhibited, we have not described at length those which are well known, as comments upon them can be found in our reports of other shows.

The exhibition opened on Wednesday of last week, and in our last issue we were therefore able to publish only the awards given up to 3 o'clock on the afternoon of that day.

MASTIFFS—(MR. MASON).

The display of mastiffs was the best that has yet been seen in this country, and it is only at a few of the larger shows in England that a better collection of these noble dogs can be found. There were twenty-six entries, three of them being absent. Hero II., looking fairly well, was alone in the champion dog class. Lorna Doone also had a walk-over in the bitch class. She was not in first-rate condition. In the open dog class Ilford Cromwell came out in capital form and had an easy win. We said of him last year, "He is a grand dog, with an immense head, and is excellent in body, legs and feet. He has but just arrived from England and was not in the best of condition; should he fill out well he will take a lot of beating." His faults are a very bad eye and too much length in muzzle. He beat Hero II. for the special prize. Dr. Perry, who owns them both, stated to the judge in our presence that his preference was for Hero, and we fancied that he would agree with him, as Hero is a son of old Salisbury; but the brindle would not be denied, and his excellent form and beautiful condition fairly won him the race. Homer was placed second. He showed up badly in the ring. Hector, vhc. and reserve, has not improved since we saw him last. Agrippa, vhc., was well shown. Hildebert, also vhc., has a good head, except that he is a trifle dish-faced; he has good legs and feet, but is rather short coupled. Laylass, hc., we do not like; he is leggy, light in bone and long in face; he was shown in bad condition. Dan, the winner at New York last year, was unnoticed; his ugly disposition is sufficient to condemn him, to say nothing of his long face, lack of markings and crippled condition.

Rosalind, the winner in the bitch class, is a recent importation. She won the champion prize at the Crystal Palace last July. She is a grand animal, of large size and plenty of bone, her head is massive, and she has a very pleasing expression; she lacks in wrinkle and is very throaty, which is her worst fault. Prussian Princess, the winner of second, equal with Hilda V., is also a recent importation. She has a good head, with nice black markings, and is a very nice bitch; her faults are a heavy ear and hindlegs a little too straight and forelegs not quite straight enough. Hilda V., equal second, is a big lengthy bitch, with a fair skull and ear. She is just a bit dish-faced and a little light in bone. She was well shown. Queen II., vhc. and reserve, won second at the Breeders' show last fall. She was looking well. Onyx, hc., is a fair bitch,

with a small head and badly carried ears. She is also rather light in bone and is a little out at elbow. Bertha, the only unnoticed one in the class, was in very bad condition. She is not a show animal.

The two winners in the puppy class are of the litter that won at New York at the Non-Sporting Show. They are compact and well formed of much the same type. Both are small and have light eyes, and lack depth in muzzle. Garth, vhc., is the largest mastiff for his age that we ever saw. He has a good body, but is too long in face and carries his ears badly. Druid, also vhc., has a fairly good head. He has a light eye, and is too small; he also stands bad in front. Hubert, hc., has plenty of bone and good legs and feet. He has heavy ears which are badly carried. Dumont, c., has a fair head, but is sway-backed and shallow in middle; he may improve. Wilbur, unnoticed, is a poor specimen with no mastiff character. The classes all through were very good and properly judged. Mr. Porter informed us that he had interviewed every mastiff exhibitor present, and that one and all expressed entire satisfaction with the awards.

ST. BERNARDS—(MR. WATSON).

There were eighteen St. Bernards shown. None of the cracks were present and there was nothing very remarkable among them. There were no entries in the champion classes. In the open dog class first went to Rene, a small dog with a fair head; he is a trifle slack in the back. Barry, second, has a surly temper; he also lacks coat and has a curly tail. St. Elmo, vhc. reserve, is a big dog with a fair head and good bone; he is poorly marked and moves bad behind. Prince, vhc., has a good head, but is a bit slack in the back and faulty in stifle. Dave, hc., is of good size, but has a light eye and faulty markings; he also moves stiff behind. Hermit was about the best in the class, but he was disqualified for mange.

First was withheld in the bitch class. Second went to Venus; she is of good size, but of bad color and has a sour expression.

In the puppy class first went to De Ette; she has good legs and feet with plenty of bone; she stands too low at shoulder and is too fine in muzzle. Rajah, litter brother to De Ette, received second. We liked him full as well for first; he is a fair dog with good legs and feet; he carries his ears rather badly. Ouisa, hc., also of the same litter, is as good as either, except that she has no white on chest or neck. Pope, hc., also of the same litter, has the same fault as to color and is not so good in head. Ernst was the only smooth-coat entered. The first prize was withheld and he was given second. He has an ordinary head and is lacking in character; he also has a ring tail.

NEWFOUNDLANDS—(MR. WATSON).

Ten of the eleven entries put in an appearance. Sam, first in the dog class, was looking well. Second went to Major, a dog of good size but with an ordinary head and with white on chest and toes. Ben, vhc., is a nice looking animal, but he is too curly and has white on his chest. Bruno, hc., is also too curly. Noble, hc., we did not see. The bitches were not first class; Juno, first, has a sour expression, and is faulty in ear and tail. Fan, second, is rather small and carries her ears badly, she might be better in shoulders and head.

GREYHOUNDS—(MR. DAVIDSON).

The greyounds were better than we have ever before seen together. The improvement within a few years has been marked, and with the good animals now in the country it should be still more so in the future. Friday Night won over Bouncing Boy in the champion class, both were in good condition. Friday is a very fair dog, he is a trifle coarse in head and tail. Bouncing Boy is also a good-looking animal, but he is too long coupled, a bit flat in back, and faulty in stifle. These faults would tell against him when sent out of slips more than those of his competitor.

In the open dog class Mr. Smith's recent importation, champion Memnon, made his first public appearance in this country. He is all over a grand dog, his head is perfect except that it might be a bit better below the eye. He has a beautiful neck, capital shoulders, back and quarters, with perfect legs and feet; he looks a trifle high, but a little more length of body would correct this. His tail is perfect, except that he has had the misfortune to have the end of it frozen. His winnings on the bench are too numerous to mention here; he also has a good field record, having been in 1881 the runner up for the Waterloo Cup, and winner in other events.

In the bitch class, Begonia was placed over Mother Demdike, a decision that we cannot indorse. Begonia was in elegant condition, while Mother Demdike was hardly out of season, and in consequence she was soft and did not move with her usual grace. Still her rare good form and evident quality should have given her an easy win.

In the dog puppy class first went to Highlander, a fair puppy, but rather coarse. Schoolboy, second, is round in skull, a bit dish-faced, and straight behind. He has a good back and may improve. Stormy night, vhc., and Harlequin, hc., have too many structural faults to ever win in good company. Paris, c., is leggy, straight behind and weak in pasterns. The bitches were a very promising lot; Hawthorne Belle is very pretty. She has a good head but is a bit straight behind. Hadee, second, has good legs and feet. She is rather shallow in chest but may improve. Honey Bee is a very fair puppy, but a bit coarse. With the exception of first in the open bitch class we thought them very well judged.

DEERHOUNDS—(MR. DAVIDSON).

The deerhounds were a fair lot. Nearly all of them are well known and need no description here. Mac, winner of first in the open dog class, was better shown than we ever saw him. Perth, winner in the bitch class, is only eleven months old; she promises well. Blithe, vhc., was in poor coat and in bad condition. They were all well placed.

POINTERS—(MR. DAVIDSON).

The pointers were a fair collection. Donald II. won in the open dog class. He was in much better condition than we have ever seen him. He is several pounds heavier than when last shown, and has taken his place in the large class, where he properly belongs. Rattler, second, if in good condition, could easily beat Donald. He is a large dog, with plenty of bone and substance. He was shown too fat, and we doubt if he was ever groomed. He is a handsome animal, and if properly shown but few can beat him. Knickerbocker is failing behind and should be retired on his honors. Sancho, hc., we thought well of. He is quite a fair dog, with fair head and shoulders, good chest and loin, and fairly good legs and feet. He did not show at all well in the ring or he might have received another letter. Pete, also hc., showed well. He is a little too wide in front and a bit out at elbow. Zeb and Don, both unnoticed, are a workmanlike-liking brace, and no fault could have been found with the judge had he given them each a card.

In the bitch class there was not much to choose between first and second; neither are first-class. Lucille, first, has a fair head, legs and feet. She is round in chest and lacks quality. Flirt, second, is light of bone. Jessie, hc., got all she deserved. She looks fairly well, but is round in chest and too light in muzzle.

In the small dog class first went to Bon Ton, winner of first at the National Breeders' show last fall; second going to Robin Adair, who had the same place at the same show. Bangor, vhc., is a useful-looking dog with plenty of bone. Ned, hc., is also a fair dog, and deserved his card. Fritz, c., won the prize for the best trick dog. his performances were wonderful. Snipe, unnoticed, won first at New York five years ago. He was out of condition and shows age.

In the bitch class Rosa received first. She is a very sweet bitch and was in elegant condition; her head might be improved, and she is a trifle straight behind. Otherwise she is very good. Mistrel, second, is also very pretty. She was well shown. Lady Bang, vhc., was looking fairly well. Lady Isabel, hc., got all she deserved. Nellie, c., was well shown.

In the puppy class first went to Lou, a very promising puppy; she is too young to criticise further. It is next to impossible to judge a pointer puppy properly, as they change so much from week to week. The classes were judged, perhaps, as well as possible.

ENGLISH SETTERS—(MR. WESTCOTT).

There were forty-nine entries in the English setter classes, only two of which were absent. There was a great improvement over last year. Plantagenet was alone in the champion dog class, he was not at his best as he has been at work among the briers and his coat and feather were not in show condition.

In the open class Rockingham carried off the honors. He is a recent importation and this was his first appearance before the American public. He is a very handsome blue belton, of medium size, with a good lengthy head, that might be a little cleaner cut below the eye; his ears are set on just a trifle high, he has a good neck, except that he is a bit throaty, capital shoulders, back, loin and quarters; his legs and feet are very good, his feet are rather large, but they are thick through the pad, with well arched toes. There is just a suspicion that his elbows are out but it is very little; he has plenty of bone and shows lots of quality. We examined him very carefully, and though we greatly admire Foreman, we were compelled to admit that he is not quite the equal of the winner. Foreman won second easily. His coat and feather were not in first-class condition. Mack B., vhc. reserve, was looking well, although his coat is not yet right. Yale Belton, vhc., was well shown, except that his coat has not improved since last year. Pride of the West, hc., was not in good condition, had he been, we fancy that he would have received another letter. Prince Phœbus, unnoticed, was taken out of the ring as soon as first and second was decided, and failed to get a card which he possibly might have done had he remained. There were a number of others in the class that looked like good serviceable animals; four of them were commended and not much fault could have been found if two or three more had been noticed. The class was well judged.

The bitch class was not so well handled. First went to Princess Phœbus, the winner in the puppy class at New York last year. She has not improved, on the contrary she has done the reverse. She has a good body and feet and a nice straight coat; she is snipy, light in bone, a bit short in back and her elbows are too much under her, one foot is turned out and her tail is too short; she should have been content with the three letters. Forest Dora, second; Lady May, vhc. reserve, and Blonde II., vhc., are all good with not much to choose between them. Lady May should have been first, and equal second would perhaps have been about right for the other two. The others were well placed.

In the dog puppy class first was very properly withheld and no injustice would have been done had the second been also. The bitch class was a trifle better than the dog. Hazel C. we liked about as well as any, but she is too young and small to pass an opinion upon. She is very pretty and promises well. There was nothing in the class that was mature enough to warrant giving an opinion as to their merits.

BLACK AND TAN SETTERS—(MR. WESTCOTT).

The black and tan setters were a mixed lot as regards type. The quality was better than the average that we usually see. Turk won in the champion dog class over Argus; both were looking well. In the open dog class first went to Gem. He was in fair condition. Thorn, second, is a very fair big dog, with a Gordon head. Dick, vhc. and reserve, is rather a nice light weight. Chris, vhc., is also good, but has poor tan. Glen II. is a big dog; his coat was poor. Ben and Richard, both c., were in bad condition, and both were lacking in tan. In the bitch class there were three light weights, all good. Edith, the winner, is very well formed, and of good coat and color. Dora, second, is not far behind her, with a good head of the English type. Rhoda is also a nice bitch. In the puppy class, first went to Argus II., a good-looking big one, and second to Madge, a very nicely-made, well-marked light weight. Topsey's Boy, vhc., and Topsey, c., deserved their cards. We thought the class well judged.

IRISH SETTERS—(MR. WESTCOTT).

The Irish setters were a grand lot. There were forty-three entries with only three absentees. Glencho was alone in the champion dog class. He was not in his usual good condition. He was shown too low in flesh. In the open dog class first went to Elcho, Jr.; he was in good condition and greatly improved since last year; his litter brother Bruce won second. He is a first-class dog all round. Blarney, vhc. reserve, is also very good. He is not yet mature, and his color is not yet right. He will improve in this respect, and when he fills out we shall look for him among the winners. Chief, Jr., vhc., deserved his card. Rocket, also vhc., is a coarse dog, and should have given place to Rory O'More II., a nice dog, well worth the three letters. Chief II., hc., is also worth another letter. The class was a rattling good one.

The bitch class was not so good, although there were several very good ones in it. Faun won first; she was looking well; her most serious fault is in her tail. Reeta II. won second, she has good coat and color but is not a typical Irish bitch, she should have been content with vhc. Lorna, vhc. reserve, was not well shown; she is well formed and has a perfect tail, her head is not a good type, and she should have exchanged places with Hazel, hc.; she is a good bitch all over. Jessie, vhc., we thought good enough for second place, although she was not in first-class condition. Norine O'More, vhc., we failed to find in her stall, she made a good appearance in the ring and looked worth her card. Nana, hc., and May, c., were very lucky. Zelda, vhc., has good coat and color but is too short in head.

The dog puppies were nothing extra, nearly all of them were big and leggy. Age will undoubtedly improve them, but we doubt if anything very wonderful comes out of it. The bitches were better. We fancied Bawn, vhc. reserve, as well as any. She is of good type, and if nothing befalls her she will do to show again. Next to her we preferred her half sister Rory Kate, vhc. Miss, the winner, was better shown than the others, but she is not so well formed. Jessie, second, is a big bitch, but not so well put together as some of the others.

SPANIELS—(MR. WATSON).

The spaniel classes, with the exception of the Irish water spaniel, were well filled. There was only one in this class, a moderate specimen, with a poor head and not enough curl in coat. There were six Clumbers entered, one of them being absent. They were a fair lot and properly placed.

The field spaniels were a very good lot. Benedict was alone in the champion class; we never saw him looking so well. In the open class Newton-Abbott Lady was placed first. She is a broody-looking bitch, with plenty of bone, good legs and a capital coat. Her head is fair, but she is faulty in eye and muzzle. She is also overshot and could be improved in feet. Black Prince, second, we liked better for the place. He is well-formed and has a good, flat coat, and has no glaring faults. He stands a trifle high, and has a light eye and is a bit fine in muzzle. His coat was in grand condition, but he was shown a trifle thin. The remainder of the class were well judged.

The cocker dogs, liver or black, were a splendid lot, and as well placed as possible. The bitch class was something wonderful. Such a beautiful lot were never before seen together. We examined them carefully, but failed to discover any errors in the decisions of the judge. Miss Obo II. did not arrive until after the judging was over. She is a capital bitch, and had she been on time and not overweight she would undoubtedly have been well to the front.

The "any other color" was a poor class, we thought them well placed. The puppies were nothing extra. In the dog class we should have reversed the position of first and second. Black Joe, the winner, is snipy, throaty, leggy, and straight behind, and is no more than fairly good in other respects. Og, second, is by no means first-class, but he has a fairly good muzzle, good body, legs and feet, his ears are not well placed, and he has an ordinary appearance. The bitches were not much better than the dogs, we thought them well placed. The classes all through were very well handled and no bad mistake was made.

FOXHOUNDS—(MR. DAVIDSON).

There were twelve foxhounds shown, and there were half as many different types. Forester II. won first, he was the only one shown that approached the type of the English foxhound, nearly all the others were a workmanlike looking lot. We thought them well placed, except that we should have given Jerry, hc., another letter for his gamy looks.

BEAGLES—(MR. DAVIDSON).

The entry of beagles was not large, but they made up in quality what they lacked in number. In the dog class first went to Rattler. He has grown throaty and was shown too fat. Gyp, second, is well made, but too big. Leader, vhc., has a good head. He is out at elbows and has too fine a coat; he was shown too fat. Mike S., also vhc., is a well-made, useful-looking dog; he is a trifle shallow in chest and has too small ears. In the bitch class Minnie was placed first; she was looking fairly well. Busu, second, is fairly good. She would be hard to beat if she was all right in her forelegs and carried her ears properly. Maid, vhc., is a nice bitch and deserved her card. Jenny, also vhc., has a beautiful eye and good ears. She is well put together, but is faulty in head. Diana and Pansy, both hc., are fairly good. The classes were well judged.

DACHSHUNDE—(MR. MASON).

There was only one entry in the dachshund class; he was awarded second, which was all that he deserved.

FOX-TERRIERS—(MR. MASON).

There were thirty-one entries in the fox-terrier classes, three of which were absent. There were no entries in the champion classes, but many of the best dogs we have were entered in the open classes. Raby Tyrant was placed first. He was looking well and won with ease. That the decision was correct the burst of applause from the many fanciers surrounding the ring is ample proof. Scarsdale, second, was closely pressed by Lancelot, vhc. reserve, a well-bred dog, with capital legs and feet. He stands a trifle high and is growing heavy at the shoulders. He should do well with weedy bitches. Ned, vhc., is a game-looking dog, and has some terrier character. In body, legs and feet he is fairly good, and his ears are small and well-placed. He is wide in front and faulty from eye to end of nose. Young Jocko, hc., has a good body, is of the proper size, and carries his ears well. He is weak in muzzle and out at elbows. Boxer, c., distinguished himself once or twice as a puppy, but he has grown big and his day is past.

In the bitch class Richmond Olive scored an easy win as she is able to do in almost any company; except that she is a trifle cheeky not much fault can be found with her. Lyra, second, was well placed; she is a smart little bitch, just a bit too long; she is a little snipy and might be improved in coat. We preferred Nannie, vhc., for the place except that her teeth are gone, otherwise she is better than Lyra. Clover Belle, also vhc., was in good coat; she shows character, but is too long in body, has not a first-class head and is a bit slack in back. Clover Blossom, unnoticed, was badly shown; she is short in face and too wide in front.

In the dog puppy class, an unnamed son of Scarsdale and Priscilla won. He carries his ears better than he did at the Fanciers' show, and is growing the right way; he will doubtless be heard of again. Surprise, second, had a great advantage over the winner in age, but the little one fairly won the fight. Surprise is very well bred and is good in body, legs and feet; he is heavy in ear and stands too high on his legs. Gaylad, hc., is too weedy and lathy to make a first-class terrier. In the bitch class, an unnamed sister of the winning dog was first. She was much the best, although she is not first-rate, being heavy in ear and too long coupled. The classes were very well handled, and so far as we could learn the decisions were indorsed by fanciers of the breed.

COLLIES—(MR. MASON).

There were thirty-seven entries in the collie classes with four absentees. Ben Nevis scored an easy win in the open dog class; he has greatly improved in coat and loin since we saw him at the National Breeders' show last fall and showed up in grand form. Argyle, equal second, did not quite come up to our expectations; he has improved, but lacks expression and is faulty in ear and tail. Brack was placed equal with him; he has the same faults as Argyle, but in a less degree; we think him the best of the two, although he was not at his best. Hiram, vhc. reserve, was as usual in good coat; we do not like his head, and his stifles and gait are bad. Laddie, vhc., lacks expression and lacks coat. Shep, also vhc., is a fair looking dog, but faulty in head and hindquarters. Shep, hc., is also faulty in head and lacks expression. Guy, also hc., is heavy in head and lacking in coat. Glencoe should have been content with c.; he is only moderate.

In the bitch class first went to Fairy. She has lots of collie character, and but for her faulty ears and tail she would be a hard bitch to beat. Lady Bess, second, is a nice bitch with a good head; she was not in full coat. She carries her tail like a setter instead of like a fox. Nannie O., vhc., was lucky. She is not nearly so good as her sister Fairy, being stilty, faulty in ear, and lacking in coat; the two letters would have been sufficient in her case. Jean, also vhc., is young and lacks coat. She may improve in this respect, but she will always carry too short a tail. Nancy and Queen should have been in the puppy class.

In the dog puppy class, Kolly B. won first; he is a very taking-looking dog, and was well placed. He has plenty of coat, and is good in frill. His top coat is too soft and his ears are too large. He is also too straight in stifle. Joe Nettles, second, seemed on the bench to be the best in the class, but he is faulty behind, which we presume set him back. Dandie, vhc. reserve, is a nice puppy; he is faulty in stifle and tail. Gem, the winning bitch puppy, is a very promising one. She is the best in Mr. Lindsay's exhibit. Her ears are not carried just right, but in other respects little fault can be found with her. Stella, second, made a very good fight for first place. She is a fair good one, but her fox-terrier ears and faulty tail lost her the place. Lothian Maid was also liked very much. She has a very sweet face, but is too full in brow, and if she matures well she will do to show again. Foxie, hc., is pretty, but faulty in ears and tail. The classes we thought well judged.

BULLDOGS—(MR. WATSON).

In the champion bulldog class Tippoo was alone. He is a good dog, but is a little light in bone and stands a trifle high; he also might be better in feet. In the bitch class, Bellissima, the only entry, was absent. In the open dog class, Robinson Crusoe had an easy win; with a better roached back and his elbows thrown out he could not be beat. Boxer, second, is pinched in muzzle, flat in back and faulty in feet. Grip, vhc., has too small a head for his body; he is also flat in back and long in muzzle. Rhodora had all to herself in the bitch class. She is a capital bitch, with lots of character and few faults. The quality of both classes was good. They were well judged.

BULL-TERRIERS—(MR. MASON).

The bull-terriers were a better lot than we generally see together. Young Bill won first. He was badly shown; his years are many and he should retire from the show bench. Saxon, second, has a good skull, a capital body and powerful quarters; he has an ugly patch of tan on his head, is a bit weak in jaw and has a bad tail. Dan, hc., has a fair middle but is faulty at both ends. Dick, unnoticed, may be good in the pit, but is far from bench show form. Young Royal was disqualified for a faked tail.

In the bitch class Victoria had a clear win, she is good enough for any company. Scarlet II. was a very good second. She is a capital bitch with plenty of muscle and good feet. She is a bit undershot and her tail is a trifle coarse. Nellie, vhc., we do not like. She is snipy, light in bone, faulty in shoulders and coarse in tail. Zook, hc., is all off in head. The Earl was the only one noticed in the puppy class. Fill him out well below the eye and keep his tail down, and he will be hard to beat. The classes were well judged.

TERRIERS—(MR. MASON).

In the black and tan terrier class Wallace was alone, the other entry being in the wrong class. He is a fairly good dog with good head and eye and fair color and markings; he is too large and carries his tail badly. In the rough-haired class first went to Moses, a fair specimen, and second to Patsey. The Dandies had but one representative, a fair one. In the Irish class Erin, wrongly printed as Aaron, was also alone. The Bedlingtons were not a good class. Souter Johnnie was the only Skye shown; he is a nice dog with rather sparse coat; what he has, however, is of the proper texture.

PUGS—(MR. MASON).

There were eighteen pugs entered, three of them being absent. Young Toby won first; he is of proper size and has nice black points properly distributed, he is too round in skull and long in muzzle. Punch, second, is a fair dog, a bit smutty and not blunt enough in muzzle. Dandy, vhc., has a good head which is well wrinkled, but he is long in back and minus trace, he does not carry his tail just right. Punch, also vhc., has a fair body but is heavy in ear and snipy. Napoleon was also vhc.; he is too big. Sambo, hc., is also too large, and is pinched in muzzle. In the bitch class first went to Tra-la-la; she won easily, she is a good bitch, a bit apple-headed, and her ears are not well carried, her head is well wrinkled, and her nails are as black as ebony. Flossy, second, is faulty in muzzle, tail and elbows. The puppy class was not good, all the winners are heavy in ear and too small in eye. The classes were properly judged.

YORKSHIRE TERRIERS—(MR. MASON).

There were eight Yorkshires shown, without exception they were short of coat and light in tan, the three noticed ones were the best.

TOYS—(MR. WATSON).

In the toy terrier class first went to Daisy, a nice black and tan, and second to Dixey II., a rough-coat, not nearly so good as the winner. Topsy won first in the King Charles spaniel class. She is shorter in face than Pitou, second. The owner of Pitou has made a protest against the decision, and stated that he can prove that he sold the winner a few days previous to the show and that she is not Topsy at all. Who mixed the babies will be a question for the A. K. C. to decide. The Blenheims were not a good class.

ITALIAN GREYHOUNDS—(MR. MASON).

The winning Italian greyhound was clearly ahead of the rest of the class, and though a dwarf in comparison with others in the class, she is too big for a first-rate one. Her head is good and she is well put together, but not of good color. She was very well shown. Blan-she, second, is much too large and is off in color, and should have been content with an hc.

POODLES—(MR. MASON).

Cognac, the winner in the poodle class, was far ahead of the others, but is too heavy in head and lacks length of ears, and is loose in curl.

MISCELLANEOUS—(MR. WATSON).

The miscellaneous class was worthy its name. With the exception of first-prize winners, there was nothing remarkable in the class. Following is a full list of the

AWARDS.

MASTIFFS.—CHAMPION—*Dogs:* 1st, Ashmont Kennel's Hero II. (A.K.R. 545). *Bitches:* 1st, Ashmont Kennel's Lorna Doone, 3yrs. (Crown Prince—Ilford Baroness).—OPEN—*Dogs:* 1st and special, Ashmont Kennel's Ilford Cromwell, 5yrs., brindle (Cardinal—Cleopatra); 2d, Winlawn Kennel's Homer, (A.K.R 1030). Very high com. and reserve, Winlawn Kennel's Hector, (A.K.R. 1240), Riverview Kennel's Agrippa, 3yrs. (A.K.R. 449); Winlawn Kennel's Hildebert, 1¾yrs. (Little Nero—Hilda V.). High com., Philip Strasburger's Laylass, 1½yrs. (Dales—Flounce). *Bitches:* 1st and special, also special best kennel, Winlawn Kennel's Rosalind, 3¾yrs. (Crown Prince—Lady Rowena); equal 2d, Winlawn Kennel's Prussian Princess, 2½yrs. (Crown Prince—Wina), and Hilda V. (A.K.R. 1433). Very high com. reserve, Winlawn Kennel's Queen II., 4yrs. (The Emperor—Queen). High com., J. Clary & Son's Onyx (A.K.R. 1769). *Puppies:* 1st and special, Winlawn Kennel's Minerva, 9½mos., (Homer—Queen II.); 2d and special, Winlawn Kennel's Tarquin, 9½mos., (Homer—Queen II.). Very high com., J. Clary & Son's Druid (A.K.R. 1508); J. A. Howarth's Cedric's Gurth, 9mos. (Kent—Juno). High com., Blandford Kennel's Hubert (A.K.R. 2014). Com., Riverview Kennel's Dumont, 8mos. (A.K.R. 1509).

ST. BERNARDS.—ROUGH-COATED—*Dogs:* 1st and special, J.W. Burgess's Rene (A.K.R. 410); 2d, St. Bernard Kennel's Barry, 18mos., mahogany, tawny and white. Very high com, reserve, D. P. Foster's St. Elmo, 3yrs., tawny and white (champion Turko—Fanny Snowdrift), Very high com., J. P. Barnard, Jr.'s Prince, (A.K.R. 791). High com., Leonard F. Beckwith's Dare, 1yr. 8mos., tawny and white (Bouivard—Elsa). *Bitches:* 1st, withheld; 2d and special, also special best kennel, E. F. Mansfield's Venus (A.K.R. 1438). *Puppies:* 1st and special, 3d, and high com., E. F. Mansfield's DeEtte (A.K.R. 1598), Rajah (A.K.R. 1604), Pope (A.K.R. 1603), and Ouisa (A.K.R. 1602).—SMOOTH COATED—*Dogs:* 1st, withheld; 2d and special, H. H. Chittenden's Ernst (Rex—Alma).

NEWFOUNDLANDS.—*Dogs:* 1st and special, Acadia Kennels' Sam (A.K.R. 556); 2d, Louis Sommer's Major, 2½yrs., black. Very high com., Nelson L. Bonneau's Ben, 3yrs., black. High com., George H. Larned's Bruno, 8yrs., black; Acadia Kennels' Noble (A.K.R. 762). *Bitches:* 1st and special, St. Bernard Kennels' Juno, 2yrs.; 2d, J. R. Gildersleeve's Fan, 15mos., black.

GREYHOUNDS.—CHAMPION—H. W. Smith's Friday Night (A.K.R. 2012).—OPEN—*Dogs:* 1st and special, also special best kennel, H. W. Smith's Memnon (E. 13,609). *Bitches:* 1st and special, H. W. Huntington's Begonia, 5yrs., black; 2d, H. W. Smith's Mother Demdike (A.K.R. 1760). Com., Elm City Kennels' Leo, 2yrs., brindle.—PUPPIES—*Dogs:* 1st, H. W. Huntington's Highlander, 7mos., black (Bouncing Boy—School Girl); 2d, Master Sherwood McCollom's School Boy, July 15, 1884, black (Bouncing Boy—Begonia). Very high com., H. W. Smith's Stormy Night (A.K.R. 1580). High com., H. W. Huntington's Harlequin, 8mos., black and white (Doubleshot—Clio). Com., Dr. O. F. Coe's Paris, 9mos., black and white (Doubleshot—Clio). *Bitches:* 1st and special, H. W. Huntington's Hawthorn Belle, 8mos., black and white (Doubleshot—Clio); 2d, H. W. Huntington's Haidee, 7mos., black (Bouncing Boy—School Girl). Com., H.W. Huntington's Honey Bee, 7mos., blue (Bouncing Boy—Begonia).

DEERHOUNDS.—*Dogs:* 1st and special, Clovernook Kennels' Mac 2yrs. 10mos., fawn brindle (Paddy—Lassie); 2d, John E. Thayer's Bran, 18mos., brindle (Donald—Wyvis). Very high com., Clovernook Kennels' Heather, 26mos., blue brindle (Clansman—Countess). High com., J. A. Butler, Jr.'s Bruce, 4yrs., light red grizzle (Rex—Maida). Com., Dr. Wm. H. Carmalt's Roderick Dhu, 5yrs., fawn (imported Lupar—imported Mona). *Bitches:* 1st and two specials, Clovernook Kennels' Perth, 11mos., brindle (Gillie—Lupa); 2d, Chas. B. Gilbert's The Banshee, 3yrs., brindle and gray (A.K.R. 1238). Very high com., J. A. Butler's Blithe, 4yrs., brindle (Rex—Maida).

POINTERS.—OVER 55LBS.—*Dogs:* 1st and special, Clifton Kennels' Donald II., 2½yrs., liver and white ticked (Donald—Devonshire Lass); 2d, C. H. Goodman's Rattler, 6yrs., liver and white (Dilley's Ranger—Corcoran's Bess). Very high com., Knickerbocker Kennel Club's Knickerbocker (A.K.R. 19) and E. I. Martin's Bangor, 2½yrs., liver and white (Bang—Jean). High com., E. Knight Sperry's Sancho, 4yrs, white and liver (champion Pete—Ives's bitch), and J. F. Ives's Pete, 2yrs., black.—UNDER 55LBS.—1st and special, Dr. A. McCollom's Ben Ton (A.K.R. 1436); 2d, Clifton Kennels' Robin Adair, 2½yrs., liver and white (Faust—Madge). High com., David Scott's Ned, 2½yrs., liver and white). Com., A. C. Collins's Fritz (A.K.R. 1249).—OVER 50LBS.—*Bitches:* 1st and special, Knickerbocker Kennel Club's Lucille, liver and white; 2d, Knickerbocker Kennel Club's Flirt (A.K.R. 1248). High com., Merrimac Kennels' Jessie, 5½yrs., liver and white (Snipe—Fannie).—UNDER 50LBS.—*Bitches:* 1st and special, Clifton Kennels' Rosa (A.K.R. 1443); 2d, F. Stevenson's Mistrel, 3yrs., black (champion Pete—Lil). Very high com., Clifton Kennels' Lady Bang (A.K.R. 698). High com., Knickerbocker Kennel Club's Lady Isabel (A.K.R. 461). Com., Dan O'Shea's Nellie, 2yrs., liver and white ticked. *Puppies:* 1st and special, Clifton Kennels' Lou (A.K.R. 1792); 2d, Geo. W. Huot's Bessie Black, 5½mos., black, with white spot on breast (Peter Black—Bessie). Very high com. and special, E. M. Crouch's Brock (A.K.R. 1931). High com., Knickerbocker Kennel Club's Mamie G., 5½mos., lemon and white (champion Knickerbocker, A.K.R. 19—Lady Isabel, A.K.R. 461). Com., Geo. W. Huot's Judge Black, 5½mos., black (Peter Black—Bessie).

ENGLISH SETTERS.—CHAMPION—1st and special best brace, also special best kennel, Blackstone Kennel's Plantagenet, 4½yrs., orange belton (Dashing Monarch—Petrel).—OPEN—*Dogs:* 1st and three specials, Frank Windholz's Rockingham, imported, 2½yrs., blue belton (Belthus—Bess); 2d, Blackstone Kennel's Foreman, 4½yrs., black, white and tan (Dashing Monarch—Fairy II.). Very high com., Blackstone Kennel's Mack B., 3yrs., orange belton (Dick Laverack—Twilight), and F. A. Cannon's Yale Belton, 5yrs., black, white and tan (Belton—Blonde). High com., G. R. Nichols's Pride of the West, 28mos., black, white and tan (Count Noser—Lola). Com., F. A. Cannon's Count Tip, 14mos., lemon belton (Buckeye Boy—Blonde II.); W. N. Callender's Royal Coin, 2yrs. 9mos., black, white and ticked; Rosecroft Kennel's Brant F. (A.K.R. 1281); Walter B. Peet's Ted Llewellin (A.K.R. 599). *Bitches:* 1st and two specials, Frank Windholz's Princess Phœbus (A.K.R. 1287); 2d, Blackstone Kennel's Forest Dora, 3yrs., blue belton (Dick Laverack—Forest Fly). Very high com. reserve, H. Pape's Lady May (A.K.R. 1371). Very high com., Foster Bros.' Blonde II. (A.K.R. 935); E. I. Martin's Countess Warwick, 3½yrs., blue belton (Warwick—Ollie); High com., Blackstone Kennel's Grace B., 3yrs., blue belton (London—Dawn); H. J. Rice's Passion, 18mos., black, white and tan belton (Prince—Peoble); Blackstone Kennel's Jennie III., 10mos., black, white and tan (Foreman—Old Jennie). Com., Andrew J. Calahan's Jolly Nell, 18mos., black, white and tan ticked (Prince—Jolly May).—PUPPIES—*Dogs:* 1st, withheld; 2d and special, E. K. Sperry's Lanman's Dan, 11mos. white and black (Gabb's Dash—Barron's Flirt). Very high com. reserve, H. L. Cowell's King Philip, 8mos., lemon belton (Emperor Fred—Lill). Very high com., R. P. Penn's Pilot, 8mos, lemon and white (Emperor Fred—Lill). *Bitches:* 1st and special, W. E. Miller's Speckle, 9mos., black, white and tan (Blue Blood—Coin); 2d, R. B. Penn's Nancy Dawson, 7mos., lemon and white (Emperor Fred—Molly). Very high com. and reserve, D. O'Shea's Speed, 10mos., blue belton. Very high com., J. A. Horne's Speck Belton, 10mos., black and tan head, blue belton body (Yale Belton—Topsy). High com., Riverview Kennel's Countess Zanette, 10mos., lemon belton (Zanzibar—Dashing Jessie). Com., H. A. Bailey's Fleet, 9mos., white, black and tan head (Yale Belton—Topsy); Rosecroft Kennel's Hazel, 6mos., blue belton (Ted Llewellin—Blanche Lewis).

BLACK AND TAN SETTERS.—CHAMPION—1st and special, H. Clay Glover's Turk, 9yrs. (A.K.R. 717).—OPEN.—*Dogs:* 1st and special, best pair with Rhoda, C. R. Taylor's Gem (A.K.R. 959); 2d, J. Conner's Black Thora, 3yrs. Very high com. reserve, Merrimac Kennel's Dick, 4yrs. (Locke—imported Daisey). Very high com., C. Smith's Chris, 4yrs. (Glen II.—Jet). High com., C. H. Redfield's Glen II., 7yrs. (Glen I.—Madge). Com., O.D. Washburn's Richard, 18mos. (Glen II. —Jet); J. Meacham's Ben, 2yrs. *Bitches:* 1st and special, D. O'Shea's Heather Lass, 2yrs. (champion Jock—Gypsie); 2d, Claire-Reeta Kennels' Dora, 16mos. (Jock—Black Bess). Very high com., C. R. Taylor's Rhoda, 1½yrs. (Flash—Doane's Chloe). High com., C. H. Redfield's Beauty, 2yrs. (Glen II.—Jet). Com., Associated Fanciers' Edith, 2yrs. *Puppies:* 1st and special, John E. Thayer's Argus II., 11mos. (champion Argus—Beauty); 2d and special, C. S. Fitch's Madge (A.K.R. 1623). Very high com., Walter G. Drew's Topsey's Boy, 7mos. (Jake—Topsey). Com., C. R. Taylor's Topsey, 4mos. (Gem—Rose).

IRISH SETTERS.—CHAMPION—1st and special, Wm. H. Pierce's Glencho, 3yrs. 9mos. (champion Elcho—champion Noreen.—OPEN—*Dogs:* 1st and special best pair with Lorna, Wm. Jarvis's Elcho, Jr. (A.K.R. 568); 2d, J. Henry Roberts's Bruce (A.K.R. 54). Very high com. and reserve, E.W. Clark, Jr.'s Blarney (Bruce, A.K.R. 54—Luray, A.K.R. 59). Jessel's Jim, mouse, 3yrs.; Chas. W. H. Ellis's Don, elephant color, 11mos.

CHALLENGE.

Editor Forest and Stream:

I hereby challenge Mr. F. Windholz, the owner of the setter dog Rockingham, to show his dog against Foreman, for $100 a side, each to select a judge and they to appoint a third, time and place to be agreed upon. WM. TALLMAN.

SOUTH ATTLEBORO, Mass., March 23.

ST. LOUIS BENCH SHOW.—St. Louis, March 21.—*Editor Forest and Stream:* Beagles will be judged at the coming St. Louis show by the standard of the A. E. Beagle Club, Major J. M. Taylor, of Lexington, Ky., will judge pointers, setters, hounds and Chesapeakes. Mr. J. H. Whitman, of Chicago, will judge spaniels. The judge for non-sporting dogs is not yet announced. The custom of benching the dogs in long parallel rows will be changed here. The benches are to be in squares, each breed, as far as possible, to itself. The judging will be completed the first day. Winners will receive a large printed certificate. The railroads entering St. Louis will carry dogs free when accompanied by owners. Express companies will charge one fare for the round trip. Cockers are divided into two classes, to be judged respectively by the American and the International standards.—GEO. MUNSON, Manager.

THE PIERCE DISQUALIFICATION.—New Haven, Conn. *Editor Forest and Stream:* In receiving the entry of Mr. Pierce I may have been wrong. The notice of his disqualification by the Philadelphia Club was received and read hastily, and regarded simply as a notice that his case would be brought before the executive committee of the A. K. C. for action. In regard to the awards made to the entry of Mr. W. H. Pierce, the following action was taken by the New Haven Club: "That, inasmuch as Mr. Pierce's entry had been accepted and the award made, it was deemed only right that the prizes should be paid, but with the following condition, that if the action of the Philadelphia Club was sustained at the meeting of the A. K. C. in Boston, the prizes should be returned."—E. S. PORTER, Secretary.

THE ESSEX COUNTY HUNT are making extensive preparations for opening the season this week. They have lately added to their pack a draft of over a dozen new hounds of best blood. The increase in the number of members since last season will bring more fine hunting horses in the field. The usual spring races at Waverly will be omitted this season, as the Hunt has decided to hold their meeting at Rockaway in connection with the Long Island Hunts. There will be three days of racing, May 9, 13 and 16. The first to be known as the Meadow Brook Hunt day, the second as the Essex County Hunt day, and the last day as the Rockaway Hunt day. These events will be the first combined efforts of the different Hunts to hold a grand meeting, and as it is under the best management, it will no doubt be a great success.

FANNY.—Boston, March 25, 1885.—*Editor Forest and Stream:* In the March number of the A. K. R. the setter bitch Fanny's whole pedigree is included in that of No. 2-156, is stated to be by Count Noble out of Flirt; but in a late number of another paper the same Fanny is claimed as by Decimal Dash out of Shapleigh Bess (Rake—Fanny). Will the owner of Fanny please state through the columns of FOREST AND STREAM what authority he has for claiming the above pedigree, also her age and full address of her breeder.—C. NOBLE.

NEW YORK DOG SHOW.—The judges for the dog show of the Westminster Kennel Club, to be held at Madison Square Garden next month, so far as they have been appointed, are as follows: Pointers, Mr. J. M. Tracy; English setters, Mr. John C. Higgins; fox-terriers, Mr. L. M. Rutherfurd. Mr. Hugh Dalziel will judge most of the non-sporting classes. The managers have very wisely decided to follow the same constructions of Rule 8 as the New Haven and New England clubs.

CINCINNATI BENCH SHOW.—The non-sporting classes at the coming Cincinnati bench show will be judged by Mr. Hugh Dalziel, of England.

KENNEL NOTES are crowded out this week.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

W. L. B., Philadelphia, Pa.—The hair on my spaniel's ears is short, faded, and to all appearances dead. What shall I do to cause fresh growth of same? Ans. Give five drops of Fowler's solution of arsenic twice daily in the food, and after washing the ears thoroughly, apply the ointment of the iodide of lead, rubbing carefully and thoroughly into the skin.

T. H. S., Rome, N. Y.—My Gordon pup has scratched her ear till the inner surface of the lobe is lacerated and raw. There does not seem to be anything like canker within the ear. Ans. Wash with warm water and castile soap and apply Goulard's extract of lead twice daily. In the intervals keep vaseline on parts, and hobble your dog if she still scratches.

E. R.—A setter dog, two years old, is in perfect health with the exception of his eyes. The lower eyelids at times hang down, and the inside looks very red and water runs from them a good deal. Ans. Get a solution of sulpho-carbolate of zinc made up, five grains to the ounce of water, and paint the eyelids where everted twice daily with fine camel's hair brush. Report result.

BERGEN, New York.—I have a mastiff dog pup about 9½ months old, weight about 100 pounds, chest and shoulders unusually heavy, other parts all good. When standing, his hindlegs appear perfectly straight and well formed, but when running he throws the hindfeet out sidewise and draws the stifle joints together. Is this a weakness of the hindlegs showing tendency to cowhocks, and if so, can anything be done for it? Ans. Your dog has grown too fast and his bones and joints are weak. He needs iron and cod liver oil. Your druggist will furnish you with some emulsion of the oil, containing iron and the lime salts. There are numbers of these preparations; most of them are effective. Give a tablespoonful three times daily. Hold the mouth open and let it fall back of the tongue.

DESICCATED MEAT, a new food article for dogs and puppies, is advertised in this issue. Dog owners should give it a trial.—*Adv.*

Rifle and Trap Shooting.

RANGE AND GALLERY.

SARATOGA, March 7.—At its Glen Mitchell Range to-day the Saratoga Rifle Club brought to a close the second tournament of the winter season. It covered about six weeks, and the result appended makes an unusually fine record. The score and average are as follows (possible 120):

	Score.	Average		Score.	Average
W B Gates	1,100	110	A C Rich	1,035	103 5-10
I Davis	1,095	103 5-10	F A White	1,026	102 6-10
A G Hull	1,074	107 4-10	H Wellington	1,025	102 5-10
A F Mitchell	1,064	106 4-10	I D Roods	975	97 5-10
S F Corey	1,049	104 9-10	L R Rich	971	97 1-10
W H Gibbs	1,042	104 2-10			

Two shoots were held last week and fair scores were made. The conditions were good on both days. The Massachusetts target was used and the distance was 200yds., off-hand. The score:

W B Gage	12	10	11	11	12	12	12	12	7	11	—110
H Wellington	10	12	10	11	11	11	11	11	10	10	—107
A G Hull	11	11	10	10	12	10	11	10	10	11	—106
A F Mitchell	10	10	12	10	12	12	8	12	8	12	—106
A C Rich	11	10	12	11	10	9	12	9	9	11	—104
L R Rich	7	11	8	10	11	10	12	10	10	10	— 99
I D Roods	10	9	9	10	9	7	11	10	9	11	— 95

BRATTLEBORO, March 14.—There was a fair attendance at Oak Grove Range to-day. The shooting being done on the Massachusetts target, 200yds. off-hand. The scores were very good considering the extremely bad light:

Taft	12	11	11	10	11	11	10	11	11	12	—110
Cobb	12	10	12	11	11	11	11	10	12	10	—110
French	11	12	9	10	12	12	10	12	11	11	—110
Hone	11	12	10	9	12	10	10	11	11	11	—107
Nichols	10	12	10	9	10	11	10	9	12	12	—105
Knight	11	11	9	12	11	10	8	10	12	11	—105
Brockway	10	12	11	11	9	11	8	11	12	8	—103
Read	11	10	10	9	11	8	10	10	11	11	—101

BOSTON, March 21.—A harder day in which to shoot a rifle than this could not well be imagined, and the gentlemen at Walnut Hill worked for all they got. The wind blew across the range in great gusts, and affected the bullets very badly. A new list of matches was opened as follows:

A.—Creedmoor target—for practice—200yds. Rounds, ten. Entry fee, 15 cents. No prizes.

B.—Creedmoor target.—200yds. Position, standing. Rounds, ten. Any rifle. Entries unlimited, at 25 cents each to members; to non-members, first entries, each day, 50 cents; re-entries 25 cents. Prizes to be won on the aggregate of each competitor's best four scores, to count in the order made. Military rifles allowed seven points and other rifles with open sights four points on the aggregate of four scores. Ten prizes, 10, 9, 8, 7, 6, 5, 4, 3 and 2 per cent. of the total entry fees and a leather medal. Any member of the M. R. A. making a clean score of 50 shall receive $5 in gold, but not for more than one score.

C.—Decimal target. Conditions as in Match B, except that military rifles are allowed twenty-four points on four scores; other rifles with open sights sixteen points. Eleven prizes as follows: 12, 10, 8, 7, 6, 5, 4, 3, 2 and 1 per cent. of the total entry fees.

D.—Victory medal match for 1885. Decimal target. Open one year. Distance, 200yds.; position, standing; rounds, 10; any rifle; no handicap; entry fee, 25 cents. First prize, a victory gold medal to the competitor who scores ten 86s; second prize, a victory silver medal for ten 80s; third prize, a victory bronze medal for ten 75s; fourth prize, a silver membership badge for ten 70s; fifth prize, a bronze membership badge for ten 65s.

F.—Decimal target, at rest, to be opened on the closing of the current (F) decimal match, at rest; 200yds.; rounds, 10; any position or rest; any rifle under 12 pounds, without telescopic sights; entries same as in Match B; prizes on the aggregate of best five scores; an allowance of 50 points on military and 25 points on other open-sight rifles, on the aggregate of five scores. This match will be closed the day that 200 entries have been made. Prizes respectively eight, seven, six, five, three and two silver dollars.

M.—All-comers' military match, 200yds.; position, standing; any military rifle; trigger pull, 6 pounds; rounds, 5; Creedmoor target; entries unlimited, at 25 cents each; four scores to count. Prizes, trophies of the value of 30, 20 and 10 per cent. of the total entry fees respectively. This match will be closed at the discretion of the executive officer.

S. M.—Militia match, conditions approved by Colonel Rockwell, inspector-general of rifle practice, M. V. M., and properly certified winners will have the privilege of wearing the badges when in uniform. Open only to members of the Massachusetts Volunteer Militia. Distance, 200yds.; position, standing; rifle Springfield, as issued by the State; trigger pull, 6 pounds; rounds 5, Creedmoor target, entries unlimited at 50 cents each, 4 scores to count. To any competitor making 4 scores of 23 or more, a gold badge; 4 scores of 21 or more, a silver badge; 4 scores of 18 or more, a bronze badge.

These matches are open to all comers, except as otherwise specified. Following are the best scores made:

Creedmoor Practice Match.

J Halsey	5455554554—47	P W White	4434545445—42
W D Palmer	4454555454—45	N F Tufts	4445554443—42
J H Farr	5444444454—42	J Emmond	4443454444—40

Decimal Match.

J B Fellows, D	8	9	9	8	8	9	4	6	3	10	—80
R Reid, A	9	5	8	9	4	8	10	5	7	6	—71
C B Edwards, A	4	6	8	7	8	5	10	6	8	7	—70
B G Warren, C	4	8	6	3	9	9	0	5	6	4	—63
R Davis, D	5	6	6	10	5	9	6	8	5	3	—63
W H Olin, C	3	4	6	7	5	6	8	6	8	8	—61

SACO, Me., March 20.—Lately I received a .32-cal. 28-inch barrel, for patched bullets, to fit my Maynard breech piece. At the first trial I made, in seven consecutive shots, 34 out of a possible 35. Second trial, two days later, hit the bullseye nine times in eleven consecutive shots. Third trial, next day, made two scores of 34, possible 35, and a ten inch circle would inclose the entire 14 consecutive shots. This shooting was all done on my private range, at 200yds., off-hand, Creedmoor target, and witnessed by Mr. Wm. G. Parker, of Biddeford. Yesterday tried a string of 5 shots, 100yds., off-hand, and put them all in a 4-inch bullseye.—W. F. CUMMINGS.

THE TRAP.

Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

NATIONAL GUN ASSOCIATION.

THE first inter-state tournament under the auspices of the National Gun Association, will be held at Springfield, O., May 5–9. Prizes $2,000. Fuller particulars will be given in our next issue. An inter-State tournament will be held at Cleveland, O., Oct. 5–10, 1885, and an international tournament at Washington, D. C., in May, 1886.

All sportsmen and citizens alike, are invited to join the National Gun Association. Initiation fee, $5, payable, if desired, in monthly installments of $1. Annual dues, $1, payable upon entering, and thereafter on May 1. The secretary's address is J. E. Bloom, Box 1292, Cincinnati, O.

KNOXVILLE GUN CLUB.—March 13.—Distance 18yds., set angles, 15 birds. Gold medal match at blackbirds: J. C. Duncan 11, John M. Ross 11, Jacques 10, F. Armstrong 10, M. O. French 9, Dr. Deaderick 9, Townsend 8, Jenkins 7, Gardner Woods 7, T. C. Eldridge 7, C. Woodbury 6, A. Mead 5, J. E. Ross 0. Ligowsky medal match at clay-pigeons: Duncan 13, John Ross 11, Jacques 10, Armstrong 11, French 9, Deaderick 7, Townsend 8, Jenkins 9, Woods 8, Eldridge 10, Woodbury 7, Mead 6, J. E. Ross 6. J. C. Duncan winner in both matches.—C. M. WOODBURY, Secretary.

STAUNTON, Va., March 17.—Staunton Gun Club match at ten clay pigeons, 18yds. rise. The strong wind blowing prevented a good average score:

T Bissell	0111111111—9	Dr Wayman	1001111001—6
A Ayres	1111100111—8	W Allen	0011001110—5
C Wittle	1101111011—8	Col Bumgardner	0010100111—5
J A Cockran	1011001111—7	W F Summerson	1001011001—5
Cox	0011110111—7	F West	1000001111—5
Dr Berkeley	1111000011—6	B Tams	1000110110—5
C L Cooke	1010010111—6	L Alby	0000111100—4
Wm Cushing	1010110101—6	C Bargamin	1010100001—4
J Stout	0110011011—6	F J Crowder	0011000001—3

Bissell takes silver medal, Crowder, leather medal.—T. BISSELL.

SAN FRANCISCO, March 6.—The opening shoot of the Alameda County Sportsmen's Association was held to day at Bird's Point. The conditions of the match were 12 pigeons, each liberated from six ground traps, Hurlingham rules governing. Messrs. Bell, Tuttle, Ghirardelli, Goodall and Mortimer shot 12-gauge guns and stood at the 28-yd. stake. W. L. Brown shot at 16yds. and A. F. Adams, who was the "top man" in last season's shoot, was handicapped to 31yds. rise. The remainder stood at the 30-yd. stake. Eastman was selected as judge. The club numbers over eighty members, but only thirteen faced the trap. Though the day was very warm the pigeons were lively, and with a few exceptions flew strong and swift. Following was the score:

Al Havens	111110111000— 8	F P Norton	011010111101— 8
C A Edson	101101010001— 6	J Ghirardelli	100110101101— 7
R E Bell	111011011011— 9	E Goodall	001101010111— 7
Dr Slade	111111111112—12	W Mortimer	111111111110—11
J Pollock	001011100100— 5	W L Brown	111011011101— 9
C A Tuttle	011111110110— 9	A H Mayhew	111011111011—10
A F Adams	011111110011— 9		

The next was a miss and out for $2.50 a corner. There were 9 entries. The scores were: Wilson 0, Edson 0, Mortimer 1, Hill 1, Brown 4, Tuttle, Coffin, Slade and Adams 6 each. As the prospect was more than likely that the cost of the pigeons would more than offset the purse when it would be won, the four last mentioned divided the pot.

NEWARK N. J., March 21.—The Southside Gun Club of Newark, shot a crow match this afternoon at the club grounds, on Railroad avenue. Three hundred very lively crows were provided and twenty-five members entered into the competition. A stiff and bitterly cold westerly wind combined with the novel character of the feathered targets in making the scores generally poor. A number of the best shots in the club failed utterly in scoring in the first sweep of five birds, while but three members made clean scores. The birds were released from a ground trap at 24yds. rise, and the match was shot under Hurlingham rules, the second barrel to be used only when a bird was on the wing. The crows rose frequently with their beaks to the wind and hovered temptingly for a moment, offering an easy mark for the veriest tyro with the gun, but still they were much more frequently missed than pigeons would have been by the same men under similar circumstances. Sometimes the crows would develop into rapid drivers the moment the trap was unroofed, and in such cases the dusky birds would almost invariably escape. Often a healthy old crow would be struck with both barrels and apparently be knocked into lacework, but would carry his load of lead lazily away, to drop into the reeds half a mile distant. The crows were caught in wild-pigeon nets along the Delaware River. They are baited several days before the nets are sprung. Often forty or fifty birds are caught at one time. Crow catching is now a paying business.

ONTARIO CLUBS.—A clay-pigeon match took place at Aurora on the 12th inst., between the Newmarket and Aurora Gun Clubs, at 15 birds each, resulting in favor of the Aurora team by 13 birds. The following is the score:

Aurora.		Newmarket.	
G Wilkinson	12	T Brown	11
J Coltham	11	A T Doan	14
R Wells	9	G Perry	8
J Moseley	12	C Norris	9
N Haldinby	11	A Rowe	11
J Wells	13	R Hardy	7
W S Weezey	11—79	P Ratcliffe	6—66

MANCHESTER, N. H., March 18.—The regular fortnightly shoot of the Manchester Shooting Club was held at the grounds of the organization in West Manchester this afternoon, and was the largest attended of the season. The event of the most importance was the shooting for the club gold medal. C. B. French broke 19 out of a possible 20 clay-birds, thus winning the medal for the third consecutive time. Under the present conditions he has but to win it once more to secure it for all time to come. Such shooting as he has been showing of late is deserving of success. There were 11 contestants against him to-day and there will probably be more of them at the next shoot. The shooting in the sweepstake events resulted as follows: 1. French and Reed divided first, Gray second, Ward and Bell third. 2. French and Wilman first, Watson and Gove second, Wadleigh and Reed third. 3. Gove and Wilman first, French and Watson second, Gray and Wadleigh third. 4. Gray and Stubbs first, Oliver second, Gray third. 5. Gray first, Stubbs second, Wadleigh third.

LOUISIANA.—St. Martinsville, La., March 20.—A glass ball and clay-pigeon shooting took place this evening with the following score: Ten single glass balls; L. J. Voorhees 10, T. L. Broussard 9, N. Bienvenu 6, Paul Bienvenu 5, J. E. Mouton 5, J. A. Deblanc 3. Ten single clay-pigeons: J. L. Broussard 9, L. J. Voorhees 8, Paul Bienvenu 7, J. A. Deblanc 6, J. E. Mouton 6, G. Fournet 6, N. Bienvenu 4.

FORT WORTH, Tex., March 22.—The pigeon match between Carver and Penrose, 100 birds, for a purse of $1,500, was won by Carver by 76 to 75.

ROCHESTER, N. Y.—At the annual meeting of the Monroe County Sportsmen's Club, held March 5, the following officers were elected: President, James H. Brown; Vice-President, Edmund Redmond; Secretary and Treasurer, L. A Pratt. President Brown appointed the following committees: Finance Committee—H. B. Hooker, A. Brownell; Vigilance Committee—G. W. Crouch, Homer Jacobs, H. H. Fleischer; Bird Committee—H. B. Hooker, M. M. Hollister, Charles Green.

COLLINSVILLE, Conn.—Officers of the Collinsville Gun Club for the year: President, G. L. Terry; Vice-President, F. E. Hawley; Secretary, C. A. Hart; Treasurer, M. Upson; Executive Board—C. N. Ellsworth, H. Delavanway, W. Bliss.

ORANGE, N. J., March 18.—A sparrow match was shot near here to-day by a party of sportsmen living in the neighborhood. The birds were clandestinely netted in the ivy of Grace Church, Newark, at midnight. They were found to be very difficult to hit, and the score sheet was destroyed at the end of the match by the man who failed to kill one bird in ten.

THE LOUISVILLE SPORTSMEN'S ASSOCIATION will hold a tournament April 8 and 9, on the grounds of the Southern Exposition Company. The shooting will be at live birds and artificial targets. J. O. Barbour, secretary.

BOSTON GUN CLUB CLAY-PIGEON TOURNAMENT.—Wellington, Mass., March 18.—It was very cold and snow fell during the latter part of the day, making it very difficult to average good scores. The average monies of the day were taken as follows: Perry and Gerrish first, Cooper second, Eager third. The following is a summary of the day's matches:

First event, 7 singles, 18yds.:

H W Eager	2	T S Hall	2
W S Perry	6	A Houghton	1
C H Gerrish	6	Clark	6
E L Evans	3	A F Cooper	5
G White	3	D Kirkwood	4
C M Stark	4	W J Braley	4
E W Tinker	5		

Cooper first, Tinker second, Stark and Kirkwood [third, White and Evans fourth.

Second event, 3 pair doubles, 15yds.:

Evans	00 10 01—2	Clark	01 10 10—3
Eager	11 10 11—5	Braley	00 10 10—2
White	11 01 11—5	Houghton	01 11 00—3
Perry	11 10 10—4	Stark	10 11 10—4
Gerrish	10 11 11—5	Tinker	01 11 01—4
Cooper	11 10 11—5	Kirkwood	11 10 00—3

Cooper and Gerrish first, Tinker second, Houghton third, Braley and Evans fourth.

Third event, 5 singles, 18yds rise: Kirkwood 3, Snow 4, Eager 4, Warren 1, Perry 5, Robinson 2 Gerrish 2, Nichols 4, White 3, Cooper 3, Houghton 3, Tinker 3, Hall 2, Braley 1, Evans 3, Stark 1, Clark 3. Perry first, Eager second, Cooper and Clark third.

Fourth event, 5 pair doubles:

Kirkwood	10 11 11 10 10—7	Evans	10 10 10 10 10—5
Perry	11 11 11 10 11—9	Cooper	11 11 11 11 10—9
Eager	10 11 10 10 11—7	White	10 10 00 01 10—4
Snow	11 00 00 10 00—3	Tinker	10 10 11 01 10—6
Gerrish	01 11 01 11 10—7	Houghton	11 10 00 01 01—6
Braley	10 10 10 10 10—5		

Perry and Cooper first, Eager second, Tinker third, Evans fourth.

Fifth event, 2-man team match at 7 singles and 3 pair doubles, singles at 18yds., doubles at 15yds.: Cooper and Gerrish first, Eager and Perry second, White and Snow third.

Sixth event, 7 singles:

Perry	0111110—5	Cooper	1101101—5
Eager	1111011—6	Clark	1101101—5
Nichols	1010110—4	Snow	0111010—4
Robinson	1101111—6	Hall	1101101—5
White	1011110—5	Kirkwood	1111011—6
Tinker	00000 w	Whitney	0001000—1
Gerrish	1101111—6	Braley	0111100—4

Gerrish first, White and Hall second, Braley third, Whitney fourth.

Seventh event, 5 singles, 18yds.: Kirkwood 4, Gerrish 3, Eager 4, Robinson 3, Snow 3, Evans 1, Nichols 2, Perry 2, Clark 3, White 3, Cooper 3, Hall 3. Eager and Kirkwood first, Snow second, Gerrish third, Evans fourth.

The Boston Gun Club will give clay-pigeon tournaments April 15 and 29, open to all, with practice shoots April 10 and 24. The prize shoot will be held April 24. The practice shoots are intended to afford all the opportunities which the club can afford towards the development of wing practice to young members particularly. All tickets therefore, which contain above ten misses are redeemable above such extent at half price. Membership can be obtained by filing application with secretary with $3, the same to be adjudged by membership committee. The club has now the most convenient accommodations at Wellington (a delightful surburb within 7 minutes of Boston) for clay-pigeon shooting. The club house has spacious, well heated and lighted rooms rooms to suit the sportsmen; possesses trap accommodations for 10 traps and facilities to throw 6,000 birds per day. Any three members by application through secretary can secure the use of the grounds and traps for private practice.—D. Kirkwood, Boston, Secretary and Treasurer.

Canoeing.

FIXTURES.

March 31—K. C. C. Camp-fire, 106 West Forty-second street, 8 P. M.
April 7—Toledo C. C. Camp-fire, "Racing and Rules."
May 30, 31—Hudson River Meet.
May 30 to June 1—Connecticut River Meet.
July 18, 28—Western Meet, Ballast Island, Lake Erie.
July 24 to Aug. 8—A. C. A. Meet, Grindstone Island.

CRUISE OF THE "AURORA."

AT the close of the American Canoe Association Meet in August, 1883, Dr. C. A. Neidé, in the Aurora, and Mr. S. D. Kendall, in the Comfort, set out from Lorna Island for the Gulf of Mexico. They got there. But before reaching Pensacola they did and saw enough to discount the adventures of that famous old cruiser, the "much-enduring Ulysses." The skipper of the Aurora kept a faithful log of the cruise, and when he got back again wrote it up and sent the manuscript to the Forest and Stream Publishing Company. It has been put into book form and is now ready.

Nobody but a blind man could make a trip of this kind without seeing a thousand things worth telling. Dr. Neidé has an eye for novelties, and a quick appreciation of whatever is out of the way. Add to this a faculty for forgetting the prosy details, a memory for what is worth remembering, and the gift of telling things so that others see them too. The Aurora's log is capital reading from beginning to end. It is real canoeing, with all the fun, tribulation, excitement and doldrums thereunto appertaining. This story of a 3,000 miles' cruise will take a high place in the canoeing literature of America. Bound in cloth, pp. 216. Price $1.00.

CRUISING INFORMATION—SALEM TO NEW YORK.

Editor Forest and Stream:

Is a canoe cruise practical between Salem, Mass., and New York City? Having two seasons' experience upon rivers and lakes in Eastern Massachusetts, I wish to turn next June to a salt-water cruise of perhaps a month's duration. I intend to carry "stores" with me as well as a complete outfit, but having no brother canoeist to consult, I hardly know what I should purchase.

My canoe is 15×25, and weighs sixty-five pounds, having a double spread of 60 sq. ft. Each week I have carefully examined the FOREST AND STREAM, hoping to find some helping hints upon the subject, and each week I am disappointed.

I think the canoeing column would be very instructive and entertaining if each issue contained one or more "logs" of cruises. Such a step would certainly be appreciated by the amateurs contemplating a vacation cruise over unknown streams and lakes, and as this is the time when canoes are overhauled, and duffle rejuvenated in anticipation of the coming season, we would respectfully request the older and more experienced canoeists to send in their manuscript. I know there must be many canoeists who weekly scan the column devoted to our craft in hopes of finding a writer who has cruised over contemplated water, and I know that for the past two months many have been in fear that canoeing is on the decline. If some one will kindly give the asked above information through these columns I will be grateful to him. GEO. S. HUDSON.

PEABODY, Mass.

[The trip would be practicable in a large and powerful canoe, but a cruise around Cape Cod is not the proper work for so small a boat, and would be a dangerous voyage. The canoe mentioned, 15×25, is entirely too small for open water cruising. We have published lists of stores for cruising, but perhaps some of our readers can give

further information to our correspondent's questions. The A. C. A. are now actively at work collecting such information as is asked for above, and we hope our correspondent will join, if he is not a member, and add his share.]

AMERICAN CANOE ASSOCIATION.

IT should be a special duty of club officers to see that canoeists proposing to join the Association should forward their names to the secretary as early as possible.

First—In order that their names may appear in the A. C. A. Book of 1885.

Second—That they may have the benefit of the record of cruises and references about to be distributed to the members of the Association.

Third—That an Association number may be assigned to them, as such number *must appear on the sail* of every canoe contesting in races at the annual meet, and members waiting until the last moment may experience considerable trouble in marking the sail properly.

Prompt action will simplify much the work of the Association officers. ROBERT SHAW OLIVER, Com. A. C. A.

ALBANY, N. Y., March 20, 1885.

CANOE PILOTAGE.

Editor Forest and Stream:

Mr. Wilkin's scheme in regard to canoe pilotage seems to be a good one, and will undoubtedly receive the warm support of canoeists everywhere. Let us elect a pilot at the next meet, and he can appoint district pilots wherever he deems necessary, alloting to them certain territory. Any canoeist can write to the pilot for information, and the communication be turned over to the district pilot in whose territory the waters may be. In this way we could avoid the trouble of obtaining the generally untrustworthy information you receive from people who are not canoeists. ELOISE.

BUFFALO, N. Y.

[It was at first intended that the secretary of the Association should have charge of all such matters as pilotage and cruising information, but his duties are already heavy, and the scheme proposed would relieve him of a work that will soon be very arduous. The Association have lately taken the matter in hand vigorously by sending out requests for information, but it is possible that better results might be obtained by an organized system of State pilots under a chief. At any rate the subject is one of general interest, and worthy of further discussion.]

SWIMMING RACES AT THE MEET.

THE suggestion has lately been made to add to the programme for 1885 a tournament of the olden style, but with canoes in place of horses. It is a capital idea, but will require a good deal of work to get into satisfactory shape.

The race programme will probably be quite long enough, but I hope the committee will find room for a couple of swimming contests. Every canoeist should be able to swim, and I presume that a very large majority of persons using canoes can do so more or less. One of the poets of the Association, Orange Frazer, cannot swim a stroke, and always ties himself to his canoe when running rapids or in other dangerous situations.

I would suggest two races, viz., first, one hundred yards, and second, half a mile. Six hundred yards might be more suitable for the latter, but endurance could not be well tested at a shorter distance. Rules for such contests are already well known. The costumes should be such that ladies could be present.

I may be mistaken, but I think races of this kind would bring out a large number of entries, and prove of interest to the Association.

BOREAS.

THE FAN MAINSAIL.

IN FOREST AND STREAM of Sept. 11 last, there appeared a short paragraph on the "Fan Canoe Sail," signed "B. Lug," which I intended to answer, but I was busy at the time and lost sight of the matter. I noticed the paragraph yesterday in looking over some back numbers of FOREST AND STREAM, and will now reply to it.

I can understand how "B. Lug" gained the impression that my fan mainsail would not sit flat. When I had it at Grindstone Island, during at least part of the time I could not hoist it so fully up as to get the boom off the slot-bar, or topping lift. This was owing to the hasty and imperfect construction of that individual sail, and is not inherent in the fan sail principle. No doubt the sail did then to some extent present the appearance of "a series of flutings." When I afterward remedied the defect so as to bring the weight of boom and battens into play to stretch the sail, aided by the tension of the sheet, I found the sail excellently flat. Mr. J. K. Bakewell, of Pittsburgh, who uses a fan sail, thinks with me that it is an exceedingly flat sail when properly made.

I think that in a good fan sail the "retarding surface" presented to the wind is less than that of a balance lug; but a comparison of two good specimens of the rigs will best settle this point.

"B. Lug" says "the fansail is complicated in make." He got that impression from the somewhat crude arrangement I had at the meet, which I put together hastily just before leaving Toronto. I have since got the thing in better shape as to details.

"B. Lug" thinks that the fansail is probably useless for racing. I don't see why it should be. I propose to race with a big one this coming season.

"B. Lug" refers to "the amount of labor necessary to keep its many parts in working order." This is a misapprehension. There is not necessarily any more gear on the fan mainsail than on any other sail having the same number of reefs. My sail at Grindstone Island had two reefs in it, both worked from the deck.

All being well, I hope to have at Grindstone Island next July-August, a large fan mainsail in a much better shape to stand criticism than the old one was. ROBT. TYSON, Isabel, T. C. C.

TORONTO, Feb. 28, 1885.

PRIZE FLAGS FOR THE A. C. A. RACES.

THE following circular has been sent out by the Regatta Committee to all A. C. A. members. For several seasons past it has been the rule that only flags shall be given as prizes for the Association races. It is difficult to purchase suitable flags for such a purpose, and the duty of obtaining them has usually devolved on the officers of the Association. Many of the members can readily procure one flag each, and the flags will not only be finer than those purchased, but will have an additional value as prizes. Answers to the circular should be sent in as soon as possible:

ALBANY, N. Y., March, 1885.

In arranging for the prize flags for the regatta of 1885, the committee venture to hope that it may not be necessary to present any factory-made articles. They believe that many members and friends of the A. C. A. will gladly send flags which will be doubly prized as being at the same time Association trophies and personal favors. The committee, therefore, ask you to fill and return the accompanying blank, promising for yourself or for a friend a contribution to the list. The flags should be of silk, painted or embroidered, of any size from A. C. A. regulation upward. Contributors may, of course, designate a race for which the flag is offered, and the committee will arrange as far as possible upon such suggestions. The name or initials of the maker or designer will add to the value of a flag. Flags not particularly designated will be marked for appropriate races by the committee.

The high appreciation of the prizes heretofore given by friends (by ladies especially), lead the committee to expect a ready response to this appeal. The prizes should be sent to the committee before July 1. The promise should be given as soon as possible.

The blank is as follows:

To the Regatta Committe A. C. A.,

CARE OF MR. R. W. GIBSON, ALBANY, N. Y.:

The undersigned will send before July 1, for the A. C. A. Regatta of 1885.....prize flag which.....offered by.....

.....

Member A. C. A.

.....(Address.)

N. B.—If any particular race is preferred, please refer to programme and quote.

Event No..... Class..... Sailing or Paddling.....

SHATTEMUC C. C.—Sing Sing, March 17.—*Editor Forest and Stream:* The Shattemuc C. C., of this place, has a membership of nine. Our officers are: G. Fisher Secor, Commodore; J. K. Hand, Captain; T. J. Hand, Jr., Purser. We hope to be on deck with a new boat house by the middle of next month. The club is almost a year old.—T. J. HAND, JR., Purser.

PERSONAL.—Mr. Frank Taylor was in New Orleans last week and called on Dr. Neidé....At last reports Messrs. Munroe, Seavey and ix other canoeists were to leave Jacksonville on the sharpie Mary B., for a three week trip to Lake Worth. They will return via Indian River and St. Johns.

TORONTO C. C.—On Saturday, Feb. 28, four enthusiastic members chained off a half mile course on the bay, starting in front of the club house and running west along the city front. Bearings were taken at a quarter mile, so that a short race can be had.

AMERICAN CANOE ASSOCIATION.

ANNUAL CAMP A. C. A., 1885.

THE fifth annual meeting and camp of the American Canoe Association will be held on Delaney's Point, at the northeast end of Grindstone Island, in the Thousand Islands region of the St. Lawrence River, commencing on Friday, July 24, and continuing until Saturday, Aug. 8. The camp site is about four miles distant from Clayton, N. Y., and five miles from Gananoque, Canada. A steamer will make regular trips between Clayton and Gananoque twice a day, stopping at camp on both trips and connecting with the Utica & Black River Railroad at Clayton and the Grand Trunk Railroad at Gananoque. Additional transportation arrangements will also be made of which due notice will be given in the *Canoeist* and FOREST AND STREAM. The ladies' camp will be located at Squaw Point, as in 1884.

CAMP SUPPLIES.

There will be an ice house and a store near the dock, where all necessaries may be obtained at moderate prices. Meals may be obtained by such as do not desire to cook for themselves at Delaney's farm, a short distance from camp, additional and ample accommodations having been provided for this purpose. Mr. Delaney can also accommodate at his house from eighteen to twenty boarders in case any members desire to avail themselves of the opportunity. The various routes to the Thousand Islands are too well known to require enumeration, and a list will be furnished later of all such making special rates in favor of the Association.

PROGRAMME.

Camp will open Friday, July 24. The first week will be devoted to cruising, camp sports, excursions, and such special races as may be arranged. The preliminary meeting of the Association will be held on Monday evening, Aug. 3. The regatta will begin, if the weather be favorable, on Monday, Aug. 3, at 9:30 A. M., according to the following programme. At the termination of the regatta a general review of the fleet will be held. Special sports and illuminations will be announced in camp and members are respectfully requested to supply themselves with lanterns, etc. The annual meeting will be on Friday, Aug. 7, at 11 A. M., and camp will close on Saturday, Aug. 8.

CAMP.

All members are earnestly requested to be present for the entire term of camp, if possible, and as it is probable that the number will be large, officers of clubs will notify the Commodore by mail, to Clayton, N. Y., immediately before proceeding to camp, of the number of men proposing to be present and the size and kind of tents they will require space for, in order that suitable grounds may be assigned. Clubs desiring it will be located as nearly as possible in the former positions, *provided* due notice is given as above.

The large Association tent will be centrally located, with suitable postal facilities, and all letters addressed to Clayton, N. Y., or Gananoque, Canada, A. C. A. Camp, will be delivered there.

The bulletin board at the head of the dock will show the orders for the day, and all members are cautioned to observe the same for the general comfort and convenience. A. C. A. Rules will be strictly enforced, and all members desiring to compete in races must conform to them.

Special days will be assigned for visitors, who will not be permitted in camp at other times except by special invitation, and no steamers will be allowed to land without special permit from the Commodore. Ladies will not be permitted in camp before 10 A. M. or after 5 P. M., except by official invitation on special occasions.

LAKE ERIE MEET.

A local meet will be held on Ballast Island, Lake Erie, near Cleveland, and Toledo, under the charge of Commodore Gardner, of the Cleveland C. C., shortly before the annual camp, and all canoeists are urged to attend, if practicable, as special facilities will be provided for proceeding direct from Lake Erie to Clayton by steamer.

ANNUAL REGATTA, 1885. OFFICIAL PROGRAMME.

First Day, Monday Aug. 3.

No. 1. 9:30 A. M.—Paddling Class III., 1 mile.
No. 2. 9:45 A. M.—Paddling Class II., 1 mile.
No. 3. 10:30 A. M.—Sailing Novices Classes A and B, no limits to rig or ballast, open only to members who never sailed a canoe before 1885, 1½ miles.
No. 4. 11:30 A. M.—Paddling Class IV., 1 mile.
No. 5. 11:45 A. M.—Paddling Class I. (This race exempt from "1 man 1 canoe" rule) 1 mile.
No. 6. 1:45 P. M.—Sailing Class B, no limits ballast or rig, 3 miles.
No. 7. 2:00 P. M.—Sailing Class A, no limits ballast or rig, 3 miles.
No. 8. 3:00 P. M.—Paddling and Sailing combined, Classes A and B, (paddle ½ mile, sail ½ mile, paddle ½ mile, sail ½ mile, paddle ½ mile, sail ½ mile, on triangular course of ½ mile sides) 3 miles.
No. 9. 4:00 P. M.—Paddling tandem, Classes III. and IV., decked (canoes for this race must be decked on half their length), 1 mile.
No. 10. 4:15 P. M.—Paddling tandem, Classes III. and IV., open (only for paddlers who do not race in No. 9), 1 mile.
No. 11. 4:30 P. M.—Upset race, any Class II. or larger canoe (no special appliances allowed unless usually carried in cruising, at signal every canoe must be turned completely over), 200 feet.

Second Day.

No. 12. 9:30 A. M.—Paddling Class IV., cruising trim (canoe and load any material, to weigh 200 pounds or more), 1 mile.
No. 14, 10:30 A. M.—Sailing Class B, no ballast, 3 miles.
No. 15. 10:40 A. M.—Sailing Class A, no ballast, 3 miles.
No. 16. 11:40 A. M.—Paddling Class II., cruising trim (canoe and load to weigh 120 pounds or more), 1 mile.
No. 17. 2:00 P. M.—Sailing Class B, cruising rig (sail limited to 75 feet, any ballast), 1½ miles.
No. 18. 2:10 P. M.—Sailing Class A, cruising rig (sail limited to 50 feet, any ballast), 1½ miles.
No. 19. 3:00 P. M.—Paddling Class III., cruising trim (canoe and load to weigh 160 pounds or more), 1 mile.
No. 20. 3:15 P. M.—Sailing unclassified canoes, no limits ballast or rig, 1½ miles.
No. 21. 4:15 P. M.—Hurry scurry, with swim, 100 yards run, canoes moored 50 feet from shore, paddle 200 yards.
No. 22. 4:30 P. M.—Gymnastics.

Second day of this programmee will be Tuesday, Aug. 4, unless weather prevents or some of Monday's races are postponed, in which case Monday's programme will be finished, if possible, and the remainder of the day be devoted to special races or sports, and the second day will be Wednesday, Aug. 5. In the absence of wind the paddling races will be called at their appointed times. Punctuality will be insisted on, no race will wait for any members. Any event delayed by lack of wind or by reason of the preceding one not having finished will be postponed to the same hour next day, and the next event started at its appointed time. All A. C. A. rules will be enforced.

"All-round record" with five prizes will be based upon all events in this programme except Nos. 3, 5, 9, 10, 20, 21, 22, that is upon 7 paddling, 6 sailing, and 1 combined. Every classified canoe (except Class I.) being eligible alike for 3 paddling races, 3 sailing, and 1 combined. For No. 5 members may bring and use another canoe besides the one allowed under Rule II. for other events.

First and second prizes in all events except No. 22.

The Committee recommend as desirable subjects for special prizes under Rule V., long distance races, sailing races for open canoes and paddling races for decked canoes, portage or obstruction races, and sports to afford amusement.

R. W. GIBSON,
R. J. WILKIN,
J. L. WELLER,
} Regatta Committee.

A. C. A. SAILING REGULATIONS, 1885.

AS REVISED AND AMENDED BY COMMITTEES.

[See also Notes following these Rules.]

RULE I.

A canoe to competé in any race of the A. C. A. must be sharp at both ends, with no counter stern, or transom, and must be capable of being efficiently paddled by one man. To compete in A. C. A. paddling races, it must come within the limits of one of the numbered classes. I., II., III., IV.; and to compete in sailing races, it must come within the limits of either Class A or B.

CLASS I.—*Paddling.*—Any canoe.

CLASS II.—*Paddling.*—Length not over 15 feet, beam not under 26 inches. Depth inside from gunwale to garboard streak at any part of the canoe not less than 8 inches.

CLASS III.—*Paddling.*—Length not over 16 feet, beam not under 28 inches. Depth as above, not under 9 inches.

CLASS IV.—*Paddling.*—Length not over 16 feet, beam not under 30 inches. Depth as in Class III.

CLASS A.—*Sailing.*—Length not over 16 feet, beam not over 28 inches.

CLASS B.—*Sailing.*—Length not over 17 feet, with a limit of 28½ inches beam for that length. The beam may be increased ⅛ inch for each full inch of length decreased.

The greatest depth of a canoe in Classes A and B, at fore end of well, from under side of deck amidships to inner side of garboard next to keel, shall not exceed 16 inches.

In centerboard canoes, the keel outside of the garboard shall not exceed 1¼ inches in depth, including a metal keel band of not over ¼ of an inch deep. The total weight of all centerboards shall not exceed 60 pounds; and they must not drop more than 18 inches below the garboard, nor if over one-third of the canoe's length, more than 6 inches below the garboard; when hauled up they must not project below the keel except as follows: Canoes built before May 1, 1885, may be fitted with centerboards which, when hauled up, may project below the keel, provided that such projection of board and case is not more than two inches and a half in depth below the garboard, and not more than 36 inches in length. In order to be admitted in races without ballast, the centerboard or boards, including bolts and other movable parts, but not including fixed trunks or cases, must not exceed 15 pounds in total weight.

Canoes without centerboards may carry keels, not over 3 inches deep from garboards, and not weighing more than 35 pounds. Leeboards may be carried by canoes not having centerboards.

MEASUREMENT.—The length shall be taken between perpendiculars at the foreside of stem and at the aft side of stern; the beam at the widest part not including beading. In the sailing classes the beading shall not exceed 1½ inches in depth; if deeper than 1½ it shall be included in the beam.

The word "beam" shall mean the breadth formed by the fair lines of the boat, and the beam at and near the waterline in the paddling classes shall bear a reasonable proportion to the beam at the gunwale. The Regatta Committee shall have power to disqualify any canoe which, in their opinion, is built with an evident intention to evade the above rules. As the minimum in Class III. and Class IV. coincides with the maximum in Class A and Class B respectively, a quarter inch each way is to be allowed in measuring for these classes in order that a canoe built to come well within one class may not thereby be ruled out of the other.

RULE II.

None but members of the American Canoe Association shall be permitted to enter its races, and no canoe shall enter that is not enrolled on the Secretary's books, with its dimensions, etc., and no member who is in arrears to the Association shall compete in any race or claim any prize while such arrears remain unpaid.

Any member shall enter only one canoe for races at any one meet, except for such races as the programme shall specially state otherwise. Each canoe shall be enrolled and entered for racing in only one sailing class and one paddling class.

CREW.—The "crew" of each canoe shall consist of one man only, unless the programme of the regatta states the contrary. Members must paddle or sail their own canoes, and must not exchange canoes for racing purposes. A canoe which is not owned or used for racing by any other member present, shall be deemed to be the canoe of the member bringing it to the camp. In double canoe races, the owner may associate any other member with himself.

RULE III.

All entries must be in writing, on the blanks provided, and must be handed into the Regatta Committee within such time as they may direct.

RULE IV.

Every canoe entering, except for an upset race, shall carry a colored signal flag 10x6 inches on a staff forward when paddling, and her *A. C. A.* number of enrollment in *red* block numerals *15 inches high and 2 inches broad* when sailing. The number to be on both sides of the mainsail, to read correctly on the starboard side, and reversed on the port side. The clerk of the course will lend the paddling signals for each race, and they must be returned to him, but the sailing numbers must be applied by canoe owners.

RULE V.

Flags shall be given as prizes as follows: A first prize in each race, and a second in each race in which more than two start, and for the five best scores in a record of the regatta to be prepared by the Regatta Committee, the five best flags at the disposal of the committee shall be given. Prizes donated for special races or competitions may be accepted at the diseretion of the Regatta Committee. *No prize of money shall be raced for.*

RULE VI.

The mode of turning stakeboats, and all directions for each race, shall be posted by the Regatta Committee on a bulletin board one hour before the race is called; and any competitor not knowing the course, or mistaking it, or not following these Rules, does so at his own risk. Stakeboats and buoys will be left on the port hand, when not stated distinctly to the contrary.

RULE VII.

No pilotage or direction from any boat or from the shore shall be allowed, and any one accepting such assistance may be *disqualified.*

RULE VIII.

Any canoe fouling another shall be *ruled out.* It shall be considered a foul if, after the race has commenced, any competitor by his canoe, paddle, or person shall come in contact with the canoe, paddle, or person of any other competitor, unless in the opinion of the judge such contact is so slight as not to influence the race. In case of a foul, the non-fouling canoe must go over the course in order to claim the race. Any canoe fouling a buoy or mark shall be ruled out. Every canoe must stand by its own accidents.

RULE IX.

Should the owner of any canoe, duly entered for a race, consider that he has fair ground of complaint against another, he must give notice of same immediately on the finish of the race to the judge, and must present the same in writing to the Regatta Committee within one hour of the finish, if appealed from the decision of the judge.

The sum of One Dollar shall be deposited with each protest, to be forfeited to the Association should the protest not be sustained. The Regatta Committed shall, after hearing such evidence as they deem necessary, decide the protest, and the decision if unanimous shall be final, but if not unanimous, an appeal may be made to the Executive Committee, whose decision shall be final.

No member of either Committee shall take part in the decision of any question in which he is interested. In all cases where a protest is lodged on the ground of fouling, evidences of actual contact shall be necessary to substantiate the protest. The Regatta Committee shall, without protest, disqualify any canoe which, to their knowledge, has committed a breach of the Rules.

PADDLING RACES.

RULE X.

Paddling races shall be started by the starter asking, "Are you ready?" On receiving no answer, he shall say, "Go." If he considers the start unfair, he may recall the boats, and any canoe refusing to start again shall be disqualified.

RULE XI.

A canoe's own water is the straight course from the station assigned it at starting. Any canoe leaving its own water shall do so at its peril; but if the stern of one canoe is a canoe's length ahead of the bow of another, the former may take the water of the latter, which then becomes its own water, and it shall only leave it at its peril.

SAILING RACES.

RULE XII.

The paddle shall not be used in sailing races, except for steering when no rudder is used, or when the rudder is disabled, for back strokes to leeward in tacking, or for shoving off when aground, afoul of anything, or in extreme danger, or from a passing steamer, or from a squall.

RULE XIII.

One minute before the start a signal shall be given, and exactly one minute later a second signal will be given to start. Any canoe which crosses to the course side of the starting line prior to the second signal, must return above the line and recross it, keeping out of the way of all competing canoes, using the paddle if necessary; but after the second signal the start shall be considered as made, and all canoes on either side of the line shall be amenable to the Sailing Rules. Canoes may take any position for starting, and prior to the second signal may be sailed and worked in any manner (outside aid not allowed). Should circumstauces allow it, the Regatta Committee may vary the manner of starting.

RULE XIV.

All shiftable ballast except centerboards shall be carried within the canoe, and no fixed ballast shall be carried below the keelband. Ballast may be shifted, but no ballast shall be taken in or thrown out during a race.

RULE XV.

A canoe overtaking another shall keep out of the way of the latter; but when rounding any buoy or vessel used to mark out the course, if two canoes are not clear of each other when the leading canoe is close to, and is altering her helm to round the mark, the outside canoe must give the other room to pass clear of the mark whichever canoe is in danger of fouling. No canoe shall be considered clear of another unless so much ahead as to give free choice to the other on which side she will pass. An overtaking canoe shall not, however, be justified in attempting to establish an overlap, and thus force a pas-

sage between the leading canoe and the mark after the latter has altered her helm for rounding.

RULE XVI.

Canoes closehauled on the port tack shall give way to those on the starboard tack. In the event of a collision being imminent, owing to the canoe on the port tack not giving way, the canoe on the starboard tack shall luff and go about, but shall never bear away. A canoe on the port tack compelling a canoe on the starboard tack thus to give way, forfeits all claim to the prize.

RULE XVII.

Canoes going free shall always give way to those closehauled on either tack.

RULE XVIII.

When canoes closehauled are approaching a shore, buoy, or other obstruction, and are so close that the leewardmost cannot tack clear of the canoe to the windward of her, and by standing on would be in danger of fouling the obstruction, the canoe to windward shall, on being requested, go about, and the canoe requesting her to do so shall also tack at once.

RULE XIX.

Should two or more canoes be approaching a weather shore or any obstruction with the wind free, and be so close to each other that the weathermost one cannot bear away clear of the one to the leeward of her, and by standing on would be in danger of running aground, or of fouling the obstruction, then the canoe that is to leeward shall, on being requested, at once bear away until sufficient room is allowed for the weathermost canoe to clear the obstruction.

RULE XX.

A canoe may luff as she pleases to prevent another canoe passing to windward, but must never bear away out of her course to prevent the other from passing to leeward; the leeside to be considered that on which the leading canoe of the two carries her main boom. The overtaking canoe, if to leeward, must not luff until she has drawn clear ahead of the canoe she has overtaken.

RULE XXI.

A canoe may anchor during a race, provided the anchor is attached or weighed on board the canoe during the remainder of the race.

RULE XXII.

These Rules may be amended by the Executive Committee, on recommendation of the Regatta Committee.

RULE XXIII.

In case of temporary vacancies in the Regatta Committee, the senior officer present shall appoint substitutes.

EXPLANATORY NOTES

BY R. W. GIBSON, CHAIRMAN REGATTA COMMITTEE.

RULE I. Some canoes whose beam disqualifies them for Class B may still be paddlers in Class 4. The permission to use boards which project below the keel was given in order not to rule out several canoes already fitted with such boards and which could not well be changed. The boards are limited in weight in "no ballast" races, because a heavy board is really most effective ballast. The cases or trunks are not included because of the difficulty of ascertaining their weight. The weight allowed for keels (35 pounds) limits outside ballast wisely, preventing in some degree the development of permanently ballasted sailboats. An oak keel 14 feet long, 3 inches deep and 1 inch thick, with ¼ inch iron band, would weigh about 25 pounds. (See also Rule XIV.).

RULE II. Each member may of course bring to camp as many canoes as he pleases, but in all programme races must enter the same canoe except in the events exempted. The Committee declare Class I. paddling race in this year's programme exempt from the "one man one canoe" rule because it was evident that otherwise no entries would be made—Class I. cannot make an all-round record and would be deserted for the more popular classes. But it is desirable to secure a good time record in A. C. A. paddling, and it is decided to allow members to use second canoes for this race which will have no score for the "all-round record,"

RULE III. The entry arrangements will be as follows: Each member must see that his canoe is registered on the A. C. A. lists with name, dimensions, etc., under her correct number. She must be measured by an official measurer and enrolled according to her certificate. The entry clerk will not be able to receive the name of any canoe until she has been so measured and enrolled. Each organized club may nominate *immediately* to the Regatta Committee a competent member who may be appointed by them an official measurer, that the correct enrolment may be done in good season. Any canoe not so certified before leaving home must be officially measured on her arrival at the meet. All measurers will be furnished with the necessary blanks to be returned to the Regatta Committee for the A. C. A. lists. There has been much misunderstanding of the measurement rules. Clubs and individuals are requested to take this matter in hand. An acurate instrument is necessary to measure beam. The honor of each club will be relied upon for accurate returns, and competent measurers will therefore be selected.

RULE IV. The number is to read on starboard side, because that is the side toward the judges at the finish. It is reversed on port side so that the figures may be exactly over one another and not be confused by the transparency of the sail. It is recommended that the number be placed below the club sailing device and sufficiently clear of any private device. The figures can be painted on or be stitched on in red bunting or cloth if required to be removable. The numbers will be printed in A. C. A. book and will be found on certificate of membership.

RULE V. A tie in record can be decided in favor of the canoe whose record is most evenly divided into sailing and paddling.

RULE VI. In the absence of other directions the usual rules hold good.

RULE VII. This is intended to prevent abuses which might arise from organized coaching and the like. It will not interfere with the inalienable right of encouraging one's friends.

RULES VIII. AND IX. Assistant judges will watch the races at the buoys to enforce these rules.

SAILING RULES.—The sailing rules generally are similar to those which govern all navigation and sailing races; some are necessary for fairness in races, as Rule XV., others apply at all times, as Rules XVI. and XVII.

RULE XIII. It is evident that "sculling" with a large rudder is unfair when done to propel the canoe, although sharp movements one way only to swing the canoe when under very little way are doubtless legitimate. It is hoped that members will not necessitate further comment or rules on this subject.

RULE XII. In sailing races the paddle may be used to hold the canoe in position until the second signal.

RULE XIV. See notes to Rule I. about centerboards and keels.

RULE XV. The clause about rounding a mark is very important. It refers only to the case when the outside canoe is leading, and defines the duties of such leading canoe. In the concluding clause the rights of the second canoe are limited to fairness. A sense of fairness (not generosity) will prompt instinctive compliance with the rule. It is evident that the inner canoe when overlapping has no choice.

RULE XVI. This rule is based upon the general law that a vessel meeting another will *pass to the right*. "Closehauled" means sailing with sheets hauled close to work to windward. To "bear away" is to steer less close toward the wind. To "luff" is to point more toward the wind. To "go about" or "tack," is to luff and continue the curve until the sail fills on the opposite tack. The left hand side of a boat (looking forward) is the port side; the right hand is starboard. The tack is named after the side the wind comes from, or windward side. Now a canoe closehauled on the starboard tack cannot sail more to the right than she is doing without going about, while the vessel on the port tack can change her course to the right to any degree, therefore the former holds her course and the latter gives way by bearing away a trifle. The same law of *pass to the right* governs the rule that the canoe on the starboard tack must *not* bear away, as she would then pass to the left. It is very important that all sailing canoeists should become familiar with the above nautical terms by frequent use of them. It is not sufficient to simply read and understand them. At a crisis such slight knowledge fails one. In sailing, the crew should be doubly vigilant when on the port tack closehauled because vessels crossing on the opposite tack are concealed by the sail.

RULE XVII. Because in going free a slight deviation from the course is of less importance. A beam wind is at right angles to the direction of the vessel, with any wind from astern of this the vessel will "sail free," that is, more or less away from the wind.

RULES XVIII. AND XIX. Evidently the only way to avoid accident.

RULE XX. See note to Rule XVI.

RULE XXI. Because an anchor can be used as ballast and must obey Rule XIV.

KNICKERBOCKER C. C. CAMP-FIRE.—The fourth of the series of K. C. C. campfires was held on Tuesday evening at 105 West Forty-second street. Those present were entertained by Mr. W. Whitlock, who spoke on "Canoe Sails and Rigs." Mr. Whitlock commenced with the standing lug used by Macgregor, and explained the evolution of sails as Prof. Fowler had explained the evolution of models at a previous meeting, and showed, in most cases aided by personal experiences, the advantages and disadvantages of each rig. For sails of an area of not more than about sixty-five feet, Mr. Whitlock seemed to think the sail known as the Mohican, devised and improved by Messrs. Joyner, Stoddard and Oliver, to be the coming sail. For larger areas than that the balance lug was to be preferred. He also explained the improved form of rapid reefing gear devised by Messrs. Baden-Powell, Tredwen and Vaux. The lecture was interesting and instructive, and much enjoyed by those present. Among the visitors were Mr. Thrall of the Oswego C. C. The next camp-fire will be held on Tuesday, March 31, when Mr. C. B. Vaux, N. Y. C. C., will read a paper on "Canoe Navigation."

Yachting.

FIXTURES.

April 2—Mosquito Fleet, City Point.
May 25—N. J. Y. C. Match—Catamarans.
May 30—South Boston Y. C., Regatta, City Point.

Sept. 28—Pentucket Y. C., Championship Regatta.

THE AMERICA AND THE COMING RACES.

BESIDES the two sloops specially building to defend the Cup, a third candidate for the honor has arisen, as will be seen by the following letter to the New York Y. C. from General B. F. Butler, owner of the schooner America, the original winner of the Cup. The second letter was written to the New York *Sun* in answer to some criticisms called out by the first.

"I learn through the newspapers that an attempt is to be made during the coming season to bring here from England some vessel that will outsail any yacht in the New York Y. C., and so, under a challenge, take, if possible, home the Queen's Cup, which was the product of the skill of the officers and crew, united with the sailing qualities of the yacht America at the World's Exposition in 1862.

"I have not the honor to be a member of the New York Y. C., but I am an owner of the yacht America, which won the Queen's Cup. I am informed and believe that her lines below the waterline are unchanged, although she is now some thirty-five years old; and I do not believe that in a race with plenty of breeze, in the open sea, dead to windward and return, or vice versa, the America can be beaten by any boat sailed under the rules of the New York Y. C. At least, I am willing to try that question, and I now write to you for the purpose of asking the favor that you will have some stipulation with the Englishmen who shall challenge for the America's Cup that before it leaves the country the boat that would it shall have an opportunity to try to keep it. At fifteen days' notice the America will be ready to sail from Newport for New York Harbor.

"If those having this matter in charge prefer it, I will put the America at the disposal of the New York Y. C. to sail such a race, requiring only that she may sail under the charge, with full authority, of my sailing master, Captain James H. Reid, in whose competency, he having sailed her for the past twelve years, I have the utmost faith."

To the Editor of The Sun—I thank you for your very complimentary notice of my note to Mr. Bennett, asking that the Queen's Cup, won by the yacht America against all England, should not be allowed to be taken back by a competing yacht from England until the America, which was built, should be permitted to have a race to retain it.

I supposed that the matter would not get into the newspapers, at least until some decision was made, and regret it has so done, because I am simply attending to my business as a lawyer now, and don't want to have my attention diverted by the discussion of any question, however pleasant it might be on a fine afternoon in the summer to contemplate it on board the America.

There seems to be an entire misunderstanding by the press of this matter, and hence this note. I did not ask to sail against the Englishman until he has beaten the whole New York Y. C., and all that they can do. I only asked that some stipulation might be made that my poor old schooner might sail against the Englishman before he carried away the Cup. One man says: "Oh, that cannot be permitted, because it would be admitting that we had made no progress in naval architecture since 1850," and that fact is just what I believe. We have made a great deal of progress in the manner of sailing vessels and rigging them, but it is a question not yet fully settled whether the 70 tons of ballast which, with the exception of what is retained as shifting ballast, is securely fastened among the timbers of the America had better be taken out and put on to her keel, in order, as the phrase is, to stiffen her. Now, that is exactly what I am afraid it would do, and before I sail the America with the Englishmen, if I am allowed to sail at all, I shall try that experiment and find out whether the ballast is better where it is or down below her bottom in the keel.

Again it is said, I see, that the America is a schooner, and what the Englishmen are going to send over here is a sloop cutter-rigged, and that a man is a fool who thinks he can sail a schooner against a sloop of the same size. Well, that depends upon where they step the mast in the sloop, and it can't be done right always the first time trying. You may not know, Mr. Editor, that the way the place is found where to put a sloop's mast in a yacht is, first, by very careful and accurate calculation of the center of figure, the evenness of draft, the center of resistance, and the center of propelling force on the sails; and after all that is calculated carefully and thoroughly, some sailor who never sees the calculations, gives a good guess where the mast ought to be put and it is placed there.

Besides, I do not see any reasons why a sailing machine should come over here to take the America's Cup, won by a schooner from all the schooners of England, and that sailing machine a sloop. When the America went over to England she had a consort that was a sloop, and the English yachtsmen would not admit, as I am informed, that consort sloop to go into the race at all as against their schooners, and they admitted that they had no sloop to compete with her.

But why, again, need anybody trouble themselves about the America being a schooner? In ten days I can make a sloop of her, and make my guess where her mast ought to be as well as another. If I find it not in the right place, and she don't sail as well as she used to do, I can move it until I find out whether she can ever sail as well as a sloop as she did as a schooner. And if I don't then make her sail better as a sloop, I will put her schooner masts in her again, for I know where they ought to be placed to an inch.

I see some New York yachtsmen say that the America is only a "fourth-rate yacht." Well, be it so. But as I am writing this I look up from my table and see her diploma in front of me, which shows that the America won the Centennial International race of 1876 of five hundred miles against the first-class yachts which the New York Y. C. selected to beat her, which tends to show at least that the "fourth-class yacht" of 1850 was better than the first-class of 1876, and tends to confirm me in what I said before, that our naval architecture has not improved in the last thirty-five years any more than our navy has done in that time. I may add that the America never has been tipped over while lying at anchor, and has never lost a spar in the last ten years, although she has been in the waters of the northern ocean, on the coast of Labrador, Newfoundland, and in the Gulf of St. Lawrence (not to mention a hurricane or two in the southern ocean) much oftener than she has been at Newport or New London.

Let me give you another instance of a distinction between a "fourth-rate" American yacht of 1850 and a first-class yacht of the New York Y. C. of 1877. The Canadians sent the yacht Countess of Dufferin to contest for the America's cup in that year. The New York Y. C. chose the Madeline as their fastest schooner yacht to retain the cup. Of course they picked their best one. The America happened to be cruising in New York harbor the day of the race, and we had a party of ladies and gentlemen on board who wanted to see the Dufferin and Madeline contest, which was twenty miles to windward and back, and a fair breeze. Although not in racing trim, my sailing master thought that he would sail the course; and thereupon we beat the Madeline, which was a larger boat, up to the windward stake one minute and forty seconds, in cruising trim. There are a half dozen gentlemen who know this fact. And nobody has ever offered to take a race dead to windward since with the America, which was her race that won the cup; and anybody can be accommodated with such a race whenever she is in commission, upon proper notice, on a day when there is a six-knot breeze and upward, neither yacht to refuse to sail because there is too much wind. I agree she won't drift in a calm quite so fast as the first-class yachts of the New York Y. C.

Let me add, I believe yachting is only to be tolerated as a healthgiving amusement, and as tending to show the best form of the sailing or steam vessel for industrial and commercial purposes. Now, what earthly use can it be to exhibit a vessel 15ft. wide and drawing 15ft. of water, which is to carry, to make her efficient, all possible carrying tonnage in the shape of lead in her keel, with no room in her for anybody to sit up or lie down? Seamen can never use such a contrivance practically, and the yachting dudes will be afraid to go in her experimentally lest they should get wet.

Very truly yours,
BENJ. F. BUTLER.

16 PEMBERTON SQUARE, BOSTON, March 20.

[It has already been proposed, in the event of Galatea winning the second series of races, to demand a third series, and it would be a little too much, even without this, to ask that she or Genesta should sail a final series with the America, interesting as such a contest would be. General Butler evidently means business, in which case he can probably make a private match with one or both of the cutters. If he is willing to make the change of rig to a sloop, no doubt the America would gladly be received in the trial races, in which case it would depend on her merit only whether she would be selected in preference to the new sloops. Otherwise the New York Y. C. have no right or power to stipulate that she, in addition to their chosen boat, shall be beaten in order to take the Cup abroad. We differ from General Butler in his estimate of the cutter and those who sail them, but his offer is evidently made in a sportsmanlike spirit, and we hope, in the interests of yachting, that the old America will be able to enter against the new sloops and cutters, in order that a fair comparison may be made.]

THE AMERICA CUP.

IT will be gratifying to the many who are interested in the coming contest for the America's Cup, to know that on the part of American yachtsmen all has been done that is possible to secure fitting representatives and a fair race. The New York Y. C. will have ready by June a sloop large enough to match evenly with Genesta and Galatea. She will be a centerboard sloop of moderate beam and depth, in model, build and rig embodying the latest ideas of American yachtsmen; and while a different boat from the Gracies and Fannys of old, she is qualified in every way to represent America in the coming races.

The issue at stake is not merely the possession of a piece of silverware, but the broader and more important one of type; centerboard or keel, moderate beam or narrow beam, and the new iron boat is a worthy champion of the views so long held here. The contests in our waters since 1880 have set at rest many disputed questions, and disposed of extreme beam, shoal draft and similar theories, while abolishing many crudities in rig; now remains the contest between centerboard and keel.

Besides the iron sloop is the yacht mentioned last week as building in Boston. This boat will be 93ft. over all, 80ft. waterline, 23ft. beam, 9ft. depth, 8ft. draft, and with board 18ft., thus making a wider but deeper boat than the New York sloop. Like the other, she will have a jib and staysail. A trial of these boats in the early summer will give a choice between two sloops, both thoroughly American, but varying in proportions, the better of which will be selected to meet the visitors. No other yachts have yet been commenced, and it is not likely that any will be built, as the time is already becoming short in which to complete and try them. The New York sloop is well under way, and will no doubt be completed on time, while the Boston sloop has been commenced by Lawley & Son, who have her keel out, and timber on the ground, and expect to have her ready by June 10 for a trial. Thus far all is satisfactory, and there is no reason to fear that when she comes to the line in August America will be ashamed of her champion.

Some interest has been aroused of late by the offer of the owner of the old America to put her in trim to sail against the cutters for the Cup she originally won. The idea is very poetical and pretty, to have her defend in her old age the Cup won in her first season, but fast as the America was, and probably is yet, it is by no means likely that she can do with Genesta and Galatea what she once did with Alarm and Titania. Without actual figures it is impossible to calculate the measurement and allowance of either of the new sloops or cutters, but it is extremely probable that the hue and cry over the present rule of the New York Y. C. will subside when the facts are known, and that the waterline lengths of area at least of the sloops will be increased no more than the cutters' by the sail area, and that it will amount virtually to an allowance on waterline length.

FITTING UP SMALL YACHTS.

THE question of fitting up a small yacht has lately been discussed in the London *Field*, a correspondent, "W," asking for suggestions as to how to fit up his yacht.

Mr. J. W. Wileocks, an old yachtsman and sailor, answers "W.'s" inquiry as follows, his remarks being applicable as well to many American boats:

The first thing to take into consideration would apparently be the proposed head-room, namely 5ft. 2in. This is manifestly too little to allow of standing upright, and unless you can do this there is considerable discomfort if you live continually on board. Sufficient height to stand up can manifestly be obtained only by a high coaming and arched hatch, and to this many have a very great objection, as they are of opinion the appearance of the craft is thereby spoiled. Although I consider the hatch certainly detracts from the appearance of a little vessel, the comfort you can obtain, if thereby you can stand upright, is very great. Having been much at sea in small yachts, as well as large, I have found great fatigue to follow from want of head room to straighten one's self under the deck, for the back and loins suffer very much through moving about in a stooping posture. A coaming a foot high, with an arched hatch over, will give the necessary height when added to the proposed 5ft. 2in. Supposing the craft to be 26ft. 6in. on L. W. L., she will not be less, I apprehend, than 31ft. over all, *i. e.*, to the end of counter or taffrail. The mast would thus, I presume, be placed about 10ft. from the fore side of the stem head and the after bulkhead of the cabin, at a distance of 20ft., measuring backward, from the fore side of the stem. Two feet and a half would be required for pantry and cabinet *vis a vis*, half of which length could be taken from before and half of it from behind the mast, which will reduce the length of cabin 1ft. 3in., leaving it 8ft. 3in. At the after end of the cabin, on each side, might be a cellaret, or, as "W." intends to live on board most part of the season, a cupboard on each side, with shelves, would probably be more useful, reaching to the deck or hatch. One of these cupboards will have holes cut in the shelves for bottles and glasses, in the other the shelves should be movable, so that a small basket, a large tin, or a bag or two may be stowed inside it. The settees or sofa berths can only be 2ft. wide, as the platform or floor of the cabin should not be less than 2ft. wide, and a foot will be a convenient height by the time the mattress cushions are placed on them, which may be stuffed with a stratum of cocoanut fiber and horsehair on the top, the two to make the cushions 6in. thick. These settees will, as usual, form lockers, but they should not be made with the small openings which are so common, but the covers be in three pieces, by which means any long object can be stowed in them. If the legs for the yacht are made of galvanized bar iron, with feet to screw on and off, they may be stowed well in these lockers. For so small a craft a fixed table will be inconvenient in the cabin, and a folding one hinged forward aft, and attached to the bulkhead would be more convenient, with a galvanized iron bar at the after end, the foot of which should step into a socket in the floor, to keep the table steady. It should have a rim, or ledge, round it, and should also be crossed with fiddles, to be used at lively times to prevent the fetching away of the crockeryware. Net racks will be found useful at the back of the sides of the cabin for charts, fishing rods, etc. Over the table against the fore bulkhead a small bookcase for nautical literature may be fixed. For small yachts folding-bed places are very convenient, as the bedding is contained therein, and is quite out of the way when not in use. They fold back by aid of hinges against the cabin sides, and form a back to the cabin as to a sofa. The bed places could be made on this plan 5ft. 6in. wide. There should be at least one folding bed-frame in the forecastle. The well, 5ft. long, should have folding seats. The lockers should have their doors without hinges, and be kept in place by the ends of battens crossing them, and these doors should be in two lengths. They should not be crossed perpendicularly with any upright piece of wood, as it may be convenient to put large objects into them at times. At the back of the well the locker door should reach the deck level. In the majority of small yachts the openings of lockers are far too contracted. A capacious tank should be fitted under the well platform, having a pipe leading to a pump close to the pantry; level of

well platform to be 22in. above that of the cabin. These seem the chief essentials for comfort.

Another correspondent, "J. M.," writes as follows on the same subject: Last year I built the seven-tonner Avron. I entirely discarded all "sideboards" or "buffets," and had two 6ft. sofas put in in the usual way, aft of the forecastle bulkhead. Aft of these I put in two raised bunks, about 11ft. 6in. higher than the sofas, and by raising them I got plenty of room for carrying them a long way aft, the after 3ft. being inclosed between the casing of the cockpit (which is very small and shallow) and the ceiling of the vessel, while the forward half of the bunks is in the cabin. There is room for a large cupboard under each bunk, and the paneling (teak and pitch pine) runs flush in a fine curve right through from the forward bulkhead to the after end of the bunks, giving a delightful air of space and openness. There are curtains to inclose these bunks when in use for sleeping. Another point in the arrangement was the door into the forecastle. This I had divided into two parts like an ordinary barn door, so that the top part would open right back clear of everything, which, of course, the ordinary door will not do, owing to the sofa locker. We have no paid hand, and we found this arrangement most useful for meals, as, with the lower half closed, one hand could sit close up to the doorway; and the "cook" sat by the stove in the forecastle, and yet was not out of our company. We have a tank (about forty gallons) under the well. The boat is flush-decked, and has about the head room of "W.'s" boat. There is a 5ft. skylight 2ft. 6in. in width.

HULL Y. C.

A MEETING of the Regatta Committee of the Hull Y. C., was held last Monday evening at the Parker House, Boston, and sailing regulations for the coming season were adopted. The courses for the first and second class will be 11½ miles, with a time limit of 4 hours; courses for third class, 7½ miles, time limit 3 hours; courses for fourth, fifth and sixth classes 6 miles, with a time limit of 3 hours.

The yachts are classed as follows:

First class, over 30ft. sailing length.
Second class, 25ft. and not over 30ft. sailing length.
Third class, 22ft. and not over 25ft. sailing length.
Fourth class, 20ft. and not over 22ft. sailing length.
Fifth class, 18ft. and not over 20ft. sailing length.
Sixth class, under 18ft. sailing length.

Schooners to sail three-quarters actual measurement, neither crew nor ballast to be allowed upon outriggers. The start to be the same as last year, from one gun. The pennant race will take place June 20, club race July 18 for cash prizes, championship races Aug. 1 and Sept. 5. Cash prizes to be given in each race and a medal for winner of series. The sail off for championship Sept. 19. A ladies' race will also take place, the date of which is undecided. The grand open regatta will take place Aug. 15. Large cash prizes will be given.

During the summer entertainments will be given every week at the club house, Hull. Several of which are being perfected at present. The annual ball will probably take place on the evening of the opening regatta, Aug. 15. The new books are in press and will be issued soon; they are a great improvement on the ones of last year.

RULES OF THE ROAD.

THE following Revised International Regulations for Preventing Collisions at Sea, were adopted by the Forty-Eighth Congress on March 3:

ARTICLE 1. In the following rules every steamship which is under sail and not under steam is to be considered a sailing ship, and every steamship which is under steam, whether under sail or not, is to be considered a ship under steam.

RULES CONCERNING LIGHTS.

ART. 2. The lights mentioned in the following articles numbered 3, 4, 5, 6, 7, 8, 9, 10 and 11, and no others, shall be carried in all weathers from sunset to sunrise.

ART. 3. A seagoing steamship, when under way, shall carry—

(*a*) On or in front of the foremast, at a height above the hull of not less than twenty feet, and if the breadth of the ship exceeds twenty feet, then at a height above the hull not less than such breadth, a bright white light, so constructed as to show a uniform and unbroken light over an arc of the horizon of twenty points of the compass, so fixed as to throw the light ten points on each side of the ship—namely, from right ahead to two points abaft the beam on either side and of such a character as to be visible on a dark night, with a clear atmosphere, at a distance of at least five miles.

(*b*) On the starboard side a green light, so constructed as to show a uniform and unbroken light over an arc of the horizon of ten points of the compass, so fixed as to throw the light from right ahead to two points abaft the beam on the starboard side, and of such a character as to be visible on a dark night, with a clear atmosphere, at a distance of at least two miles.

(*c*) On the port side a red light, so constructed as to show a uniform and unbroken light over an arc of the horizon of ten points of the compass, so fixed as to throw the light from right ahead to two points abaft the beam on the port side, and of such a character as to be visible on a dark night, with a clear atmosphere, at a distance of at least two miles.

(*d*) The said green and red side lights shall be fitted with inboard screens projecting at least three feet forward from the light, so as to prevent these lights from being seen across the bow.

ART. 4. A steamship when towing another ship shall, in addition to her side lights, carry two bright white lights in a vertical line, one over the other, not less than three feet apart, so as to distinguish her from other steamships. Each of these lights shall be of the same construction and character, and shall be carried in the same position as the white light which other steamships are required to carry.

ART. 5 (*a*). A ship, whether a steamship or sailing ship, which from any accident is not under command, shall at night carry, in the same position as the white light which steamships are required to carry, and if a steamship, in place of that light, three red lights in globular lanterns, each not less than ten inches in diameter, in a vertical line, one over the other, not less than three feet apart, so as to be visible on all round the horizon at a distance of at least two miles, and shall by day carry in a vertical line, one over the other, not less than three feet apart, in front of but not lower than her foremast head, three black balls or shapes, each two feet in diameter.

LAYING TELEGRAPH CABLE.

(*b*) A ship, whether a steamship or a sailing ship, employed in laying or picking up a telegraph cable, shall at night carry, in the same position as the white light which steamships are required to carry, and if a steamship, in place of that light, three lights in globular lanterns, each not less than ten inches in diameter, in a vertical line, over one another, not less than six feet apart. The highest and lowest of these lights shall be red, and the middle light shall be white, and they shall be of such a character that the red light shall be visible at the same distance as the white light. By day she shall carry, in a vertical line, one over the other, not less than six feet apart, in front of but not lower than her foremast head, three shapes not less than two feet in diameter, of which the top and bottom shall be globular in shape and red in color, and the middle one diamond in shape and white.

(*c*) The ships referred to in this article when not making any way through the water shall not carry the said lights, but when making way shall carry them.

(*d*) The lights and shapes required to be shown by this article are to be taken by other ships as signals that the ship showing them is not under command, and cannot therefore get out of the way. The signals to be made by ships in distress and requiring assistance are contained in article 27.

ART. 6. A sailing ship under way or being towed shall carry the same lights as are provided by article 3 for a steamship under way, with the exception of the white light, which she shall never carry.

ART. 7. Whenever, as in the case of small vessels during bad weather, the green and red side lights cannot be fixed, these lights shall be kept on deck, on their respective sides of the vessel, ready for use, and shall, on the approach of or to other vessels, be exhibited on their respective sides in sufficient time to prevent collision, in such manner as to make them most visible, and so that the green light shall not be seen on the port side nor the red light on the starboard side. To make the use of these portable lights more certain and easy, the lanterns containing them shall each be painted outside with the color of the light they respectively contain, and shall be provided with proper screens.

ART. 8. A ship, whether a steamship or a sailing ship, when at anchor, shall carry, where it can best be seen, but at a height not exceeding 20ft. above the hull, a white light, in a globular lantern of not less than 8in. in diameter, and so constructed as to show a clear, uniform and unbroken light, visible all round the horizon at a distance of at least one mile.

ART. 9. A pilot vessel, when engaged on her station on pilotage duty, shall not carry the lights required for other vessels, but shall carry a white light at the masthead, visible all round the horizon, and shall also exhibit a flare-up light or flare-up lights at short intervals, which shall never exceed fifteen minutes. A pilot vessel, when not engaged on her station on pilotage duty, shall carry lights similar to those of other ships.

ART. 10. Open boats and fishing vessels of less than twenty tons net registered tonnage, when under way and when not having their nets, trawls, dredges or lines in the water, shall not be obliged to carry the colored side lights; but every such boat and vessel shall in lieu thereof have ready at hand a lantern with a green glass on the one side and a green glass on the other side, and on approaching to or being approached by another vessel such lantern shall be exhibited in sufficient time to prevent collision, so that the green light shall not be seen on the port side nor the red light on the starboard side.

FISHING VESSELS.

The following portion of this article applies only to fishing vessels and boats when in the sea off the coast of Europe lying north of Cape Finisterre:

(*a*) All fishing vessels and fishing boats of twenty tons net registered tonnage or upward, when under way and when not having their nets, trawls, dredges or lines in the water, shall carry and show the same lights as other vessels under way.

(*b*) All vessels when engaged in fishing with drift nets shall exhibit two white lights from any part of the vessel where they can be best seen. Such lights shall be placed so that the vertical distance between them shall not be less than six feet and not more than ten feet, and so that the horizontal distance between them, measured in a line with the keel of the vessel, shall not be less than five feet and not more than ten feet. The lower of these two lights shall be the more forward, and both of them shall be of such a character and contained in lanterns of such construction as to show all round the horizon, on a dark night, with a clear atmosphere, for a distance of not less than three miles.

(*c*) All vessels when trawling, dredging or fishing with any kind of drag nets, shall exhibit, from some part of the vessel where they can be best seen, two lights. One of these lights shall be red and the other shall be white. The red light shall be above the white light, and shall be at a vertical distance from it of not less than 6ft, and not more than 12ft, and the horizontal distance between them, if any, shall not be more than 10ft. These two lights shall be of such a character and contained in lanterns of such construction as to be visible all round the horizon on a dark night, with a clear atmosphere, the white light to a distance of not less than three miles and the red light of not less than two miles.

(*d*) A vessel employed in line fishing, with her lines out, shall carry the same lights as a vessel when engaged in fishing with drift nets.

(*e*) If a vessel, when fishing with a trawl, dredge or any kind of drag net, becomes stationary in consequence of their gear getting fast to a rock or other obstruction, she shall show the light and make the fog signal for a vessel at anchor.

(*f*) Fishing vessels and open boats may at any time use a flare-up in addition to the lights which they are by this article required to carry and show. All flare-up lights exhibited by a vessel when trawling, dredging or fishing with any kind of drag net, shall be shown at the after part of the vessel, excepting that if the vessel is hanging by the stern to her trawl, dredge or drag net, they shall be exhibited from the bow.

(*g*) Every fishing vessel and every open boat when at anchor between sunset and sunrise, shall exhibit a white light, visible all round the horizon at a distance of at least one mile.

(*h*) In a fog a drift-net vessel attached to her nets, and a vessel when trawling, dredging or fishing with any kind of drag net, and a vessel employed in line-fishing with her lines out, shall, at intervals of not more than two minutes, make a blast with her fog horn and ring her bell alternately.

ART. 11. A ship which is being overtaken by another shall show from her stern to such last mentioned ship a white light or a flare-up light.

SOUND SIGNALS FOR FOG.

ART. 12. A steamship shall be provided with a steam whistle or other efficient steam sound signals, so placed that the sound may not be intercepted by any obstructions, and with an efficient fog horn, to be sounded by a bellows or other mechanical means, and also with an efficient bell. (In all cases where the regulations require a bell to be used a drum will be substituted on board Turkish vessels.) A sailing ship shall be provided with a similar fog horn and bell.

In fog, mist or falling snow, whether by day or night, the signals described in this article shall be used as follows, that is to say:—

(*a*) A steamship under way shall make with her steam whistle or with other steam sound signal, at intervals of not more than two minutes, a prolonged blast.

(*b*) A sailing ship under way shall make with her foghorn, at intervals of not more than two minutes, when on the starboard tack, one blast; when on the port tack two blasts in succession, and when with the wind abaft the beam three blasts in succession.

(*c*) A steamship and a sailing ship, when not under way shall, at intervals of not more than two minutes, ring the bell.

SPEED OF SHIPS TO BE MODERATE IN FOGS.

ART. 13. Every ship, whether a sailing ship or a steamship shall, in a fog, mist or falling snow, go at a moderate speed.

STEERING AND SAILING RULES.

ART. 14. When two sailing ships are approaching one another so as to involve risk of collision, one of them shall keep out of the way of the other as follows, namely:

(*a*) A ship which is running free shall keep out of the way of a ship which is close hauled.

(*b*) A ship which is close hauled on the port tack shall keep out of the way of a ship which is close hauled on the starboard tack.

(*c*) When both are running free, with the wind on different sides, the ship which has the wind on the port side shall keep out of the way of the other.

(*d*) When both are running free, with the wind on the same side, the ship which is to windward shall keep out of the way of the ship which is to leeward.

(*e*) A ship which has the wind aft shall keep out of the way of the other ship.

ART. 15. If two ships under steam are meeting end on, or nearly end on, so as to involve risk of collision, each shall alter her course to starboard, so that each may pass on the port side of the other. This article only applies to cases where ships are meeting end on, or nearly end on, in such a manner as to involve risk of collision, and does not apply to two ships which must, if both keep on their respective courses, pass clear of each other. The only cases to which it does apply are when each of the two ships is end on, or nearly end on, to the other; in other words, to cases in which by day each ship sees the masts of the other in a line, or nearly in a line, with her own, and by night to cases in which each ship is in such a position as to see both the side lights of the other. It does not apply by day to cases in which a ship sees another ahead crossing her own course, or by night to cases where the red light of one ship is opposed to the red light of the other, or where the green light of one ship is opposed to the green light of the other, or where a red light without a green light, or a green light without a red light, is seen ahead, or where both green and red lights are seen anywhere but ahead.

ART. 16. If two ships under steam are crossing so as to involve risk of collision, the ship which has the other on her own starboard side shall keep out of the way of the other.

ART. 17. If two ships, one of which is a sailing ship and the other a steamship, are proceeding in such directions as to involve the risk of collision, the steamship shall keep out of the way of the sailing ship.

ART. 18. Every steamship when approaching another ship so as to involve risk of collision shall slacken her speed, or stop and reverse if necessary.

ART. 19. In taking any course authorized or required by these regulations a steamship under way may indicate that course to any other ship which she has in sight by the following signals on her steam whistle, namely:

One short blast to mean, "I am directing my course to starboard."
Two short blasts to mean, "I am directing my course to port."
Three short blasts to mean, "I am going full speed astern."

The use of these signals is optional, but if they are used the course of the ship must be in accordance with the signal made.

ART. 20. Notwithstanding anything contained in any preceding article, every ship, whether a sailing ship or a steamship, overtaking any other ship, shall keep out of the way of the overtaken ship.

ART. 21. In narrow channels every steamship shall, when it is safe and practicable, keep to that side of the fairway or mid-channel which lies on the starboard side of such ship.

ART. 22. Where by the above rules one of two ships is to keep out of the way the other shall keep her course.

ART. 23. In obeying and construing these rules due regard shall be had to all dangers of navigation, and to any special circumstances which may render a departure from the above rules necessary in order to avoid immediate danger.

NO SHIP TO NEGLECT PROPER PRECAUTIONS.

ART. 24. Nothing in these rules shall exonerate any ship, or the owner or master or crew thereof, from the consequences of any neglect to carry lights or signals, or of any neglect to keep a proper look-out, or of the neglect of any precaution which may be required by the ordinary practice of seamen or by the special circumstances of the case.

RESERVATION FOR INLAND NAVIGATION.

ART. 25. Nothing in these rules shall interfere with the operation of a special rule, duly made by local authority, relative to the navigation of any harbor, river or inland navigation.

LIGHTS FOR SQUADRONS AND CONVOYS.

ART. 26. Nothing in these rules shall interfere with the operation of any special rules made by the government of any nation with respect to additional station and signal lights for two or more ships of war or for ships sailing under convoy.

ART 27. When a ship is in distress and requires assistance from other ships or from the shore, the following shall be the signals to be used or displayed by her, either together or separately, that is to say:

In the daytime—

First—A gun fired at intervals of about a minute.

Second—The international code signal of distress, indicated by N. C.

Third—The distant signal consisting of a square flag, having either above or below it a ball, or anything resembling a ball.

At night—

First—V gun fired at intervals of about a minute.

Second—Flames on the ship (as from a burning tar barrel, oil barrel, and so forth.

Third—Rockets or shells, throwing stars of any color or description, fired one at a time at short intervals.

SEC. 2. That all laws and parts of laws inconsistent with the foregoing "Revised International Rules and Regulations" for the navigation of all public and private vessels of the United States upon the high seas, and in all coast waters of the United States are hereby repealed, except as to the navigation of such vessels within the harbors, lakes and inland waters of the United States: and that this act shall take effect and be in force from and after the first day of September, anno Domini 1884.

Approved March 3, 1885.

SWINGING CENTERBOARDS.

Editor Forest and Stream:

In your last issue I see that Captain Scott describes a swinging keel. I have had some experience with the aforesaid "contraption" (as an old skipper called it), and I cannot say that the arrangement is a success. My keel was attached in a slightly different manner from the one described, but the principle was the same. I used chains at first for stays, one on each side, but they chafed all the paint off the sides of the boat; then I used wire rope with the same result, and to obviate this difficulty I had to place guides on the bilge and sides of the boat for the ropes to run in; then from the kinks in the rope and its slipping on the cleats, at times it required considerable figuring to ascertain whether the keel was at an angle of 30° on the starboard side, or jammed up against the bottom on the port side. Finally, after bringing up all standing several times on sundry rocks and sandbars, I voted the concern a nuisance and took it off, but not before I had seriously damaged my boat. The worst feature about the affair is that it tempts a man into places where there is not sufficient water for it, and he goes in under the delusion that he can pull it up when he sees bottom, but the general result is that something else requires attending to about the time it ought to be pulled up, and the consequence is that some damage is done. A centerboard will take care of itself in such places, to a great extent, and with a permanent keel a man will stay where there is plenty of water, but with the half and half arrangement "eternal vigilance is the price of safety."

CRICKET.

DECORATIONS FOR CLUB ROOMS.

THE New York Y. C. have requested all yacht owners to contribute copies of their private signals to decorate the model room of the club. Each flag is to be 18in. wide at the staff and 30in. long. No more appropriate method of decorating a club house can be found than by flags, many of which have special value from old associations, while it is a method easily carried out, as each member's part in it is very small. The club meeting room, above all things, should be cosy and cheerful, with models, flags, books, pictures, any odds and ends of a nautical character. A library is a prime requisite, if the room is to be the attraction and factor of club life that it should be, but to purchase one outright is expensive. A good beginning is a small bookcase or even shelf, where such volumes as can be gathered together may find a suitable resting place. Members may be requested to loan such books as they can and also to contribute, and with such a nucleus as any club can begin with, providing it is well managed, a library will soon grow up. Similarly with models; if those available at first are mounted, varnished, hung in suitable places and kept clean and in repair, others will soon join them. The main thing in such a collection is to make a beginning, and next, to keep all that is gained, not allowing anything to be abused or lost. If this is done, each member will take an interest in the library or other collections that will soon bear visible fruits. No matter how small a club may be, a club room is a prime necessity to thorough union and co-operation. We have before sketched out a scheme for club quarters which may be followed on a large or small scale. In places where a building site cannot be obtained, or where piling and foundations are expensive, any old scow or hulk that will float may be moored, and on it a house 15 to 20ft. square, or larger if possible, can be built at small expense and fitted up in the manner indicated above, making a comfortable meeting room, a general rendezvous, and a backbone around which the club may firmly grow.

YACHTING NOTES.—Mr. Phelps's new schooner, now building at Nyack, will be named Brunhilde.... Mr. J. A. Osgood has sold the well-known Boston sloop Gem.... Captain Dick Brown, the pilot of the America on her visit to England in 1851, is laid up at his home in Brooklyn with rheumatism. Captain Brown is now 74 years old.... The Ceylon, lately arrived at New Orleans, is not a steam yacht, but an ocean steamer with a party of excursionists on board.... Nettie. This sloop has been purchased by Mr. Chas. A. Post, S. C. Y. C. She was built by Wallin & Gorman in 1879.... Mr. Andrus's new sloop will have a laced mainsail with Mr. Cary Smith's patent roached foot. This device is not intended to give the advantages of a loose-footed mainsail, but to secure a better sitting sail, as it can be tightened on the foot or slacked up to accommodate it to all changes.... The yawl building in New Haven from the model of the Windward will be called Rommer.... Mr. J. M. Sawyer is busy with the sails for the new steam yacht Cora, for Mr. Woodward's steel steam yacht. Mr. Phelps's schooner Brunhilde, Mr. Wayland's sloop Viola, the two new sloops building at Mumm's for Messrs. Maxwell and Howe, Mr. Frank Fowle's new sloop at Wallin & Gorman's, a smaller sloop at the same place, Mr. Ziegler's Thistle, now being altered at Greenport, the sloop Hope, and Mr. Andrus's new sloop, building by Vought, of Harlem.... The steam yacht Ibis has been sold by Mr. F. L. Higginson to Mr. S. C. Florence. She was built by L. A. Hoagland, at New Brunswick, N. J., in 1873, and her engines were built by Cramp & Son, of Philadelphia.... Hutchings & Pryor are building a small catboat, length over all, 19ft. 6in.; beam, 10ft.; draft, 15in. She is for their own use and will be named Rival.... The Nomad, a boat that has been very successful in the Beverly Y. C. races, has been sold by her owner, J. J. Fay, to a member of the New Bedford Y. C.... Gaoviota.—A model of this sloop has been added to the collection of the New York Y. C.... San Francisco.—The yachts are overhauling for the season. Halcyon, Lurline, Chispa, Nellie and Fleur de Lis are all nearly ready.. The schooners Ariel and Eva have been sold to go into trade. The Startled Fawn has been painted white instead of black this season.

NOTES FROM OSWEGO.—There will be plenty of sailing here next season. The purchase last fall of the good-sized McGlehan yacht Ethel by three of our most popular young business men has strengthened the weaker side of the club, namely, the limited number of vessels. The addition of the steam yacht Ruth, brought up from salt water, gives an impetus that is very gratifying to all interested in the club. The different yachts will be launched about the middle of May. A backward season is expected on the lakes, as every corner and crevice is frozen up tight. The Katie Gray will receive a new cabin, her old one having withstood the wrenching of nearly forty hard-fought races. The Cricket will dance at her buoy complete in every detail, probably the best fitted 10-tonner in lake waters. A most needful move is being made in the direction of comfortable tenders to our yachts. Burke has turned one out for the Laura, Goble one for the Fascination, and Henley is to build a roomy, handsome dingey for the Katie Gray. A building is contracted for, to be erected just east of our club house, to accommodate the rapidly increasing number of boats which are being purchased by members of the club. I think the lively interest which is manifested in the coming struggle for the Cup is spreading into all yachting circles. Mr. Wm. E. Lee, who has been the secretary of the club since its organization, and one of its most skilled yachtsmen, has accepted a position in a New York commission house and his resignation as secretary has been handed in. We hand Mr. Lee over to salt water breeze with great reluctance; his place as a brother tar and officer of the club cannot be speedily replaced.—KATIE GRAY.

YACHT STOVES.—Fall River, Mass.—*Editor Forest and Stream:* In late issues of the FOREST AND STREAM I notice recommendations of different kinds of stoves for small yachts. After having tried about all kinds, from the old fashioned charcoal furnace to the regular coal stove, I have settled upon the gasoline stove as the cleanest and nicest, as well as the most economical. If you think proper to place this on record, you are perfectly at liberty to do so. Last summer, on a cruise of two weeks duration, I used one, cooking two meals a day for four persons, and my fuel expense was just twenty cents. Can any one beat this?—J. BORDEN, JR.

NEWARK Y. C.—The programme for Decoration Day is as follows, the course being 20 miles triangular, starting from the club house at Greenville: First class, for cabin sloops only; second class, for open boats, jib and mainsail; third class, for catboats over 18ft.; fourth class, for catboats 18ft. and under. A special race will be provided for catboats over 20ft. in length. In addition to the prizes for each class there will be a special prize given by the commodore for the boat making the best time in the regatta.

YACHT BUILDING AT GLOUCESTER.—Messrs. Higgins & Gifford, the yacht builders, of Gloucester, have been busy with small yachts this winter. They have built four boats to go to the West Indies, each 31ft. long, 12ft. beam, and 4ft. 6in. deep, cutter rigged. Besides these they have built a catboat for Boston, 23ft. long, 10ft. beam, and 2ft. 4in. deep, and two boats for Cape Cod, one sloop and one schooner rigged, each 28ft. long, 8ft. 6in. beam, and 3ft. 10in. deep. They have in hand contracts for a yacht on the model of the Sassacus, 18ft. 4in. long, 7ft. 6in. beam, 2ft. 4in. deep, with round stern, sloop rigged; also a sloop 22ft. long, 9ft. beam, and 2ft. 9in. deep. Higgins & Gifford are the builders of the small boats Little Western, Centennial, and Nautilus, that have made the trip across the Atlantic. They also make a specialty of seine and other fishing boats, ship's yawls and rowboats, as well as the Excelsior life boats.

"AHOI!"—This magazine, published in Potsdam, Germany, which made its appearance last year as a quarterly, now comes to us each month. The March number contains a number of interesting articles on yachting, besides diagrams of different rigs in general use. A new method of signaling a vessel's course is described, in which an endless line is run from the barrel of the steering wheel through a block hung aloft. To one side of this line a green light is hung, and to the other a red one. When the rudder is amidships the lights are abreast. If the wheel be turned to throw the rudder to starboard, the cord is wound and unwound on opposite sides of the barrel, raising the green light and lowering the red. If the rudder is turned the other way the red rises above the green, indicating that the vessel's head is turned to port. "Ahoi!" promises to be a valuable addition to the yacht literature of Germany, and we wish it all success.

CRUISING SLOOP ALICE.—We shall publish shortly the lines of a little cruiser now building by F. C. Smith of New Bedford, for Mr. D. W. Tryon of New York. She will be 24ft. over all, 21ft. 6in. on waterline, 10ft. beam on deck, 9ft. on waterline, 3ft. 6in. draft, with 3,000 pounds of ballast on keel. She is intended for knocking about the coast, cruising and sketching, and is of light enough draft to enter most of the harbors. Her name will be Alice, and she will have the usual sloop rig.

MARY TAYLOR.—An inquiry as to the date at which this famous boat was built has brought out a number of answers, placing it between 1848 and 1850. Mary Taylor was the first of Geo. Steers's departures from the old models, and the date of her building marks the beginning of the most important era in American yachting. We believe the boat was named after a popular actress of the time. Who can tell anything more about the subject?

RARITAN Y. C.—*Editor Forest and Stream:* The annual meeting of the Raritan Y. C. was held at their club house on March 4. The reports of the retiring officers and committees show the club to be in a healthy condition financially and otherwise, and the prospects of a bright and successful future for the club are exceedingly good. After the routine business had been disposed of, the club proceeded to elect their officers for the ensuing year, when the following gentlemen were chosen: Commodore, E. H. Hall; Vice-Commodore, J. G. Hall; Secretary, J. Lawrence Boggs, Jr.; Treasurer, F. A. Greenley; Measurer, C. W. Ramsay. Regatta Committee—Wm. King, Edward Pausch and George Foster, Jr.—J. L. BOGGS, JR., Secretary.

A RIG FOR "PATERFAMILIAS."—*Editor Forest and Stream:* On page 134 "Paterfamilias" inquires about rigs. I presume he has chosen his dimensions after sufficient consideration. To me they seem too small. To my mind, as accidents will occur, it seems a great mistake not to have ballast in such shape that it can be easily removed. I would suggest as a rig a mainsail stepped well forward, with a small mizzen on the counter. In case of sudden squall, etc., the mizzen will keep the boat's head to the wind. Ditto in reefing. I would recommend 3½ beams to length, taking for type measures 8ft. beam, 32ft. deck, 28½ft. waterline, depth of hull 5ft., with trunk 6ft. —PATER.

QUEBEC Y. C.—At a general meeting of the Quebec Y. C., held on the 13th of March, 1885, the following gentlemen were elected officers: Commodore, J. U. Gregory, Esq.; Vice-Commodore, John Ritchie, Esq.; Captain, John S. Thom, Esq.; Secretary, W. McLimont, Esq.; Treasurer, George C. Scott, Esq. Members of the Managing Committee—J. Hamilton, Esq., and Albert Peters, Esq.

ADRIFT IN AN OPEN BOAT.—Last week the life-saving crew on Sandy Hook rescued a man who was adrift in an open sail boat three miles from land. He had been blown off shore from Port Monmouth, N. J., and when discovered was nearly frozen, his boat being half filled.

NEW STEAM LAUNCH.—Mr. W. H. Sterling is having a steam launch built by S. Ayers, 37 Peck Slip, for use on Lake George. The N. Y. Safety Steam Power Co. will furnish the engine, the cylinder being 8x9ins.

ELISE—This handsome little centerboard cutter, now hauled out at the Knickerbocker Y. C. grounds, is offered for sale. She would make a splendid yacht for Corinthian sailing.

REMOVING MILDEW FROM SAILS.—Damp the sail, soap it over, and sprinkle with whiting over the worst parts, and damp again; then dry in the sun. Repeat the process.

"BLOW YE WINDS HEIGHO."—This book is for sale by Hunt & Co., 119 Church street, London, Eng. The price is about $1.50. It is not yet on sale in the United States.

HAVERHILL Y. C.—Mr. C. H. Stacy, Secretary of the Haverhill Y. C. writes us that the club has not disbanded, but is still in existence.

SEAWANHAKA C. Y. C.—The date of spring matches is June 13, instead of June 15 as given in our fixtures last week.

L'ESPERANCE.—This sloop, one of Geo. Steers's boats, is advertised for sale in another column.

NEW YORK Y. C.—A business meeting will be held at the club house this (Thursday) evening.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

W. C. S., Harrisburg.—See badge manufacturer's advertisement in our columns.

J. L. Z., Plantsville, Conn.—For the rabbits write to Reiche & Bro., Chatham street, New York.

O. A. W., Chicago, Ill.—The Mohican settee is illustrated in "Canoe and Boat Building," page 159.

H. R. H., Syracuse, N. Y.—A license is needed to run any steam engine, no matter what fuel is used.

F. D. B., Woodstock, Vt.—Last season a pure black raccoon was caught here. Are they common? Ans. No.

E. H. T., New York.—The book can be had of Hunt & Co., 119 Church street, London, England. Price about $1.50.

T. B. D., Ovid, Mich.—It is usually better to plank out to the sternpost, ship fashion, if the boat is deep enough aft to allow it.

F. W. H.—One whistle signifies that a steamer will keep to the right, leaving the other vessel on her port side. Two whistles signify that she will pass to the left.

F. C., Clyde, N. Y.—Will you be so kind as to give patterns and descriptions of rudders for canoes. Ans. A full description of all canoe rudders, with diagrams, will be found in Stephens's "Canoe and Boat Building," which we can send you. Price $1.50.

THE NYE CREASER CO., Monmouth, Ill.

"FOREST AND STREAM SERIES."

DEER HUNTING.

BY JUDGE JOHN DEAN CATON.

BY and by it will be time to hunt antelope and deer. It is always time to read about them. Judge Caton's book on the antelope, elk, deer, moose and caribou of America discusses in a readable way the life history of these animals and the methods of their capture. It is the work of an enthusiastic sportsman who has had a wide experience and has devoted the leisure of years to studying these interesting game animals. The volume is very fully illustrated, and is a perfect storehouse of information and entertainment. The first edition was sold by the Boston publishers at $4. Price $2.50.

WOODCRAFT.

BY "NESSMUK."

A COMPACT pocket handbook of condensed, boiled-down, concise, clear, comprehensive, sensible, practical camp gumption. "Nessmuk" has been "in the woods" in Michigan, New York, Pennsylvania, and South America, and this is a book for outers, wherever they kindle their camp-fire. The author believes in "smoothing it." He has learned how; now he tells others. It is much easier to learn from "Nessmuk" than from Dame Experience. We should not be surprised if "Woodcraft" completely revolutionized the methods of camping out. If you are going to the woods, read "Woodcraft" before you go. It may add to your trip a hundred fold. Price $1.00.

DOG TRAINING.

BY S. T. HAMMOND.

HE was a promisig puppy, and when you turned him over to the breaker to be educated, you thought he was bound to make "the best dog in the world." And you'll not soon forget how disappointed and disgusted you were when the dog, the breaker and the big bill—all three turned up together, and you saw that the animal's spirit was broken and it would take a steam calliope to make him mind. Now, this could not have happened if you had been wise enough to buy a copy of Hammond's book, and in your odd leisure moments *train* the dog yourself instead of having him *broken* by some one else. We are selling edition after edition of this book, and it is revolutionizing the system of preparing dogs for work in the field. Price $1.00.

SHORE BIRDS.

A PAMPHLET for those who "gun" along the shore. Tells of: I. Haunts and Habits—Where the bay birds live and what they do at home. II. Range and Migration—Where they go to breed and where to spend the winter. III. A Morning Without the Birds—An episode of shore shooting. IV. Nomenclature—A list of our American species of *Limicolæ*, with a description of each species. V. Localities—Where to go to shoot them. VI. Blinds and Decoys—How to shoot them after you have reached the grounds. 45 pp., paper. Price 15 cents.

ANGLING TALKS.

BY GEORGE DAWSON.

AS a political writer of conceded power, Mr. Dawson wielded a trenchant pen; when he terned from the conflict of parties to the praise of the favorite pastime of "simple wise men," his essays, limpid as the crystal streams, are aglow with the soft summer sunlight and melodious with the songs of birds. When angling was the theme, he wrote from a full heart and in closest sympathy with the scenes and pursuits described. These "Talks" are brimful of manly, wholesome sentiment; there is in them all not a particle of cant. Their sincerity and overflowing spirit at once win the reader, and he perforce shares the author's enthusiasm. The effect is magical, like that of the mimic players in Xenophon's *Memorabilia:* he who reads, if he be an angler, must go a-fishing; and if he be not, straightway then must he become one.—*Extract from Publishers' Preface.* Cloth, price 50 cents.

CANOE "AURORA."

BY DR. C. A. NEIDÉ.

A CHARMINGLY written and always entertaining account of a canoe cruise from Lake George, New York, down the Ohio and Mississippi Rivers to the Gulf of Mexico, by the Secretary of the American Canoe Association. To read the cruise of the "Aurora" is the next best thing to having made it; and the reading is decidedly more pleasant than would have been participation in some of the misadventures related. 216 pp., cloth. Price $1.00.

THE ITHACA GUN!

BEST ENGLISH TWIST BARRELS, $35.

DAMASCUS STEEL BARRELS, $50 to $200.

New Publication.

CANOE

THE FOREST AND STREAM began a year ago the publication of a series of papers on canoe construction, by Mr. W. P. Stephens, of the New York C. C., widely known as an expert on canoe design and building. These papers, having appeared through the year in our columns, have since been rewritten, and with numerous additions are now published in a handsome volume under the title of "Canoe and Boat Building for Amateurs." Mr. Stephens is peculiarly fitted for the preparation of such a work, beginning as an amateur, and having after a long experience of the difficulties attending a learner, taken a prominent place among canoe builders, due both to the model and workmanship of his canoes. Realizing fully the difficulty of explaining to a novice an art in itself far from easy,

AND

and with which he is entirely unfamiliar, the book begins with a description of the various classes of canoes in general use, with their main features and dimensions, and definitions of the terms used in connection with them. Numerous examples of canoes are given, and in connection with them, such plain instructions in designing as will enable the beginner to select intelligently the proper craft for his pur-

BOAT

pose, and to plan her dimensions, details and fittings. To this end designs of all classes of canoes are given, with full dimensions and details. The object has been not merely to enable the tyro to build one boat as described, but to teach him the principles of designing and building in such a way that he may construct such a craft as he desires, following the chapters on designing, the construction of a canoe is taken up in detail, the tools and appliances being first clearly described, as well as the various materials, after which follows the actual work of building. Every operation is taken up in order, from the selection of the keel to the varnishing of the finished boat, and illustrated with numerous diagrams.

A chapter on sails describes all the varieties in use by canoeists, down to the new Mohican settee, with directions for making, rigging and measuring them, while the method of proportioning the sails to the boat is clearly explained, all the calculations

BUILDING

being worked out in detail. The many minor points of a canoe, paddles, steering gears, rudders, aprons, and camp outfit are also described at length, while a chapter is devoted to canvas canoes.

The subject of boat building is fully treated, a rowboat of the usual construction being taken as an example, and described in all its parts in such a manner as to make clear the principles involved, and their application to any form of boat, either lapstreak or carvel build. Each of the numerous technical terms belonging to the subject is defined clearly when it first occurs, and as the index is full and complete, the book is in itself a glossary.

In addition to the numerous diagrams in the body of the work, twenty-four large plates are printed on bond paper, containing the working drawings of canoes for paddling, sailing, cruising

FOR

and racing, with their sail plans, rowing sailing boats, large canoe yawls, and various boats for special purposes, such as gunning boats, yacht boats, and the widely known sneakbox.

The canoe yawl, a boat between a canoe and a yacht, is illustrated by examples of various craft from 17 to 20ft. long, and suitable for a crew of two or three on a cruise. This class of boat, while little known among us as yet, is admirably fitted for cruising, and will meet the wants of many who object to a canoe as being too small, and yet desire a boat with the same excellent qualities. The boats and canoes illustrated are in all cases among the best of their class, the list of canoes including English, Scotch and American craft, and are all drawn

AMATEURS.

to scale, so as to be available as working drawings. The plates, for convenience in using, are placed loose in a tough manilla envelope and accompany the book.

Pp. 168, with 24 plates of working drawings. Price $1.50. Address,

Explanatory and Suggestive.

FOR THE CASUAL READER.

Arma virumque cano—"Arms and the man I sing." And, indeed, it would take the genius of a Virgil and the roll of Latin hexameters fitly to tell the deeds of this man, whose arms are shotgun and fishing rod. Go where you will, he is there. You run into him on the crowded city street, encounter him on cars and steamboats; he perches atop the country stage, bestrides the burro, and doubles up like a jacknife in the kanim. Seek out the most distant, most tortuous streams, his line has been wet in their waters; penetrate into the wilderness, the tin can of the sportsman's camp is yet further on. He goes for game—if the fates shall send anything within reach of his ammunition; for fish—if by good fortune a trout shall rise to his fly or descend to his worm. But, good luck or bad luck, game or no game, fish or no fish—fun always, fresh air, ozone, quicker pulse beat, brighter eye, more elastic step, all the multitudinous rewards, which, after all, outweigh the biggest "bags," and tip up the longest "strings." Is it not true that only a poet could tell his deeds as they ought to be told? Perhaps so. Perhaps not. He can usually tell them himself. And he does, with a thousand different pens, in a thousand different ways.

You may read it in the FOREST AND STREAM.

And that is better than if it were put into verse between book covers.

One who does not understand these things might imagine that after being told so often, this story of the man—him with the rod and gun—might in the end become hackneyed. But it is not so. Why? Well for pretty much the same reason, we venture to say, that the fields themselves and the woods and the lakes and the streams never become hackneyed. However that may be, one thing is certain. Our columns every week, and month after month, give ample proof that there is still an abundance to tell of what is seen and what is done afield and on angling waters; and that hosts of people still delight to read the telling, our subscription books show with ever increasing emphasis. The FOREST AND STREAM is in the best sense

A Journal of Recreation.

It tells of the recreation found by busy men, in out-door, open-air life. It *is* recreation to these same men and to others. Explain it how you will, this recreation found in the pages of the FOREST AND STREAM is different from the diversion afforded by other papers. Why? Because (it may be answered again) the recreations of field and stream are always ten times more potent for good than are those found in almost any other way.

Look through the pages and you will see that the departments include a pretty large field. It is a wide scope of subjects. But if you look carefully you will see that the paper, from front cover to back cover is homogeneous. What is in it belongs in it. There is not the mistake of trying to foist upon the reader, who is interested in angling and shooting, a lot of stuff about horse racing or base ball or prize fights. There is no sawdust-ring odor. Everything is redolent of the woods. There are plenty of other papers devoted to the other subjects. If you are interested in them, you need hardly spend time to read the rest of this explanatory advertisement. The FOREST AND STREAM'S field is broad, but it is not broad enough to take in all creation. The editors are perfectly contented with the scope of the paper as it is at present.

In a word—this is what we started out to say—in 1885 the FOREST AND STREAM will be newsy, bright, wholesome—a journal of out-door recreation.

Terms:—$4 per year, $2 six mos., 10cts. per copy. Sold everywhere. Make orders payable,

FOREST AND STREAM PUB. CO., 39 Park Row, N. Y.

Reads like a romance from beginning to end.—SPRINGFIELD REPUBLICAN.

Old Saint Augustine.

BY CHARLES B. REYNOLDS (FOREST AND STREAM).

THE famous Florida town's three centuries have been crowded with romantic incidents; and a story of wonderful interest is this, with its Huguenots and Spaniards, Franciscan Fathers, English Sea Kings, Boucaniers, Minorcans, Liberty Boys, and Seminoles. It is told vividly, in the briefest possible compass, with strict historical accuracy, and with an enthusiasm that is manifest from the very first page to the last. Among the illustrations are copies of some of the very rare drawings by Jacques Le Moyne, the French artist, who so narrowly escaped massacre by the Spaniards in Florida, three hundred years ago. Another very rare engraving is the plan of the city in British times. The *artotypes* (or photographs in permanent ink) are among the most beautiful book illustrations of the day. They are made from negatives taken expressly for "Old St. Augustine," and are: Fort Marion (four views), the Matanzas Fort, the City Gateway, the Cathedral, the old Palm-tree, Garden Overlooking Plaza, and two very characteristic St. Augustine Houses. Cloth, pp. 144, 8vo. Price, $1.50. **Forest and Stream Publishing Co.**

STUD FOX-TERRIER

Champion Raby Tyrant,

(K.C.S.B. 11,179.)

Pupped October, 1880. Weight 16½ pounds.

Raby Tyrant is a white dog, with an even marked rich black and tan head. He is a thoroughly game and stylish terrier, possessing a beautifully shaped long punishing head, with perfect drop ears, small eye, rare neck and shoulders, deep chest, well ribbed and muscular quarters, short, straight legs, excellent feet, great bone and substance, with an exceptionally hard and dense coat.

Raby Tyrant is without doubt one of the most successful terriers of the present day. He has been exhibited 67 times, 33 different judges having adjudicated upon him, and has won 47. First 10 cups and specials; 12 second and 2 third prizes. His breeding is undeniable, combining as he does the choicest and most valuable blood that can be obtained. At the stud Raby Tyrant is proving himself eminently successful.

Fee, $15.00.

JOHN E. THAYER, Hillside Kennels, Lancaster, Mass.

Stud Dogs Proper.

ANSWERS TO CORRESPONDENTS.

With its compact type and in its permanently enlarged form of twenty-eight pages this journal furnishes each week a larger amount of first-class matter relating to angling, shooting, the kennel, yachting, canoeing, and kindred subjects, than is contained in all other American publications put together.

THE TROUT SEASON.

IN New York city the opening of the trout season means only the annual exodus of the anglers to the waters of Long Island. The streams in other parts of the State are, as a rule, either closed by ice or so filled with snow-water that they present no attractions, and this year is far from being an exception. The laws of New Jersey permit trout fishing before April 1, but we have not heard of any trout being caught. Certainly the city anglers have not gone across the river to wet their lines and freeze their feet to open the season, but have waited for the day set apart by the laws of their own State, which is full early. On that day those who either cannot go to Long Island, or who do not care to go, worship at the shrine of Saint Fontinalis, in Fulton Market.

The Long Island waters which are still open to the public are very few, and are usually skinned by poachers some weeks before the opening of the season. This year the long-continued cold weather and the fact that the streams have been closed by ice up to within a few days of the opening, has protected the fish to a greater degree than in many years, and good fishing is expected. Of all waters in the State, those of Long Island, both public and private, are more persistently poached than any other. The island produces the trout-thief, not only in numbers, but in perfection, and the king of them lives on the Great South Bay. Most wonderful stories are told of his ingenuity in evading the watchfulness of the owners, and it is asserted that with a rubber diving-suit and a silken net he goes beneath the water and nets trout in broad daylight, while the proprietor, looking over the pond from his window, sees nothing wrong. Allowing for exaggeration, it is certain that this man sells an enormous amount of trout from an exceedingly small pool in which he claims to have bred them.

It is an article of faith with New York city anglers that no trout compare with those of Long Island, either for game or flavor. The most enthusiastic of them will go to their favorite waters on the opening day regardless of the weather, and return fully satisfied that they have fulfilled an obligation to themselves, without considering prospective rheumatism and the discomfort of easterly winds. Most of them have invitations for that day from owners of preserves, and if not accepted then, the opportunity is missed. This accounts, in some measure, for the number who go down to fish on the first of April.

In another column will be found some account of the display in Fulton market which attracts so many to see what the trout from different localities look like, and to make comparisons as to the size and color of their favorites from all parts of America and from Europe. It is a field day in the market, and no pains or expense is spared to make it a most attractive and instructive exhibition.

THE INTERNATIONAL MATCH.

THERE is to be, after all, no international rifle contest this year. The invitation to a contest on American soil, which was sent from the National Rifle Association here to the British Association, has been under consideration for some time, but a few weeks ago the Council of the N. R. A. of Great Britain concluded that in view of the complications, present and prospective, which the arms of Great Britain have thrust upon them, it is inexpedient to have a match this year. The exact wording of the resolution of declination reads:

"*Resolved*, That in consequence of the very unsettled state of affairs both at home and abroad, the National Rifle Association do not think that they would be justified in accepting the challenge of the National Rifle Association of the United States of America, to an International contest at Creedmoor in 1885."

Perhaps it is better, after all, that there should be no match of this magnitude during 1885. It is a fact that there would be no small difficulty in getting together a satisfactory American team, either for small-bore or for a military match; and with the present depressed condition of business it is exceedingly doubtful whether the support of the teams, financially, would be all that the association would desire. There was a feeling in some quarters that such a match was necessary to stir up the interest in rifle shooting, but there should be and are ample opportunities in the number of home clubs for pleasant rivalry and capital enjoyment in range work. The U. S. Regulars have taken a new departure; the militia in this and in other States will have plenty to do in the practice prescribed by orders, while civilians find the best fun of all in small, active clubs, those in which the management does not become so great as to overshadow the shooting part of the club's effort.

There will be a general regret that we have not had an opportunity of welcoming our victors from over the sea, and had also a chance to redeem our prestige from them, but we can wait, and while waiting the armories are not behind at all in working out new ideas with the practical shape and improved arms.

BATTERIES IN CURRITUCK SOUND.

CURRITUCK waters are not to be thrown open, it appears, to the battery-shooting market-hunters from the North. The proposition to repeal the law was, in view of the fact that it originated with a person who is a resident of the State, a most extraordinary one. Happily it found little favor in the eyes of any, except the marketmen and market-hunters outside of the State. The residents of North Carolina saw clearly enough that to repeal the law would be to take the bread out of the mouths of the citizens of their own State, and sportsmen, who hold intelligent views about game protection, were equally clear that to open Currituck Sound to the battery-shooting public would be to utterly ruin one of the great winter homes of wildfowl along the Atlantic seaboard.

As soon as we brought the matter to public notice the citizens and the press of North Carolina took hold of it very energetically, and the result has been that the bill has been tabled, and, we trust, will not be brought up again during this session.

We understand that a bill was also introduced in the North Carolina Legislature to repeal the law protecting quail, and that this has shared the fate of the one intended to throw open Currituck Sound to batteries.

We have received several letters from members of the Legislature assuring us that there is no danger that either of these bills will be again brought up. This is very satisfactory but there are so many attempts nowadays to remove protection, that it behooves every man, who has the interest of our game at heart, to be watchful at every point. We are told that Mr. Dempsy Wood, who is well known to many of our readers, was influential in bringing about the result of which we have spoken, and a letter which appears in another column gives us reason to believe this subject has been carefully looked after in North Carolina.

NETTING DUCKS ON LONG ISLAND.

THE illegal capture of ducks on Long Island waters by means of nets has been going on for years, and it has seemed impossible to put a stop to it. The difficulty has been that the officers of the law are unable to prove the intent, and even if the nets are lifted and found to contain fowl, the owner affirms that they were put down to catch fish, and pleads no intent to capture wildfowl. Moreover, the officer who orders the nets to be taken up and fails to prove his case, renders himself liable to a suit for damages for his interference with private property.

A bill has been drawn to remedy this state of things, and was introduced at Albany by Senator Otis, March 27, and as it seems to cover the ground, it deserves careful consideration and support. It reads as follows:

An Act to amend Chapter five hundred and thirty-four of the Laws of Eighteen hundred and seventy-nine, entitled: "An Act for the preservation of moose, wild deer, birds, fish and other game."

The people of the State of New York, represented in Senate and Assembly, do enact as follows:

SECTION 1. Section five of chapter five hundred and thirty-four of the laws of eighteen hundred and seventy nine, entitled: "An act for the preservation of moose, wild deer, birds, fish and other game," is hereby amended to read as follows:

SEC. 5. No person shall, at any time, kill any wild duck, goose or brant, with any device or instrument known as a swivel or punt gun, or with any gun other than such guns as are habitually raised at arm's length and fired from the shoulder, nor use any net, device or instrument, or gun other than aforesaid, with intent to capture or kill any such birds. Any person or persons who shall set or cause to be set in any of the waters of the counties of Queens or Suffolk, any seine or net wholly below the surface of the water without having corks or floats of at least three inches in length each, and not more than five feet apart, attached thereto in such manner that the same shall float upon the surface of the water over such net when set, shall be deemed guilty of a violation of this section.

Any person violating any of the provisions of this section shall be deemed guilty of a misdemeanor, and in addition thereto shall be liable to a penalty of fifty dollars.

It is alleged, upon what appears to be good authority, that the only nets used without floats of any kind are those which are set for the express purpose of capturing ducks, and that all nets used for taking fish invariably have floats.

The fact that the nets set for ducks are usually placed in deep water over the feeding grounds, and without floats, of course, makes it impossible for the birds to see them, while the legal fish nets, by means of their floats, are visible, and hence are usually avoided. Few fowl, therefore, are caught in fish nets, the great majority being taken by means of those set expressly for their capture and without floats.

This most destructive method of taking fowl should be put an end to, and if the bill to which we have called attention will accomplish this end, the person who drew it will deserve the thanks of all who use the gun.

DEER HOUNDING.—The clowns of the Michigan Senate amused themselves and excited the indignation of the public by their action on the deer hounding bill, which, as we have said, failed by one vote to pass that body. It is now proposed to attempt to enact the bill prohibiting hounding except for twenty-five days of each year. This, we think, should not be done. It will permit dogs to be kept in the woods, and the nominal restriction will amount to nothing at all. At Albany yesterday (April 1) the bill to forbid deer hounding in New York was reported back from the Senate Game Committee without amendments. This is most encouraging, and we hope that when it comes to a vote the bill will pass the Senate with a good majority, as it did the House, and soon become a law.

THE EASTERN FIELD TRIALS CLUB RULES.—We have received a copy of the revised running rules of the Eastern Field Trials Club, which we shall publish next week. The proposed change, making May 1 the date for whelping of Derby entries, was not made, and all dogs whelped on or after Jan. 1 of the previous year are eligible. There are several changes, and a cursory reading impresses us with the belief that they are an improvement over the old rules.

THROUGH TWO-OCEAN PASS.

XL.—KILLING A BLACKTAIL.

HITHERTO our march had been an easy one, for we had either been following well-marked trails or had been within sight of certain known landmarks, which pointed out the way quite as surely and plainly as the signboards on a country road. Now, however, we were about to strike out into a new country, one through which none of the party had ever passed, and about which it seemed impossible to secure any information. No prospector, hunter, or trapper that had been encountered seemed to know anything about how to find Two-Ocean Pass, or whether the trail to it was easy or difficult. It was known that Pacific Creek, or as it is called by those who live in Jackson's Hole, Two-Ocean Creek, must be followed up, and that if the main stream was followed to its sources, the Pass would be found there; but then the stream branches constantly, and many of these branches are quite as large as the main fork, so that it might be a very difficult matter to select the one which should lead us to the Pass on the Continental Divide.

The morning, though not actually stormy, was very threatening as we left the camp on Snake River, somewhat in advance of the train, and rode back over the sage brush plains toward Buffalo Creek. The wide valley is level, here and there crossed by wide stream beds, most of which were at this season dry, though evidently carrying in spring and early summer a great body of water, for the whole precipitation on the western slope of the Continental Divide finds its way into Snake River through these channels.

A mile or two from camp we encountered a prospector. He was on foot leading his horse, and to the horn of his saddle was tied the lariat of a second horse, which was so lame that it could but just manage to walk. We stopped to make inquiries of this man about Pacific Creek. He told us that he lived about twenty miles further down Snake River, and that he had been five years in the county. He had just come down from Pilgrim Creek, where he had been prospecting for fine gold. At first we were quite hopeful that he could give us some information as to the trail which we must follow to reach the Pass, but a little cross-questioning developed the fact that he knew no more about the matter than ourselves. He said that he had never been up Pacific Creek, though he had been around its head, and knew that the Pass was there, and also that there was a trail up the stream for twelve or fifteen miles. He did, however, direct us how to cut across from the mouth of Buffalo Creek through the low hills to the bottom of Pacific Creek, thus saving us several miles unnecessary travel.

I had the curiosity to ask him about the winters here in Snake River Valley, and his reply was that the snow lies from three to five feet deep all through the winter. The autumns are early and the springs late, snow usually falling heavily in September and October, and remaining on the ground until near the first of June. The county is thus by no means adapted to stock raising, though some men have a hay ranch about seven miles below the mouth of Gros Ventre Creek on Snake River. The country is valueless for farming purposes and has hitherto proved equally so for mining. Our informant stated that men had been steadily at work looking for gold for fifteen years and had not yet made day's wages at it.

By the time we had convinced ourselves that the prospector was entirely ignorant as to all the points on which we desired information, the pack train had come up, and bidding our chance acquaintance good morning, we rode on to the crossing of Buffalo Creek. Just after passing this stream, we turned to the right, and climbing the bluffs, near the cabin, where the prospectors stable their horses in summer, followed up a little valley through the low hills, and in an hour or two reached the bottom of Pacific Creek. It is here very wide and the stream bed is enormously spread out. The amount of water carried by it at this season, is absolutely quite large, but is inconsiderable in comparison with the width of the bed. Everything, in fact, that we have seen on this western slope of the mountains, points to an extremely heavy fall of snow in winter, and hence to great floods when these snows melt.

The prospector had told us to cross the valley, and we would have no difficulty in finding, on the other side, a trail which we could follow for a number of miles toward the head of the stream. We did cross the valley, but failed to strike the trail, and so rode for several miles over steep hills rough with down timbers, and then descended again into the bottom several miles further up stream. Just as we were about to make the descent, we were halted by the appearance in the wide valley of a band of about forty horses feeding, and herded by a man or boy. It was not a place where stock would be looked, for and the presence of the horses gave rise to no little speculation as to who their owners might be. When we reached them the herder had disappeared, but in a little clump of cottonwoods we saw a blue canvas tent and the smoke of a fire, which no doubt was his temporary home. We did not visit it, and opinions were about equally divided as to whether the inhabitants were a band of horse thieves, who had chosen this lonely valley as a safe place in which to *cache* their stolen stock, or a party of Indians making their autumn hunt from the reservation near Fort Hill.

All day long it rained more or less, and the high brush and other trees through and under which we rode were wet, dripping and disagreeable. The valley was narrow and overgrown with deciduous trees, and there was little opportunity to see the character of the country.

About 1 o'clock we made camp on a little bench about thirty feet above the stream. We should have gone further, but the valley was becoming more and more narrow, and it was uncertain when we might find another suitable camping place. It was now raining quite hard, and as soon as the saddles were off the animals, the tents were put up and all the spare pieces of canvas rigged, so that we were in shape to be comparatively dry and comfortable.

I tried the fishing, but could not get a rise, though I changed my flies half a dozen times. The water was covered with small midges, apparently beaten down on it by the rain, and the trout were perhaps satiated. The country hereabouts looked well for game, especially deer. There were, too, some fresh elk signs, but the presence of the camp in the valley below us and the fresh horse tracks in the trail which we had been following, accounted for our seeing none during the day.

When we looked out of the tent the next morning the ground was covered with a couple of inches of wet snow. The great damp flakes were still falling thick and fast. They clung to the tent and to the branches of the trees, but as it was by no means cold, they melted fast, and everything that had been left uncovered the night before was wet and dripping. We breakfasted about 8 o'clock, and then made up our minds to make the best of a snowy day in camp.

Time flies, they say, but if this be so, its wing beats during a chilly, rainy day in camp are very slow and measured. It was so cold that it was impossible to keep warm away from the fire except under one's blankets, and standing about the fire in the rain is not very exciting work. About half past ten o'clock I felt as if I could endure the monotony no longer, and cast about in my mind for some occupation. The fishing was nought, that I had proved the night before, but since there was a good tracking snow it might be worth while to try the hunting. I therefore suggested to Saddlemeyer, who was always full of energy, that he and I should go out and try to kill some meat. He agreed, though not with any very great degree of enthusiasm, I thought, and before long we set out. Mine was the only rifle in the party, but I told Saddlemeyer that we would share the shots equally if we saw anything. For a few hundred yards we followed up the valley near the trail, going through the green timber, which showered down upon us water from the melting snow, and then, turning to the left took the first ridge and began to climb the hill on the north side of the valley.

It was horribly wet, for by this time the snow had turned to rain. Under foot there were three inches of snow, and beneath this an inch or two of water; from above the water and an occasional mass of wet snow dropped on us from the branches, and the willows and other undergrowth which grew waist high, soaked us thoroughly. The ground was soft, muddy and very slippery, and the snow, the wet sticks, down timber, and loose stones made the walking and climbing very laborious and difficult. The hillside was steep and seemed to have no end, for as we reached the crest of each ridge we could see the mountain tops still far above us. One or two elk tracks, made this morning, were noticed before we had gone very far up the mountain, but the animals had passed along early in the day and were moving briskly, so we did not follow them far, but kept climbing higher and higher. A few deer sign were seen, made since the snow began to fall, but before the elk tracks, but nothing very fresh, and almost all the tracks seemed to be leading up the hill. Every now and then it would rain with great violence, or a dense fog would rise out of the valley below, and creeping slowly along the mountain side would shut out from sight one hilltop after another, until at length it would close about us and would render invisible objects within fifty yards. There was a little wind from the west, and these fogs did not last long, but while they hung over us we stood still beneath some spruce tree and patiently waited for them to lift. All over the hillside were scattered migrating birds; the red-shafted flickers, robins, Western song sparrows, and little companies of Oregon and Aikens snowbirds. Sometimes while we were thus waiting, a flock of the green-tailed finches (*Pipilo chlorurus*) would fly into the tree by which we stood, startling us by the rushing sound of their wings, and would then stand and shake the water from their feathers within arm's length of us, and hop about and peer down into our faces as if trying to decide for themselves whether we were alive, or were only very ragged and wet stumps. By this time we were of course thoroughly drenched, and, equally of course, extremely cold and uncomfortable, and I felt quite guilty for having lured Saddlemeyer out on such a wretched excursion.

We kept on, climbing hill after hill for two hours and a half, and had seen nothing but tracks, when we became disgusted and determined to return to the camp fire, following the ridge on which we then were, until we had reached a point opposite the camp, where we could see that a little green-timbered hog-back led down into the valley. We followed the ridge south, and as we went along quietly, I was scanning the borders of the horizon just ahead, and Saddlemeyer was close behind me. Suddenly I heard my companion whisper "Whoa." I stopped, half turned, partly slipped a cartridge into my gun, and then stood motionless, for over the crest of the ridge above us had risen the horns, head and body of an enormous blacktail buck. Two others, both yearlings, followed him, and in a moment or two a couple of others, one almost as large as the leader, the other about two years old, wandered up to the verge of the ridge and looked over. They were about two hundred yards distant, too far for a sure shot—from a rifle in my hands at least—and we were so much in need of the meat that I was unwilling to take any chances which might result only in alarming them. The big leader had seen us at once, but he was evidently unable to make out just what we were, and for perhaps ten minutes he stood there and watched. He was not alarmed or suspicious; but we excited his curiosity and he kept looking. He stood on the very crest of the ridge and behind him was only the white sky, so that every outline of his graceful form and large branching horns was distinctly visible. While he stood there the others wandered about in an aimless way, now taking a bite of grass, and then giving a long look over the country. One of the yearlings came a few steps down the face of the bluff to a young pine tree three or four feet in height, against which he began to rub his horns and head, just as a deer or an elk does when ridding his antlers of the velvet, or as it is termed, "shaking." Another, next in size to the leader, came still further down the bluff, and began to feed at an elderberry bush that grew there. A third, he was a small yearling, was very frisky and played about almost like a fawn. At length after his long, long stare, during which we scarcely breathed, the big leader's curiosity seemed satisfied. He shook himself and then turned, and gave a long look to the east and then one to the west. Then he lowered his proud head, took a bite of some weed, and stepping majestically along the ridge for a few yards, turned away from us and disappeared. Just as he did so, two of the young deer, like boys when the schoolmaster turns his back, and they begin to skylark, drew off and charged one another, coming together vigorously head to head. It did not seem to be done viciously at all, but rather in sport, and one of them being evidently much the stronger of the two, pushed his opponent a few feet backward, when the latter sprung lightly out of the way, and both turned and followed in the footsteps of the big buck. Four of the deer had now moved out of sight and there remained only the berry picker on the hillside. A couple of dead trees, one leaning against the other, stood thirty or forty yards in front of us, partially concealing him from our view, and it was possible by stealing up behind these to approach within 150 yards of him and perhaps even closer. We were so much in need of the meat at the camp that I did not quite like to risk a shot at over 100 yards, but he stayed so long that I was afraid the other deer might get beyond our reach, and so made up my mind to take the chance. I had taken only a few cautious steps toward him, when suddenly he stopped feeding, looked about him, walked briskly up to the top of the ridge, and then pausing for a moment to see where his comrades were, followed them over the ridge and out of our sight.

Now at last the coast was clear, and we hurried toward the ridge and clambered with breathless haste up its steep face. Reaching the crest we very cautiously looked over, but the game was not to be seen, and still as we slowly advanced in the direction in which the deer had last been headed we saw nothing of them. I was just about to suggest that we had better go back and take their tracks, when without a moment's warning a mountain hurricane of hail, rain and snow swept down upon us, blotting out from view every object save those directly at our feet. The blast was bitter cold, and while it continued, all we could do was to turn our back to the storm and stand there patiently while the pitiless elements beat down upon us. The squall lasted but a few moments, and when it was over we started back and crossed the tracks of the deer about fifty yards from where we had last seen them. They were walking along slowly, all except the last one, which had been trotting to catch up to the others. The trail led over the rolling ground toward two little groups of spruces, where it seemed probable that the deer might be found. When we were within about one hundred yards of the nearest clump of trees, Saddlemeyer's quick eye caught sight of a moving object just beyond them, and a moment later I saw a dark body move. Carefully creeping up behind the trees, I was at last able to make out through an opening in the foliage three deer standing close together. They were the big leader and two of the yearlings. I was anxious, if possible, to kill the former; but I could only see his head and neck, so I waited for him to move and give me a shoulder shot. While I waited he turned, looked me square in the face for a moment, and then stepping to one side disappeared from view. One of the yearlings still stood there, broadside to, and to make sure of the meat I fired at once at his shoulder. When the smoke cleared away there was nothing in sight.

Handing Saddlemeyer the gun and a couple of cartridges, we ran up to the top of the ridge beyond where the deer had been, and in a few moments saw three of them standing on top of a hill about three hundred yards away. Saddlemeyer sent a shot or two after them, but the distance was too great for anything very effective. Stepping back to the place where they had stood, we found lying there a fine fat yearling, a welcome addition to our larder. We took off the hams and saddle and started down the hill with them, but they were pretty heavy and the walking bad, and at length, after changing loads once or twice, we

stopped, divided the meat once more, and started on again, carrying only a single quarter.

After we had seen the deer, and just as I was stealing up to make my shot, I was interested in the curious actions of a beautiful pine grosbeak. It flew down from the spruces, and alighting on some low twigs which stood up above the snow just in front of me, hopped about in a most uneasy and anxious manner, whistling sweetly. As I advanced toward the game it took short flights before me, scarcely moving out of the way, and continually uttering it clear warning whistle, as if urging me not to shoot. It was a young male, and had a brilliant red head and pinkish-gray body. I was quite impressed by the bird's actions and apparent intent, although I did not permit them to interfere with what I was doing.

We reached the camp at 2:30, and shortly after dinner Saddlemeyer took a mule and went up on to the hill for the remainder of the meat. During the afternoon I again tried to induce the fish to rise, but without success. That they are abundant in this stream cannot, however, be doubted, since fishhawks and kingfishers are abundant. One of the former alighted in a tree within thirty steps of the camp, and the sharp, rattling cry of *Ceryle* was heard at frequent intervals through the day.

It rained and snowed all the afternoon, and Saddlemeyer did not get back to camp until nearly 8 o'clock, and when he arrived he was of course wet, cold and hungry, but notwithstanding these discomforts, he was as cheerful and merry as possible.

The Sportsman Tourist.

NOVA SCOTIA TROUT AND SNOWS.

NOT far to the east of me now is the famed River St. Mary's, from which have been taken such quantities of salmon; and as to the toothsomeness of the fish from this same river, I am willing to testify at any fit time and place. And it seems also that every lake in the Province (and the lakes here number like the sloughs in Minnesota) every stream and every river that empties into the sea holds innumerable quantities of the nimble trout in all the varieties of lake, brook and sea. But as to the specific differences between kinds, "those to the manor born," appear to be unable to agree. Of course, at this season there is no game in these fish, though they are continually being caught by fishing through holes cut in the ice, the ice ranging from two to three feet in thickness, and the bait, beef or pork. We have had them several times this week, and to me the flavor is some what muddy, though as a fact, I do not know that I have ever tasted mud; I only imagine what it does taste like. All the trout I have ever seen in the Province have had a decided pinkish or salmon color, although I have heard reference made to fish of a perfectly white flesh.

A resident told me the other night of the best catch he ever made on Lake Sailome, a mile away, last year. After indulging in the sport for several hours, and returning to the water the uninjured smaller fish, he brought back to camp 120 pounds of trout, sixty pounds of which was represented by thirty-two fish. He is a splendid specimen of physical development, yet he explained the means he took to carry such a load, and then remarked that every few rods he was obliged to stop and rest. From the character of the man, and the avouchment of the story generally, I am satisfied that the foregoing is an unvarnished tale. So much for fish.

As I write in this cabin there look down upon me two pairs of moose antlers, which remind me that this identical region only a few years ago, five or six at least, was one of the best hunting grounds in the Province. When I was here last, moose was a not uncommon dish on the table. The lightning-gaited caribou is still in the neighborhood, and is reported this winter in large droves. They seem to be hunted very little, or at least not successfully so, and are not credited with being good eating. Perhaps this is only another case of "sour grapes." The rabbit can be found here at any time and in any quantities. The partridge also, with the squirrel and the porcupine; the latter is in some cases eaten.

Most of the foregoing I give as a matter of hearsay; my necessities having generally confined me to immediate surroundings of a strictly practical geological nature. This mining district, one of many in the Province, is perhaps the most isolated and difficult of access of all. In a direct line we are perhaps eighty-five miles northeast of the city of Halifax. To reach this city one goes twenty miles south to the coast line over almost a mere trail, crossing the East River twice (in winter on the ice and in the summer by fording) to Sheet Harbor, where three times a week, he can take the Royal Mail stage, and the second night be landed in that well-fortified, but sleepy city. Or he can walk, climb and sometimes wade for thirty-two miles, going north, and reach a station on the Intercolonial Railroad, then only six hours from the same city. I never go over either route but I afterward wish I had gone by the other. Coming in by the first route, we had to wait a day at Sheet Harbor for the effects of a rain storm to somewhat disappear and the weather to harden. The weather did accommodate us promptly, for when I left in the sleigh the next morning at 5 o'clock the thermometer was at zero. The crossing of the river was unique to me. Over two feet of ice was a foot of water, and over that a shell of ice an inch thick. We managed finally to make the passage after the driver, in his sealskin larigans, had been obliged to get out and break a way through the shell ice for the horse. Without this heroic treatment I fear that the horse and sleigh would have remained there to be frozen in and we should have been obliged to wade ashore.

This is a country that can out-thermometer any other of my acquaintance. Fortunately I brought a Fahrenheit with me. For the past week it has seemed the thing that it should register from 25° to 30° from noon till 3 or 4 o'clock. Then the mercury begins to show its weary condition, and without any reaction till 7 or 8 P. M., when it reaches the place of the cipher. Then it seems to halt a little, but shortly continues down and down, as if *Facilis descensus Averni* were its motto. Last night, when through writing at 12:30 and ready to retire, having through the evening gradually invested myself in fur cap, muffler, arctics and overcoat over my knees, and having kept up in the cabin a roaring fire in the wood stove, I went out to the thermometer and found it at 11° minus. I should add that I cannot complain of badly-ventilated apartments. The air never is close or vitiated. I can generally tell from which direction the wind is blowing without going outside.

To-day we have been treated to an additional white blanket of eight inches thickness, as if the several feet of covering were not already enough to keep the ground comfortably warm. Last week I found it necessary to use snow shoes, and I made my first essay with them, and very much to my astonishment, with great success. I had supposed that it required some time to learn how to use them with any degree of rapidity. Away from the beaten track it is just simply impossible to go without snow shoes. HYPERBOREAN.

FIFTEEN-MILE STREAM DISTRICT, Nova Scotia, March 10.

ROUGHING IT IN THE NATIONAL PARK.

II.

IT snowed all night, and the next morning everything was covered with a white mantle. After breakfast we broke camp. We had made arrangements at the Hot Springs for an extra team of horses to pull us up Terrace Mountain. The snow the night before made the road very slippery. The grade is heavy, and a loaded team even with four horses can scarcely make the summit in less than half a day. At the brow of the mountain the road passes for a mile through a forest of fir, pine and cedar, until it reaches pretty Swan Lake. Two or three miles further we come to the middle fork of the Gardiner River and Valley, and camped at the upper end of it in Willow Park, where the pasturage was good, there being no other camping place nearer than ten miles beyond. On our way we passed through the Obsidian Cañon, a volcanic formation, which glistens like jet, the intense black being sometimes variegated with streaks of red and yellow.

Wednesday, Sept. 17. The weather was fine and the scenery grand. We passed Beaver Lake, a beautiful sheet of water, and resort of many wild geese, ducks, cranes and other water fowl. Gibbon Cañon was a little rough on our horses, but by slow and steady pulling we gained the summit of the Divide. A few rods to the left of the road is the beautiful Lake of the Woods, surrounded by a growth of dense and majestic pines. Leaving this lovely spot, we traveled through an open park area showing many vestiges of former hot springs, and after fording Gibbon River, came into view of the first active geysers and pitched tent.

The Norris Geyser Basin is wonderful for its spouting geysers, clouds of vapor and overpowering odors of sulphur. It is the first "fire hole" area encountered on entering the Park from the Mammoth Hot Spring. The whole vast basin is a collection of hot springs and pools, varying in different colors, some black, some white, and some as yellow as sulphur. The earth rumbles and shakes, and the air is hot with unpleasant odors. Where the water does not boil over the crust; it seethes and gurgles beneath. Some of the springs are "frying-pans" which sputter and sizzle violently, some are "paint pots," which boil incessantly their pasty clay of diverse colors with noisy sputterings. There are some geysers which seem in perpetual action, obscuring the sun with their steam, one near the road is a large "mud pot." A smoking hole near by sends out an awful roar of superheated steam, this is named "Steamboat Vent." On the left of the road, near the "mud pot," is the Emerald Pool, its large basin full of the purest green bluish water. Not far off is the "Minute Geyser" discharging every minute a bold stream of water to the height of twenty-five to thirty feet.

The next morning we left the Norris Geyser Basin, passing on our way the "Monarch" and "Fearless" geysers of great splendor. We forded the river three times, the last time with great difficulty. We drove along the river until we came to the Gibbon Cañon, and made the Gibbon Falls at lunch. Frank took his rod and flies along, and caught some fine trout and grayling. We camped on the Madison River, near the forks of the Firehole River, and the next day drove to Marshall's hotel near the Lower Geyser Basin, where we left all superfluous truck, to lighten our load as much as possible. Leaving Marshall's we forded the Firehole River, a large but fishless stream, fed by hot springs and camped four or five miles from the hotel, where we found good feed for the ponies, splendid water and wood.

The next morning we started early. The road was very rough and steep, but after the heights are climbed a beautiful mountain and forest scenery is unfolded; now the road passes through noble woods until we see Mary's Lake before us. This lake is in deep seclusion among the towering pines which are reflected on its surface as in a mirror. Camped on the Yellowstone River, we had roasted mallard and squirrel for supper, after which we turned into our wagon bed. Sunday, Sept. 21, we reached the lake, a beautiful sheet of water in a setting of snow-capped mountains. Looked upon from Stormy Point, the picture it presents is one of most enchanting loveliness, the silvery water is covered by myriads of different waterfowl, its margin is fringed with rugged mountains and timbered bluffs. The next morning we started for the falls and cañon, which we made by noon.

This wonderful gorge of the Grand Cañon displays a scene of enchantment surpassing all imaginations, it reveals the most varied and astonishing grouping of crags and rocks which eye ever beheld. Not alone is the gaze entranced by the great variety of towering rocks, but also by the marvelous magnificence of this vast gorge in the brilliant tints of every hue. The underlying color is the clearest yellow; this flushes onward into orange. At the base, the deepest mosses are draped in the most vivid green, interspersed with spectral-staring white rocks. It is a wilderness of color, and indescribable for pen or brush, one of Nature's most beautiful masterpieces, impressing us with overwhelming feeling of our own insignificance.

Sept. 23. We started back to Marshall's, passing the sulphur mountains and sulphur springs, which are at the foot of the buttes. The fumes are quite powerful and disagreeable. The deposits of sulphur are very pure, and there are great heaps of it in bright yellow crystals amounting to hundreds of tons. From Marshall's we drove to the Upper Geyser Basin, which we reached toward evening. We camped near the Firehole River, and were fortunate enough to see the Grand Geyser spout, displaying a spectacle of wonderful beauty and majestic power that well befits its name. The Grand usually gives two exhibitions at irregular intervals in the course of twenty-six hours. The display continues with constantly increasing power, throwing a column of water 200 feet high. During the eruption a vent 30 feet from the geyser blows off steam with tremendous force.

Next morning, after an early breakfast, I saddled one of the ponies, and left Frank in camp. My first visit was to "Old Faithful," well named for the great regularity of his eruptions, which always begin with a dozen or more splashes or spurts, becoming more and more powerful, until they are followed by a rapid succession of jets, which escape with a roar, throwing a column of water from 100 to 150 feet, while clouds of steam accompany the water and reach a much greater height. The eruption takes place at intervals ranging from fifty-four to eighty minutes. From here I went to "The Bee Hive." It is easily distinguished by its beehive cone, but I did not see it spout. About 400 feet from here, on a higher level, is the "Giantess." This is the most powerful and highest spouting geyser. The eruption is not regular, occurring once in fourteen days, but is one of the greatest beauty and grandeur. West of the "Giantess," upon a mound, are the "Lion," "Lioness," and "Two Cubs." The Lioness and Cubs lie close together, and were in action at the same time, making a beautiful display, although they do not send up a very high column of water. Not far off is "The Saw Mill," a very active little geyser. Its eruptions are quite frequent and attract attention by the harsh, burring noise. Near by is "The Spasmodic." Both of these I saw spout.

The "Castle" geyser shoots out a column of water from 50 to 100 feet, accompanied by a tremendous rush of steam. Before each eruption deafening sounds are heard far down the crater, and masses of water are thrown out. After a short period of quiet, as if gathering force for a new attempt, a fearful roaring, audible for miles, took place, and the ground trembled as from an earthquake. Then a column of water was ejected to the height before named. About 150 feet north of this powerful geyser is "Morning Glory," a large and beautiful boiling spring. The water is transparent and heavenly blue. The funnel-shaped channel, which leads from the pool, brightly tinted with yellow and red, resembles the flower this spring is named after. There are scores of other springs, not so large as this, but possessing features of wonderful attractiveness. As we left, Friday, the 26th, the active little "Spiteful" gave us a parting salute.

Having seen the wonderful sights of the Yellowstone Park, we reloaded our heavy truck and, as the pasturage was poor, drove out a few miles to a good camping spot. Next morning (Sept. 27) we started early, arranging with hunter Ryan to accompany us, and left the Park by the road to Beaver Cañon, the western entrance to the Park, and drove as far as Riverside, a station of Bassett's stage line, near the South Fork of the Madison, and the next day we crossed the Madison for the cañon, where our guide expected to find sheep. I killed some mallards on the way, and here also we saw our first antelope. We camped right on the river. The following day by noon we reached the Middle Cañon of the South Madison, where right in the very heart of this wild, romantic cañon, close to the river, we pitched our tent. After lunch we rode down the cañon a few miles in search of the shy and wary bighorns, and were so fortunate as to see a small band of them close to the river, where they had come down from the mountains to drink. Unnoticed, our dog had followed us from camp, and having some trouble in sending him back, the sheep must have been alarmed. Not daring to get any closer to them, I crawled behind some willows and brushes, through which I had to shoot, but without success, as they soon gained the timbered foothills, running up the mountains, as could be seen when they happened to cross an opening in the timber, but too far to shoot.

We hunted down the cañon without seeing any more sheep, but noticed a great number of blue grouse. Having no shotgun along, and not being expert enough to cut their heads off with my rifle, I left them undisturbed and headed for camp, which we reached by dark. Next day (Sept. 29) we started early, as we were to hunt the sheep high up in the mountains at their lofty homes. We crossed the Madison, where the rapid current came near taking us along; but the knowing and well-experienced horse brought me safely to the other side. We picketed our horses near the timber and began to climb the mountains, and after hours of terrible work gained the summit. Here still we had to do some neck-breaking gymnastics, sometimes jumping from rock to rock or climbing on hands and feet over the sliding rock and slate, unable to secure any sure footing. Our hard labor was fruitless, no sheep to be seen; but the surrounding views, sometimes obtained at the height of from 1,500 to 2,000 feet, repaid us, and I returned to camp fatigued, but well pleased.

NEW YORK. F. B——T.

A REMONSTRANCE.—The Nuttall Ornithological Club of Cambridge, has represented to the Legislative Committee on Agriculture as follows. That our existing game laws (chapter 92 of the Public Statutes, and chapter 297 of the Acts of 1881) give protection to certain birds and their eggs, as stated below, which protection would be withdrawn if a bill offered as a substitute for the present law and now in your hands, should be passed. We earnestly ask that in drafting a bill for legislative action you recommend all present protection be continued and re-enforced, and that certain other species of birds as named below, not now protected, be given protection under the law. The argument is constantly brought forward that most of the species of birds for which we ask a close season, do not breed in the State, that they all pass north to raise their young. We claim that some of them do remain to breed; that others might do so if not disturbed toward the end of the spring migrations, and that many birds would return by the same route in the fall flight, if not shot at so incessantly in the spring. The pinnated grouse, prairie chicken or heath hen, found naturally on Martha's Vineyard only, is, under existing law, protected the year round—see Public Statutes, chapter 92, section 1—and has been so protected for over thirty years. The suggested law proposes an open season from Sept. 1 to Jan. 1, in each year. We think it desirable to retain the present close protection. The so-called marsh, beach and shore birds, *i. e.*, the various species of plover, snipe, sandpiper and rail, are protected (with the exception of five species) from April 1 to July 15 (see Public Statutes, chapter 92, section 4). The suggested law proposes to protect but one species, viz., the Bartramian sandpiper or upland plover. Their protection at least from May 15 to Aug. 1 we consider desirable. Herring gulls, or terns, generally known as sea swallows or mackerel gulls, are now protected from May 1 to Aug. 1 (see Acts of 1881, chapter 297, section 3), as are also their eggs (see Public Statutes, chapter 92, section 6). The suggested law would remove all protection from these birds and their eggs. We think they should have protection at least a portion of the year, perhaps from May 15 to Aug. 1, if not to Sept. 1. The existing law (see Public Statutes, chapter 92, section 6), as also the proposed law, specially exempts wild geese and such fresh water and sea fowl as are not protected in preceding sections, from any protection whatever. We think it advisable to protect such fowl after May 15 to Aug. 1 in each year. The request is signed by the officers of the club, viz.: William Brewster, President; William A. Jeffries, Vice President; H. A. Purdie, Recording Secretary; J. A. Allen, Corresponding Secretary; Charles F. Batchelder, Treasurer; and several of the members.

Natural History.

THE BIRDS OF MICHIGAN.

BY DR. MORRIS GIBBS.

(*Continued.*)

24. *Thryothorus ludovicianus* (Gm.) Bp.—Great Carolina wren.

This species is always a scarce Michigan bird, and although it has been recognized by a few collectors, to the majority it is unknown. It is not recorded in 1839 by Prof. Sager in his list of the birds of Michigan, the first published in the State. Dr. Miles first records it in 1860, in the State Geological Report. Covert embraces it in his list of birds of Southern Michigan, 1878. No northern record is made for this wren, and it is to be doubted if the species is often, or ever, taken north of 43° in this State. I have met with the Carolina wren but once. A large bird, which I knew at once to be of this family, flew into our city door yard, and sang at a great rate in the top of a burr oak. A respect for neighboring females of hysterical tendencies alone prevented my securing the specimen. We may fairly consider as stragglers all individuals of this species which appear in Kalamazoo county. This bird, I understand, like many others, is found to follow in the wake of civilization, and form its home in the neighborhood of dwellings, often in close proximity to the habitation of man. We may hope in the future, when our territory shall have been more completely populated, that this beautifully singing bird will become more abundant.

25. *Thryomanes bewicki* (Aud.) Brd.—Bewick's wren.

This species appears even rarer as a Michigan bird than the last, being embraced in but one list exclusive of my list of 1879, published in the Geolog. and Geograph. Report of the Department of the Interior. This bird as yet has not been recorded north of Kalamazoo county. Covert gives it as taken once in Washtenaw county.

It may be that I had the pleasure of securing the first specimen. On May 5, 1877, while collecting, I shot a wren, new to me and of agreeable song, which proved to be of this species. On April 18, 1874, Mr. F. H. Chapin secured a male. Mr. Syke observed it May 2, 1883.

In all, I believe that not over five specimens have been seen or shot in this county. It is a rare species. One collector claims to have found this wren breeding in the State, and that it does occasionally nest here there is little reason to doubt, but as the eggs were not secured or birds taken we cannot embrace it as a certified summer resident for the present.

26. *Troglodytes ædon* Vieill.—House wren.

This vivacious, ever happy, active sprite, is extremely abundant during nearly six months of the year. Arriving from the south from April 20 to May 3, it spreads over the entire lower peninsula, and breaks into a rattling artillery of song which does not close for at least three months. We might say with more propriety that the song resembles the rattle of small arms, for, though possessing considerable volume, the notes are mixed up with an incessant rattle, sounding like a fusilade at the side of ducking flat in the fall. To describe the song is utterly impossible. It is agreeable, were it not for that destroyer of beauty in many carols, monotony, which is a decided feature of most of the wren's songs. Compare a house wren's song to a train of cars in crossing a switch on a small scale, and you have as good an idea as it lies in my power to give. The song starts in low, with a few gutteral notes, then a rattle of ten to thirty seconds' duration, broken into by a series of irregular notes of a higher key, the whole winding up with a bold attempt of the performer at singing in high *c*, while too conceited to understand that he has a very bad cold. But at just this stage of the proceedings and when you are debating whether to decide for or against this fellow's ability, and trying to make up your mind which end of the song he began on, he proceeds to again thrash through his lingo without intermission between the high *c* and the gutteral notes. This continues indefinitely until you are thoroughly worried with attempting to formulate the air of the song in your mind.

The wren often scolds away as if his life depended on his rattling off adjectives like a pirate. Such a wicked, savage rattle, coming from beneath our feet as we step aside to climb the fence, and the scolder actually seems everything but capable of annihilating us. That he has the evil will is evident from his manner and style of swearing. Like some people, puerile in strength but mighty in talk, this brown bit of feather and sarcasm expostulates without a chance for one to defend himself. Two means of exit from our unpleasant plight presented themselves; one to shoot the blasphemer, the other to leave the neighborhood. As our collection is replete with skins of this wren, taken principally by accident when collecting other and rarer birds, we choose the latter and hasten away, receiving a broadside salute from the valiant warrior as we cross the field.

The fact that this bird is so much more common now than it was fifteen years ago has led me to conclude that it, like the rest of the family, is to a large extent influenced by the tide of civilization, and in its spread to the northward it is entirely controlled by the influx of settlers, at least to the extent of enlarging its range and increasing its numbers among us. I have said that it spreads over the entire Lower Peninsula, which is maintained, with the qualification that it is not found in wooded sections. The species has as decided a preference to villages, farms and partially-cleared localities as has the winter wren for the recesses of deep, dark woods.

However, in all portions of the State that I have visited many birds are found, excepting in heavy pineries or hard timber. Twenty years ago there was scarcely a house wren in Kalamazoo county, and I can remember with what boyish delight I hailed the first song. The country about the southern border of our State has been principally under cultivation for over thirty years, while in many portions sections have been populated over sixty years. Kalamazoo county has now fifty wrens of this species where she had one fifteen years ago, and yet I think candidly that we have fewer now than we had five years since. I account for this on the principle that many more birds are completely transient in the county, the birds going to the north to nest, occupying the vast burnings and devastated pine forests, where ten years ago stood thousands of acres of virgin pine.

The species was known in the State as early as 1839, as Sager records it. Other lists embrace it. In Kneeland's list of the "Birds of Keweenaw Point, Lake Superior," 1856, the species is omitted. Cabot also omits it in 1860 in his "Birds of Lake Superior." Judge J. H. Steere observed the species a few years ago at Sault Ste. Marie, indicating a northern extension of range.

This bird is a single illustration of a principle which ever obtains, viz.: that the animal creation, as a whole, is subordinate to the power of man, and that the movements of the civilized portions of the country, from necessity, affect the entire order of migration, even to the seasonal journeys of our simplest creatures.

Within two or three weeks from the time of arrival, or about May 15 to 20, the busy wren begins preparations for nesting, having completed the mating, which is ushered in with savage warfare and revengeful talk. I say begins, for it should not be understood the giddy creature is to occupy the first nest constructed. On the contrary, it takes the little busy-body a long time to decide on a home after preparing, I think always as many as two, often four houses for its mate and self. The dapper little snuff-coated gentleman has, in common with all the other members of the family, so far as my experience goes, a predilection for the amassing of wealth in the form of real estate, and nothing quite so well suits him as the finding of a suitable building site for a new house. He at once presses his amiable, sprightly wife into the service, and while she is compelled to carry the greater share of twigs and material for the nest, he carries a few twigs, does an immense amount of bossing and no end of cursing and swearing in a high key. Sometimes the nest is completed without a stop, but generally it is about one-half finished when it is left, and another suitable location is looked up. This manner of becoming a landlord in a small way, is apt to retard the chances for an early first brood, and the result is that the little *ædons* are rather slow to make their appearance. The first eggs are generally laid in late May and the brood is spread to the four winds before June 30. That a second brood is reared I feel confident, but it may not be a general rule.

The situations chosen by the house wren as nesting sites are variable and often extremely curious. There appears to be no limit to the oddities of the old birds in the selection of a home. Hollows in limbs and stubs, nooks in cornices, bird houses and knot holes in fence posts seem to be the positions usually chosen; but often hollows are selected, or mechanical spaces in buildings, entered by small holes. One case which I call to mind is a peculiar illustration of the birds peculiarity in filling a larger space than was required by the birds, with rubbish. The site in question contained at least a peck of twigs, which were massed together in one large lump. It took the birds quite two weeks of spare moments, when not engaged in the construction of other quarters across the way, to accumulate this material, and the struggles of the chattering pair in getting the large twigs, some of them over six inches in length, into the nest through an orifice scarce one inch and a half in diameter, were amusing in the extreme.

The nests are generally placed from five to ten feet from the ground, when built in hollows, in limbs or stubs, but are often found twenty or twenty-five feet up, when built in the gables of houses. The nests in their makeup are constructed of almost everything that the wrens find adapted to their wants, but in my experience small twigs are more often used in the body of the nest. The lining is of softer material, while it is sometimes entirely wanting, the eggs resting on the bare twigs or coarse grass.

After the nesting season, which we may consider as practically ended by July 15, the birds become quite refined in their behavior and keep respectably quiet, only occasionally sputtering when irritated. Just when the little fellows leave us for the season I am unable to attest, but can say that they become quite scarce after the middle of September.

CENTRAL PARK FORESTRY COLLECTION.

SPECIAL operations in progress at the Old Arsenal at Central Park are novel both as to method and motive. The work includes various technical processes preparatory to the permanent exhibition of forestry, of which some portion of the specimens have been placed already in the Museum of Natural History. It has been hoped that the entire collection might be arranged and opened to public view during the present spring. The exhibition is to be arranged within one large case extending throughout the length of the great hall, and in six smaller cases placed next the wall along either side.

The collected specimens amount to 420; in addition will be a few of difficult access yet remaining to be obtained. About 400 specimens form the census collection made under the direction of Professor C. S. Sargent, Arnold Professor of Arboriculture at Harvard, acting as chief agent of the forestry department for the tenth census publication. From this work was developed the idea of the present museum exhibition movement, the latter also in charge of the Arnold Arboretum; the financial means being provided through the generosity of Mr. Morris K. Jessup. The preparation of the specimens is intrusted to Mr. S. D. Dill, who performed the same service in an excellent manner for the census collection. The present scheme has been his exclusive occupation already for two and a half years, with two assistants since March of the past year, instead of one, as previously.

A specimen consists of a section of about five feet eight inches in length, taken from the trunk of a tree, with a partial section, including half or more of the diameter and in length about one-third of the whole piece, cut down and removed from the top; in this way the inner vertical and the horizontal surfaces are shown at once. Only half of each of these exposed portions is polished in order to illustrate the effect of the treatment; the top of the remaining upper portion is neatly finished by beveling.

The dimensions of specimens range from two inches to six feet in diameter, the California pine showing the latter large measurement. A plank of redwood (*Sequoia sempervirens*) is also included, which measures eight and a half feet in width.

Without extension to the innumerably multiplied varieties, the collection will represent every native species of this country. Each specimen is to be accompanied by a placard giving both the local and the scientific name, the study being rendered of further advantage by numbering in duplicate trees of corresponding species in Central Park. The plan includes also the publication of a descriptive catalogue. Another useful feature in addition will be that of the drawings of leaves, flowers, cones, fruits, etc., which are being prepared by Mr. Faxon at the Arnold Arboretum. These are to be hung in the exhibition, each above a corresponding specimen in the wood, while a different illustrative series will consist of pressed leaves forming an herbarium.

A course of observations connected with the work may prove scientifically of some aid in arboriculture. In the preparation of the wood at the Arsenal, exact diagrams are drawn from the horizontals as the cuttings are made, and representing the increase in diameter for succeeding years of the tree's existence as indicated by the rings. It is hoped that the record may serve toward a solution of such questions as whether dry seasons affect some or all trees as causing slower growth, and all the data for comparative study are filed away for reference.

A record of the age and diameter of every tree represents in a general way the comparative rates of growth. A tree three hundred and sixty-nine years old which is only fifteen inches in diameter is an example of slow growth. This is the *Pinus edulis* or edible pine from Arizona, called also nut pine, and of which the seed, resembling in dimensions a good-sized bean is used by the Indians for food. The Western shell-bark hickory (*Carya suleata*) from Allenton, Missouri, which is three hundred and forty-one years old, has a diameter of thirty-seven inches; another tree only one hundred and fifty years old with a diameter of forty inches represents a different habit of growth. This is the *Tilia americana* or basswood, from the same locality as the last named species.

The oldest tree in the collection, and which has felt the snows of four hundred and ten winters, represents a species remarkable for slow growth, being only of twenty-four inches diameter; it is named *Picea engelmanni* from its discoverer, Dr. Engelmann, being known also as Engelmann's spruce; its locality is from British Columbia to Arizona, and it forms extensive forests in Colorado.

Among rare specimens in view for this collection, but which remains to be secured as circumstances permit, is the *Larix lyellii* or Western larch, growing in the Cascade and Galton ranges of Oregon at 6,000 or 7,000 feet elevation; the acquisition of trees so situated is evidently attended by difficulties; even the extensive census collection is destitute of this species.

Woods of handsome appearance include the arbutus, holapensis, sweet bay (*Persea carolinensis*), Alaska cedar (*Chamæcyparis nutkansas*) and the beautifully-figured maple burl from Missouri. A species most remarkable for durable quality is the catalpa, of which some of the wood buried in the ground for seventy-five years is brought out in a perfectly sound condition. Among other interesting specimens are the cocoanut tree from Key West, and the finely odorous nutmeg tree from California.

An extremely curious species is the Washington palm (*Washingtoniani filipera*) from Southern California, of which the rings are nearly detached, forming layers of fibrous, bark-like substance lying loosely one within another to the heart; the top of this tree severed from the trunk is also among the specimens, with its immense spreading leaves dried and yellow.

From Texas comes another extraordinary tree formation resembling a fluted column, and known as the *Cereus giganteus*. Its vertical, singularly curved parts are easily separable, being without attachment of any heart at the center. The Douglas spruce exhibits an equally peculiar appearance, but from extrinsic cause; its bark is thickly perforated with holes of the average size of nuts, the cavities representing an economical system pursued by woodpeckers; after forming these holes, the birds therein deposit acorns, to remain until some future day when required for food.

One of the most interesting curiosities is that of the *Gleditschia triacanthus* or honey locust, from Missouri, of which the body is covered with thorn clusters, shooting outward in all directions from their centers of growth. The base of this thorn formation is in the bark, without any source in the wood beneath or connection with it. These knots or crowns of thorns are therefore easily detached, and it was necessary on this account for the tree to be transported from the West suspended from the ceiling of the car.

HORNS OF THE FEMALE CARIBOU.—*Editor Forest and Stream:* Apropos of the present discussion, the writer had the pleasure of lately meeting Mr. E. W. Methot, of Quebec, a nimrod the value of whose local reputation is vouched for by his having, during the previous week, on the grounds of the Shawinigan Club of this Province, killed six male caribou, and shown mercy to sundry "cows and calves." Closely interrogated on the subject, Mr. Methot stated that it was well known to the Canadian hunters of this animal, that only the barren or fallow female produced horns, it being the rule to find them in such a case, while they have never been reported as borne by the pregnant or nursing cow. Nature's anomalies being only examples of her laws misunderstood, and physiologists knowing many instances where morbid growths follow from the increased supply of blood intended for nourishing offspring, the above appears a very rational explanation of the varying existence of the horns. That the different condition actually occurs, your correspondents have amply proved, while if any good reason for the fact has been produced, the writer has not seen it.—NITRE (Montreal, March 21).

CAPTURE OF AN OPOSSUM IN ESSEX COUNTY, N. Y.—Dr. M. H. Turner (Hammondville, Essex county, N. Y.,) informs me of the capture of an opossum near Crown Point, on or about Oct. 15, 1884. While visiting his traps near the mouth of Puts Creek, which empties into Lake Champlain at Crown Point, a young man named George Williams found in one of the traps a strange animal to him, as well as to almost every one in the vicinity. Dr. Turner and a friend went to see it, and at once identified it. Diligent inquiry has failed to reveal anything pointing toward its having escaped from confinement. It is still kept alive as a pet. The capture of an opossum in the Lake Champlain valley is interesting, as showing the tendency of more southern species to extend up through this region.—A. K. FISHER, M.D.

THE WHITE-THROATED SPARROW.—Sherbrooke, P. Q., March 25, 1885.—*Editor Forest and Stream:* Can you or any of your subscribers let me know as to the behavior of the white-throated sparrow in confinement? Whether it will sing and breed or not? I well know that it can never sing so sweetly anywhere as on the edge of a clearing at sunrise and sunset of a day in early summer, but ask as a matter of curiosity, and I think, general interest.—JOS. G. WALTON.

BATTERY-SHOOTING.

Editor Forest and Stream:

I did not think I would again be called upon to trespass on your space, for it seemed to me that all had been said on battery-shooting that was necessary, so far as I was concerned, but "Sinkboat," in your last issue, asks a few questions which politeness to a courteous correspondent requires me to answer, and moreover, the subject is one of such moment, as to the ultimate effect on our wildfowl, if batteries are not suppressed by law, that I must ask an opportunity for a final communication. The discussion between "Sinkboat" and myself seems, in certain particulars, to have become loosed from its moorings. Therefore I am constrained to cry *"Revenons a nos moutons."* In "Sinkboat's" first article he raised a signal of distress for the locality, regarding which he claims, and undoubtedly possesses, particular knowledge, viz., Chesapeake Bay, for he said, "There is too much shooting there, the ducks are harassed in every way." Of course he excepted shooting from the shore, because he stated that boxes were adopted after shooting from the shore had failed. Therefore it was a fair inference that the ducks could only be harassed by box-shooters with their tenders, or persons shooting from boats of all kinds. It was therefore to show him and others who might be interested, that batteries were the main cause of the "too much shooting and the harassed birds," that I replied to his article and gave the known results (no individual opinion about it whatever) upon the habits of wildfowl where batteries were used to accomplish their destruction in localities other than his own.

I think I have in my various replies covered pretty generally his objections to my statements, but sometimes I cannot but believe by the way he answers, that he must have forgotten what I had written. In a question of the kind under discussion, one must look upon the subject in all its bearings, and because every method mentioned as objectionable may not pertain to each locality, that is no reason why it should be asserted that one or any of them are not injurious. The waters of the Chesapeake are exceptional in many ways, so far as affording feeding grounds for ducks, as well as in their vast extent, and are probably hardly paralleled in this country, consequently it will take longer for the injurious effects of the use of batteries to be fully appreciated there than in more contracted waters. That, since the introduction of boxes in those waters, ducks have decreased in numbers generally is, I believe, acknowledged by the majority of the sportsmen who resort there for shooting, and "Sinkboat" is in error when he attributes this lessened number solely to the lack of food. I do not assert this without having received sufficient proof in other localities than the Chesapeake, for I am as keenly alive to the fact that assertion of itself proves nothing as "Sinkboat" can possibly be. If he will do me the honor to carefully read what I have written, I think he will find I have given reasons founded upon my experience for the assertions I have made. "I speak those things which I do know, and testify of that which I have seen." I could multiply the instances where batteries have driven away the fowl, when, as in the Great South Bay, the fowl so decreased after the introduction of the machines, that batteries were forbidden by law, and it was only through the political influence of the gunners who could not shoot birds enough for market to make it profitable, that the law was repealed. The reason advanced for this action did not justify to the minds of all true sportsmen the legalization of batteries, and now on this water, duck shooting, save on rare occasions, is very poor, and will doubtless further degenerate while boxes are allowed.

I have never written, as stated by "Sinkboat," that Currituck box-shooters fail to make a living "from the fact that fowl soon learn to know the batteries, and are not killed in large numbers." Alas! I wish this were true; but those gunners' discomfiture arises from quite another source. It is because the ducks are so harassed on their feeding grounds that they leave the Sound for more quiet districts, and in spite of "Sinkboat's" doubting nature, I have seen time and time again (and so have numbers of other gentlemen I could name) the tenders of the boxes sailing over the Sound, as "setters quarter a field," putting to wing every body of ducks in sight. Nor was lack of food the cause of the birds' disappearance, for I believe I can safely say that food is always abundant at Currituck, for the Sound and the marshes are so extensive that even if there should be a short supply in some parts, there would be plenty in other localities. Yet in spite of this the birds decrease in numbers when the batteries get to work. "Sinkboat" must not look at this question solely through the spectacles he can procure at Havre de Grace. The subject is greater than the locality he shoots in and wider in its application than the waters of Chesapeake Bay.

"Sinkboat" charges me with being unfair in my quotations of his remarks. I was careful not to garble the meaning of his sentences. That would have been foolish, and he will find, if he looks over them, that the purport of what he wrote was in no wise impaired by my selections. "Sinkboat's" reasons for the failure of shore-shooting are suggestive, as he says in his first article that "ducks, like other things, have advanced with the times, and, as a rule, will not approach the shore as they did years ago, and other methods have to be adopted [to get them] by the sportsman." Or in other words, "Too much shooting and 'harassed birds' has made the fowl shy and unwilling to approach the points. But the points can be rested and good shooting can be had from them again, the birds soon recovering from their fear." How is it with feeding grounds; do box-shooters ever think of resting them? Suggest to such a person the propriety of doing so, where the law does not compel him; is it likely he would show much alacrity in following the suggestion? No, indeed, for he knows that so long as the birds remain in the vicinity they must go to the feeding grounds or starve; so he stays there as long as any fowl remain.

"Sinkboat" and others state in defense of box-shooting, that fowl cannot always be obtained, and frequently great rafts of them remain all day in the open water out of reach. Why do they stay there? It is not to feed, for the water is deep, else the boxes would be there also, but because their feeding grounds are occupied by batteries, and they fear to approach until forced to do so by hunger, and then they do go to feed despite the presence of batteries.

"Sinkboat" is anxious to know what I meant by asking him if he ever heard of riparian rights. Well, I expect I meant exactly what the question implied. In his first article he made two unqualified statements, viz., that "no one can commit a trespass in the water," and "the water is free to all," and there is nothing in the context to show that he restricted his assertion to his own locality. In his last article he states that the law, according to his belief, makes a material difference in water where the tide ebbs and flows, and in navigable and unnavigable water. It has been decided in several States that where the common law prevails, the proprietor of the bank of a stream owns to the thread of that stream, *i. e.*, the middle of the channel, whether navigable or not, and if he owns both banks, he controls the entire stream in front of his property, and although he cannot obstruct navigation, he can, if proper notices have been erected on the banks, prevent any one from shooting on the waters over which he has jurisdiction. Consequently, if a box-shooter or other gunner should take up his position on that water, he would be guilty of trespass. And it is not to be supposed that the same stream near its mouth, if affected by the tides, would be in any way removed from the operation of the law that governed it near its source, all other things being equal.

"Sinkboat" also asks if I indorse the sneakbox and swivel gun? This is one of those lapses of memory that I have mentioned, which I thought "Sinkboat" was occasionally afflicted with. If he had read the next line below the one sneakboats are mentioned in, he would have seen I classed them with batteries as objectionable methods. I have never referred to swivel guns, but lest "Sinkboat" may be misled as to my opinion of them, I do not hesitate to say that it is my profound conviction that any one who uses such a weapon in any of our waters ought to be in the penitentiary. In such a place he might be made useful to the community.

"Sinkboat" appears to think he has made a "point" when he says that I prefer to "sit in the marsh" that "cannot move" and look at battery-shooters. "Sinkboat," I fear, cannot appreciate the feeling that compels me to agree with his assertion, but I much prefer to "sit" and "look on" rather than indulge in a practice that although successful to-day will, as is well known, finally drive the fowl from their haunts. Unintentionally and unconsciously "Sinkboat," while believing he has found a weak point in my armor, exhibits the feeling that controls and inspires all the advocates of battery-shooting when he quotes, "He shows the weakness of his cause; he says the marsh cannot be moved and the sportsmen cannot reach the fowl." J-u-s-t s-o. "Therefore we want to get in a position to reach them." That sentence covers his whole ground; it is the creed of the battery-shooter. To "reach them" the box is brought out, the fowl are chased from feeding ground to feeding ground, until, persecuted beyond endurance and half starved, they depart for other quarters. The supposed "weakness of my cause" is a "strong point" that it may not be expected a box-shooter can appreciate. His sole desire is to procure birds. The charm of scenery, the changeful hues of autumnal woods, the play of the breeze on the water, and the many objects that brighten and enliven the landscape even in winter time, have no attractions for him as he lies flat on his back in his coffin-like shelter beneath the water; and he cannot understand that any one should be willing to remain on shore rather than practice a method that a great cloud of witnesses can testify to be most hurtful to continued good sport, and objectionable in every way.

Now it seems that so far as "Sinkboat" and I are concerned, this subject has been ventilated for as much as it is profitable to us. He has argued from the experience he has gathered in his locality, honestly and with all courtesy. I have endeavored to show, I trust with equal consideration for my correspondent, that despite the exceptional advantages the Chesapeake waters possess, they have only partially escaped the inevitable result of continued battery-shooting, while other localities, partially in some, totally in others, have been deprived of their fowl from the same course. It is time now for us to give place to the host of sportsmen throughout our land, who can bring competent testimony on this question, so that, if battery-shooting is shown to be the destructive and harmful thing I claim it is, then we can all unite in having it suppressed by legal enactments within our borders. Speak out, gentlemen.

SAGAMORE.

MASSACHUSETTS GAME PROTECTION.

THE Massachusetts Fish and Game Protective Association has difficulties to contend with as well as other associations which undertake to reform men. Influenced by the market interests, there is a strong impression among country people not well informed, that the Fish and Game Protective Association is a society of "sporting gentlemen of leisure, who want all the fish and game saved by law till they get ready to catch or shoot." Marketmen, who know better, take pains to spread this idea broadcast at every opportunity, till it has become very difficult for those who desire laws wholesome for the future of fish and game, as well as the good of farmers and the owners of timber lands, to obtain legislation. A greater mistake was never made. The Fish and Game Protective Association is made up of hard-worked merchants and professional men chiefly—men who do very little hunting or fishing in Massachusetts. Its members work and tax themselves to obtain and enforce such laws as shall preserve fish and game in the best manner for an increase and perpetuation rather than utter extermination. Many of them, who can ill afford the time, work in this direction from pure love of the cause, since they never hunt or fish at all. Some of them are earnest students of nature, and the leaping trout and whirring grouse has more of interest to them than its value in the stew-pan or as a mark to shoot at. But they are misjudged all the same, and any action on Beacon Hill which looks toward saving the deer, the trout or the partridge from following the buffalo, fast to utter extermination, is looked upon jealously by the "country member." He is made to believe by the member who is in league with the market interest—and there are such members—that the trout and the partridge are the special booty of the country boy. The country member is usually the father of the country boy, and hence, any legislation which looks like favoring the Fish and Game Protective Association—although so very wide of that intention—is liable to be voted down. The "country member" from the backwoods of Maine has more sense. He has trusted—legally voted to trust—the preservation and propagation of fish and game in his State in the hands of a couple of earnest, sensible commissioners. Witness the result. A wonderful increase in both fish and game, especially the larger game. Would the "member from Cape Cod" agree to such a proposition? Not if he knows himself; he has some pet theories of his own, chief among which is the old one that fish and game belong to everybody, and hence nobody has a right to attempt to save it.

Some changes are being asked for in the Massachusetts fish and game laws at the present session of the Legislature. One feature desired is a greater chance to bring conviction upon the law breaker. Another is the greater protection of song and shore birds, both of which are suffering severely from the fashion of hat wearing. The destruction of birds for millinery puposes is simply enormous, but will the Legislature grant any help? It is uncertain. The matter is now in the hands of the Committee on Agriculture. No bill has yet been reported and printed. Some good measure may pass, or it may go the way the excellent form of a bill did last year—to defeat. But the Fish and Game Protective Association is working in a different direction. It is increasing its membership rapidly, and taking new measures to better inform the general public upon the question of fish and game protection.

SPECIAL.

From Boston comes the news that the Legislative Committee on Agriculture of the Massachusetts General Court does not encourage us to hope for protection of geese in spring. It is, however, possible that the Committee contemplates some general game law, which will do away with the destruction of geese, duck and shore bird while on their way to their breeding grounds in the spring. The petition is as follows:

"To the Honorable Senate and House of Representatives, of the Commonwealth of Massachusetts, in General Court assembled. The undersigned petitioners respectfully ask that the statutes of the commonwealth in relation to the preservation of birds, may be so amended that it shall be unlawful to kill wild geese (so called), between the first day of March and the first day of October, that being the period during a part of which they are on their passage to their breeding places at the north. Duxbury, Jan. 1, 1885."

Signed by Horatio Chandler and fifty-eight others.

Report of the Committee on Agriculture, leave to withdraw, on the petition of Horatio Chandler and others for such legislation as will prevent the killing of wild geese between the first day of March and the first day of October. (March 27, 1885).

THE KILLING POWER OF BULLETS.

THE following experiments were the initial ones of a series which were instituted by an association of hunters, professional and amateur, for the purpose of ascertaining the comparative value of different sorts of ammunition and different styles of firearms for killing game. The trials are intended to eventually embrace tests of accuracy, but for the present are confined to ascertaining the penetrative power of various bullets, and the size and nature of the wounds they make.

A target was constructed of material having, it was judged, about as much resisting strength as the body of an elk or bear. It is composed of successive thicknesses of planed cedar boards, whereof nineteen are 16¼ inches thick. These are a foot square, and are held together by cleats nailed across the ends. Bullets are fired into the target in a direction perpendicular to the face, and four shots, distributed symmetrically, are fired, when the target is taken to pieces and the penetration ascertained. The wood being free from knots and quite homogeneous, the results are trustworthy and regular. The substance appears rather more difficult of penetration than sugar pine.

The first experiments were loosely conducted, and their results are deemed not worth printing, as they were carried on with the idea of determining the proper conditions under which to proceed with the formal investigations which had been decided upon. The first regular essays were made with a Remington rifle of .44-caliber, center fire, and using in each trial seventy-seven grains of powder, the normal charge for the gun. The bullet was factory-made, patched, hardened, and weighed 395 grains. Its penetration was about fourteen and one-quarter inches. It was "upset" to about three-fourths of its former length and increased to about two-thirds of an inch in diameter.

The second shot was with the same charge of powder but with a 200-grain Winchester bullet, grooved, and composed of soft lead. It flattened to a rough irregular form approaching a disc, whose greatest diameter was 1$\frac{1}{16}$ inches; penetration, 9 inches.

The third test was made with the same amount of powder and with a factory-made bullet, so hard that it could scarcely be chipped with a penknife. Weight 520 grains; penetration, 18¼ inches. The bullet cut a clean hole, was upset scarcely at all, and very little deformed otherwise.

The fourth and last charge consisted of 77 grains of powder, and a round ball made from lead pipe and very soft. It weighed 120¼ grains; penetration, 6 inches and a fraction. The bullet was flattened to a disc the size of a quarter dollar and scarcely thicker.

There is a vast difference in the size and shape of the perforations made by these four bullets, the fourth being the roughest, and considering its depth the most capacious. It becomes easy to understand one element of superiority possessed by the muzzleloading rifle, which uses the round ball. An animal struck by such a ball would be lacerated worse than by a much heavier cylinder conical one. Provided that each of these four projectiles were given sufficient force to penetrate an animal, death would doubtless ensue more quickly from the round bullet than from either of the others, and judging by its behavior in wood, the long-range 520-grain bullet would prove the least effective.

We observed with interest that the holes cut by the four bullets were about equal in cubical capacity. This fact was ascertained by filling the cavities with plaster of paris and allowing it to "set." Then splitting up the target we dissected out the plaster cast of the bullet hole and compared the four. This method is theoretically exact, since it would only be necessary to weigh the material taken from each hole and compare the weights. But in practice it is very imperfect, inasmuch as the fibers of the wood become imbedded in the plaster and cannot be disengaged without some loss of the latter, whence the accuracy of the experiment is vitiated. The material we have adopted for targets is the best procurable here, but as the fibers spring back after the bullet has passed, a fair measurement of the size of the aperture cannot be well ascertained. A strictly homogeneous material is needed, which would be cut away clearly by the bullet and yet not afford resistance enough to break it up or distort it too much. We shall feel obliged to some one who may suggest a material, which can be quickly and easily procured.

Our future experimenting is designed to include a course of firing at targets of cedar covered with a thickness of bear or elk skin, and including in its mass a stratum of oak or ash woods to represent the skeleton of an animal, which would usually act so as to divert or deform the bullet. I will communicate the results.

BARRON.

PORTLAND, Oregon.

GUNS, SHOOTERS AND SHOOTING.

I LIKE Robert B. Roosevelt's way of expressing himself in regard to "remarkable shots"—that is, shots which are remarkable to every one except the party who made them. Every man who shoots at all has made a shot out of the ordinary course of things. I have done it. I have killed ten Bob Whites in ten consecutive shots. That was, indeed, remarkable for me. I have missed "ten straight," and that was not so remarkable.

But when a man writes or says that he has the skill or luck to go into the field and take such chances as present themselves, and usually gets even four-fifths of the birds he shoots at, I must be pardoned if I have doubts as to the truth of the statement. Such talk is too severe a strain of the "sportsman's license." He who goes out with fifty shells in his belt and comes back with even twenty-five birds in his bag has had a successful day and done excellent shooting. Occasionally a man does better. If the shooting is done in the open field, and no companion is present who pops away so soon as he hears the flutter of the wings, an expert gunner may sometimes do even better than this. But if he is blessed with such a friend, or shoots largely in cover so thick that he hardly gets even a flitting sight of the bird, his success will be much less. So, therefore, when I hear of a man who boasts of his killing thirty birds in thirty shots, I am not only incredulous, but convinced that he does not speak the truth.

I was present at the field trials (so called) at High Point, in 1882, and one night listened, with some impatience, to the extravagant talk of a fellow who was airing, *ad nauseam*, his recent exploits in the field. He "vaunted himself" in having bagged thirty birds in thirty consecutive shots. Soon after he had sought another admiring audience for his hyperboreal expressions, I asked a well known wing shot if he could beat that man in the field. He promptly answered that he could. "What, beat a man who never misses?" "No," said he, "I can't beat a man who never misses, but that fellow shoots with his mouth. I can beat him and all others who are like him."

I recollect an occasion when I shot a cylinder 12-bore gun, loaded with twelve No. 1 buckshot, at the bottom of a common wooden basket, placed thirty yards off. I hit the object with eleven shot. Now I do not hesitate to say that I could not have done it again in a hundred trials. No man has a gun which can be relied on to make such a target.

We hear, sometimes, of a gun of such remarkable form as to kill snipe or partridge (not ruffed grouse) at eighty yards with No. 9 shot. I don't believe a word of it. Four drams of gunpowder, in the best of guns, will scarcely make one half of a charge of that sized shot even stick in a soft board at that distance. I heard one of those boasters make the allegation that he had a gun which would break glass balls, if held right, at sixty yards. It cost him over a thousand dollars. A gentleman who was present offered to bet him ten dollars a shot that he could not do it, with the ball placed on the end of a cleaning rod, at that distance. The bet was declined, but the trial was made. The gun was a full-choked Purdey, loaded with five drams of gunpowder and one and a quarter ounces of No. 9 shot. That gun was shot six times and that ball and the cleaning rod escaped untouched. Let the best of guns be shot at the side of a house at even fifty yards, and many spaces between shot marks will be found through which a bird could fly. It is an excellent weapon which, with the most perfect aim, is seen to kill a snipe or woodcock or partridge at thirty-five yards at every discharge.

One of the most remarkable hunts I ever took occurred when I was a boy. At that day even percussion guns were not common in our neighborhood. I was the owner of a flint and steel rifle, eighty balls to the pound of lead. With that and a "rest" I could kill squirrels nearly every shoot, and indeed, rarely missed when I fired "off-hand." One day I took the gun and went alone to a small piece of woods lying on the bank of the stream near which I lived. Although there were less than four acres in the tract, it was generally well supplied with squirrels. Cautiously entering it, and taking an eligible position, I soon saw one in the fork of a tree. He presented a most excellent opportunity for a trial of my skill. Just as I was "drawing a bead" on him, I heard another chatter. I took down the gun and looked at him. He was as "fair" as the first one. I sighted on him and then I heard others. Examining the trees, I saw nine of them—all good chances. I took aim at each one, and was unable to determine which offered the greatest temptation; and inasmuch as I knew I could get but one of the lot, I put the gun on my shoulder, and went back home without shooting at all. I am not sure I should at this day be guilty of the same folly.

The old flint and steel gun is a weapon of the past, but can be found now and then in those sections remote from railroads. Even gun flints are getting to be a curiosity. The percussion muzzleloader is becoming scarcer. No sportsman will have one of these inconvenient guns who is able to purchase the more modern article. How long will it be before the present breechloader will be a historical arm? Some persons say that hammer guns will give place to the hammerless, and that even the gunpowder of this age will be supplanted by some better, safer and more economical propulsive power. Who knows? The present gun and ammunition suit me very well. If cheaper shells could be had, "good for one time," I should be highly pleased. Now I am forced to pay for the highest grade, no second or third grade ones being made of the size which I use. Why do not our manufacturers make cheap 14s, 16s and 18s, as they do 10s and 12s?

My beau ideal of a sporting gun for small game, is a 14 or 16, cylinder, 28 inches long, and weighing 6½ pounds. I am not able to carry all day nine pounds, besides the loaded shells and lunch. The old Roman soldiers carried sixty pounds, but I am not a Roman soldier. Yet some silly fellow has said that he who can't carry with comfort all day a gun of ten pounds, ought to leave the glories of field and forest sport to him whose physical powers will enable him to bear such a burden. With quite as much truth would I say, that he who has such strength of muscle ought to stay at home and wield a sledge hammer or a jack plane. When I go into the fields or woods, I go for sport and not for labor. I go to get strength and recreation, and not to see how much I can carry. If that was my purpose, I would pull at a gate post or try to handle an anvil.

Yes, give me a 14-bore cylinder gun, with a length of stock of 13¾ inches, a drop at heel of 2¼ and at counter of 2 inches. With such a gun I can use 3 drams of gunpowder and an ounce of shot with comfort, and the gun being light, I can manage much better all the game I can kill. Men with long arms can stand a length of 14¼ to 14½ inches, and if quite robust can undergo the labor of toting nine or ten pounds. But for most of persons who hunt birds I regard a small gun as the most suitable. There is little doubt that a 10-bore, with 1¼ to 1½ ounces shot, would prove more destructive, but the weight is such as to make it a prohibited article to those who are unused to much physical labor. A fair marksman, with a 14 or 16 bore gun can get as much game as the needs of his own table require, and occasionally have some for his friends. If one wants ducks, a heavier weapon is desirable, and the additional weight is of little consequence, inasmuch as it is borne chiefly by the boat. But most men would find a 10-bore weighing 9 or 10 pounds an intolerable burden in a tramp over the fields to the extent of ten miles or more. These, at all events, are my views.

Why is it that gunmakers use such strong mainsprings? Are not the most of them far more powerful than necessary? The springs for all hammerless guns are far weaker, and yet they are effective. The evil of a very stiff spring is that it strains the pins of the lock and batters the striking pins. If a stroke of ten pounds will explode the cap, there is no use of any more. I have had frequent occasion to grind down the springs, reducing them at least one-third, and yet never had any trouble to follow. Besides the evil to which I have referred, there is greater ease in handling, and all sportsmen know how much more pleasant it is to cock his gun without a heavy tax upon his thumb, than to get hold of one which requires the muscles of a giant to get ready for a shot.

Has it yet been settled how short gun barrels can be before their effectiveness as field weapons is destroyed? I have seen it stated that experiments had demonstrated that twenty-six inches was about the limit. A friend of mine is the owner of a little Scott gun, which was originally a 16-bore cylinder gun, thirty inches long. As such he shot it for several seasons, when, desiring it to shoot more closely, he had it choked by enlarging the bore an inch from the muzzle. When clean it shot well; but it soon became foul, the depression filled up with burnt gunpowder, and thus the effect of the choking was destroyed. This disgusted him and he sent it to a gunsmith for unchoking. To do this the barrels were reduced to a 14. They were now exceedingly thin and easily indented. At last one of them began to bulge. Fearing it would burst, he brought it to me and requested me to saw it off. I did so, and the barrels are now just twenty-four inches long. With this he has done some good shooting, and tells me he has seen no difference in its effectiveness. I confess I think it rather short. He says if he ever gets another gun the barrels shall only be twenty-six inches.

Now at all trap-shooting trials there should be handicapping. It is not just to place 10 and 12 bores under the same restrictions as to distance; and all shooters should be required to place in the hands of the judges, before the shooting commences, every shell which they use. Let them be placed in separate boxes, properly labeled, and the judges should take one from each lot and examine it, so as to see that too many shot are not used. It will not do to say that all shooters at these trials are gentlemen and will confine themselves to the law. Unfortunately all of them are not of this character. There is a deal of jockeying at such times. No honest man could object to the plan proposed. If any one did it would create a suspicion that he was guilty.

Is it not provoking, when after a covey rises, or even a single bird, for the sportsman to hear the unpoetic sound of a snap? I have had those feelings, within the present season, and that too with a shell of the highest grade. It was not the fault of the lock, but of the cap on the shell. This rarely happens, even with the lower qualities. When it does the gunner feels unamiably. At least I do. Can it be remedied? I wish so.

The open season for birds in this State is quite a long one, extending from the middle of October to the first of April. I wish that the Legislature would prohibit shooting Bob White before November. Even in that month coveys are found which are not half grown, and then anybody who can shoot at all can easily kill. But in January, February and March all are strong flyers, and the sportsman must exercise all his skill to bring them down. It takes No. 7 or 8 shot, a good charge of good gunpowder and a quick shot to fill the bag. In addition to this, during the months of November and December in our climate many of the birds are in the woods and do not come back to the fields until January. Some of our best hunts are in February and March. WELLS.

ROCKINGHAM, N. C.

THE FIRST TRUE SPORTSMAN.

Editor Forest and Stream:

In the "Encyclopædia Brittanica," Vol. VI., page 232, in the article on Confucius, the Chinese sage, it is stated that Confucius "never shot at a bird perching nor fished with a net, the creatures not having in such a case a fair chance for their lives." I therefore claim the belt for Confucius as the original true sportsman, who always cried "shoo!" when he saw a Chinese ruffed grouse sitting on a limb, and disdained to lift a Chinese speck— beg pardon, trout, out of the wet otherwise than with a half-ounce split bamboo rod, horsehair single-strand line, microscopic fly tied to represent a lo— I mean insect. As it is supposed that gunpowder was not used to throw projectiles until long after the Christian era, the question arises, Did Confucius, 2,400 years ago, shoot birds flying with his "bow an' arrer," or did he, like many modern sportsmen, use a blow gun? BOBOLINK.

WILLIAMSPORT, Pa., March 19.

SMALL-BORE SHOTGUNS.

Editor Forest and Stream:

In your last number I see an article upon this subject by "Syntax." The article is a good one, and I would be glad if every lover of a gun could read it. I know from experience that the 20-bore is all that is claimed for it. It has been my favorite. Having tried the 10, 12, 16 and 20-bore find that the 20-bore is the best of either for all purposes. All necessary is to make the load according to the game and distance. There are a great many people who are fond of hunting that cannot afford a costly gun or buy ammunition for a large-bore gun. In the interest of economy I have gone a little further than "Syntax." Not long ago I bought a Remington rifle, New York State model, .45-caliber, 36-inch barrel, had it made smooth bore and rechambered to use a .45-caliber 3-inch shell. The outside appearance was altered to a regular sporting gun. I find that it is the best gun I ever shot, without any exception. It scatters sufficiently for birds when handled by a scientific hunter. It will kill as far as a No. 10-bore, is economical in ammunition, has no rebound, and can be reloaded almost as fast as a repeater. The cost of this gun complete does not exceed fifteen dollars. Firing small cannon from the shoulder is played out with me. ECONOMY.

EVANSVILLE, Ind., March 1.

SOME REMARKABLE SHOTS.

Editor Forest and Stream:

Returning late one evening from a day's hunt we crossed a wet pasture lot. A rabbit started and scudded down a cow path. My brother fired in that direction. His dog retrieved a fresh-killed woodcock, but no cotton-tail could we find. We then routed several woodcock in this lot, but it was too dark to shoot. I heard one get up near me and by sound fired, and my dog found dead.

Hurrying along a mountain wood road late one night a partridge flushed from under the edge of a large rock, where it had located for the night, and instinctively I threw up the gun and fired, the party with me exclaiming, "What are you doing in the dark?" But the well-known tattoo told the story, and gathering him in we went on our way rejoicing. REBUCK.

Editor Forest and Stream:

In the long ago in "Old Kentuck" squirrels were very plentiful, and the old-fashioned muzzleloading rifle was the favorite. My uncle, who is still living and whose word has never been doubted, told me one day that while out hunting squirrels he shot one from a tree near by, which fell dead at the crack of the rifle. While reloading another squirrel fell dead from another tree further off, both squirrels having been pierced by the same bullet. ALPHA

EVANSVILLE, Ind.

Editor Forest and Stream:

Some years since a neighbor of mine was out hunting with an old percussion lock rifle. He got a shot at a deer, but his old pill lock neglected to go off. As he stood with the gun resting across his arm and pointing back into the woods, trying to reprime, the piece was by accident discharged. Hearing a commotion in the bushes, he walked out in that direction, and some ten or fifteen rods from where he had been standing found a deer which his bullet had killed. BUCKEYE.

OAKSHADE, O.

Editor Forest and Stream:

This shot was with a stone. Prowling around in the woods one day when quite a lad, I spied a woodpecker on the under part of the limb of a tree, distant from me perhaps forty feet. Boy-like I picked up a stone and hurled it at the bird, and my aim was better than it has been many times since, for I hit the woodpecker a tremendous blow directly on the head, knocking it lifeless, and driving its beak well into the wood of the tree. I did not get the bird till I had climbed the tree and pulled its beak out, which required considerable force. This sounds like a "sea serpent yarn," but is a fact. SOUS BOIS.

WASHINGTON, March 21.

MICHIGAN DEER HOUNDING.

Editor Forest and Stream:

The vote on the prohibition of deer hounding in the Michigan Legislature took place on March 17, after a long and warm debate, and prohibition was lost by a vote of 16 and 13 against, wanting one vote of a majority of the Senate, which would have carried the measure. One Senator voted against it who had made a speech in its favor, and promised to vote the same way. But the vote was reconsidered and the bill laid on the table, so that another trial of the matter will probably be had.

A proposition has been made by the advocates of hounding to compromise on a period of twenty-five days, during which hounding shall be permitted. A Senator who inquired what had better be done, and if it was not better to get half a loaf than none, received the following views and advice respecting the matter:

"I would not thus compromise; think it would be unwise. There is no doubt but that deer hounding has got to go to the wall, and if not prohibited the present session will be the next. The great body of the people—the entire body, with slight exception—is adverse to it, although only a portion has been pointedly expressive. The best class of mind is decisively against it; it has become the fixed belief with the great majority of the people that its prohibition is essential to prevent swift extermination of the deer, and this conviction is founded on abundant and conclusive facts and experience which are fully entitled to respect.

"And only a coterie really champion deer hounding. You can readily see that the result in the Senate is purely the work of a lobby, and does not spring from a manly conviction of the right of a cause. It is generally looked upon as a majority 'made to order.' The House was not lobbied, and its spontaneous conviction of what is right was expressed in the decisive vote of 80 for prohibiting hounding to 3 against.

"The twenty-five days proposed would practically give hounding sufficient time to efficiently accomplish its destructive results. Its devotees would aim to put in their time during the allotted period, and would put it in effectively too.

"The allowing of hounding at all will induce the care and breeding of hounds for this purpose. They will be taken on to or kept on the ground for this hunting, all of which will result in their being used much out of season as well as in, and thus the measure of damage will be enlarged.

"No hounding at all is the only safety. Compromise will only complicate and delay getting rid of the destructive mode; it will thus become intrenched, and claim the right of continuance by virtue of compromise, and be harder to eradicate than now."

Your interest in this question generally, and being a very proper vehicle for the expression of fact and opinion relative this class of interest, make it both pertinent and desirable to publish the above relative to the exciting contest in this State over the hounding question. * *

DETROIT, Mich., March 23.

NORTH CAROLINA LEGISLATION.—*Editor Forest and Stream:* As soon as I saw in your paper that a bill to repeal the non-resident battery law was before the Legislature, I immediately wrote a letter to the *Daily News*, published at Raleigh, protesting against the repeal of the law, and recounting some of the many objections to battery-shooting, as noticed by its effects in the waters of the Chesapeake Bay. I also communicated with several members of the Legislature, urging them to vote and use their influence against the proposed measure. Fortunately there are a number of intelligent and influential sportsmen members of the Legislature of North Carolina, and it is not at all likely that such a bill will ever pass while they hold their seats. The thanks of all sportsmen are due you for the stand that you took in the matter, and there is no doubt but that you were largely instrumental in defeating the obnoxious bill.—CHES A. PEAKE (Baltimore, March 26).

PHILADELPHIA NOTES.

MR. W. H. CHILDS, one of the members of the Philadelphia Kennel Club, while down the bay duck shooting, Tuesday, the 19th inst., saw immense flocks of snow geese, and from information given him by the man he had employed, he learned that the fowl had been there about a week. An effort was made to get a shot at them, but, as is always the case, the geese were too watchful, and the flock took wing in a mass and shifted to safer quarters not very far distant.

Ornithologists who are interested in the subject may now be sure of the presence of this beautiful goose in the waters of Delaware Bay in large numbers every spring and autumn, and that they appear here not as occasional stragglers merely, as the books state.

During the cold snap of last week a large shipment of Western game reached Philadelphia. I notice a number of white-fronted geese in the lot and not a few snipe, besides mallards and teal. As I write there is a southerly storm brewing, and doubtless we will have a warm rain. This will bring the snipe most surely, and they are about due, taking the average of their several arrivals. The meadows in most places are in good condition or will be so after a rain, although there is yet some frost in the ground. Newly arrived snipe, however, generally seek spring marshes where vegetation is advanced and the soil does not contain much if any frost. HOMO.

THE REPEATING SHOTGUN.—Dr. D., one of our crack shots, is rejoicing in the possession of a Spencer repeating shotgun and has been making various targets as well as testing the fact that a single gun will do better work than any double gun. The Doctor claims that more game is killed within 25 yards than beyond that distance, and any gun to be a good field gun, one that brings meat to the bag, must do as good work at 25 yards, as at 40 or 60; therefore his targets are made at those distances and he thinks he has never seen in all his forty years' experience, more perfect targets, while at 40 yards he put 390 pellets in the 30-inch circle, still at 25 yards the distribution was so regular and even that while it would not have let a quail through, at the same time would not have torn or lacerated it. Every sportsmen knows how often he has wished his gun would shoot four or five times when the birds were getting up all around him, and the Doctor thinks he is now prepared for any emergency.—DISNER (Marshalltown, Iowa, March 27).

SPRING IN IOWA.—Spring has opened up very satisfactorily for the sportsmen. A few ducks have put in an appearance and the hunters are wild. Dr. Kibby and Will Osman were out after ducks a few days ago, but had rather indifferent success as it was a little too early. Rev. J. B. Casebeer and Dr. Dorsey had a hunt on the tapis for the same day but it fell through. Reports are coming in to the effect that good quantities of geese are in our neighborhood. While the waters are not too high, the country is still a little more inundated than will make the sport first-class for a week to come. What few quail there were about here have wintered very well, and if the sportsmen will protect them for a year we will again have fair shooting. Will keep your readers advised of events here.—DISNER (Marshalltown, March 26).

INDIANA.—Last fall's shooting season was rather disappointing upon the whole. It was dry and very warm, except in the latter part, when the blizzards made shooting anything but a pleasure. Quail were fairly plentiful; have been gaining steadily since the great snow, and if we could but have the law fairly respected they would make good shooting in a few more seasons. It was too dry for woodcock in the fall. All their favorite resorts in this vicinity were dried up. Hare in abundance, and the light snows bring all the old muskets into requisition.—C. W. W. (Fairland, Ind.).

VICKSBURG, Miss., March 21.—The snipe have gone north mostly, though a gentleman heard the "scaipe" of several one evening the first of this week, as he passed from the entrance to the government building to the Hotel Windsor at New Orleans. The season on quail in this neighborhood will close with a large supply left over. Many of the coveys have apparently been untouched.—BURR H. POLK.

ON A RUNWAY.—Cleveland, O., March 14.—*Editor Forest and Stream:* "Behind or in front of a tree?" That is the question proposed by "A. F. T." as to how to watch for deer. My experience is that deer will come sufficiently near while sitting on a log. See illustration in FOREST AND STREAM for March 5.—DR. E. STERLING.

BELLEVILLE, Ont., March 19.—It is reported that a game butcher in one of the northern townships found forty deer yarded, killed them all, and after stripping off the pelts, left the bodies to rot in the woods. The Sportsman's Club are working up evidence in the case.

QUANTICO, March 27.—Great numbers of ruddy ducks, whistlers, redheads, and a few canvasbacks are in the lower Potomac now. Gunners from Washington are down to-day at their club house, Richland station. The fowl are expected to remain some days.—T. C.

A CARD FROM MAJOR VERITY.—Adironda, March, 1885. —*Editor Forest and Stream:* Permit me to say that no accounts of my adventures are authentic unless signed by myself. I am very respectfully yours—MAJ. JOSEPH VERITY, U.S.H.M.

FAVORABLY REPORTED.—Albany, April 1.—*Special Dispatch to Forest and Stream:* The bill to prohibit the hounding of deer in New York State was this morning reported back from the Game Law Committee of the Senate without amendment.

IN GOSHEN'S HOLE.—I spoke of the deer killed in Goshen's hole as the blacktailed deer. I used that name as it is the one almost invariably used here, but "mule deer" is the correct name.—MILLARD (Bear Creek, Wyo.).

A HUNTING HORN.—Will some of those who write of "winding the horn," give instructions how to prepare a hunting horn, or where a good one can be purchased?—WARREN.

TENNESSEE.—Qail and ducks are plentiful here. Although we have had a very severe winter, it does not seem to affect them much.—B. (Knoxville).

MINNESOTA.—St. Paul.—The Legislature adjourned without making any changes in the game laws.

Sea and River Fishing.

THE BIG TROUT OF THE THAMES.

BY J. HARRINGTON KEENE.

"FOR myself I hold the salmon to be the king of fish, but trouting to be the choicest form of angling; in the word salmon including all the migratory species, and by trouting meaning also fly-fishing for grayling." Thus saith Mr. Senior ("Red-Spinner"), the angling editor of the London *Field*, in a charming little work written for the "Fisheries" of 1883, and he adds in a sentence or two further on, "There can be no question that salmon and trout between them represent the science, ethics, poetry, rhetoric and all the rest of the delicious sport of angling." I am only concerned here with the trouting part of this quotation. I fully and entirely agree with "Red-Spinner," and go further in laying down my individual dictum, that of all trouting that for the Thames trout is far and away the chief sport, in that it requires the exercise of greater art, patience and ability than ordinary trout angling, and that its guerdon is a fish which has no superior in beauty and strength among the *Salmonidæ*. April 1 is the opening day on the Thames, and it is a joke too venerable and oft repeated to be omitted here, that the fish often makes a fool of its would-be captor on that auspicious date. The law allows of the trout being taken much earlier, it is true, but the instinct of the Thames trout fisherman has made the unwritten law as it is, and no one would face the reprobation which would inevitably fall on him by beginning to fish sooner than this. The season of winter in England is of all seasons the most capricious, and it occurs now and then that these large trout have not "mended" as they should do, even by the orthodox date, certainly they are never thoroughly takeable much earlier. The Thames trout is unmistakably *un poisson d'Avril*.

Some particulars as to the personality of this fish to justify the praise I have showered on it ought here to be given. Briefly then it is a true *Salmo fario* or brown trout, and excepting in size and symmetry, the 15 pound Thames trout is identical with the tiny twelve-to-the-pound fingerlings of Dartmoor. Of this there is no doubt ichthyologically. Lay the two fish side by side and you will see that the larger is more symmetrical, and that its coloring is on an extensive pattern, but the proportions in both are substantially the same and size for size there is not much difference in their fighting power. Indeed those little fish of Dartmoor and Devonshire streams are gallant little fellows. Verily, "they have great souls in their little bodies," as Virgil said of the bees, some thousands of years ago, and some pretty sport can be gotten from them, Lilliputians though they be, by the side of the Brobdingnaggian proportions of the fish we are now discussing.

Yes, the Thames trout is a brown trout, and no one who has peeped through the interwoven gothic arches of the overshadowing alders into the limpid, oily eddy, wherein a large one is lying taking his afternoon siesta, can forget the mottled tortoise-shell markings of the broad-shaped back and the rich dark brown of the powerful tail any more than he can the full orbed eye, set like a huge diamond amid dark brown velvet. Be wary as you look, lest you scare him, for with one powerful sweep of that helm-like tail, he will disappear like a beautiful dream, to a dead certainty. So, now you can see him quite clearly. Mark the crimson jewelry of his gills as they slowly expand and close with rhythmic regularity, and by gently bending down you will get a side view of unmatched beauty; the brown markings gradually shading off to a silver sheeny white and studded over with deep carmine spots. Surely Paladin of old never wore such a magnificent scale armor, nor was Solomon, in all his glory, arrayed in such a prismatic wealth of tints and general magnificence. Now this fish, as I have hinted, grows to the weight of fourteen or fifteen pounds; indeed Frank Buckland once cast one caught at Reading which weighed 16 pounds 15 ounces; this was in 1880.

The reason for its remarkable growth as compared with its brothers of such rivers as the Colne, Test, Itchen, etc., is not definitely known. The most probable explanation is that the river produces a plentitude of some kind of insect life which is not so prevalent in other waters. Mr. Francis Francis thinks that the larvæ of the large stone fly is the secret, but I can't quite adopt this theory inasmuch as that the fly is quite unknown in reaches where I have myself taken some of my finest fish. My idea, which I broach with diffidence, is that its size and strength came of long continued cannibalism, in other words it is a well known fact that this fish feeds almost entirely on the *Leuciscus albumus*, or bleak, of which the Thames possesses immense numbers, and this diet together with the exertion necessary in the chase, develops its size and agility. As a collateral support to this idea I may mention that Alresford Lake, near Winchester, there are trout of the Itchen breed which weigh from eight to twelve pounds, though their original progenitors never exceed four, and there are myriads of roach and rudd in the lake and an infinitesimal amount of insect life. And again in my experience of trout streams I have invariably found that the patriarch of the mill tail, or arch, or camp sheathing, is he who feeds regularly on the fry of the stream. Of the Thames trout one thing is certain. He feeds as regularly as a London alderman, and at stated times you will see him chase and catch his prey. Having ascertained the particular hour at which he dines you may wager your bottom dollar he does not vary a quarter of an hour for weeks—of course if he isn't caught that is.

This brings me to the subject of his capture. The trout of the Thames are not very plentiful, and with the wealth of coarse fish life (which notwithstanding the thousands of anglers is owing to the Thames Angling Preservation Society becoming still greater) it is doubtful whether it is possible to greatly increase the number without decreasing the size and quality. Still there seem to be quite sufficient for the exclusive patrician Thames trout fisher, and really I think if a man gets an eight or ten pound fish once in a season it ought to satisfy him, especially if he only fishes as accident and leisure allow, and not systematically, and at the same time gets good sport with the pike, perch, carp, barbel, etc., etc. Fishing fairly regularly I got thirteen in two months at old Windsor in 1876, and thought myself highly successful. Here as a sample is the report of trout caught in one week—which I know to be correct—in 1883 from a length of the Thames of twelve miles: Chertsey weir, four fish, weight 7¾ pounds, 4 pounds 14 ounces, 5 pounds, 3½ pounds; Shapperton weir, four fish, weighing, respectively, 5¼, 4½, 3¾ and 2 pounds; Sunbury weir, two fish of 7 and 4½ pounds respectively; Sunbury, one of 10 pounds; Hampton Court weir, four fish, weighing, respectively, 14 pounds 10 ounces, 7 pounds, 4 pounds and 2 pounds; Thames Ditton, one fish, 7 pounds 2 ounces; Kingston, one fish, weighing 7 pounds. This shows a total of 17 fish, weighing together 99 pounds 14 ounces, and is not a despisable record by any means, though it is not at all exceptional.

It will be noticed that many of the fish were taken at the weirs. These, it should be said, are the favorite "hovers" and feeding grounds of the Thames trout. The larger the fish the more will he delight on a bright, sunshiny day to hunt the darting "willow blade," as the bleak is sometimes termed, amid the roaring, tumbling torrent of the weir, where also, curiously enough, the bleak is fond of being, little and slender though he be. Naturally here, likewise, the ardent piscator is seen, either moored securely right close to the woodwork or perched on the cross beams above casting the flashing, spinning bait, now into the roughest of the torrent's flow and anon gently and artfully governing it into some foam-crowned eddy, where perchance the fish has retired for a rest and lieth perdue. If this be so, not a moment does that waiting fish pause to reflect; but, like a jungle tiger springing on its unwitting prey, he plunges on the bait and then—the keen triplet hook is firmly fixed in the gristle of his fierce jaw. Ye gods, what a period of heaped-on agonies the next twenty minutes or so becomes. Your rod is a light bamboo spinning weapon, your reel line is of eight-plait dressed silk, your trace and hook-link are of single salmon gut, and you are pitted against a brute with the courage of a lion and the wile of a fox, and strength to back it up. Moreover, the breadth of the river is perhaps not a hundred yards, and snarls and snags and submerged roots fringe its banks. Besides all this, you are unable to move from where you stand, and the struggle is carried on in the boiling stream rushing away at thirty miles an hour. Think of it, oh, brother piscator, and imagine the hopes and fears that thrill through and throb the bounding pulses of the fisherman who has perhaps fished many days and only at last, when patience has been well nigh exhausted, has met with reward. Slowly, however, the pace tells on the game fish, and piscator will find, as I have often, that when his quarry has fought to a standstill, and not till then, will it give up. But when it has once given up like this, be sure it is all over with it. It is of no use throwing it back expecting it to live—even supposing you mad enough—for it will float away, a fish exhausted to the death. Its heart is broken, its vitality is expended, and you are its captor but not its conqueror. This may seem romantic, but it is simply true of this splendid fish.

Another and yet more sportsmanlike method of catching this trout is known as the "Nottingham" style. The tackle is yet more light and fragile, indeed, my line is usually of undressed silk twist, no thicker than ordinary sewing silk, and gut of corresponding texture. A single hook of No. 4 size is the retaining weapon, and a rod which is of the peculiar make known as the "Nottingham," built of yellow deal and lance with a wooden light-running reel are the other equipments. A live bleak is the bait, and the way the tackle is used is as follows: You ascertain when the trout usually feeds, and some time previous the boat is anchored about thirty yards above the usual spot. When Sir *Salmo fario* breaks the water, on goes a lively bleak—being a top-water fish it won't dive—and the line is paid out till the feeding place is reached. Then the rod is lifted as occasion requires, and the wind playing on the line in the air, urges the bait hither and thither in a most enticing way. Of course there is a good deal of art in this movement, simple though it sounds. When a fish is hooked depend on it there is a war, and it's odds on the fish. This method is very successful when the fish has taken up his quarters in a quiet nook of the stream, and not in the rough water of the weirs, but it requires a first-class fishermen to use it, and therefore it is not the most popular of styles on the Thames.

Thames trout are sometimes taken with the fly, but as small salmon and lake trout patterns are only used—this fish has never been known to rise to a live insect—it is fatiguing work, and far from generally remunerative, and the method only demands a passing mention. Taking it comprehensively, the two styles described are the best, giving the greatest amount of sport all around. And it may be safely said that an old trout of a dozen pounds is no fool, and requires very great and silent care to inveigle. Moreover, the fish has also a notion of avoiding the hooks, though he almost tears off the bait. I once had a big fellow jump at my bait in which were four triplets and a lip-hook—thirteen hooks in all—and he smashed the head of the bait to pulp, but he avoided the hooks. Query: "How was it done?" and with that question I'll just leave the subject for this time.

"FLY-RODS AND FLY-TACKLE."

A BOOK with the above title has just been published. It is enough to say that it is written by our valued correspondent, Mr. Henry P. Wells. It is confined entirely to the subjects named and does not wander off into bait fishing, nor angling in general. Mr. Wells has devoted more time and attention to the materials used in fly-fishing than any person we know of, and his experience is well set forth in this most valuable book. In the chapter on fish hooks and the principles which govern their efficiency, the author has gone over the whole ground of draft lines, penetrating power, and all the forces which a model hook should possess.

It is the chapter on rods and rod material which will be the most closely scanned and criticised of anything in the book. Here Mr. Wells has given the results of his study of the subject together with his own preferences as to the action of a rod. He recognizes that some may dissent from his views when he says: "One likes a rod as stiff as a poker for the lower third, and withy for the remainder of its length. Another will look at nothing not stiff in butt and tip, and sloppy in the middle joint. A third must have plenty of action in the butt, and not much elsewhere; a fourth, uniform action from handle to the tip, but quite stiff withal; a fifth the same general spring but great flexibility; and so on to the end of the chapter." The author is an amateur rod maker who has experimented with every wood known to rod manufacturers, as well as with some that are not known to them, and therefore he is an undoubted authority on this subject. This chapter and the one following which gives directions in rod-making forms the most perfect treatise on rods extant.

The directions for casting the fly, a most difficult thing for a beginner to learn from a book, are as good as anything which has appeared. We might dissent in a trivial matter or two, such as the illustration showing the hand holding the rod with the line running under the fore finger, etc. We strike from the reel and believe it to be the true way, but this is largely a matter of individual preference. The book is one of great value and will take its place as a standard authority on all points of which it treats, and we cannot commend it too highly.

WHY FISH LAWS ARE NOT RESPECTED.

IT IS not many years ago when all legislation in this State, looking to the preservation of fish and game, was almost universally regarded as an attempted restriction upon the natural right of every citizen. The hatred entertained by the first settlers of this country toward the game and fish laws of the mother countries seems to be so deeply implanted that it has been transmitted through every successive generation to the present one with unabated force. "In this country the woods and streams are free," is the response commonly made when any one claims the exclusive right to hunt or fish on his own land. However absurd this belief or assertion may be, it is nevertheless very often sincere. There are few who have had any opportunities for observation, who cannot point to more than one pond or stream deliberately injured or ruined, because the attempt of the owner to prohibit trespass upon his premises was not only regarded as an act of hostility to the neighborhood, but also as an actual interference with the right of every citizen. People are slow to recognize or assert their rights as riparian owners to the waters which flow over their lands, for fear of some secret attempt at retaliation.

The cutting of a tree or injury to a growing crop will be quickly treated as a trespass by the man who will quietly look on while a half score of persons will deliberately drag a seine through his pond or stream, in wanton disregard of his rights, and in violation of the laws for the protection of fish, and consider himself lucky if they "count him in" when they cast lots for the "catch."

If riparian owners were aware of their rights, and the popular sentiment would sustain them in asserting them, there would be no more need of game constables to-day than there would be of wood or grain constables. There has been, however, during the last ten or twenty years, a very decided and satisfactory change in the popular sentiment throughout the entire State, and it would have been much more satisfactory if the legislation relating to fish and game had been more uniform and more consistent with vested rights.

The successive acts of our Legislature have not been respected, but have too often begotten a spirit of resistance, because they were harsh and unequal, and contrary to the public sentiment, even when the popular sentiment has been in favor of enacting and enforcing stringent laws for the protection of game and fish.

What for instance could be more absurd or unjust than the law enacted some twenty or more years ago, which made every person liable to a penalty of $25 who happened to cross the land of any person without permission on his way to a stream, even though he had the consent of the riparian owner to fish; and which gave the right of action not to the owner of the land only, but to any scalawag who might see fit to sue for the penalty.

While we have no law as absurd as that on our statute books to-day, we do have laws which are impossible of enforcement.

It would be a grave disaster if our courts should hold certain portions of our present law unconstitutional, for the reason that the Legislature had exceeded its powers, and yet the fear of just this result has prevented prosecution, while the failure to prosecute has only tended toward a greater or less defiance of the law.

We know personally of more than one deliberate and wanton violation of the fish law within the past year or two, by persons who had the guarantee of some shrewd lawyer that in case of trouble he would drive a "coach and four through the law."

The right of the Legislature to pass laws for the protection of game and fish, has been exercised under the clause in the Constitution authorizing it to pass general laws.

A general law is one which whether applied to the entire State, or limited in its scope, must affect equally and uniformly, all who are interested in the subject of the legislation.

When two or more persons are in possession of a common right, the Legislature may prescribe the mode in which that right shall be enjoyed by a general act, which must affect all equally.

If the legislative act restricts the enjoyment or use as to a portion, and enlarges or continues it as to the rest, or what is worse, if it bestows the entire use or enjoyment on a portion, and prohibits it as to the rest, it would not be a general law.

Even though the law be a local one, in its scope and effect, it must be general or equal in its application. And such a law will always command respect.

The Constitution also provides that the Legislature may delegate to boards of supervisors certain powers of legislation within, and affecting their several counties, but under this power, can it delegate a power it does not itself possess?

Can a board of supervisors under the power given to it to pass laws for the protection of fish, enact a law relating to its county which the Legislature could not enact?

To illustrate. Suppose that at the point where three counties meet there lies a lake of say a hundred acres. The riparian owners own to the center of the lake, with the exclusive right of fishing on their own land.

Suppose the Legislature should now pass an act prohibiting by name all those living in one county from fishing in this lake for five years, permitting those in one of the other counties to fish with hook and line in certain months, and allowing those in the third county to fish when and as they see fit. Would such an act be within the constitutional powers of the Legislature? Would not the ownership of the land adjacent to and underlying the lake carry with it as a vested right in each riparian owner the right to catch on his own land, the fish abounding in the common waters, on the same terms as his neighbors? If the Legislature could not pass such an act, would it make any difference if, instead of prohibiting or permitting these persons by name, it should arrive at the same result by dividing them into groups, by adopting the county lines as arbitrary, geographical lines of separation?

If it could not enact such a law, would a board of supervisors, under its delegated authority, have the power to enact a law which would have precisely the same effect? But yet this is, in its practical effect, the result of many of the acts recently passed by the Legislature and by the boards of supervisors of our different counties, acts which have, in effect, drawn an arbitrary line through or across lakes or streams, in the waters of which persons have a common interest as a vested right, thus practically enlarging the enjoyment of that right to a portion by limiting or denying it as to the rest.

There are streams in this State the centers of which constitute the boundary lines dividing different counties, in one side of which it is lawful to catch trout, while to take them in the other side at the same time and in the same manner is prohibited under severe penalities.

Do our astute legislators for one moment suppose that the persons owning the land on the closed side of these streams, whose only privilege is to sit on the bank and watch their opposite neighbors as they lure the fish to their side and then take them, will aid in or countenance the enforcement of a law which prohibits the enjoyment of what they consider to be, and what may indeed be, a vested right?

The general law (Sec. 23) divides in two the Wallkill, which was stocked at private expense some years ago with black bass. Any person having a net or fyke in his possession on the shore of that stream in Orange county, is guilty of a misdemeanor, and liable to a penalty of $25 (Sec. 24). While the possession of nets and fishing with fykes (for suckers and eels) is lawful in Ulster county.

Unless a fyke can be invented, which will discriminate in favor of suckers and eels, bass fishing in the Wallkill will soon be well nigh ruined, for no possessor of a net or fyke can be found in Ulster county who can tell a sucker or eel from a black bass.

The question of the legality of this kind of legislation has never been before the courts, but we do not believe that it would ever be upheld as within either the letter or spirit of the constitution.

The reason has been already suggested.

First—Every act of the Legislature of a local nature should be made to apply, without reference to county lines, to the entire waters of a lake or stream, in the waters of which, as it flows over their land, the riparian owners have a common right or interest.

Second—The power to pass laws for the protection of fish, when given to boards of supervisors, should be restricted to those waters, whether lakes or streams, which lie wholly within their respective counties.

When that is done, every law will be general in its application as to all affected by it, and then, if it is not respected and obeyed, it can be enforced.

In making the above criticism, we are not unmindful of the fact that the "Senate and Assembly," as asserted by the Court of Appeals, "possesses all legislative power except when restricted by other provisions of the same instrument."

The game and fish laws have been enacted, however, as general laws.

If they are not general laws, they must be private or local acts, and as such, under the restriction of the Constitution, they would certainly be incapable of enforcement.

J. S. VAN CLEEF.

POUGHKEEPSIE, N. Y., March 20

THE MOST KILLING FLY.

Editor Forest and Stream:

I have read with a great deal of interest the discussions of numerous fly-casters on the merits of different flies.

The verdict seems to be in favor of the scarlet ibis with the majority of them, but my experience has been different.

On the Androscoggin waters the scarlet ibis is a very killing fly, especially for chubs; but on the streams and ponds of northern Coos, there are several flies that will take the lead of it.

The largest number of trout I ever saw caught in one day's fishing, I took nearly all with Ronald's stone. It was done on Mill Brook, in Stark, a rapid, rough stream, and formerly one of the best trout streams in the county for small trout. I scarcely ever caught one in that stream weighing more than three-quarters of a pound. But years ago, when the upper Ammonusuc River was full of them, the oldest inhabitant tells of how, in his younger days, he could go out any morning and take all he wanted, and weighing from two to five pounds each. Alas, for the degeneracy of modern times.

I don't dare to tell just how many Frank Bellows and myself caught on that two days' trip, for it would sound too much like a fish story; but it is needless to say that we couldn't duplicate the number in twice the time this year.

I will venture to say that there is not a stream in Coos county where as many trout can be taken with the ibis as with many other flies that I could name. With ponds it is different. In some few of them the ibis is a killing fly, but in the majority of them the Montreal, brown and gray Caughlins, coachman, professor, queen of the water, and golden monkey, will be found a long ways ahead.

The silver doctor is a leading fly in the Rangeley Lakes, but here it is nearly useless except at Second Connecticut Lake, where I have used it with success.

The hackles are all good at certain times, dependent on seasons and weather, they usually being better on streams than ponds. The brown, red and grizzly leading respectively in the order named, the killer of one day being, frequently, totally useless the next.

Where a person only fishes certain waters he can find by trial which flies are the most taking for the different seasons and may not need to use so many varieties, but if he is going over a large and varied extent of country in all seasons and weathers he will have better success with a large assortment of flies, varieties and sizes, than if he has but a few kinds. I like to have several sizes of my favorite flies, for sometimes fish will take a No. 4 best, at others a 10 or 12, or again an intermediate size may be the thing. I have caught trout in a pond on a bright sunshiny day when the surface was like a mirror by using an extra fine leader and very small gnats for a lure, when with ordinary tackle I could do nothing. Of course I had to make a long cast and drop the flies with the greatest care, and strike and handle them very gingerly. I have frequently safely landed trout weighing from one to one and one half pounds each, that after they were in the boat you couldn't lift half their weight by the snell without the hook tearing out. I have fished for trout with a fly for many years, but am still unable to tell which is the "most killing fly." It seems to me very much as it would be to ask an M.D. what is the best remedy for diseases. The kind of fly to use seems to depend almost entirely on the various conditions of the water and weather, and as we can never tell what they may be when we take our week's outing, give us a well filled book and a large range of flies. I don't think it made so much difference when trout were plentier here, and when "Sproat," "Sneck Bend" and "Aberdeen" snelled hooks and leaders were unknown to us countrymen. Then the angleworm and grasshopper were the standard lures; wanting these, a piece of salt pork filled the bill, for, like the people of those times, their tastes were not educated up to the modern standard. I had good luck one dark, cloudy afternoon with a coachman on a No. 7 hook, taking over thirty large trout, and I have tried the same fly on the same pond many times since and have never taken as many with it altogether as I took that one afternoon.

S. J. G.

TROUT AT FULTON MARKET.

THE display of fish at Fulton Market the first day of the trout season was equal to any that has been made in previous years. There was an exhibition at Mr. Blackford's of both live and dead trout that was instructive and entertaining. It gave an interesting lesson in fishculture and ichthyology. The New York State Hatchery at Cold Spring Harbor, sent adult smelts and their eggs, whitefish eggs and fry just hatched, eggs of rainbow trout and land-locked salmon, young brook trout from one week to one month old. From the United States Fish Commission at the same place were shown eggs and young of salmon, with which the Hudson and Delaware rivers will be stocked, and some monstrosities in the way of double-headed fish, etc. From the New York Hatchery at Caledonia, were trout from one week to three years old, and adult rainbow trout.

The South Side Sportsman's Club, of Long Island, sent 500 pounds of live trout, weighing from one-half pound to three pounds, and some fine specimens of rainbow trout of three to four pounds. The United States Fish Commission sent rainbow and Tahoe trout, and also trout from Pend d'Oreille, and chinook and steel-head salmon. The display of brook trout was perhaps not as large as regards geographical distribution, but in quantity was fully up to any previous one. Many private fishculturists sent trout, which were labeled with their names and ponds, and there was a good display of foreign fish. Mr. S. J. Moore, of the Derby Museum, Liverpool, sent specimens of the English trout, *S. fario*, and there were also fish from Scotland and other countries. Mr. Blackford spared no pains nor expense to make a most creditable exhibit.

We dropped down there about noon and recognized many prominent anglers, among whom were Mr. M. M. Backus, Mr. Francis Endicott, Mr. Wm. Mitchell, Dr. S. M. Nash, Mr. H. P. Wells, Mr. John D. Hewlett, Mr. G. M. Miller, and others of New York; also Mr. Frank Dennison and Hon. James Geddes, of Syracuse, Prof. A. S. Bickmore, of the American Museum, and Mr. H. F. Douseman, of Chicago.

Col. Cuyler sent some large German carp from Prospect Park, Brooklyn, which he received from Mr. Blackford two years ago, and which now weigh three pounds. Mr. James Annin, Jr., sent some fine live specimens of trout, from one to three years old, from his ponds at Caledonia, N. Y.

Taking the exhibition as a whole it was equal to anything in the past and superior to some. The great extent of territory from which the specimens were drawn made it an instructive study for those interested in the differences in trout caused by food, water, etc., as well as in the different species. These exhibitions are very valuable as object lessons in both fishculture and ichthyology.

BAIT-FISHING FOR TROUT.

FROM fly-fishing we pass by natural and easy transitions to bait-fishing. And this is anent bait-fishing. Now, would a man with any self-esteem fish with bait? It depends upon circumstances. To my mind one who would fish with bait when fly-fishing is available does not take a very high rank among anglers. But there are circumstances when bait-fishing is perfectly allowable. In Alaska the trout will not rise to a fly, but that is no reason why the people there should be debarred from a delicacy which is so near at hand. A friend of mine, a naval officer, whose word cannot be doubted, told me that about three years ago he was stationed for sixteen months in Alaska, and one day in season a party of officers went fishing up one of the streams in their vicinity. They used salmon roe for bait, and the three hooks, which composed the party, caught, in round numbers, 250 trout trout ("mountain trout" my friend called them), weighing 450 pounds. When this statement was first made to me I admitted that I could "tow it alongside," but I could not "hoist it aboard." My friend assured me it was true, and when I intimated that I thought they somewhat overdid the business, he rather resented the aspersion, and explained that the fish were all disposed of by the officers and crew of the vessel to which he was attached. My friend had several varieties of flies with him, to which he gave a thorough trial, but with no result. Who can blame him, then, for descending to bait, from which he got considerable amusement, when otherwise the fish his mess required, would have been bought from some of the natives?

Again, some of us in the East who go to the Adirondacks for our fishing, find that when the extreme hot weather comes, our fish leave the lakes, ponds and larger streams for the grateful seclusion of small, cool, shaded brooks. These are too narrow and too much overgrown with alders to allow the fly to be used. Shall we, then, at these times give up our favorite fish? I say no. Life, particularly life in the woods, is too short to be long deprived of this delicious edible. Besides, when one takes a long tramp through the woods, it is pleasant to think there are some trout waiting for one at the end of the route. I don't want to be condemned, but I confess that I have spent days, not a few, bait-fishing down some quiet brook. One day during the past summer I took an early start, and with Andrew Rogers, for company rather than guide, proceeded over four miles of mountain trail, mostly up hill. It was rather laborious, for the many trees that had fallen across the trail during the previous winter had not been cut out. But when we arrived at our destination, I was amply repaid by the beauties of the valley and the vivacity of the denizens of the little stream. Our bait was angle worms and white grubs.

I have delightful recollections of that day, though it does not compare with many days when I have fished with the fly. The beauties of nature are the same, fish you with fly or worm. On this particular occasion I got home pleasantly hungry and pleasantly tired, and after supper and a pipe I turned me in to such a slumber as one only knows in the woods. The result of our combined efforts was 291 trout, of which Andrew caught 161 and I 130. While probably none of our fish would weigh over a quarter of a pound, none was below the regulation size. By the way, what are the statistics as to the number caught by each, when a gentleman and his guide go off fishing together? In this same little brook in August, '81, three of us, fishing about an hour of one evening and most of the next day, caught 368 fish. I remember also that I caught a cold that lasted me for weeks. We slept in a roughly-built shanty, each with a single blanket, and that night the thermometer went down to 44°. It was rather disastrous, but we had nobody to blame but ourselves. Doubtless the experience was of benefit. From all this, it will be seen that when I can't get fly-fishing and can get bait-fishing, I take latter, and take it gladly. And I hope your readers will not blame me for it. And at this moment my bones are aching for the time to come when I may be off to the woods, where I devoutly hope I may be able to get both kinds of fishing.

SOUS BOIS.

CARING FOR LAKE MINNETONKA.—*Editor Forest and Stream:* The good people of Minneapolis have at last awakened to the fact that if they wish to continue to have good fishing in Lake Minnetonka, it is time to enforce the laws, and prevent the wholesale slaughter of black bass and other fish, and take measures to stock the lake with valuable food fishes at present not natives of its waters. A meeting was held yesterday noon at the office of Mr. A. B. Taylor, in this city, at which a number of gentlemen interested in this question were present. Steps were taken to prevent the wholesale catching of fish from these waters, and to stock them with game fish. The following gentlemen were present: Charles F. Wheeler, C. W. Tracy, A. B. Taylor, C. W. Cyphers, W. W. Parker, E. F. Peabody, L. J. Skinner and Messrs. Potter and Findley. Mr. Taylor was chosen chairman and Mr. Skinner secretary. Nearly all the gentlemen present spoke earnestly in favor of taking active steps to properly regulate fishing in the lake. W. L. Burwell, Chas. F. Wheeler and L. J. Skinner were selected to draft a constitution and by-laws. The following gentlemen were appointed a committee to solicit membership and report at the next meeting: G. H. Christian, S. C. Gale, Fred. C. Pillsbury, C. W. Tracy, E. F. Peabody, Charles Cyphers and A. S. Dimond. It was proposed to hold another meeting at the West Hotel on Tuesday evening, at which a large attendance is expected. I predict the complete success of this society, as the gentlemen interested are the kind who do nothing by halves. I am sure all lovers of the sport, including FOREST AND STREAM, will wish the society God speed in its good work.—JUDGE. (Minneapolis, Minn., March 27).

ANGLING SEASON.—During the coming season there will be many opportunities to test the different questions of flies and rods which have been so freely discussed in our columns of late, and also to add new experiences to write up in future. That perennial query as to which is the most killing fly can be proved to the angler's satisfaction one day and the evidence overthrown on the next. Still, if not settled, the question will be broadened into which are the most killing flies. This can readily be settled for one locality, at least, but the list will need to be enlarged as the territory of the individual angler widens. This is the busy season of the tackle dealers, and many new devices are offered that add to the comfort or convenience of the angler, or increase his chances of capture. Those busy men who have not looked over their tackle all winter will find time to survey it now. Rods need new whipping and varnishing, rings are gone, ferrules are loose, gut is frayed, and reels need oiling. These things are often neglected by overworked men until the approach of the season for using them, while the man of more leisure looks his tools over several times during the winter and enjoys repairing his tackle himself.

DANIEL WEBSTER AND TROUT LAWS.—It seems that trout protection in Massachusetts originated with no less a personage than Daniel Webster. The Boston *Journal* says: "It is not generally known that Daniel Webster was once a member of the Legislature of Massachusetts. The fact is not mentioned by many of his biographers. He was chosen by the people of Boston, and was one of the framers of the first city charter of Boston. In one of his speeches, delivered in New York, Mr. Webster said: 'It has so happened that all the public services which I have rendered in the world in my day and generation have been connected with the General Government. I think I ought to make an exception. I was ten days a member of the Massachusetts Legislature, and I turned my thoughts to the search of some good object in which I could be useful in that position, and, after much reflection, I introduced a bill which, with the general consent of both houses of the Massachusets Legislature, passed into a law, and is now a law of the State, which enacts that no man in the State shall catch trout in any other manner than with the ordinary hook and line.'"

NO TROUT FISHING THROUGH ICE.—Glens Falls, N. Y.—A few persons residing along the shores of Lake George have tried to have the laws amended so that fishing for trout through the ice during February, March and April, may be permitted. Fortunately the legislative committee on game laws refused to listen to this proposition, which is in direct conflict with the provisions of a bill now before them to prohibit fishing through the ice in any waters in the State. The existing law permits trout fishing throughout the State April 1, except in Lake George, where the open season begins one month later, or May 1. This amendment was added a few years ago at the request of people residing at Bolton and elsewhere on the lake, because, during the month of April, many trout were taken through the ice, and nearly all of them were small fish, from one-half to one pound and a half each, and they were evidently of the plant made by the Fish Commission. Few fish of this size, comparatively, are taken after the ice disappears.—A. N. C.

HOW I CAUGHT A BLACK BASS.—I was rowing a canoe one summer day along the shore of T. Island, in the State of New York, at a place where the water was quite shallow near the shore, but suddenly deepened a little way out, and was surprised to hear a flapping in the boat behind me, when turning to see the cause of it, behold, I had captured a fine bass, unaware. If he had come from the clouds I should not have been more astonished, but my theory was soon arrived at, that he had tried to pass the boat which intervened between him and the deep water, and in his spasm of fright had made the "leap for life," which unlike so many reputed ones, did not succeed. The canoe was a little wider and higher than ordinary canoes that he may before have tried his gymnastic abilities on; but, like the renowned Mr. S. Patch, it was his final and fatal effort.—F. (Detroit, Mich.).

FISH AND SEWAGE.—In Memphis, Tenn., a cry has been raised against the fish caught near the city because they are claimed to be tainted by the sewage. Dr. Thornton is of the opinion that a law should be passed prohibiting the catching of fish in front of the city and for a mile below, because they are tainted by the sewage and unfit for food. Unless the sewage of Memphis is viler than that of other cities, we doubt the tainting of the fish to any appreciable extent.

KANSAS.—President David S. Jordan, of the Indiana University, has recently presented a collection of fishes to the museum of the Kansas State Agricultural College, Manhattan, Kansas.

TROUTING IN WASHINGTON TERRITORY.—Tacoma, Washington Territory, March 15.—*Editor Forest and Stream:* This is a kingdom of joy for those fond of the trout rod. All our fresh waters abound in trout, ranging from eight ounces up to four pounds, and averaging, say, one pound. I have cast the fly here for two seasons and cannot complain of ever having returned from a trouting trip disappointed. We are awaiting the opening of the season to try the trout again with a new assortment of flies.—L. S. W.

Fishculture.

FISHCULTURE IN KANSAS.—We have the fourth biennial report of the Fish Commissioner of Kansas for 1883-4. With an exceedingly limited appropriation the Commissioner has done very much work in distributing fishes obtained from the U. S. Fish Commission and other sources. He recommends prohibiting the use of fykes, weirs, pounds, "stake-nets," "fall-traps," "slide-traps," spears, gigs, pitchforks, harpoons, "or any other murderous device" except hook and line. Also that the close season for fishing with nets and seines of any description be extended so as to include the months of July and August, and that strong penalties be provided for violation of the law. An examination of the streams of the State has been made to see where fishways are needed, and we are surprised to learn that the old plan of fishway is recommended after being abandoned in most of the Eastern streams after years of trial. It was found that the waters of Kansas are too warm for the Salmonidæ, and no attempt at their culture will be made. The native fishes of the Mississippi River will receive the most attention. Many adult pike, black bass, wall-eyed pike, striped bass, yellow perch, catfish and white perch were captured and removed to suitable waters. From the U. S. F. C. there was received many thousand shad and carp, which were turned into the streams.

FISH CULTURE IN COLORADO.—The Denver *Times* says: "Sheriff Becker has a ranch at the head of Tennessee Park that promises to be one of the most profitable of its kind in the mountains. It is a fish ranch. He purchased it a few years ago when it contained nothing but a few lakes, which were almost entirely destitute of fish. He procured several thousand spawn of brook trout the first season from the State fish hatchery, and has each year added to that number various varieties of the speckled beauties, until at the present time he likely has fully 75,000 trout that will average seven ounces each. He keeps a man at the place continually whose business it is to break the ice and feed the fish. The food generally used is liver, and it is surprising what a small amount is required." A correspondent from Denver, under date of March 20, says that while "in Leadville last week I saw about one hundred pounds of trout at a market, brought in from these lakes. They would weigh from one-third to one-half pound each." It strikes us as being early for trout, but as the Sheriff has planted the crop it may be proper for him to reap it any time. We do not know how this agrees with Colorado laws.

A STEP BACKWARD.—The Springfield, Mass., *Republican*, commenting on the action of the State Legislature in depriving the Fish Commission of its power to lease ponds, says: "Both branches have now passed a bill repealing the statutory provisions which allow the Inland Fish Commission to lease ponds for the purpose of cultivating useful fishes. They have voted to do away with a system of fishculture which confessedly has been not only harmless, but in many places productive of good results, and this, apparently, without a thought toward providing any substitute. Their action seems to have been the result of hostility toward the Commission, backed by a popular prejudice based on misinformation."

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

C. E. B., Knoxville, Tenn.—We are promised a plan and description of a breeding kennel soon, which we shall publish.

V. H. P., Providence, R. I.—1. Has the shooter a right to challenge a bird if both judges declare the bird lost? 2. Can the referee reverse the decision of the judges in any case where they may agree? Ans. 1. Yes. 2. No.

W. K. P., Athens, Pa.—Are there any printed rules for rifle shooting and rules for organizing a rifle team? If so, could you furnish them? Ans. Wingate's or Blunt's manuals of rifle shooting will give the desired information.

FONTINALIS, New York.—Can you inform me if it is possible to keep brook trout in the aquarium? They would be kept in Croton water kept constantly running. Ans. They can be kept in Croton water from the middle of November to May 1, and possibly later in some seasons. They die at 70 deg. Fahr.

F. H. D. V., Ottawa.—Please tell me if Mr. Herbert's (Frank Forester's) books, such as "Warwick Woodland," etc., are published in cheap form. Where can they be had? Ans. We do not know that they are published in cheap form. Two vols., $4, is the edition we are familiar with. We can send them.

O. R. C., Philadelphia.—Being about to purchase a .22-cal. Remington rifle, I would like to ask you a few questions. 1. Would having it chambered for extra longs hurt it for shooting shorts and caps, or make them "spit fire" at the breech? 2. Will it injure the barrel to shoot shot cartridges? Ans. 1. Yes. 2. Yes.

W. E. S., Harrisburgh, Pa.—What is the caliber of an eighteen-foot split bamboo salmon rod? Ans. The calibers of the ferrules and diameters of the butt and tip of one just measured are: Butt cap, 1⅛in., above hand piece, ⅞; butt ferrule, ⅝; tip ferrule, ⅜; end of tip, 3-16. These figures vary a trifle with different makers.

E. T. J., Beverly, W. V.—1. Can paper cartridges or shells be obtained for our ordinary sporting rifles? I have never seen such, nor have I seen them advertised, but have heard some of our residing sportsmen speak of them. 2. Other things being equal, is a straight or cylindrical shell better for a rifle than those that are either "bottle-shaped" or "taper?" Ans. 1. The old style rifle cartridges were of paper. They have been discarded. 2. The straight shell is preferred. The object of the bottle neck shell was to increase the capacity of the cartridge without increasing its length.

E. N. B., Scott, Wis.—What time of the year can we catch pickerel and bass with the hook, and what kind of hooks, lines, poles, et cetera, do we need? Also about trolling, when, and what kind of hooks and spoons are necessary for a good outfit? There are lots of fish here, but I am a greenhorn in the fishing line. Ans. You can fish for pickerel at any time. The black bass season opens in your State on May 1. You need a volume on general angling, such as Norris, or Scott, for the information you require would cover many pages. Write to some of our advertising tackle dealers for suitable tackle.

LIST OF PATENTS

Bearing Date March 25, 1885. Reported expressly for this paper by Louis Bagger & Co., Mechanical Experts and Solicitors of Patents, Washington, D. C.

313,229. Ball Trap.—P. Marqua, Cincinnati, O.
313,120. Flying Target.—C. F. Stock, Peoria, Ill.
313,119. Apparatus for the manufacture of Flying Targets.—C. F. Stock, Peoria, Ill.
313,804. Ball Trap.—J. E. Bloom, Cincinnati, O.
313,695. Fishing Reel.—E. P. Trent, Jersey City, N. J.
313,652. Feathering Paddle-wheel.—W. C. Burne, New York, N. Y.
313,664. Sailboat.—Israel Garrard, Frontenac, Minn.

The Kennel.

FIXTURES.

BENCH SHOWS.

April 7 to 10, 1885.—First Annual Dog Show N. E. Kennel Club, Music Hall, Boston. J. A. Nickerson, Secretary, 159A Tremont street.

April 21, 22 and 23.—Annual Dog Show of the St. Louis Gun Club. W. A. Albright, Secretary, St. Louis, Mo.

April 28, 29, 30 and May 1.—Ninth Annual Dog Show of the Westminster Kennel Club at Madison Square Garden. Entries close April 14. James Mortimer, Superintendent, 48 Broad street, New York.

May 5, 6, 7 and 8, 1885.—Second Annual Dog Show of the Cincinnati Sportsman's Club, Cincinnati, O. W. A. Coster, Superintendent.

May 13, 14 and 15.—Third Annual Dog Show of the Toronto Dog Show Association. W. S. Jackson, Secretary, Toronto, Ont.

May 19, 20, 21 and 22.—Show of the Philadelphia Kennel Club. F. A. Diffenderfer, Superintendent, Philadelphia, Pa.

June 2, 3, 4 and 5.—First Annual Dog Show of the Illinois Kennel Club. John H. Naylor, Secretary, 3,182 Archer avenue, Chicago, Ill.

FIELD TRIALS.

November.—Seventh Annual Field Trials of the Eastern Field Trials Club, High Point, N. C. Entries for Derby close May 1. W. A. Coster, Secretary, Flatbush, L. I.

Dec. 7.—Seventh Annual Field Trials of the National Field Trials Club, Grand Junction, Tenn. Entries for Derby close April 1. B. M. Stephenson, La Grange, Tenn., Secretary.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **2200.**

MODERN JOURNALISM.

Editor Forest and Stream:

Your critical and able report of the New Haven show is worth reading twice over. New Haven was a great show, the quality throughout being far in advance of anything that has been seen in this country. Mastiffs, greyhounds and spaniels were fifty per cent. better than they have ever been at the New York shows. Your critique on the spaniels was very reliable, but you might have devoted more space to them, as they were an exceptionally good lot. By your courtesy I will write something about these classes next week. The Chicago editor who contributed so freely to the success of the show, seemed determined that nothing should be left undone that was calculated to make the exhibition a very imposing one, and he paid the New Haven Club a great compliment by rigging his reporter in a new suit, a brand new silk hat, new kids, cane, etc. The reporter, in taking off his old clothes, unfortunately relieved himself of his manners (if he ever had any) at the same time. Some people said he left them at home to take care of his field trial record.

Yes, sir, it was a great show. Everybody was there. The ladies turned out *en masse*, and there were senators, judges, professors, doctors (not quacks), etc., by the score. The Poolseller was there and the Welcher was there. The keen, dark, restless eyes of the former were cruel in their search for charges of fraud against honorable gentlemen, and were as reluctant to look honest people in the face as they were quick in their cowardly work. The Welcher seemed intoxicated with the idea that somebody might mistake him for a gentleman. His sensitive feelings must have undergone a severe strain, as there was never the slightest indication that one would fall into such a blunder. "How are you, Porter?" "Is it to me you speak?" and then a little later on, "Give me a catalogue," "One of my men will attend to you," etc. The Welcher had few friends, and he knew it. "I'll show them what we can do," said he, and then he retired.

The third volume of "We Will Kill Mason, Davidson and Watson" is just out. It is probably the last volume and is a sort of parody on the New Haven Show and the judges. A very laughable production well worth reading; beats *Puck* and *Jingo* to death. I seldom spend money on trash, but the third volume is well worth the ten cents asked for it. Unlike its kennel companion, the N.A.K.C. Stud Book, it does not show signs of having been "in the printer's hands" for any great length of time, but it is a masterly work for all that, and as the independent (?) journal is reported on its death bed this last effort will no doubt be freely read. I don't propose to dissect the entire volume, that would occupy too much space; neither do I propose to show that the writer is the embodiment of all that is low, mean and corrupt. The question I propose to put before the impartial jury is—Sane or insane? That is the question and the only question that can be fairly asked.

On page 64 of the New Haven catalogue there is this entry: "417. Dan O'Shea, London, Ont., Aaron, 2 years, red (Rock—champion Norah). Not for sale." To this entry I awarded the first prize. The "sportsman's independent journal, New York (?) and Chicago," March 28, 1885, in its latest attempt to "kill Mason," said: "One long-legged, weak Irish terrier, Aaron, was shown and received first prize." I gave the first prize to a long-legged, weak Irish terrier named Aaron. Get thee back to Chicago, crazy fellow! The long-legged, weak Irish terrier was champion Erin. A printer's error, that's all; and the Chicago reporter who never owned or bred a non-sporting dog in his life, and who cannot distinguish between an Irish terrier and a wire-haired fox-terrier, didn't know the dog, although he has criticised him a score of times. In his hurry to "kill Mason" he has exposed the whole business and his own ignorance at the same time. Let us now see what the reporter with the savory (?) field trial record had previously written of Aaron, the long-legged, good-for-nothing weed. "Sportsman's independent journal, June 23, 1883: "He [Erin] is a splendid puppy." March 15, 1884: "There is little to choose between them [Erin and champion Norah]. Both are good." April 5, 1884: "Norah and Erin are both very good." Perhaps the dog has grown larger on the legs, lighter in body, and has less bone than he had last year. Dogs do grow that way sometimes.

Now it's Mr. Watson's turn. We will "kill Watson." The gentleman who gave the Western reporter notes on the spaniel classes played a splendid joke on him. Read this carefully: "In the open class, which was for dogs or bitches of any color, over twenty-eight pounds, there were some good ones shown. First went to a good all-round liver and tan dog." First did not go to a good all-round liver and tan dog, it went to a bitch that has a Roman nose, is throaty, and too short in the back. That is not the way to "kill Watson" any more than this is:

Sportsman's Independent (?) *Journal*, March 15, 1884.—"As previously announced, the judges for the show were Major J. M. Taylor and Mr. James Watson * * * As these judges are so well known and so popular as authorities in the classes which they have been so often called upon to judge, it is only necessary to add that their decisions were accepted with the usual good grace."

Sportsman's Independent Journal, March 28, 1885.—"Mr. Watson got along very well with his little terriers. He could not have gone very far astray in any of those classes, but some of his special awards were so ridiculous as to provoke mirth. It is to be hoped that no one will again see such judging as was done at New Haven. A few such shows and the breeders and exhibitors of good dogs would give up showing in disgust. It is a very serious matter for dogs which have cost a great deal of time and money, to be bowled over by inferior dogs, just to please an association that will not get good judges."

Let us now "kill Mason" again. Sportsman's independent

journal, March 28, 1885: "The show of mastiffs was very good, but the judging was outrageous. In the open class, Ilford Cromwell won easily, but Homer, second, was not entitled to his award. He has a good head, but beyond that he has no special strong points. On the contrary he has some very weak ones. He is a small dog and cowhocked at that. If is bad enough for a big dog to be weak in his legs, but in a small dog such a fault amounts almost to disqualification." Second prize to a cripple, an animal that ought to have been disqualified. Why the Poolseller's friend, Mr. Mortimer, awarded first prize to this cripple at the last New York show, and the independent (?) journal of Nov. 1, 1884, after praising the judges, said: "Homer, given first, has a splendid head, but is rather under size, but what he lacks in size is made up in strength and symmetry." The same individual wrote, May 17, 1884: "We preferred Homer, placed third, for first. He has the massive head of a typical mastiff, and though a small dog is symmetrical in shape." Will the Chicago wise-acre please explain how a cowhocked dog can be symmetrical and strong, and at the same time tell us why the dog was better than Ilford Cromwell when Mr. Mortimer judged him, and a worthless brute when I judge him.

These are a few clippings from the last volumes of "We will Kill Mason, Davidson and Watson." From Philadelphia I learn that Mr. Watson still lives; your humble servant never felt better in his life, and I know Mr. Davidson is on his legs, for he writes me that he hasn't seen a copy of the sportsman's journal, that there isn't one to be had in Monroe, and that if there was nobody would read it. He most emphatically denies that I was in his judging ring at New Haven, or that I tried to influence his decisions. Yes, sir, we all live, *mors janua vita.*

The sportsman's independent journal says, "It takes a smart man to catch a rogue." It takes a smarter man to convict a rogue, and a still smarter man to make a rogue return plunder and blood money to the rightful owners. The N. A. K. C. Stud Book is in the printer's (?) hands. CHAS. H. MASON.

MARCH 31, 1885.

PROMPT CONTRADICTIONS.

ONE of the reports of the New Haven dog show, printed in a Western paper, was so entirely unreliable and so palpably inspired by a vehement desire to injure the judges and the New Haven Kennel Club that it has called out protests from those who are in a position to know all the facts of the matter.

The ring stewards for Messrs. Davidson and Mason, by the following statement, brand as an unqualified falsehood the assertion that Mr. C. H. Mason visited Mr. Davidson's ring during the judging of the latter's classes. They say:

We as ring stewards to Mr. C. H. Mason and Mr. John Davidson at the late show of the New Haven Kennel Club wish to say, in reply to a paragraph in your report of the show, that Mr. Mason did not enter Mr. Davidson's ring during the judging of the latter's classes, and we consider the statement as malicious in the extreme, and calculated to do Mr. Mason and the reputation of the club great injustice.

Respectfully, WALTER D. PECK, G. E. OSBORN, H. S. COWELL, CHAS. B. GILBERT.

The owner of the Ashmont Kennels is equally prompt in correcting the slanderous innuendoes of the same report. He says:

In your last issue, in commenting upon the New Haven show, you refer to what passed between the judge and myself when my mastiff dogs Hero II. and Ilford Cromwell were brought before him to contest for the special. You desire the facts; it pleases me to give them. The judge, in a bantering tone, asked me which ought to have the prize. My answer, hastily given, without thought, and in the same spirit, "I suppose the old dog should have it." To this the judge responded, "I am going to find out which deserves it, and the dog that does shall have it." I made the laughing reply, "Very well, it is a family matter." I considered the question of the judge a bit of pleasantry on his part, entirely without significance. Neither then nor since have I had the remotest idea that he would be influenced in the slightest degree by any preference of mine or opinion as to relative merits. Yours truly, OWNER OF ASHMONT KENNELS.

The report abounds in perversions of the truth, but the animus which inspires them is so evident that it is unnecessary to correct them.

THE PITTSBURGH PIECE OF PAPER.

Editor Forest and Stream:

Mr. Mason is nothing when he is not personal. His sneer at me as the "kennel man" of the Westminster Kennel Club does not lesson the fact that I have the honor to be the superintendent of their magnificent club house and grounds, as well as of their kennel and of the forthcoming dog show, and I trust I shall continue to merit the confidence they have thought fit to place in me. His statement in your issue of last week relating to the Pittsburgh show, is false and exaggerated in every particular, and he is so bereft of all decency that he drags in the name of my dead friend, Chas. Lincoln, who can neither affirm nor deny to substantiate his inventions.

I was not aware until reading his contribution to your columns, that I "had broken down," but his commiseration has put me under a lasting obligation.

I did not ask Mr. Mason to judge the black and tan terrier class for me any more than I asked him to judge the mastiffs or collies, and I scarcely believe he will have the effrontery to say he coached me in these classes.

Upon my arrival at Pittsburgh, Mr. Mason was almost the first whom I met with whom I was acquainted, and at his invitation I roomed with him in the same hotel, and the conversation as to the black and tan terriers took place there. I simply asked him to look over the two dogs Vortigern and Reveller, and give me his opinion as to their respective merits. I was "conscientiously endeavoring to place the dogs correctly."

As you, Mr. Editor, are aware, it was the first time I had ever been called upon to act in the thankless position of judge. I had not sought the appointment, but consented to act upon a request from Mr. Lincoln sent by telegraph.

The sporting press, and especially the FOREST AND STREAM, were very flattering in their complimentary notices of my ability, and I have always had the satisfaction of knowing that, whether my awards were correct or otherwise. I had acted there, as at all other dog shows with which I have been connected, with honest purpose to all and favor to none.

When the article entitled "Mr. Mason's Manipulations" appeared, accusing him of sending a note to the judge requesting him to divide a certain prize, I, actuated by feelings of indignation at the injustice of the accusation, promptly denied, and flatly contradicted any such statement. Was it necessary that I should go further, and explain exactly what the "scrap" contained? I think not.

Mr. Mason winds up this conception of his imaginative intellect by saying, "I shall always blame him for having done himself a great injustice and his brother fanciers a still greater one, in accepting the judgeship at dog shows, where his tongue and the record prove him to have had very little experience as an exhibitor, and none whatever as a breeder or owner of good dogs," and "the influence that put him into the judge's ring and kept him there no longer exists."

In this statement he may prove, as he already has in many others, a false prophet. Dalziel says in his notes on "Judges, Their Election," "There is a rather broad-spread opinion that to be a good judge a man must have been a successful breeder." "The experience gained by breeding may be beneficial or prejudicial, but it can never make a man a judge," and just here I would like to ask Mr. Mason of which breed he has been a successful breeder? I have carefully studied the English records, and I fail to find where he has been a successful exhibitor with any dog, pointer or other, which he bred himself; probably he sold the good ones or—raffled them.

I may be wrong, but I am vain enough still to believe that exhibitors of the breeds of dogs I have judged would, notwithstanding Mr. Mason's painful endeavors to prove the contrary, as soon trust their pets to me, as to the infallible discernment of this self-asserted authority. JAMES MORTIMER.

BABYLON, L. I., March 27.

THE NATIONAL DERBY.

Editor Forest and Stream:

I send you entries for the National Field Trials Club Derby that have come in to date:

GAY GLADSTONE.—Chas. Tucker, Stanton, Tenn., white, black and tan English setter dog, April 28 (Gladstone—Lavalette).

LEMON GLADSTONE.—Samuel S. McCuen, New Orleans, La., white, black and tan English setter dog, April 28 (Gladstone—Lavalette).

NANNIE GLADSTONE.—P. H. & D. Bryson, Memphis, Tenn., lemon belton English setter bitch, April 10 (Gladstone—Sue).

JESSIE GLADSTONE.—W. B. Gates, Memphis, Tenn., black, white and tan English setter bitch, April 10 (Gladstone—Sue).

UNNAMED.—W. B. Gates, Memphis, Tenn., black, white and tan English setter dog, June 14 (Paul Gladstone—Bo-Peep).

B. M. STEPHENSON.

LA GRANGE, Tenn., March 11.

ST. LOUIS DOG SHOW.

Editor Forest and Stream:

Mr. J. H. Naylor, of Chicago, has accepted the position as judge at our show, for the nonsporting classes. We are very well pleased with the number of entries so far received, and we believe we shall have a very fine collection of dogs from present indications. Applications for entry blanks come in very fast. We have reason to believe we shall get a very fair representation from the East, notwithstanding the New York show follows ours just one week. We feared at first our ten-dollar prizes would not attract exhibitors, but we find the great majority of owners care much more for the honor of winning a prize than the amount won. We shall give each winner a large certificate of his winnings.

Dogs will be received at the Fourteenth street side of the Exposition Building. Our building is lighted with electricity, steam heated if necessary, and is one of the best lighted, best ventilated and handsomest halls in America. Open benches will be used as far as possible, since we have ample room for them. I hope to be able to announce our completed railroad and express arrangements next week. The Ohio and Mississippi Railroad has already notified us that dogs will be carried free when accompanied by owners or handlers.

GEO. MUNSON, Manager.

ST. LOUIS, March 28.

THE NEW YORK DOG SHOW.

THE managers of the Westminster K.C. dog show have decided to make additional regular classes for Clumber spaniels, cocker spaniels and Newfoundland bitches, and beagles under 12 inches. Beagles will be judged by the standard of the American English Beagle Club. Several very valuable special prizes will be offered. Among them is a cup valued at $150, for the best setter or pointer, and one of $75 for the best pointer. The usual arrangements with railroad and express companies have been made. The superintendent informs us that, judging from present indications, the show will be the most successful that the club has yet given. Following is a complete list of the judges:

LIST OF JUDGES, 1885.

Mastiffs, St. Bernards, Newfoundlands, greyhounds, deerhounds, English retrievers, spaniels, all classes, basset hounds, dachshunde, bulldogs and terriers, all classes (except fox-terriers), pugs, Italian greyhounds and miscellaneous class—Hugh Dalziel, England.

Pointers and Irish setters—J. M. Tracy, Greenwich, Conn.
English setters—John C. Higgins, Delaware City, Del
Black and tan setters—H. Clay Glover, New York.
Chesapeake Bay dogs—Isaac Townsend, New York.
Foxhounds—A. Belmont Purdy, Long Island.
Beagles and collies—Dr. J. W. Downey, New Market, Frederick county, Md.
Fox-terriers—L. M. Rutherfurd, Jr., New York.
Poodles—John G. Heckscher, New York.

CINCINNATI DOG SHOW.

Editor Forest and Stream:

Many very valuable special prizes have been subscribed for different classes. The list will be furnished for your next issue. Hugh Dalziel has been selected as judge for non-sporting classes. Major J. M. Taylor will judge English setters. The appointment of a judge for Irish setters and Gordon setters, and pointers, will be given to the press for next issue, or as soon as it can be done. This exhibition promises to be the best ever held in the United States. Certainly in sporting classes this show will distance all others in quality and quantity, and the promises for non-sporting classes are very encouraging. There has never been but one regular bench show held in Cincinnati, and that, I am informed by the officers of the Cincinnati Sportsmen's Club, was a private affair of Mr. Lincoln. This show was held in a hall on the second floor, about ninety feet square, with nearly three hundred dogs on exhibition, not giving one quarter of the room necessary to accommodate the public. It is estimated by those best informed that many thousand people will attend this show, provided the weather is fair, as there is a great deal of interest displayed in the matter by the citizens generally, and the enterprise meets with the hearty support of the press and public spirited citizens. This is a good opportunity for breeding kennels of non-sporting dogs. I find here but a very few non-sporting thoroughbred dogs, especially mastiffs, St. Bernards, Newfoundlands, Scotch terriers, and bull-terriers. There is a great demand for thoroughbreds of these kinds, in fact of all non-sporting kinds. From a business point of view breeders of non-sporting dogs will find it greatly to their advantage to exhibit at this show.

WASHINGTON A. COSTER, Supt.

CINCINNATI, March 28.

THE TORONTO DOG SHOW.

WE have received the premium list of the third annual dog show of the Dominion of Canada Kennel Club, to be held at the Horticultural Gardens, Toronto, Canada, on May 13, 14 and 15. The premiums are liberal, and the managers will spare no pains to make the show the best of the year. Instead of champion classes there are challenge sweepstakes for English setters, English setter bitches, Irish setters, black and tan setters, pointers, Irish water spaniels, field spaniels, cocker spaniels, greyhounds, fox-terriers and collies. The entry fee is $5 with $10 added by the club, all to the winner. The rule governing entry in the challenge classes is as follows: Rule VIII.—A dog to compete in a challenge class must have won a first prize in an open class at New York, Pittsburgh, Boston, London (Ontario), Ottawa, Chicago, Cleveland, St. Louis, Toronto (D. C. K. C.), New Haven, Montreal (1884), Boston, Cincinnati, Philadelphia, St. John, New Orleans, or Ontario Collie Club; and a dog having won a first prize at any show held as above, cannot compete in an open class when there is a challenge class of its kind, but must compete in such challenge class.

The premiums in the open classes are: English setter dogs, $20, $10 and $5; bitches, the same; puppies, $10 and $5; Irish setters, black and tan setters and pointers, same as English setters; field spaniels, black or liver dogs, $15, $7 and $5, bitches, the same; any other color, dogs and bitches, the same; puppies (including cocker), $10 and $5; fox-terriers, smooth-haired dogs, the same; bitches, the same; collies, dogs, the same; bitches, the same; bulldogs, dogs and bitches, $15, $10 and $5. Most of the remaining classes are $10, $7 and $5, except that in some cases the third is omitted and the prizes are $10 and $5. There are two foreign or miscellaneous classes with $15 each. Should any one so desire, silver plate of the value of prize will be given instead of cash.

There will be a large number of valuable special prizes offered. Following is the list of the judges:

Jno. Davidson, Esq.—For setters, pointers, collies and hounds.

J. S. Niven, M. D.—For spaniels, Scotch, Irish, Dandie Dinmont and rough-haired terriers.

Ronald H. Barlow, Esq.—For mastiffs, St. Bernards, Newfoundlands, bulls, pugs and terriers (other than above).

The judges in concert will judge the foreign and miscellaneous classes.

Entries close May 6. W. S. JACKSON, Sec'y,
UPPER CANADA COLLEGE, Toronto, Canada.

BOSTON DOG SHOW.

Editor Forest and Stream:

We have closed our entries, which number 628; the classes are well filled: Mastiffs, 35; St. Bernards, 36; Newfoundlands, 18, pointers, 50; English setters, 58; Gordon setters, 27; Irish setters, 60; spaniels, 24; greyhounds, 10, deerhounds, 7; foxhounds, 20; beagles, 18; collies, 75; fox-terriers, 27; bull-terriers, 22; other terriers, 36; bulldogs, 18, pugs 25; the remaining classes are well represented, and the dogs entered are mostly well known, so that our show will compare favorably with the best. Our list of specials is not yet completed, the same being added to daily. We would call attention to the fact that each and every one of the special prizes to be given at our show is contributed by friends, and in many cases we have no acquaintance with the donor. The club does not give a single special and has no control over the giving of them.

The prospect for a successful show is good; it is the topic of the day here, and even if the clerk of the weather should be unfriendly to us, we believe that we shall have a full house.

Three dogs, when accompanied by owner, can come free to and from our show via Fall River line.

We have decided to issue a marked catalogue.

J. A. NICKERSON, Secretary.

BOSTON, Mass., March 28.

THE SIZE OF BEAGLES.

Editor Forest and Stream:

The article of "Sedge" which appeared under the above heading in your last issue, savors strongly of prejudice against the small beagle, and certainly does that grand little dog an injustice. "The Size of Beagles" is a heading which clearly shows the purpose of the articles under the same, viz., to determine which size of beagles is the most useful. I take it for granted that under the general term beagle, the only true beagle, *i. e.*, the English beagles, are meant. "Sedge," therefore, is wrong in assuming that this discussion is carried on to show which dog (or breed) is best suited for rabbit hunting, and whether his preference is for the American beagle or any other mongrel, is foreign to this controversy. It is wrong for any one to condemn a certain size of beagles just because they are not suited to their locality, or the specimens of that size owned by them were worthless. It should be taken into consideration that the nature of ground and cover should govern the selection of beagles as to size, for most any one will admit that the larger beagle is preferable in a rough country with heavy cover. It must also be remembered that worthless specimens exist in all breeds and sizes of dogs, no one, therefore, is warranted in making his condemnation general in its application as "Sedge" has done.

My experience with the small beagles will not bear out the assertions made by "Sedge." I find them true on the trail, making by far fewer losses than the larger beages, owing to their comparative slowness on the trail. The large beagle with their naturally increased speed will, as a rule, overrun all doubles, and so much so that a great deal of time is lost thereby, whereas the small beagles coming to a double with far less speed, will quickly discover it and almost turn with the double, "Sedge" to the contrary notwithstanding. My preference is for a twelve or thirteen-inch beagle. I do not desire or look for great speed in a beagle, in fact, I would not keep a fast one, although for hunting without a gun where the rabbit is run down, they are undoubtedly the dog; but this is not my idea, neither of the dog nor of the way of hunting rabbits. I love to listen to the musical tongue of the merry little hounds, and would rather topple over a rabbit with a well directed shot, then to pick up the mangled remains of one caught by fast hounds.

Oftentimes during the past autumn have I stood with gun resting in my arms and listened to the music of three of my favorites as they slowly but surely brought a rabbit back from hence they had started him from its "form." Oftentimes I would perceive the rabbit, ere it came within the reach of my gun, sitting upon its haunches, listening to the hounds in the rear, and seemingly enjoying the music. As the dogs burst from the brush, which had so far hidden them from my view, the rabbit skips away rather lively, and as I look upon my dogs with nose close to ground and

"With ears that sweep away the morning dew,"

and their cries prolonged and exultant, almost making me forget the rabbit, who is now almost beyond gun shot or in the bushes out of sight, but quickly turning and catching sight of his white tail I venture a snap shot, and walking up there lays my game, and just as my little hounds come up I pick up my rabbit and stow him away in my capacious game pockets, and giving my dogs, who are anxious to mouth the game, a few friendly pats while we are making for another place they are again ready to repeat the performance.

Such is my ideal of rabbit hunting and of the dogs best adapted to this sport; but remember, I do not condemn other sizes. Different localities require different sizes, according to the nature of the country, nevertheless the size I advocate I think will be found a good average, a compromise so to say. Give the small beagles a place in your kennel and they will win a place in the hearts of your family; you cannot deny to them your friendship, their large lustrous eyes are always pleading for your love.

I hope N. Elmore, "Rusticus," "Briar," and others will give us their views. A. C. KRUEGER.

WRIGHTSVILLE, Pa., March 9.

THE FOX-TERRIER CLUB.—At the meeting held in January last, at Madison Square Garden, for the purpose of taking steps to form a fox-terrier club, a temporary committee was appointed for the purpose of drafting constitution and by-laws and a standard. This committee having completed their work, a meeting of the club will be held to consider it. It is probable that the standard of the English Fox-Terrier Club will be adopted. A call has been issued to those interested, which reads as follows: "March 30, 1885. Dear Sir—At the call of Mr. Edward Kelly, Chairman of the preliminary meeting held at Madison Square Garden, in January last, having in hand the formation of an American Fox-Terrier Club, I hereby notify you that a meeting for organization will be held at Delmonico's, Twenty-sixth street and Broadway, New York City, on the evening of April 7, 1885, at 9 o'clock; at which meeting the temporary committee will submit for approval and adoption, the rules and standard of the English Fox-Terrier Club, modified to suit our American requirements.—A. E. GODEFFROY, Sec. pro tem. P. S.—Communications will please be addressed to the Hon. Chairman, Edward Kelly, Esq., 185 Fifth avenue, New York city.

MR. FRANK WINDOHLZ'S BLUE BELTON ENGLISH SETTER DOG "ROCKINGHAM."
Winner of First Prize in Open Class for English Setters, New Haven, 1885.

ROCKINGHAM.

WE give an illustration this week of the English setter dog Rockingham, winner of first and also special for the best setter at the New Haven show. Rockingham was whelped April 27, 1882, and is by Belthus (champion Rock—Meg) out of Greenbank's Bess. He is a very handsome blue belton of good size, and capitally put together. He is registered in the E.K.C.S.B. as Winder, No. 13,697, and won third in sporting puppies at Sheffield, Eng., April, 1883. His name was changed to Rockingham, under which name he has won in England second at Hull; first, Doncaster; first, Filey; first, Todmorden; first, Barnsley; first, Dundee; first, West Bromwich, and first and cup at Fylde. He has beat Young Rock III. and Osman VI., the first and second prize winners at the late Crystal Palace Show. The sketch is by Mr. A. W. Roberts. It was made from a photograph, and is a good likeness of the dog.

"LILLIBULERO'S" LITTLE JOKE.—When a joke is so obscure that it has not only to be pointed out, but taken by the scruff of the neck and hauled from its lurking place to be exhibited to the world and its fun descanted on, it is safe to call it an outcast of the family, and its flavor is found to be that of very flat fourpenny. I have no such reason for disinterring "Lillibulero's" little joke on the Crown Prince pedigree case. It is not dead, has not been buried, and it is not stale, but bright, sparkling, fresh, and frisky as a bottle of Bass's East India pale. In FOREST AND STREAM—which paper "Lillibulero" is making very popular in England, especially in the offices of the *Field* and *Live Stock Journal*—the writer says of the Crown Prince controversy: "It is dead against the club; though there has been *more wool* and less cry, it has not saved the *Cook* a roasting." The italics are mine, and represent the surgical operation necessary to get the joke into the heads of my countrymen. Of course other readers of the *Stock Keeper* need no such aid.—*Corsincon, in Stock Keeper.*

THE PHILADELPHIA KENNEL CLUB'S MAY DOG SHOW.—The Industrial Art Hall, where the Philadelphia Kennel Club's May show will be held, is a very roomy building, and can accommodate 750 dogs comfortably. A measurement of the two rooms, which are adjoining, gives 145x98 feet, and 70x60 feet. It is proposed to have the large classes benched in the main hall and the toys in the smaller room. A lot next to the building will be secured for exercising the animals, and every effort is to be made to make the show the most successful ever held in this city. The premium list, which will be out to-morrow, will show that larger money prizes are offered than any yet published in addition to the club's handsome medal. Mr. Diffenderfer, who has been made superintendent, was asked last week to judge in Cincinnati, but as the date of the latter show will fall at about the time of closing of our entries, he has been obliged to decline.—HOMO.

A CARD FROM "WILDFOWLER."—London, March 13.—*Editor Forest and Stream:* Mr. Kent says: "Mr. Clement has kept both dog and money and will not reply to several letters which I have written him." Mr. Kent is wrong throughout. To begin with, your paper reached here on Wednesday, the 11th, and (1) his dog had been sent on Saturday, the 7th, per Grecian Monarch. (2) Several letters written to him have been returned to me marked "Dead." I inclose one.—L. CLEMENT ("Wildfowler"), editor of *Shooting Times.* [The envelope accompanying the above was addressed to "F. Kent, Esq., Monticello Kennels, New York, America," and was returned to writer. The first London postmark is Dec. 24, 1884, and it was received at New York post-office, Jan. 3, 1885.]

POINTER LOST.—Stanton, Mich., March 25.—*Editor Forest and Stream:* I would like to ask the readers of your valuable paper to be on the lookout for a stray pointer. Last December he was shipped to Chattanooga, Tenn., to be trained, and about an hour before the trainer called for him he escaped from the kennel in the city and has not been recovered, although diligent search has been made and a reward offered. He is liver and white, evenly marked with large patches of liver on sides and one at set on of tail. Has white nose, with white strip between the eyes, but not extending over top of head; carries his tail rather high and slightly curved, and answers to the name of Rival. He is by Croxteth out of Countess Rival, and a very valuable dog. Any information leading to his recovery will be liberally rewarded.—W. J. PERCIVAL.

THE PIERCE DISQUALIFICATION.—*Editor Forest and Stream:* I do not agree with your interpretation of the powers of superintendent in regard to the disqualification of Mr. Pierce. He certainly was not authorized to go behind the rules, and had he ruled adversely to any exhibitor, said exhibitor would have appealed to managers. If Mr. Lincoln accepted Mr. Pierce's entry knowing that he was not the owner of Reeta, he violated the rules governing the kennel prize. I claim that Mr. Pierce won the kennel prize through misrepresentation, and that upon the facts concerning her ownership being brought before the managers, they were bound, in justice to other exhibitors and the public, to take action in the matter.—WM. H. CHILD (Philadelphia, March 28).

CHALLENGE.—Mr. Tallman's challenge is accepted, and I am ready to show Rockingham against Foreman for $100, the sum named by Mr. Tallman. But I would prefer the match to be for $500 a side, and I hope Mr. Tallman will increase the amount. I am quite willing that Plantagenet should figure in the race. The affair can be settled at the New York Show. But Rockingham will not compete in the regular class. If Mr. Tallman will name his judge and deposit a forfeit with some reputable paper he will hear from me at once.—F. WINDHOLZ (New York, March 31, 1885).

BREEDING OF BEAUFORT.—Marion, Ala., March 25.—*Editor Forest and Stream:* Will Mr. Chas. H. Mason please correct his entry in the *American Kennel Register* concerning Beaufort? He was bred by me and sold to Mr. Nixon, of Leesburg, Va., from whom I suppose Mr. Mason got him.—W. W. LEGARE.

NEW HAVEN DOG SHOW CATALOGUES.—*Editor Forest and Stream:* Catalogues of the late show of the New Haven Kennel Club will be sent free to any one sending stamped and addressed newspaper wrapper to the New Haven Kennel Club, Box 657, New Haven, Conn.—E. S. PORTER, Sec.

A BIG DOG HOAX.—Monticello, March 21.—*Editor Forest and Stream:* The large dog said to belong to Daniel Lounsbury, of Hurleyville, this county, is all a hoax. Mr. Lounsbury has no dog at all. The letter was written by a college student home on a vacation, for a take off on Mr. Lounsbury.—C. F. KENT.

FOX-TERRIER SALE.—Messrs. L. & W. Rutherfurd had their third annual sale of fox-terriers at the American Horse Exchange, New York, on Saturday. Sixteen were sold. The prices, except in two or three instances, were not satisfactory.

THE BERGHUND has gone to join the dugong.

WHAT IS A COCKER?—This is the cliff of granite upon which cocker breeders have been clawing with their finger nails for the past tenth of a century, and still no advance has been made. At the coming St. Louis show they will have two standards, that of the American Cocker Spaniel Club and that of the International Cocker Spaniel Association. However, the old-time cocker "must go;" in fact, he is going, as any one may see who attends bench shows. It is simply a question of supply and demand. The public does not want the old-time cocker, consequently the old-time cocker's dog day has passed.

NATURAL HISTORY NOTE.—All animals have their good points, but for abundance of the same none can compete with the porcupine.—*Yonkers Gazette.* Especially if the "Porcupine's" points happen to be dog points.

ENGLISH KENNEL NOTES have been crowded out.

WHICH best serves the interest of exhibitors, an impartial description of the animals shown, or garbled statements of facts and totally unreliable criticism?

KENNEL NOTES.

NOTICE TO CORRESPONDENTS.

Kennel notes are inserted in this column free of charge. To insure publication of notes, correspondents MUST GIVE the following particulars of *each animal:*

1. Color.
2. Breed.
3. Sex.
4. Age, or
5. Date of birth, of breeding or of death
6. Name and residence of owner, buyer or seller.
7. Sire, with his sire and dam.
8. Owner of sire.
6. Dam, with her sire and dam.
10. Owner of dam.

All names must be *plainly* written. Communication on one side of paper only, and signed with writer's name.

NAMES CLAIMED.

☞ *See instructions at head of this column.*

Garry. By Wm. T. Reynolds, Poughkeepsie, N. Y., for red Irish terrier dog, whelped Sept. 14, 1884, by Garryowen (Paddy II.—Erin) out of Aileen (Jack—Kitty).

Judy. By Wm. T. Reynolds, Poughkeepsie, N. Y., for red Irish terrier bitch, whelped April 3, 1884, by Pluck (A.K.R. 197) out of Sheila (A.K.R. 137).

Marie Obo. By Geo. L. V. Tyler, West Newton, Mass., for black cocker spaniel bitch, whelped Nov. 21, 1884, by Obo II. (A.K.R. 432) out of Gem (A.K.R. 1312).

Limber, Listner and Lounger. By Thos. Goode Tucker, South Gaston, N. C., for indigo blue Byron foxhound dogs, whelped March 13, 1885, by Brodnax's Speck out of Lucy (Rouse—Old Bet).

Lavish, Lightning and Logan. By Thos. Goode Tucker, South Gaston, N. C., for indigo blue Byron foxhounds, age not given, by Rector (Spot—Trouble) out of Brodnax's Sellie.

Sport First. By Homer B. Soverin, East Berkshire, Vt., for black, white and tan beagle dog, whelped Nov. 13, 1884, by Flute M (A.K.R. 1990) out of Pride (A.K.R. 1995).

Fidus Achates. By J. E. Decker, Newark, N. J., for orange and white pointer bitch, whelped Feb. 7, 1885, by Bon Ton (A.K.R. 1436) out of his Mattie May.

Duke, Victor, Cupid, Flirt and Fairy. By City View Kennels, New Haven, Conn., for pugs, whelped March 4, 1885, by Napoleon (A.K.R. 2037) out of Beauty (A.K.R. 1860).

Draco. By Miss E. R. Packard, Dorchester, Mass., for blue belton English setter dog, whelped Jan. 25, 1885, by Dash III. out of Ravenswood Kennels' Nellie Dale.

Duke. By C. T. Brownell, New Bedford, Mass., for Gordon setter dog, age not given, by Duke out of Maud.

Grouse. By C. T. Brownell, New Bedford, Mass., for Gordon setter dog, age not given, by Tone out of Juno.

PRIOR CLAIM.—*Editor Forest and Stream:* I notice that the Blackstone Kennels claim the name of Paragon for a black, white and tan setter dog. I hope they will change it, as I claimed it some time ago and it is registered in the A. K. R.—CHAS. E. WALTON (Montgomery Ala., March 16).

Beaufort II., Beaufort Gem, Beaufort's Lad, Joe Beaufort, Ned Beaufort, Dashing Beaufort, Rapid Beaufort, May Beaufort, Mabel Beaufort and Lady Beaufort. By Joseph R. Trissler, Lancaster, Pa., for pointers, whelped Jan. 1. 1885, by Beaufort (A.K.R. 694) out of Nelly Bird (Harry—Nell).

Glen Lass and Glen Ada. By Rancocas Kennels, Jobstown, N. J., for white, with lemon ears, and black and white English setter bitches, whelped Nov. 14, 1884, by Glen Rock (A.K.R. 1616) out of Blue Belle (A.K.R. 99).

Hamlet, Hotspur and Lotta. By Rancocas Kennels, Jobstown, N. J., for lemon and white and lemon belton English setter dogs and black and white bitch, whelped Nov. 28, 1884, by Don Juan (Tam O'Shanter—La Reine) out of Fairy Lass (A.K.R. 36).

Dame Buck. By Rancocas Kennels, Jobstown, N. J., for black, white and tan English setter bitch, whelped Nov. 14, 1884, by Buckellew (A.K.R. 30) out of Madam Llewellin (Rake—Rocksie).

Soudan. By Rancocas Kennels, Jobstown, N. J., for lemon and white English setter dog, whelped Nov. 25, 1884, by Druid (Prince—Dora) out of Ruby (Fred I.—Rhoebe).

Count Rush and Bessie Noble. By H. Pape, Hoboken, N. J., for blue belton English setter dog and black and white bitch, whelped May 3, 1884, by Count Noble out of his Lady May (A.K.R. 1371).

Brigadier. By N. Palmer, Baltimore, Md., for liver and white ticked pointer dog, whelped July 29, 1883, by Beaufort (A.K.R. 694) out of Daisy instead of Coulson's Lillie, as it was published Feb. 26.

Madam Petrel. By Rancocas Kennels, Jobstown, N. J., for black, white and tan English setter bitch, whelped July 25, 1884, by Don Juan (Tam O'Shanter—La Reine) out of Petrel III. (Carlowitz—Petrel).

Stormy Petrel. By Rancocas Kennels, Jobstown, N. J., for black, white and tan English setter bitch, whelped July 25, 1884, by Don Juan (Tam O'Shanter—La Reine) out of Petrel III. (Carlowitz—Petrel).

Countess Wind'em. By D. A. Goodwin, Jr., Newburyport, Mass., for black and white English setter bitch, whelped Dec. 25, 1884, by Roderick II. (Roderick—Norna) out of Jennie (Carlowitz—Rose).

Bruce R. By J. E. Radford, Hyde Park, Mass., for white and orange English setter bitch, whelped Nov. 14, 1884, by Buckellew (A.K.R. 30) out of Madam Llewellin (Rake—Rocksie).

El Mahdi. By Rancocas Kennels, Jobstown, N. J., for black, white and tan English setter dog, whelped Oct. 29, 1884, by Don Juan (Tam O'Shanter—La Reine) out of their Petrel II. (A.K.R. 2063).

Cecil Glen. By E. W. Jester, St. George's, Del., for black, white and tan English setter bitch, whelped Jan. 1, 1885, by his Glen Rock (A.K.R. 1616) out of Leah II.

Critobo. By E. W. Jester, St. George's, Del., for black cocker spaniel bitch, whelped Jan. 16, 1885, by Obo II. (A.K.R. 432) out of Critic (A.K.R. 333)

BRED.

☞ *See instructions at head of this column.*

Margery—Otho. James Watson's (Philadelphia, Pa.) St. Bernard bitch Margery to Fred W. Rothera's Otho (Rollo—Lady Abbess), Feb. 6.

Fannie Faust—Ranger Croxteth. S. B. Dilley's (Rosendale, Wis.) pointer bitch Fannie Faust (Faust—Minnetonka) to his Ranger Croxteth (Croxteth—Royal Fan), March 20.

White Lilly—Ranger Croxteth. C. W. Stewart's pointer bitch White Lilly to Ranger Croxteth (Croxteth—Royal Fan), March 19

Trusty Gladstone—Ted Llew Win. Geo. Jarvis's (New York) English setter bitch Trusty Gladstone (A.K.R. 1550) to Ted Llewellin (A.K.R. 599), March 21.

Lea C.—Dick Laverack. P. M. Commayere's (New Orleans, La.) English setter bitch Lea C. (Spot—Queen) to champion Dick Laverack (Thunder—Peeress), March 11.

Cremorne—Don. John E. Gill's (Franklin, Pa.) pointer bitch Cremorne (A.K.R. 164) to R. T. Vandevort's Don (A.K.R. 165), March 23.

Arrow—Icicle. R. T. Vandevort's (Pittsburgh, Pa.) pointer bitch Arrow (Bow—Sleaford's Maid) to his Icicle (A.K.R. 82), March 25.

Bessie A.—Paul Gladstone. J. M. Avent's (Hickory Valley, Tenn.) English setter bitch Bessie A. (Dashing Lion—Armida) to Paul Gladstone (Gladstone—Lavolette), March 12.

Nannie—Brockenhurst Joe. Monmouth Kennels' (Long Branch, N. J.) fox-terrier bitch Nannie (A.K.R. 2197) to Brockenhurst Joe (Belgrave Joe—Tricksey), March 12.

Daisy Blossom—Dinks. Malcolm McLane's (Hopedale, Mass.) Gordon setter bitch Daisy Blossom (A.K.R. 375) to J. F. Hartwell's Dinks (A.K.R. 1077), March 9.

Rusk—Rake. C. M. Hammond's (Lakeport, Cal.) Chesapeake Bay bitch Rusk (A.K.R. 144) to Gard. G. Hammond's Rake (A.K.R. 141), March 1.

Rue—Bang Bang. Bayard Thayer's (Lancaster, Mass.) pointer bitch Rue (A.K.R. 401) to the Westminster Kennel Club's Bang Bang (A.K.R. 334), March 25.

Gaily—Royal Ranger. Howard Hartley's (Pittsburgh, Pa.) English setter bitch Gaily (E.K.C.S.B. 9,131) to his Royal Ranger (Royal—Novel), March 19.

Mottle—Ringwood. N. Elmore's beagle bitch Mottle (Ringwood—Maida) to his Ringwood), Feb. 2.

Chase—King. N. Elmore's beagle bitch Chase (Ringwood—Winnie) to his King (Victor—Lucy), Feb. 25.

Mollie—Emperor Fred. R. B. Penn's (New Haven, Conn.) English setter bitch Mollie to E. A. Herzberg's Emperor Fred (A.K.R. 33).

Countess Wind'em—Foreman. D. A. Goodwin, Jr.'s (Newburyport, Mass.) English setter bitch Countess Wind'em (Roderick II.—Jennie) to champion Foreman, March 12.

Matchless—Plantagenet. Frank Thurlo's (Newburyport, Mass.) English setter bitch Matchless (Roderick II.—Jennie) to champion Plantagenet.

Frou Frou—Sambo. Samuel S. McCuen's (New Orleans, La.) pug bitch Frou Frou (George—May) to his Sambo (A.K.R. 572), March 10.

Bellona—Bang Bang. The Westminster Kennel Club's pointer bitch Bellona (A.K.R. 304) to their Bang Bang (A.K.R. 394), Feb. 9.

Rose—Sensation. The Westminster Kennel Club's pointer bitch Rose (A.K.R. 214) to their champion Sensation (A.K.R. 217), Feb. 23.

Maida—Tramp. The Westminster Kennel Club's pointer bitch Maida to their Tramp (Sensation—Psyche), Feb. 25.

Zuba—Beaufort. Fred F. Harris's (Portland, Me.) pointer bitch Zuba (A.K.R. 1359) to C. H. Mason's Beaufort (A.K.R. 694), March 12.

Daisy Blossom—Dinks. M. McLane's (Hopedale, Mass.) Gordon setter bitch Daisy Blossom (A.K.R. 375) to Dinks (A.K.R. 1077), March 9.

Lill—Bang Bang. H. R. Kelly's pointer bitch Lill (Sensation—Grace) to Westminster Kennel Club's Bang Bang (A.K.R. 394), Feb. 14.

Fable—Bang Bang. Mr. Van Wyck's pointer bitch Fable (Bow—King's Maid) to Westminster Kennel Club's Bang Bang (A.K.R. 394), March 11.

Lou—Guy. Elliot Smith's (New York) Gordon setter bitch Lou to L. H. Livingston's Guy, Feb. 10.

Rosalie—Sensation. The Westminster Kennel Club's pointer bitch Rosalie (Bang Bang—Rose) to their champion Sensation (A.K.R. 217), Feb. 28.

Luckystone—Sensation. The Westminster Kennel Club's pointer bitch Luckystone (Tory—Moonstone) to their champion Sensation (A.K.R. 217), March 4.

WHELPS.

☞ *See instructions at head of this column.*

Lassie. Fred W. Rothera's (Simcoe, Ont.) collie bitch Lassie (A.K.R. 445), March 14, ten, by his Lorne (A.K.R. 440); five dogs and one bitch living.

Lucy. Thos. Goode Tucker's (South Gaston, N. C.) Byron foxhound bitch Lucy (Rouse—Old Bett), March 13, three dogs, by Brodnax's Speck.

Bonnie Doon. W. H. Drane's (Clarksville, Tenn.) pointer bitch Bonnie Doon (Bow—Beulah), Feb. 19, seven (four dogs), by Theo. Schwartz, Jr.'s, imported Don (Dodge—Doxey).

Pet Berwyn. Walter B. Peck's (Central Falls, R. I.) English setter bitch Pet Berwyn (Dashing Berwyn—May Druid), March 23, nine (four dogs), by Blackstone Kennels' champion Foreman.

Lavelette. Rancocas Kennel's (Jobstown, N. J.) English setter bitch Lavelette (Druid—Princess Draco), March 21, eight (five dogs), by champion Gladstone (Dan—Petrel); four lemon and white dogs, the rest black, white and tan.

SALES.

☞ *See instructions at head of this column.*

Heather Lass. Gordon setter bitch, 3yrs. old (champion Jock—Gypsie), by Dan O'Shea, London, Ont., to Merrimack Kennels, Boston, Mass.

Newton Abbott Lady. Chestnut and tan field spaniel bitch, 2½yrs. old (Bend Or—Ladybird), by Andrew Laidlaw, Woodstock, Ont., to A. C. Wilmerding, New York.

Forester II. Black, white and tan foxhound dog, 3yrs. old (Ringwood—Roxey), by Dan O'Shea, London, Ont., to Merrimack Kennels, Boston, Mass.

Gyp. Black, white and tan beagle dog, 21mos. old (Racket—Fly), by E. J. Perkins, Meriden, Conn., to N. Elmore, Granby, Conn.

Bon Ton. Orange and white pointer dog (A.K.R. 1436), by Dr. A. McCollom, New York, to Wm. H. Moller, same place.

Rosa S. English setter bitch (A.K.R. 1075), by H. Sturtevant, Medina, N. Y., to Associated Fanciers, Philadelphia, Pa.

Norah. Red Irish setter bitch (A.K.R. 379), by John Smithers, Berwick, Pa., to Associated Fanciers, Philadelphia, Pa.

Quiver. Bull-terrier bitch (A.K.R. 1890), by J. P. Stinson, Leavenworth, Kan., to Associated Fanciers, Philadelphia, Pa.

Saxon. Bull-terrier dog (A.K.R. 1703), by J. P. Stinson, Leavenworte, Kan., to Associated Fanciers, Philadelphia, Pa,

Maud. Mastiff bitch (A.K.R. 1768), by C. F. Wilson, Palmyra, N. Y., to Associated Fanciers, Philadelphia, Pa.

Esme. Rough-coated St. Bernard bitch, whelped April 25, 1884 (Priam—Novice), by Fred W. Rothera, Simcoe, Ont., to Geo. L. Wetmore, Fredericton, N. B.

Sis. Black, white and tan foxhound bitch, age and pedigree not given, by A. McDonald, Rockland, Me., to L. N. Edwards, Oxford, Me.

Sport. White and tan foxhound dog, whelped Aug. 9, 1881, by L. N. Edwards, Oxford, Me., to Chas. Jones, Welchville, Me.

Rem and Ross. Beagle dogs (A.K.R. 2115 and 2116), by N. Elmore, Granby, Conn., to Chas. Davol, Warren, R. I.

Romaine. Red Irish setter bitch (A.K.R. 38), by F. J. Mills to G. T. Wells, Boston, Mass.

Duke. Pug dog, whelped March 5, 1885 (Napoleon, A.K.R. 2037—Beauty, A.K.R. 1360), by City View Kennels, New Haven, Conn., to I. J. Fowler, Bridgeport, Conn.

Victor. Pug dog, whelped March 4, 1885 (Napoleon, A.K.R. 2037—Beauty, A.K.R. 1360), by City View Kennels, New Haven, Conn., to F. H. Hurd, Bridgeport, Conn.

Frolic. Pug dog, whelped Jan. 3, 1885 (Napoleon, A.K.R. 2037—Daisy II., 1361), by City View Kennels, New Haven, Conn., to W. F. Peet, Philadelphia, Pa.

Bon Ton—Mattie May whelps. Pointers, whelped Feb. 7, 1885, by J. E. Decker, Newark, N. J., a liver and white and an orange and white dog to F. A. Sinclair, Mottville, N. Y.; a liver and white dog to Dr. A. McCollom, New York; a liver and white dog to S. H. Post, New York; a liver and white dog to Wm. Martin, Newark, N. J.; an orange and white dog to O. Willigend, Orange, N. J., and an orange and white bith to Thos. Brabson, Newark, N. J.

Sport First. Black, white and tan beagle dog, whelped Nov. 23, 1884 (Flute M., A.K.R. 1990—Pride, A.K.R. 1995), by O. H. Mossman, Barton, Vt., to Homer B. Soverin, East Berkshire, Vt.

Miss Georgie D. Pug bitch (A.K.R. 1803), by Samuel S. McCuen, New Orleans, La., to H. Oelerich, Milwaukee, Wis.

Sammie D. Pug dog (A.K.R. 1805), by Samuel S. McCuen, New Orleans, La., to Miss May Mauri, same place.

Melissa. Black, white and tan setter bitch, age and pedigree not given, by John Overman, Cincinnati, O., to Geo. H. Hill, Maderia, O.

Rutledge (A.K.R. 1860)—Madam Juno (A.K.R. 1853) whelps. Red Irish setter dog, whelped Feb. 12, 1885, by Chas. S. Davol, Warren, R. I., to M. Jacobs, Providence, R. I.

Young Coin. Black, white and tan English setter dog, whelped June 10, 1884 (Royal Coin—Countess Mora), by W. N. Callender, Albany, N. Y., to C. F. A. Eddy, Greenfield, Mass.

King of Delaware. Black, white and tan English setter bitch, age not given (Dashing Monarch—Vannette), by R. M. Brown, Jr., Amherst Court House, Va., to W. H. Colquit, Richmond, Va.

Princess Blossom. Black, white and tan English setter bitch, age not given (Dashing Rover—Princess Rose), by R. M. Brown, Jr., Amherst Court House, Va., to W. B. Gates, Memphis, Tenn.

Flute—Belle whelp. Beagle bitch, whelped Aug. 27, 1884, by N. Elmore, Granby, Conn., to A. Belmont Purdy, Hempstead, L. I.

Flute—Lucy whelp. Beagle bitch, whelped June 27, 1884, by N. Elmore, Granby, Conn., to A. Belmont Purdy, Hempstead, L. I.

Ringwood—Thorn whelps. Beagles, whelped Dec. 12, 1884, by N. Elmore, Granby, Conn., a dog to Wm. A. Leonard, Vergennes, Vt., and a dog to John Ingham, Westerley, R. I.

Barney—Jessie whelps. Red Irish terriers, two dogs and three bitches, whelped July 11, 1884, by Robert Hume, Orange Court House, Va., to Associated Fanciers, Philadelphia, Pa.

Zoo. English setter bitch (A.K.R. 1846), by E. Butters, Lynn, Mass., to Chas. W. Nutting, same place.

Rowell. Italian greyhound dog, whelped Sept. 6, 1884 (Silk Socks—Zelpha), by Henry C. Burdick, Springfield, Mass., to Dr. M. F. Young, Littleton, N. H.

Flute—Victress whelp. Beagle bitch, whelped June 13, 1884, by N. Elmore, Granby, Conn., to L. D. Spaulding, Lewisville, Pa.

Queen Maud. English setter bitch, 4yrs. old (Racket—Kelp), by Highland Kennels, Ashfield, Mass., to F. B. Walker, Ashland, Ky.

Saxon. White bull terrier dog (A.K.R. 1703), by J. P. Stinson, Leavenworth, Kan., to Associated Fanciers, Philadelphia, Pa.

Quiver. White bull-terrier bitch (A.K.R. 1890), by J. P. Stinson, Leavenworth, Kan., to Associated Fanciers, Philadelphia, Pa.

Norah. Red Irish setter bitch (A.K.R. 379), by J. A. Smithers, Berwick, Pa., to Associated Fanciers, Philadelphia, Pa.

Zora S. English setter bitch (A.K.R. 1075), by H. Sturtevant, Medina, N. Y., to Associated Fanciers, Philadelphia, Pa.

Rugby. Lemon and white pointer dog, whelped April 3, 1882 (Rocket—Belle), by J. G. Hedman, Allentown, Pa., to Associated Fanciers, Philadelphia, Pa.

Lady. Imported fox terrier bitch, whelped 1881 (Trap—Peg), by Robert Hume, Orange Court House, Va., to Associated Fanciers, Philadelphia, Pa.

Whist. White and lemon fox-terrier bitch, whelped May 12, 1884 (Pincher—Fancy), by Robert Hume, Orange Court House, Va., to Associated Fanciers, Philadelphia, Pa.

Frank. Liver English setter dog, whelped Nov. 15, 1883 (Don, A.K.R. 421—Lady Bislow, A.K.R. 605), by H. J. Bennett, Trenton, N. J., to Associated Fanciers, Philadelphia, Pa.

Vic. Red Irish setter bitch, age not given (Acho—Lady Helen), by C. H. Dayton, Peekskill, N. Y., to Associated Fanciers, Philadelphia, Pa.

Wyn. Fox-terrier dog, whelped May 12, 1884 (Pincher—Fancy), by Robert Hume, Orange Court House, Va., to Associated Fanciers, Philadelphia, Pa.

Count Blanc. Lemon and white English setter dog, whelped Aug. 1, 1884 (Count Paris—Daisy Starlight), by H. W. Durgin, Bangor, Me., to Wm. H. Cowan, Baltimore, Md.

Joker, Jr.—Viola whelp. Lemon and white pointer dog, age not given, by Surrey Kennels, Ellicott City, Md., to W. H. Cookson, Hudson, N. Y.

Lorne. Blue and white English setter dog, age not given (London —May), by J. W. Humpidge, London, Ont., to J. S. Waring, Watkins, N. Y.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

S. T., Ithaca, N. Y.—I have a black and tan eight years old, who is troubled by a cough that seems to be caused by a swelling of the glands of the throat. His appetite is good and bowels seem regular, but he is in poor flesh. Sometimes the swelling on one side seems much larger than at others, but he does not cough or retch more at such time than when not so much enlarged. Does not expectorate any phlegm, but acts as if it were present. What is the cause and what the remedy? Ans. Probably your dog has indolent enlargement of the lymph glands in the neck. They press upon the nerves going to the larynx and so cause the cough. Give your dog fifteen grains of iodide of potash in syrup of sarsaparilla. Your druggist will make it up so that a tablespoontul will contain fifteen grains of the potash. Give this dose night and morning. Feed on nourishing diet; milk, soups, some cooked meat.

H. N. V., Charlestown, W. Va.—I have a pointer puppy. He is ruptured at the navel. I have put a bandage on to keep it up, but as soon as I remove the bandage, the rupture comes down again. Can it be treated surgically? Ans. Yes, the dog can be cured by having the rupture returned and the edges of the opening sewed together, and by then keeping the animal absolutely quiet until firm adhesions have taken place. It would be a delicate operation, but in all probability successful.

DESICCATED MEAT, a new food article for dogs and puppies, is advertised in this issue. Dog owners should give it a trial.—*Adv.*

Rifle and Tray Shooting.

SINGLE MILITARY SIGHTS.

Editor Forest and Stream:

I was pleased to learn from your last issue that Dr. Skinner had interested himself in the improvement of our present very defective military rear sight. I think that the difference of opinion existing between us on the question of verniers is to be accounted for by the different standpoints from which we view the subject. His efforts have apparently been directed to the production of a special sight—the intention being to educate the men up to its use. While my idea has been to make a sight so simple as to be understood by the rank and file, and to furnish it with all the refinements possible without sacrifile, and to furnish it with all the refinements possible without sacrifiling this to my mind) necessary simplicity. Perhaps the Doctor's estimate of the intelligence of the average soldier is too high—possibly mine is too low. Be that as it may, after having thought the matter over, I have concluded that it is not necessary to preclude the use of verniers, and I would substitute for that sentence the following: This would require that the sight be graduated like the springfield—every 100yds. of range being very distinctly marked, and having intermediate divisions for every 50yds., or if thought desirable, for every 25yds. A vernier scale may be used, provided it is so placed that it cannot be confused with the simple scale mentioned above. An elevating screw may also be employed, provided that it does not interfere with the rapid adjustment of the sight required in Section 3 of my previous letter. I think this last provision should be insisted on

It has been one of my least pleasant duties, in a professional way, to break in a score or more of green rodmen on various surveys. These men were usually of more than average intelligence, and several had received more or less college training. In other words, they were far more capable of learning the use of the vernier than the average soldier or militiaman. Yet I found these men generally difficult to teach, and very liable to forget what they had learned, if at all out of practice, while they all were liable to error if hurried.

Dr. Skinner's suggestion for the position of the spirit level is a good one for the old Remington sight, but I think it would hardly be found practicable on the new one. The distance between the uprights is much less, and even this limited space is partly occupied by the elevating screw. Another objection that occurs to me is that the sight would have to be lengthened to get the necessary elevation for the long ranges, thus sacrificing compactness.

Again, in criticising my 3d condition, Dr. Skinner says: "And in the case of sharpshooters firing at 1,000 to 1,200yds. and be attacked by skirmishers at 100 or 200yds., the vernier could be thrown down, bringing an open sight into view elevated for 150yds." Undoubtedly a sight could be made that way, but at present they are not.

If Dr. Skinner refers to the Remington, as I suppose, and the vernier was "thrown down, bringing the open sight into view," it would be found to be elevated for at least 450yds., even supposing the bubble to be removed.

My idea of what a military sight should be is about as follows: Retaining the Remington base and wind-gauge, the essential features are shown in the accompanying sketch.

FIG. 1. FIG. 2. FIG. 3.

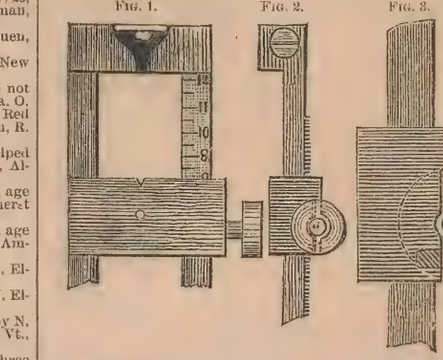

Fig. 1 shows a rear elevation of the leaf. The right side is graduated like the Springfield. The sliding bar is provided with a notch in addition to the aperture.

The notch is to be used in connection with the graduated scale already mentioned, in the usual manner.

The left side of the leaf and sliding bar are cut with a vernier scale similar and similarly placed to the Remington.

The simple scale being in plain view will be the one instinctively used by the inexperienced at all times, and by experts also when it is a question of rapid firing. The sliding bar is moved by a rack and pinion.

The pinion is secured to the sliding bar by a split bearing, as shown in Fig. 3. The depth to which the teeth of the pinion engage those of the rack is regulated by a set screw. For field service the screw is loosened, as shown in the sketch, and as the teeth engage lightly, the sliding bar can be shifted by hand in the usual manner. When used for target practice only, the screw may be tightened, giving any desired stiffness of motion. The pinion may be removed altogether at the discretion of the company commander.

If the sliding bar is made to move smoothly on the upright—yet with sufficient stiffness to retain its position—I think all screw adjustments can be dispensed with, as with a little practice the bar can be readily set to 1-100th of an inch by hand. I have constructed a model with a vernier scale but without an elevating screw, and find no difficulty in setting it to any desired position. I hope others will agree with me in the belief that the elevating screw is not essential, as, though we wish to attain the utmost proficiency possible, we must not sacrifice simplicity. If the rifle is to be used much above 1,000yds., the elevations can probably be best obtained from an auxiliary vernier sight on the heel, similar to that of the long-range rifle. This sight might fold forward into a recess in the stock and be covered by a metal slide like that closing the receiver of the Winchester rifle.

The top of the leaf is made slightly heavier than is usual, and is drilled out to receive the spirit level, as shown in Figs. 1 and 2. the hole being closed by a screw plug. The spirit level in this position is entirely out of the way and is thoroughly protected. It is also well illuminated, so that it can be seen distinctly. It may be objected that it is at quite a distance from the aperture, but this objection applies most strongly at the shorter ranges, where its use is not of so much importance. As the range and the necessity for the level increase the space is shortened.

If the level were placed on the base of the sight, as has been proposed, the reverse would be the case.

The spirit level in its proposed position can be seen so much more clearly than as at present used, that I think the slight disadvantage in distance would be more than counterbalanced. JAMES DUANE,

NEW YORK.

BLUNT'S RIFLE MANUAL.

THE new work, for the use of the regular army, upon rifle shooting, prepared by Capt. Stanhope E. Blunt, of the Ordnance Department, is now issued and in the hands of officers in the various departments. It is a compact little manual, got up in regular code shape, and is as full of valuable information as an egg is of meat. Capt. Blunt is one of the best-informed officers of the army on the topics treated of in the manual, and no better selection as author could have been made. The work was needed by the army. Col. Laidley's little volume had an unfortunate experience, but Capt. Blunt, while accepting and acknowledging hints from many quarters, has subjected everything to the test of experience, and the manual really presents the record of his range work for several years past.

In his introduction, Capt. Blunt gives the correspondence which explains the origin of the volume. This, in fact, is at once a confession of the backwardness of the army on this point and of the efforts made within the past few years to remove this conspicuous blot on the force. The work appears to have been prepared with due deliberation and every precaution taken to remove any possible error. The manuscript, after preparation by the author, was most carefully revised by him in company with Lieuts. Manning and Wallace, and its approval was one of the last official acts of Secretary Lincoln.

It is well arranged and illustrated. Each paragraph throughout the work is numbered, so it is possible to at once refer to the remarks upon any particular point. The plates, which have been specially engraved for the work, are clear and distinct, and are so prepared as to stand for working drawings upon target building and range planning. The opening chapters are given up to a consideration of the course of instruction, giving the duties of officers in sighting drills, position and aiming drills, and upon gallery or armory practice. The soldier is then taken to the range, and several chapters are given to the details of individual practice, with suggestions for riflemen. The various sorts of firing are taken up, including skirmish firing, volley and file work and practice at moving targets. The targets of various sorts, with ample illustrations, take up another chapter. Ranges and their plans take up yet another valuable chapter, while marking and scoring are clearly defined. Competition firing, with some valuable hints on the management of teams, is followed by explicit directions on the making up of reports to the War Department of the results of the regular practice at the various posts of the army. Estimating distance by pacing, sight and sound is described and hints given toward proficiency in this very valuable part of a soldier's duty. A scientific chapter upon the motion of bullets, the variations in the trajectory and the effects of atmospheric conditions upon that trajectory adds much to the value of the book, while in a series of appendices appear directions for pistol firing, for reloading cartridges, with tables of fire and blank forms for the return of scores and the keeping of individual records.

It will be seen from this brief synopsis that the work is something more than a mere set of rules for the guidance of the soldier. It is rather intended for such intelligent riflemen who wish to know the why and wherefore of their art, and while no space is wasted in mere conjecture upon any of the many disputed points of small-arm practice, yet each assertion or direction either grows naturally out of the subject as presented or the reason is explicitly stated. The new targets adopted for the army appear with dimensions clearly given. Several paragraphs are devoted to a sort of apology for the change from the old circular divisions, and to us they rather weaken than strengthen the stand taken by those who brought about the

change. It is as yet an open question which sort of target is, all points considered, the most just and fair. The rifleman certainly aims at a particular point, and any departure from that point ought to bring a corresponding penalty on the score sheet. To a duellist, of course, line shots are everything, and shots of good elevation but away from the center of little value, so he needs a special target because he has special work to do. The soldier, to a large extent, looks at his work from the same standpoint, but the best marksman is he who gets nearest the exact point aimed at, and every enlargement of the bullseye in actual area only takes away from the value of the scores as recorded. The strong measurement with modifications is after all the most scientific, as it is the most just in competitive work, and any departure from it is on the ground of expediency, and this alone would justify the use of the new army target. Typographically the book is capital, errors of print are few and far between, and the compactness of the volume ought to find it a corner in many a shooter's outfit. While it is nominally issued as a book of "Instructions in Rifle and Carbine Firing for the U. S. Army," it has much that makes it valuable to the civilian shot, and it is to-day the best and most comprehensive of the works issued on the subject from American authors.

RANGE AND GALLERY.

SPRINGFIELD, Mass., March 28.—The interest in rifle shooting is increasing in this city, if the large attendance of shooters at the Rod and Gun Rifle Club's range at Lake Lookout to-day is any criterion. Five of the eight members of the team who are to shoot the Fast Day match with the Pittsburgh, Pa., Club, turned out for practice, the target used was the American decimal, the first time the target has ever been used on this range, and it somewhat bothered the marksmen at first, even Captain W. Milton Farrow not coming any where near his average in the first string, but the shooting of the captain and also that of David in the ten shot sweepstakes was something out of the usual and was watched with great interest by the shooters present. Below will be found their scores for comparison on the American decimal. The regular Massachusetts target as used by this club and the Creedmoor target. Practice match same conditions as the match with the Pittsburgh three sighting and twenty scoring shots. The scores were:

David....	6	7	8	8	7	9	4	7	7	10	9	9	10	8	7	7	7	9	9	9—157
Field	6	4	7	7	8	8	7	8	5	2	6	9	10	10	7	8	9	10	5	2—144
Gassener	9	8	8	7	9	9	6	6	2	8	7	7	8	6	4	7	10	7	8	1—137
Knox....	9	8	9	3	7	8	8	4	2	9	9	5	8	9	10	7	2	5	5	8—135
Farrow..	4	9	5	8	9	8	8	3	9	10	3	3	7	9	8	6	7	6	6	5—133
Allen....	7	9	5	5	6	2	7	6	3	0	10	7	6	5	8	7	5	9	9	7—123
Stephens.	7	10	11	5	4	1	6	10	3	0	10	4	0	1	7	9	5	9	9	6—110
Bullard..	7	7	1	4	7	0	4	8	0	0	9	9	9	7	8	0	6	8	6	8—108
C'wright	0	7	9	9	6	4	10	2	2	7	8	1	2	5	5	10	2	3	1	0— 93
Hindley .	0	9	9	1	8	4	5	9	6	10	2	8	5	2	8	7	0	2	4	0— 89

The sweepstakes was a very interesting and exciting match between Captain Farrow and Mr. David. The two best scores are given for comparison on the Massachusetts and Creedmoor targets:

J David	10	7	7	8	10	10	7	10	10	10—89
Capt Farrow	9	8	10	9	6	9	9	10	8	10—88
E S Field	2	8	10	3	9	8	8	10	10	9—77
J Allen	5	0	8	8	10	7	10	6	7	8—69
E T Stephens	8	9	7	4	9	7	8	9	0	0—63

J David	5	4	4	4	5	5	4	5	5	5	5—49

The several rifles used during the day were as follows:
J. David—Ballard, .38-cal., 50grs. powder, 330grs. lead, patched.
Field—Bullard, .38-cal., 30grs. powder, 180grs. lead, grooved.
Gassener—Maynard, .32-cal., 35grs. powder, 165grs, lead, patched.
Knox—Maynard, .32-cal., 35grs, powder, 165grs, lead, patched.
Farrow—Farrow, .32-cal., 35grs. powder, 185grs. lead, patched.
Allen—Maynard, .40-cal., 60grs. powder, 285grs, lead, patched.
Stephens—Ballard, .38 cal., 50grs. powder, 255grs. lead, patched.
Bullard—Bullard, .38-cal., 45grs. powder, 300grs. lead, grooved.
Cartwright—Ballard, .38-cal., 50grs. powder, 330grs. lead, grooved.
Hindley—Bullard, 40-cal., 50grs. powder, 300grs. lead, grooved.

BOSTON, March 28.—There was a very fair attendance of shooters at Walnut Hill to-day. The light was good, but the wind was a little puffy and variable, shifting from 8 to 12 o'clock. The rest match was closed, and the winners are given below. March 18 a team of the Minneapolis Rifle Club shot on their range with a team of six men, and March 21 a team of six of the Massachusetts Rifle Association shot against them. Each club mailed its score, and it now appears that the Western men beat their opponents by a score of 411 to 395; the home club has challenged them again and is to shoot another match. There is a match on hand with the Springfield Armory team, and as the range will be open Fast Day, Thursday next, the match will be shot then. The following are all the scores to-day:

Creedmoor Match.

B G Warren (B)	4	5	4	5	5	5	4	4	4	4	4—41
N F Tufts (B)	5	1	4	4	4	5	4	4	5	4	4—44
H Davidson (A mil)	5	4	3	4	4	4	4	4	4	4	4—41
F Cummings (A mil)	3	4	4	3	4	4	3	4	4	3	3—37

Decimal Match.

A C White	111	109	109	109	108—546+ 0—546

LAWRENCE, Mass., March 28.—The fine weather conditions brought out several marksmen to day to compete in the Creedmoor 200yds. prize match at the range of the Lawrence Rifle Club in Riverside Grove. The snow which has heretofore made good sighting difficult, had almost entirely disappeared, and the gentle wind that was blowing from from 3 o'clock quarter caused but little trouble for the bullseye seekers. The following scores were the leading ones made:

A W Howland	4545555553—47	J O Mason	4545455445—44
O M Jewell	4534055547—42	T O West	4455545544—44
J Merrill	4555455445—46	W A Arthur	5444445545—43
W O Webber	4444551555—45	P N Howe	4444545535—41
O T Wilson	4545454515—45	M Williams (mil)	3444344444—38

NEWARK, N. J.—The first match in the series of three between the Essex Club of Newark and the Bullshead Club of New York, was shot at the range of the latteron March 24, and resulted in favor of the Essex by thirteen points, as follows: Essex Club—Coppersmith 113, Germayne 113, Watts 111, Lake 111, Meisel 115, McCullum 114, Cooper 112, Welters 112, Sneller 111, Neil 112, total 1,124. Bullshead Club—Zimmerman 116, Gunther 110, Holzman 109, Schutz 108, Rein 115, Steinbeck 107, Doneer 114, Scheinder 110, Roos 107, Lober 115, total1, 111. The return match will be shot on the Essex range.

RIFLE WING-SHOOTING.—*Editor Forest and Stream:* In your last issue "Wing Shot" says he hopes some one will kindly and charitably answer his interrogatories relative to Mr. Otto C. Wilkins's with a .44 Kennedy magazine rifle, breaking 479 out of 500 glass-balls, from a Bogardus trap, 6yds. rise. Mr. Wilkins performed this feat on May 4, 1880, in this place, in the presence of more than 100 reliable citizens, all of whom will attest it. He also accomplished it under most trying circumstances. The trap spring not being good, threw the balls very irregularly, some going 20ft., others not over 10ft. high, and a great portion of the balls being blue and thrown against a blue sky, caused several misses. As referee, I ruled against him several balls claimed to be hit, giving him none except those broken plainly in the air. After the ball shooting was over, Mr. W. shot silver quarters, dimes, three cent pieces, lead pencils, dice, and other objects thrown in the air by persons in the crowd, rarely making a miss. He did all this with single, solid bullets, the balls being ordinary size and part of those our club were using. At the time I was almost a stranger to Mr. W., and was chosen as referee on account of being President of the Franklin Sportsmen's Club.

THE TRAP.

Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

THE SPRINGFIELD TOURNAMENT.

THE first Interstate Shotgun Wing Shooting Tournament, under the auspices of the National Gun Association, will be held at the Fair Grounds, Springfield, O., May 5, 6, 7, 8 and 9, 1885.

All matches to be shot under the rules of the National Gun Association. Matches open to members only. Besides the main 5 traps, two additional sets of traps will be constantly at the disposal of the shooters, where the entrance fee will be $2 and $1 respectively.

A special prize, $100, will be donated by the National Gun Association for the best general average scores in Matches No. 2, 3, 4, 5, 6, 7, 8, 11, 12, 13, 15, 16, 18, 19, designated the consolidated contest. For the first best average $40, for the second best average $30, for the second poorest average $20, for the poorest average $10.

FIRST DAY.

Match No. 1.—Individual handicap sweepstake, 7 single clay-pigeons, entrance $5.

Match No. 2.—Individual handicap sweepstake, 7 single clay-pigeons, entrance $5; guaranteed prizes—First $40, second $30, third $20, fourth $10.

Match No. 3.—Individual handicap, 7 single live pigeons, entrance $5; guaranteed prizes—First $40, second $30, third $20, fourth $10.

Match No. 4.—Individual handicap, 5 pairs double clay-pigeons, entrance $5; guaranteed prizes—First $40, second $30, third $20, fourth $10.

Match No. 5.—Twin team handicap, open to any team of two, each member to shoot 5 singles, entrance $10; guaranteed prizes—First $60, second $40, third $30, fourth $20.

SECOND DAY.

Match No. 6.—Individual handicap, 7 single clay-pigeons, entrance $5, guaranteed prizes, first $40, second $30, third $20, fourth $10.

Match No. 7.—Individual handicap, 7 single live pigeons, entrance $5, guaranteed prizes, first $40; second $30, third $20, fourth $10.

Match No. 8.—Individual handicap, 25 single clay-pigeons, entrance $10, guaranteed prizes, first $80, second $60, third $40, fourth $20.

Match No. 9.—Inter-state club team championship, sweepstake open to any club team of three, all being residents of the same State, 10 single clay-pigeons, 5 pair doubles, entrance $15 per team, three purses, 50, 30 and 20 per cent.

Match No. 10.—Miss and out sweepstake, entrance $2.

THIRD DAY.

Match No. 11.—Individual handicap, 7 single clay-pigeons, entrance $5, prizes guaranteed, first $40, second $30, third $20, fourth $10.

Match No. 12.—Individual handicap, 5 single live pigeons, 2 pairs doubles, entrance $7, guaranteed prizes, first $50, second $40, third $30, fourth $10.

Match No. 13.—Prize, the diamond badge or $250, 10 single clay-pigeons, 5 pair doubles, entrance $10, guaranteed prize to the best individual score. The diamond badge (intrinsic value $200), won by C. M. Stark, of Exeter, N. H., at the first International clay-pigeon tournament, Chicago, Ill., May, 1884, presented for redemption, and won by B. Tiepel, of Covington, Ky., at the second International clay-pigeon tournament, New Orleans, La., February, 1885. Should said badge not be presented for redemption at the time of this match, the association guarantees the first prize to be $250 cash. The association further guarantees to redeem said badge from present winner for $250 cash within one year from date.

Match No. 14.—Non-winners individual handicap, 7 single clay-pigeons, entrance $5, guaranteed prizes, first $30, second $20, third $15, fourth $10.

FOURTH DAY.

Match No. 15.—The "Bogardus Cup" championship match, official scores of which will also be accepted for the competition of the Chamberlin Cartridge Company's prizes. Conditions: 50 single clay-pigeons and 25 pairs double clay-pigeons. The singles only will be shot to-day, the doubles to-morrow, entrance $5. Guaranteed prize, first, the "Bogardus Cup" and $25; second, third, fourth, each $10; balance to "Cup fund" and the Association. The cup shall be again submitted for competition under similar conditions at each tournament of the Association during the years 1885–6. The winner making the maximum scores in said years, shall be entitled to hold the cup subject to challenge as set forth below. Final ties between winners at successive tournaments shall be decided at time and place indicated by the Association. After the final inter-state tournament of 1886, the cup shall be held subject to challenge under the following

Rules: 1. The final winner of the cup shall give a satisfactory guarantee to Captain A. H. Bogardus for the safety thereof, in the shape of a responsible surety. 2. The winner shall pledge himself to shoot any challenger, for a sum not less than $100 a side, within two months of the date of said challenge, under penalty of forfeiting said cup. 3. Any party challenging the holder of this cup shall make a deposit of $50, as a forfeit for a match of $100 a side, in the hands of the secretary of the National Gun Association, to be covered by the challenged party with an equal amount. The balance of the money, $50 a side, shall be deposited in the same hands three days before the match is shot; the match then becomes "play or pay." In case the holder not complying with the foregoing conditions, he shall forfeit the cup to the party challenging. 4. Every contestant for this cup shall pledge himself to contend for the same under the trap-shooting rules of the National Gun Association, and make all necessary arrangements and furnish the clay-pigeons. Each party to pay half the expenses of the same, and if gate money be charged it shall be divided equally. 5. All matches for this cup shall be at 100 single and 50 double each. 6. The holder of this cup shall name the place where the same shall be contested for. 7. If the party holds this cup for two years against all comers it shall become his personal property. 8. Where practical so to do, the match shall be shot under the auspices of the National Gun Association, at the place and time designated by the latter.

Match No. 16.—Individual handicap, seven single clay-pigeons, entrance $5. Guaranteed prize: First, $40; second, $30; third, $20; fourth, $10.

Match No. 17.—Non-winners handicap, five single clay pigeons, entrance $5. Guaranteed prize: First, $40; second, $30; third $15; fourth, $10.

FIFTH DAY.

Match No. 15.—Continued for the Bogardus Cup and the Chamberlin Cartridge Company's prizes.

Match No. 18.—Individual handicap, seven single live pigeons, entrance $5. Guaranteed prizes: First, $40; second, $30; third, $20; fourth, $10.

Match No. 19.—Individual handicap, three pairs live pigeons, entrance $5. Guaranteed prizes: First, $40; second, $30; third, $20; fourth, $10.

Match No. 20.—Non-winners handicap, five single live pigeons, entrance $5. Guaranteed prizes: First, $40; second, $30; third, $20; fourth, $10.

Capt. A. H. Bogardus will undertake daily, at 4 P. M., to break 300 Ligowsky clay-pigeons, thrown from 5 traps, within 20 minutes. He will use three different guns, viz.: 10-gauge, 9½ pounds; 12-gauge, 7½ pounds; 20-gauge, 5½ pounds.

An Interstate tournament, under the auspices of the National Gun Association, will be held in the city of Cleveland, Ohio, Oct. 5 to 10, 1885, where all the ties for the Chamberlin Company's prizes will be finally decided.

First international tournament, under the auspices of the National Gun Association, Washington, D. C., May, 1886.

WELLAND, March 24.—The Ritter, Rodger and Bell pigeon shoot for $300 is unavoidably postponed for a later date not yet fixed.

CLEVELAND, O., March 12.—The tenth regular contest for the championship badge of Cuyahoga county, took place this afternoon at the Cleveland Gun Club Park, East Cleveland, with an excellent attendance. An early wind blew across the traps and drove the balls down so as to make good score especially impossible. The work was, as usual, under the badge rules at 50 glass balls, from 5 traps chosen by lot at 18yds. rise. The badge is shot for every 4 months, and any member of a shooting club in good standing in Cuyahoga county is eligible to enter the contest. Being won three times consecutively, it becomes the personal property of the possessor. C. A. Calhoun, of the Cleveland Club, had won it in the two contests preceding yesterday's, but failed to score the third victory. Mr. George Randerson was referee, and the score stood: C. E. Calhoun, 39; E. Alger, 41; C. M. Roof, 42; George Newbury, 39; W. H. Polhamus, 35; C. F. Wheal, 42; R. E. Sheldon, 38; Dan Powers, 42; Walter Neff, 42. There have been ten contests for the badge, and the winners have been as follows: D. C. Powers, Clevelands; John Prechtel, Kirtlands; C. M. Roof, Kirtlands; J. J. Wightman, Clevelands; C. A. Calhoun, Clevelands; R. E. Sheldon, Clevelands; R. E. Sheldon, Clevelands; C. A. Calhoun, Clevelands; C. A. Calhoun, Clevelands; C. M. Roof, Kirtlands. There will be no more contests for the badge under the present rules. Instead of glass-balls Peoria blackbirds or clay-pigeons will be used in future, and the entrance fee reduced from $5 to a lower figure so as to make competition less expensive. The amendments are wise.

ASBURY PARK, N. J., March 28.—The Neptune Gun Club held their challenge match with the West End Gun Club of Long Branch, the conditions of the match being 9 men on each side, 10 clay-pigeons each, 21yds., the losing team to pay for the pigeons and a dinner. The match was won by the West End Club by 4 birds:

West End Club.		Neptune Gun Club.

Judges, C. Borden and O. Pitcher. Referee, W. C. Price.

THOMASTON, Conn., March 24.—At a meeting of the Empire Gun Club, of Thomaston, this evening, a committee was instructed to improve Bridgemoor Range by placing an awning over the firing point and substituting sliding for swing targets. Also, a committee presented a schedule of cash prizes for our annual tournament on or about the middle of May. The aggregate is nearly $200, with $60 for the first, $45 for the second, etc. A constitution and by-laws were also presented by a committee and accepted by the club. Voted to hold the opening shoot of the season April 3 (Fast Day).

The clay-pigeon shoot to-day stood:

E Berkeley	1111001011—7	Alby	1011100101—6
Bissell	1100011111—7	Dr. Berkeley	0110101101—6
Crowder	1101011101—7	Wegner	1000011101—4
Cushing	0011111011—7		

Ties for silver medal, miss and out: Ayres 0, Cooke 1, Whittle 1, Wayman 7.

CLINTON, Mass., March 24.—There was a field day at the range of the Clinton Sportsmens' Club to-day, and a large delegation was present from Worcester. There was some sweepstake shooting, but the principal event was a team match between Worcester and Clinton, there were two men on a side, each with a possible total of 50. The individual score of each man and the number of balls broken was as follows:

Worcester Team.

H W Webber	1111111100111111111111111101111111011111111111011—45

		84

NEWMARKET, Ont., March 24.—Following is the score of the clay-pigeon match between the gun clubs of Newmarket and Aurora, today, 15 birds per man: Aurora—J. Wells 10, G. Wilkinson 11, J. Moseley 15, R. Wells 9, Sweezey 11, J. Coltham 10, E. Coltham 7, Total 73. Newmarket—T Brown 13, A. T. Doan 14, A. E. Roe 12, C. C. Norris 12, W. H. Nelson 12, H. Harxey 6, T. Ratcliffe 11. Total 80.

WELLINGTON, March 28.—Trap-shooters were numerous at the range of the Malden Gun Club to-day. The following events took place: 1. Five black birds—Hanford and Parkhurst divided first. 2. Five black birds—Shaffer. Parkhurst and Loring divided first. 3. Five black birds—Scott first. 4. Three pair double Polock birds—Field, Dennis and Parker divided first. 5. Five black birds—Schaffer, Loring and Snow divided first. 6. Merchandise match, five black birds—Snow and Adams divided first. 7. Five clay-pigeons—Schaffer first. 8. Three pair black birds—Loring and Parker divided first. 9. Five clay-pigeons—Schaffer and Parker divided first. 10. Merchandise match, five black birds—Loring first. 11. Five black birds—Schaffer, Loring and Dennett divided first. 12. Schaffer first.

NASHVILLE, Tenn.—The match set down for April 2 between Capt. Bogardus, the famous shot, and Mr. Andrew Meaders, of Nashville, will be at 200 clay-pigeons for $250 a side. Meaders is the champion of this section of the country, and bets were offered that he would beat Bogardus in New Orleans. His failure to do so, however, has not cooled the ardor of his admirers. This match has served to awaken local pride, and to a certain extent, a general rivalry among Nashville shots, and steps are being taken for the organization of a gun club. An active interest has awakend in the move, and there appears no reason to doubt the successful organization of the club. There are several matches among local shots talked of, and the probabilities are that another month or six weeks will find the gun club fairly under way, when some good sport will be witnessed, for Nashville can boast a number of excellent shots, both at clay-pigeons as well as live birds.

CLINTON, Mass., March 24.—At the range of the Clinton Club today, the event was the team shoot between H. W. Webber and W. L. Brown of Worcester, and G. A. Sampson and J. B. Parker of Clinton. The contest was for 100 glass balls to a side, or 50 to a man, and was by the Worcester team by a score of 89 to 84. After the team shooting the afternoon was passed in sweepstake shooting. The score of the team match stood: Brown 44, Webber 45, total 89; Sampson 42, Parker 42, total 84.

THE NATIONAL GUN ASSOCIATION.—The following additional gentlemen have lately joined the Association: Chas. E. Chase, Mansfield, Mass.; C. G. Sunergren, Boston, Mass.; C. C. Fleming, Nashville, Tenn.; W. D. Kimball, Clarendon, Tex.; S. H. Brown, Richburg, N. Y.; W. W. Curtin, Richburg, N. Y.; E. R. Curtin, Richburg, N. Y.; W. A. Coster, Flatbush, N. Y.; A. D. Cairncross, Amboy, Ill.; Charles Tatham, New York city; Geo. W. Wade, New York city; C. J. Curry, New York city; Z. Stamm, Allentown, N. Y.; J. Fay, Allentown, N. Y.; L. D. Strayer, Allentown, N. Y.; R. E. Chetwood, Elizabeth, N. J.; J. J. Phelps, New Haven, Conn.; Chas. Richards, New York city; C. N. Brown, Fenton, Mich. Dr. L. E. Russell, of Springfield, O., has been elected president of the Association for the ensuing year.—F. O. BISHOP, Secretary.

SAN FRANCISCO CLUBS.—The Neophyte Club has elected the following officers for the ensuing year: C. W. Kellogg, President; C. O. Dean, Vice-President; Edgar Chaplin, Treasuser; W. W. Haskell, Secretary. In future the club matches will be held at Bird's Point, every second Saturday in the month.... The annual election of the officers of the Alameda Sportsmen's Club took place March 15, with the following result: H. A. Mayhew, President; W. E. Miller, Vice-President; C. R. Yates, Secretary; W. D. Heaton, Treasurer. Board of Directors—F. B. Norton, A. F. Adams, R. E. Bell and the President and Vice-President ex-officio. The club has eighty-five members, and it is in prosperous circumstances.

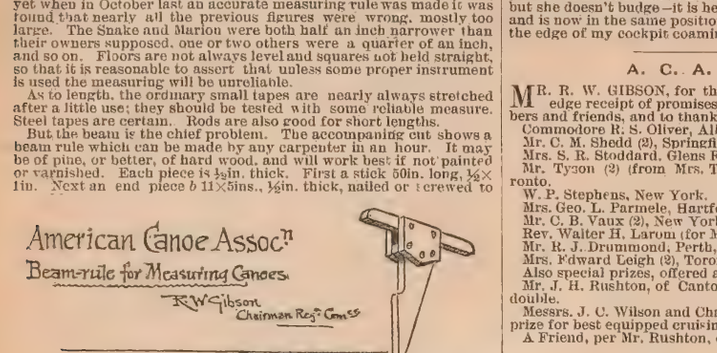
EMERALD GUN CLUB.—The following officers have been elected for the coming year: Dr. George V. Hudson, President; John Glaccum, First Vice-President; John Measel, Second Vice-President; Patrick Keenan, Financial Secretary; Martin L. Biggane, Recording Secretary; Richard Regan, Treasurer. The club was organized in March, 1882. We are in a very good condition, both numerically and financially. It is the only Irish gun club in the country. We have one shoot every two months, at which we have three prizes, a gold medal, $10 gold piece and silver medal.—M. L. B.

THE spring meeting of the Philadelphia Gun Club is fixed for April 16 and 17.

THE NATIONAL GUN ASSOCIATION.—All who would foster "The Gun" as a healthy outdoor sport are invited to join the National Gun Association, organized New Orleans, Feb. 10, 1885. Incorporated Covington, Ky., March 4, 1885. Membership fee $5. Annual dues $1. Life membership $25. A series of Inter-State and International tournaments, open to members only, will be announced shortly, the first at Springfield, Ohio, prizes $2,000 guaranteed, May 5 to 9. Handbook with full details, constitution, trap shooting rules, etc., price 10 cents. Dr. L. E. Russell, President, Springfield, Ohio; Fred. C. Bishop, Secretary, Box 1,292 Cincinnati, Ohio; J. E. Bloom, General Manager and Treasurer, Cincinnati, Ohio.—*Adv.*

Canoeing.

FIXTURES.



April 7—Toledo C. C. Camp-fire, "Racing and Rules."
May 30, 31—Hudson River Meet.
May 30 to June 1—Connecticut River Meet.
July 18, 28—Western Meet, Ballast Island, Lake Erie.
July 24 to Aug. 8—A. C. A. Meet, Grindstone Island.

MEASURING CANOES.

IT is not so simple an affair as it at first appears to measure the beam of a canoe, especially one built with slight tumble home and with rounded, projecting beading. The Mohican canoes had all been measured (some more than once) with squares and rules and sticks, not to mention the catalogue dimensions of this or that model; yet when in October last an accurate measuring rule was made it was found that nearly all the previous figures were wrong, mostly too large. The Snake and Marion were both half an inch narrower than their owners supposed, one or two others were a quarter of an inch, and so on. Floors are not always level and squares not held straight, so that it is reasonable to assert that unless some proper instrument is used the measuring will be unreliable.

As to length, the ordinary small tapes are nearly always stretched after a little use; they should be tested with some reliable measure. Steel tapes are certain. Rods are also good for short lengths.

But the beam is the chief problem. The accompaning cut shows a beam rule which can be made by any carpenter in an hour. It may be of pine, or better, of hard wood, and will work best if not painted or varnished. Each piece is ½in. thick. First a stick 50in. long, ½×1in. Next an end piece *b* 11×5ins., ½in. thick, nailed or screwed to

lower edge of stick. One inch from top cut out a notch ½in. down and 1in. in as shown on drawing, to allow the beading of various sized boats to keep clear of the rule. Taper off the back edge for appearance and handiness. Next take an exactly similar piece to make the sliding end *c*. Take also a piece of ½×1in. same as the stick, and two side clamping pieces each 5×5in., and ½in. thick, put together with screws as indicated so as to leave a space ½×1in., through which the stick will slide. The accuracy of the rule depends upon the exact squareness with which these ends stand upon the stick; the long head to the sliding piece is intended to insure this remaining square. A pin through the end of stick prevents the slide coming off. The scale of inches can best be done with an ordinary pencil, as it makes a cleaner, neater line than paint or ink. Figure every second inch at least, and from 24 to the end fill in shorter lines (not shown on cut) for ½ins.

The diagram shows the rule laid on a 30-inch canoe. The slide must be moved up until it touches the planking (not bead) just as a shoemakers rule is used on the foot. The widest part of a canoe must be found by experiment, and on some craft where the greatest beam is close under the bead, the rule must be lifted a little so that the lower end of notch reaches the under edge of beading. The rule will be made more complete if the class limits are figured on its reverse side and top as indicated on diagram over the elevation of rule. On reverse side draw lines at 26ins., 28ins., and 30ins. The interval is the Class II. limits, 15ft.; the next, Class III. and beyond that Class IV., the length for the latter classes being 16ft. On the top edge of stick a line drawn at 28ins. will show the limits of Class A, the length, 16ft., being noted there too. At 28½ins. a line marks the beam, which in Class B entitles a canoe to 17ft. length. For every eighth of an inch which the vessel exceeds this, the length must be reduced 1in. Armed with this instrument the measurer will be able to classify his fleet with a minimum of calculation and a maximum of certainty. The scale of inches, however, is the chief thing to be relied upon; the other marks can well be dispensed with by using the revised Rule I. schedule of dimensions.

A. C. A. MEASURERS.

IN sending the following circular the imperfect lists and addresses at command will occasion failure to reach some clubs. Will all such please consider this publication of the letter as addressed to them and reply accordingly:

To the Canoe Club:

GENTLEMEN—The A. C. A. regatta committee have agreed that the official measurers for 1885 may be appointed immediately, one from each club, so that classification of the fleet may be done in good season. Please refer to Revised Sailing Regulations, Rule III., and note to Rule II. published in FOREST AND STREAM March 26.

If you wish to take advantage of this arrangement and will recommend to me a competent member of the club and A. C. A. for A. C. A. measurer I will send him the necessary blanks.

ROBERT W. GIBSON, Chairman Regatta Committee.

ALBANY, N. Y., March 27.

A CANOE CLUB AT NEWBURGH.

Editor Forest and Stream:

At a meeting held March 25, 1885, the canoeists and amateur boating men of this vicinity, formed an organization under the name of the Newburgh Canoe and Boating Association. We start with 20 active members owning 18 craft of various kinds, including 8 canoes. Of our members 7 are members of the A. C. A.

The following-named officers were elected, viz.: Commodore, Wm. E. Bartlett; Vice-Commodore, Jas. T. Van Dalfsen; Captain, Nate S. Smith; Purser, Henry A. Harrison.

The club signal is a pointed burgee, white field with a "Dockrat" rampant in black upon it. HENRY A. HARRISON, Purser.

NEWBURGH, N. Y., March 28.

MISSISSIPPI MUD.

IN his forthcoming book, "The Cruise of the Aurora," Commodore Neidé relates a funny time they had on the occasion of their first acquaintance with Mississippi mud:

"Pulling my rubber shoes on over my canvas slippers, I threw aside the tent flap and stepped out hurriedly. Had the weather been cold I could have sworn that it was ice that caused my feet to fly out from under me so quickly and brought my helpless body into such violent contact with the coaming of the canoe. But I learned better the moment I attempted to gather myself up, for my feet were held so fast that with all the force I could muster I could scarcely move them from the tenacious clay into which they had slot. Barnacle was enjoying my predicament; he had been in the same fix a few moments before, and now stood about ten feet from me, his feet hidden from sight beneath the clay and water. The rain had converted the smooth, hard clay bank into a deep bed of a soft, mortar like consistency, in which it was almost impossible to move about. Everything was smeared with the vile grayish clay. My overshoes, being a size too large for my slippers, had been left where my feet first struck, and I was moving about in the clay up to my ankles. By using much caution I reached the water's edge, and succeeded in scraping off some of the slimy mud. Every time I lifted my feet I brought up with them a great weight of the river bottom that clung to the shoes until I set them down, when it would give me the sensation of falling as it yielded to my weight. I managed to get the tent unfastened from the forward part of the canoe, but was unable to reach the stern, owing to the deep decline of the bank, a slip on which would have shot me into the boiling waters.

"A short distance below us we could make out what appeared to be a sandy point, and to this we decided to go and prepare our morning meal. I fished my overshoes out of the depths with the end of my paddle, and piled them, mud and all, on the deck; then getting my feet well braced, I pushed the Aurora with all my might, but she would not budge an inch. I couldn't even rock her from side to side. I looked back of me to see how Barnacle was making out. There he stood ankle deep in the mud, his hands and clothing smeared full of the gritless clay. He had been no more successful than I, and protested that he 'couldn't get his canoe off, and would have to wait until a rise in the river floated her.' I prepared to make one more attempt to float the Aurora, and placing the mainmast under my feet, I got a low hold on the canoe, and then gave a lift that caused my back to ache for days after. Away she went, down the slippery bank and plunged into the water. But where was I? Stretched at full length on my stomach in the nasty, glutinous mass. Words fail me with which to describe my feelings or appearance as I finally gave up all hope of ever appearing like myself again. Barnacle sees me in this humiliating position, but for a wonder, doesn't laugh; he is too mad for that—you couldn't provoke a smile on his angular features with one of the funniest of funny sayings. I went to his assistance, and we seized hold of the Comfort and swung her around so that she might be slid down the same incline which the Aurora had left clear. As I am fishing the mast out of the mire Barnacle takes the stern painter of his canoe in hand and gives her a haul with all his might; but she doesn't budge—it is her skipper that makes a sudden move and is now in the same position that I was a short time back. On the edge of my cockpit coaming I laugh until my sides ache."

A. C. A. PRIZE FLAGS.

MR. R. W. GIBSON, for the Regatta Committee, begs to acknowledge receipt of promises of prize flags from the following members and friends, and to thank them for their kind support:

Commodore R. S. Oliver, Albany.
Mr. C. M. Shedd (2), Springfield.
Mrs. S. R. Stoddard, Glens Falls.
Mr. Tyson (2) (from Mrs. Tyson and Miss Kate L. Johnston), Toronto.
W. P. Stephens, New York.
Mrs. Geo. L. Parmele, Hartford.
Mr. C. B. Vaux (2), New York.
Rev. Walter H. Larom (for Miss Ida Larom), Stafford Springs, Conn.
Mr. R. J. Drummond, Perth, Canada.
Mrs. Edward Leigh (2), Toronto.

Also special prizes, offered as follows:

Mr. J. H. Rushton, of Canton, N. Y., paddles, for single blade vs. double.

Messrs. J. C. Wilson and Chas. Remington, of Watertown, N. Y., a prize for best equipped cruising canoe.

A Friend, per Mr. Rushton, one prize.

A LOCAL MEET IN CANADA.

Editor Forest and Stream:

At a special meeting of the Deseronto C. C., held March 20, it was resolved "that this club invite the members of Canadian canoe clubs to hold their spring meet in the vicinity of Deseronto, and that cordial invitations be hereby extended to as many of our American brethren as can join us at that time."

We have many choice spots in our immediate vicinity for camping. They are easy of access either by the Grand Trunk Railway or by steamer from Kingston, Ont. We will arrange for a suitable site for the camp, plentiful supply of firewood, lay out the sailing and paddling courses, and arrange for meals to be furnished at the camp for 25 cents each. Prizes, given by our friends and members of this club, will be awarded for competition in sailing and paddling.

Notice of time and length of the proposed meet will be duly given.

E. C. FRENCH, Purser D. C. C.

ROCHESTER C. C.—Following the custom, the Rochester C. C. early in the year inaugurated a series of weekly camp fires, which have been well attended. To add to the inducements a lodge of "Knights of the Paddle" has been organized, consisting of three degrees, with appropriate ritual and initiatory ceremonies. Rear Commodore Andrews, A. C. A., has sold his Springfield model and is having a new canoe built, and two canoes are being built for members of the club. The Remus Club has consolidated with the Rochester C. C., bringing up the membership to twenty-eight. It was proposed to hold a local meet for Buffalo, Warren, Pittsburgh and Rochester, at Chautauqua Lake late in May, but the scheme is off, business engagements of members of the Warren Club, who were pushing and fathering the affair, preventing.—M. A.

NAUTILUS B. C.—A regular meeting of the members of the Nautilus Boat Club, was held at Messrs. Dieters, Brooklyn, N. Y., on the evening of March 26, 1885, and the following officers duly elected for the ensuing year: President, Henry F. Waring; Vice-President, George Hewlett; Secretary, Thomas F. Crean; Treasurer, Henry W. Schede; Captain, Prof. J. Douglas Andrews; First Lieutenant, Albert S. Oswald; Second Lieutenant, Walter Edwards; Coxswain, A. Hillman. This club is having erected along the Bay Ridge shore a new and beautiful boat house, to replace the old and somewhat dilapidated one now occupied by it, its greatly increased membership also rendering the old house unfit for use. The Nautilus promises to become one of the leading boat clubs of Brooklyn.

DESERONTO C. C.—*Editor Forest and Stream:* The Deseronto C. C. held its second annual meeting on March 13. Last year's officers were re-elected and are as follows: F. S. Rathbun, Captain; George Clinton, M.D., Mate; E. C. French, Pruser. The club contemplates building a large boat house this spring for the accommodation of canoes and boats belonging to members. This will meet a long-felt want here. The enthusiasm prevalent at the meeting was much enhanced by the presentation by Captain Rathbun of a handsome cup to be raced for once a month by canoes only. Several new canoes have been ordered. Four members are overhauling their canoes thoroughly, putting in the most modern appliances in the way of sails, centerboards and rudders.—E. C. FRENCH, Purser D. C. C.

LALOO.—A canoe on the model of the Laloo, illustrated in FOREST AND STREAM some time since, is being built by an amateur in Michigan. This is the first canoe of the Laloo model in our waters.

FREAK.—This canoe will retain a 3-inch keel for cruising, the Childs board being only used for racing. The air tanks put in last season will be removed.

PERSONAL.—Com. Munger, Chicago C. C., is now cruising down the San Juan River in Central America, in his canoe Gitana.

Yachting.

FIXTURES.

April 2—Mosquito Fleet, City Point.

July 25—Pentucket Y. C., Club Race.
July 25—Beverly Y.C., Marblehead, Second Championship Regatta.

YACHTBUILDING IN BOSTON.

A GLANCE at a map of Boston harbor and the adjacent waters shows a succession of little bays, which with the open water near at hand offer every facility to the yachtsman, plenty of good harbors and anchorages, with good racing courses and cruising grounds within easy reach. Probably no other point on our coasts offers such advantages to the yachtsman, both in the way of natural facilities and club privileges. Within the city limits are half a dozen yacht clubs, while within a radius of a few miles, and distant less than an hour in time, are as many more, Quincy, Lynn, Dorchester, Marblehead, with its beautiful harbor, Salem, Beverly, Hull, Nahant, all of which places are favorite resorts for yachts large and small. Of course the various fleets are seen to best advantage in the summer, but a visit now, when all are hauled out, is still more instructive. At various points along shore, in East and South Boston, as well as the other places mentioned, large numbers of boats are drawn up and covered for the winter.

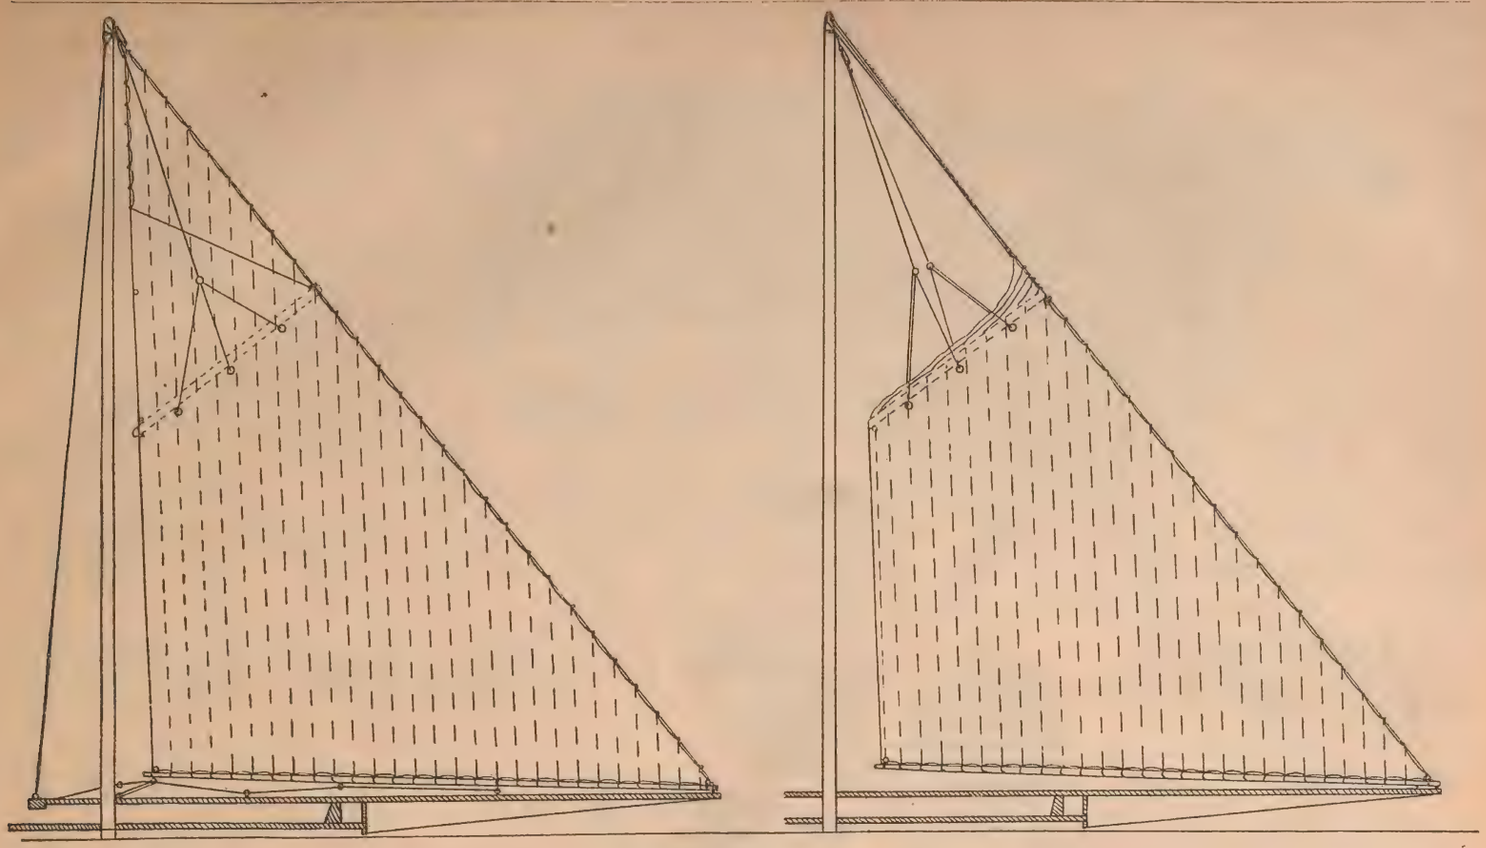
A ramble among these craft brings to notice several prominent features, the most striking of which is the outside ballast. From the new sloop with her thirty tons of lead down to the little catboat of 12 to 14ft., with a big chunk of cast-iron underneath, all, except the sandbaggers pure and simple, carry a portion, and often a large portion, of their weight outside. Metal keels are the rule in all sizes and classes except the one mentioned, and the weights are increasing also. Adrienne discards eight tons of iron for twenty tons of lead; next to her on the ways is Tempest with five tons of iron added on keel in place of inside, while near by is a steadier of iron going under the steam yacht Athletic. Whether in all cases the great weight outside is an advantage is a question not yet decided, but the absence of any evidence in the shape of a change from outside to inside ballast is an argument in its favor.

Next to the outside ballast the most noticeable feature is the keel. Centerboards are still plenty, but side by side with them is a large fleet of keel boats, mostly of considerable draft, and of the new boats, except the small sandbaggers mentioned and the Burgess sloop, all are keel boats. While the bugbear of draft seems to have a little terror for Eastern yachtsmen, it is accompanied by an absence of depth in the body which goes far to counteract the benefits generally attributed to deep boats. The prevailing type still, in spite of the presence of some genuine cutters, show a high bilge, shoal body, and deep keel outside, giving little headroom; in fact they are almost the deep centerboard model with a huge fin added.

Coupled with this is the third noticeable feature, extreme beam, and the enormities that can be obtained by a combination of width, shoal body and immense draft, must be seen to be believed. Clearly the old heaven of length measurement is still at work in the brains of many yacht designers, and the result is seen in large beamy tubs, requiring an outrageous sail plan and a heavy outlay for ballast, while they attain a minimum of accommodation and speed at a maximum of cost. Draft is of course always a disadvantage and to be decreased as much as practicable. It would seem obvious that the best boat is that in which draft is coupled with depth of body, some of the bulk that is placed in beam being cut off and put lower down, giving suitable headroom in the cabin, an easier form to drive, a better sea boat and a less costly craft to build. The possibilities of an able and roomy boat of 30ft. or under on a draft of 6ft. are unlimited, and yet plenty of craft may be found drawing more water, but requiring a high trunk cabin to give ordinary headroom. When it is once clearly understood by all that the problem is not to produce simply the largest boat on a given length, but to put a given bulk or given sum of money in the shape which will combine comfort, accommodation and speed in the highest degree possible, we may hope for some change in the prevailing models, but such a state of affairs is still far off.

Passing to the actual work in hand of course the new sloop claims first attention. Like the New York boat, Mr. Burgess's sloop bears little resemblance to the old sloops above water, in fact the plumb stem, round, bright bowsprit, straight sheer, high side, and most of all the long overhang of 12ft (her counter being much like that on the cutters of a few years since), all these features, coupled with the double jibs, make her in appearance anything but an ideal sloop. Her designer has turned out a fair and handsome model, the dimensions being 93ft. over all, 80ft. W. L., 23ft. extreme beam, 8ft. 2in. draft, freeboard at bow 6ft. 6in., least freeboard 3ft. 6in., and last of all a lead keel of 30 tons. The centerboard will work through a slot in this keel, and with it down she will draw 18ft. The rig has not been decided on beyond the fact that jib and staysail will be used, the former probably set flying. The total displacement of the boat will be 105 tons. The sheer plan shows a plumb stem, or rounding very slightly above water, like a pilot boat; a forefoot rounding away fairly into a slightly rockered keel, the sternpost being nearly upright. The midship section shows a wide keel with rounded corners, a hollow above the rabbet, above which the floor rises nearly straight until it turns into the bilge, while the topsides flare a little, the width on deck being slightly greater than on waterline.

Messrs. Lawley & Son have the contract to complete the boat by June 10, under a penalty of $1,000, and they are now pushing the work as rapidly as possible. Their building shed has been enlarged, and on Thursday last the first chips came off the keel, a splendid stick of oak 22×22in., ×53ft. On Saturday a portion of the lead keel was cast. The timber for the yacht is nearly all on hand, and no interruptions are probable. The frames will be of oak, double, sided 5in., moulded 8 and 4in., spaced 22in. The bottom will be of white oak, 2¾in., and the topsides of yellow pine, while the deck will be of 2¼in. square white pine. All deck fittings will be of mahogany, and there will be no cabin house. Below she will be plainly finished, her main cabin, 16ft 6in. long, having a sofa on each side. Forward of each sofa is a small sideboard, and aft a locker, while behind is also space curtained off for lockers. Forward of the cabin are four staterooms, two on each side, and a w. c., and aft of the cabin is another stateroom with two berths. Under the floor of the galley are the watertanks, icebox and coal locker. The forecastle will accommodate twelve men. Sails and spars will be ready by the time the boat is launched.



Next to the new sloop, in the same shed, stands the new cutter Moya, before mentioned in the FOREST AND STREAM, which Lawley & Son have built for Mr. Horace Binney, from designs by Mr. Geo. K. Boutelle. She is a fine example of a moderate beam cruiser, her dimensions being 43ft. over all, 36ft. loadline, 10ft. beam and about 6ft. draft, plumb stem, good rocker to keel, moderate rake to sternpost, and long, light overhang. In the way of room, both below and on deck, she offers all that any one could ask, but while her beam is moderate for Boston, there is plenty of it, and a foot less, making the even four beams, would not lessen her room below and would still leave ample deck room, while improving her model.

From her iron keel of 9½ tons to her elm rail, the construction both in material and workmanship, is excellent, the general finish on deck being specially noticeable. The rail, as stated, is of elm, stanchions of locust, bulwarks and all deck fittings of mahogany, the deck planks being laid straight. An oak partner plank runs fore and aft from the stem to abaft the mast, in which the bitts are stepped, the running bowsprit is over the center of the stem, the gammon iron being a neat forging, with sheave for chain on the side, the spreaders are of wood running through the stem head. The companion and skylight are in one, the latter being fitted on a new plan, with a gutter between the two sashes, forming the ridge piece, this gutter being made from half of a brass tube, semicircular in section. By this means all leakage around the upper portion of the sashes is prevented. Messrs. Lawley are also putting in a new form of companion slide. The outer edges of the sliding hatch project a little outside of the coamings, and each edge is moulded to a quarter round. On the upper edge of the coaming is a quarter round beading, of the same size, the two, when together, making a half round "nosing." A brass tube of suitable size is sawn in half lengthwise, making two semicircular sections, one of which is screwed to each edge of the hatch, its lower portion also clasping the moulding on the coaming. This makes a neat, compact and watertight slide, and it is little liable to jam, as the brass slides easily on the wood and cannot shrink. It is also lower than the usual method. Abaft the companion is a skylight, over the after cabin. Further aft is a cockpit about 15in. deep for the steersman. This cockpit is square, and is without a rail, the crew sitting on deck. Just abaft it is a sail hatch, the sail locker being under and aft of the cockpit.

The companion is quite wide, the ladder, however, being narrower, to give entry to the after stateroom without removing it. On descending, to port and starboard are closets, and running forward of them on each side is a large locker or sofa. At the head of each of these is a small sideboard with several closets. The cabin is long with wide floor and 6ft. headroom. A door in the fore bulkhead on port side, leads to the galley, and in the starboard side of bulkhead is a yacht stove for heating only, while above it is a book case. The entire finish is in cherry. The berths, one over each locker, fold down, swinging up when in use. Below the floors are large copper water tanks. The forecastle is high and roomy, with ice-box, pantry, plate lockers, and coal box, besides room for berth.

Abreast the companion ladder is a door leading to a fine after stateroom, with a large berth on either side, and a. w. c., all being lighted by a skylight. Abaft this is the sail locker and cockpit. The arrangement of space in this yacht is admirable, as the various accommodations are not crowded, and headroom as well as floor space are ample. The main objection to a cockpit in such boats is that it destroys the after cabin; but in this case it does not interfere, while it certainly gives greater accommodations on deck for ladies, a decided advantage in a family boat. The construction is well shown below, in heavy floors, strong clamps and knees, all through fastened. The rig will be full cutter. For those who wish to obtain the main advantages of the cutter with more deck room and initial stability than the narrower boats afford, this is the type of boat, as there is a minimum of waste room, no wide bilges useful only for small stowage, no inaccessible corners in the bow or under an immense cockpit, but the actual bulk is in such a form that all is utilized.

Side by side with the Moya is the Nebula, a visible example of the prevailing worship of beam. This boat, building for Mr. C. W. Jones, former owner of the Lorelei schooner, is 44ft. over all, 35ft. loadline, 12ft. beam, and draws about 6ft. with a keel of 12 tons. In

WHOLE SAIL. REEFING GEAR FOR LARGE JIBS. REEFED SAIL.

general construction and finish she is like the Moya, but in model and arrangement forms a striking contrast. With a plumb stem, over which is a sloop's bowsprit, round below and flat on top, painted black, she is cut away into a rocker similar to Moya, but with a plumb sternpost. Her overhang is not only very long, but wide and heavy in appearance, contrasting poorly with her neighbor's, while the great beam, accompanied by depth, makes her heavy and clumsy to the eye.

On deck is room in abundance, in fact more than is necessary, while the effect to the eye is not pleasing, the boat looking almost as broad as long. Forward is a circular hatch to forecastle, over the main cabin is a large skylight, and abaft is the companion, placed to starboard of the centerline, while on its port side is built a second skylight over the owner's stateroom. The companion is entered from a very large cockpit, with rail of the usual form, the steering gear being in the after part of it. At each side are fixed seats. The steering gear and segment are of composition.

Below the cabin is arranged very curiously, the starboard side having two lockers, one forward of the other, with a folding berth over each. On the port side forward is an ice box of large size, opening into the galley through the bulkhead. Next to it is a closet, then a large buffet, then another closet, then the w. c., abaft which is the owner's stateroom, with several more closets and a large berth. Abaft of stateroom and cabin is the sail room, entered from under the ladder. Closets abound everywhere with a feminine profusion. The forecastle is very large and commodious, but throughout the immense bulk at the disposal of the designer is badly utilized, if not wasted. In some respects she offers more room than her sister near by, but considering their sizes, she cannot compare with her. Her sail area will be 2,500ft., 2,000ft. in lower sails. The mast is 33ft. 6in., deck to hounds; masthead, 6ft.; topmast, fid to truck, 32ft.; boom, 38ft.; gaff, 28ft.; bowsprit, 22ft.; mast from fore side of stem, 14ft. 6in. She will have a staysail set well out on bowsprit, and her bobstay and preventer are both of bar iron.

A comparison of these boats, lying as they now do, side by side, is very interesting, and carries its own evidence to all who examine them carefully. When they have been tried together and when the cost of each is known, a fairer conclusion can be reached, but in all respects, accommodation, performance, cost, the odds will, we think, be strongly in favor of the narrower boat. Both are now ready for launching, and their spars are waiting for them. About the yard are also hauled up the Aliza, Rondina, Fad, Ella May, Zaidée, Tempest, Athlete, White Wing, Adrienne, North Star, and Dream, while the two *Herald* launches, built last year, are also on shore, covered in. One is entirely completed, the other has not received her engines yet.

At the other yard of Lawley's is a keel catboat nearly completed. She is 20ft. on deck, 17ft. 6in. waterline, 8ft. beam, 3ft. draft, and carries 1,000 pounds on keel. The cockpit is large, with a low cuddy forward, entered by a sliding hatch. A movable bulkhead door divides it from the cockpit. She will steer with a tiller, which is fitted with a rack to lock it in any position. On deck, just abaft the mast, is a small brass tripod, to which is fitted a gooseneck for the boom and a shackle for the tack. Lawley's are also building several yawl boats for various yachts. Laid up in their yard are a large number of boats; Saracen, Vayu, Columbine, Edna, Tomboy, and many others, all waiting for spring to shed their canvas covers.

Near by, at Hutchins & Pryor's yard, a number of boats are hauled up. They have built this season a boat of the Cruiser type, but of different model, which they will race this year. They are also busy with repairs on a number of other boats.

At Smith's yard both Thetis and Huron are hauled up side by side. The former has had a small piece added to her forefoot, making it about 8in. deeper; otherwise she is the same. Little can be learned about her performances last season, but that little does not argue well for the success of such a combination of beam, depth and weight. This year she will be canvassed and handled in better form, and may astonish all, but a look at her form does not promise any such performance. Inside she has been changed a little. The Huron is really a new boat, being 9ft. longer than before, while she has been entirely rebuilt, only her keel and half a dozen frames amidships being left. Mr. Smith has made an excellent job of the rebuilding, and turned out a strong and shapely vessel. We doubt whether she can even yet hold her own with Bedouin, but she is the best example we have of a large keel sloop. A cockpit has been added, of oval form. Both Huron and Thetis are fitted with the McIlvaine patent slides and skylights, which we will describe later on.

Williams, of City Point, is now busy in his new shop with a small cutter for Pittsburgh parties. At Lawlor's yard, in East Boston, no new work is doing, but he is putting new cabins and stern on the steam yacht Naja, lately purchased by Mr. White.

At Jeffries' Point, Wood Bros. have nearly finished the large keel sloop we described lately. This firm were among the earliest builders of deep boats, and they have turned out the Neva, the famous little Gem, Nyssa, now in New York, and many others. Their latest boat is of the same type, 38ft. over all, 32ft. 6in. waterline, 12ft. beam, with 6ft. 2in. headroom in cabin. Her keel is of iron, 8,800 pounds, and she is very strong, all planks in deck and bottom being in single lengths. She will have a round hatch to forecastle, and a cockpit aft, all of mahogany. Below she will be fitted with icebox, water tanks, lockers, w. c., and all the requisites of a cruising boat. Her rig will be cutter. Messrs. Wood have built her in stock, and she is now for sale. They have also a little sloop for Mr. Underhill, of New York, 27ft. over all, 9ft. beam, 3ft. draft, with 2,600 pounds of lead on her keel. Besides her they are building a gig for the Naja, and a boat of canoe model 19ft. long, while they have completed a steam launch 30ft. long. The late season has delayed fitting out, but with the present weather the boats will soon be afloat. The first race, that of the Mosquito Fleet, takes place to-morrow.

A REEFING GEAR FOR LARGE JIBS.

WITH the jibs carried on the open racing boats and cat amarans reefing is almost impossible, as a man cannot be sent out on the long, light bowsprit, and no satisfactory method of reefing the foot has been devised. Mr. Thos. Fearon, of Yonkers, is now fitting a new reefing device to a catamaran, which works on an entirely different principle, the area being reduced at the top, in the same manner that a topsail is taken in. The jib is laced to a club on the foot, and set on a stay with a halliard in the usual manner. About one-third from the head a batten is run across from luff to leach, and below the batten three or more grommets are placed. Through these grommets slings are rove on each side of the sail. These slings are united and to them a block is hooked. A second halliard is rove through this block and one at the masthead. The downhaul is led from the head of the sail, down the leach a few feet through rings, and then across to the luff, down to bowsprit end and inboard in the usual manner. In hoisting sail both halliards are hauled on at the same time. In reefing, the main halliard (fast to head of sail) is cast off, and the downhaul hauled in, bringing the upper part of the sail down snugly on the batten, where it rests in the slings. By this reef the area is quickly and effectually reduced, and full sail can instantly be made again. Mr. Fearon has also a new mode of rigging the jib sheet, shown in the sketch, by which the foot is trimmed down very flat.

LAKE CHAMPLAIN.

Editor Forest and Stream;

Yachtsmen and canoeists in this vicinity are looking forward to a very lively season, as new boats are being designed and built by several local builders.

Mr. Wm. C. Blodgett has just completed an 18ft. sloop for himself, and two canoes for members of the Whitehall C. C. One of the latter is built on the lines of the Jap, which Mr. E. W. West sailed at the A. C. A. meet last summer.

Mr. Blodgett will soon lay the keel for a 20ft. steam launch for a member of the club.

Mr. William W. Cooke will add 200 pounds of lead to the keel of his 14ft. yawl this spring.

A fishing club has been organized at this place to protect the fish in Lake Champlain from unlawful netting, which is carried on here at all seasons of the year. CHAMPLAIN.

CUTTERS TO WINDWARD.

Editor Forest and Stream;

There is one point that occurs to me, which I have not seen mentioned by any of your contributors, in relation to the pointing powers of cutters. It is often wondered why, owing to the great angle of heel, they do not "slide off to leeward." The point I refer to is that only one view of the controversy, and one side of the vessel, seems to have been taken into consideration. Now I propose to approach the subject from the windward and inquire if it is not a fact that the windward side of a vessel has as much to do with her holding on as the leeward side? The suction of the weather side of a board when set in the water edgewise and pushed to leeward, seems to be equal to the direct resistance of the water on the leeward side, and a consideration of this fact should influence the model given to a windward-going vessel. Again, just in proportion as said board is held in a perpendicular position, or an inclined one, just in that proportion will it resist lateral pressure, or slide off to leeward. This would seem to indicate that it is important to make the windward side of a cutter as near a vertical plane, when heeled, as practicable, and from this it would follow that the slight curve given to the midship section of the ordinary cutter should give place to the straight timbers of the "Fendeur" type, for just in proportion as a bilge is produced, will there be skin friction without corresponding lateral resistance. Yours for fast sheets and safe boats, that are not afraid of their beam ends. R. L. E.

THE HINDER END OF A BOAT.

"THE Cruise of the Ghost" is instructive upon boats and waters. The first point made was the necessity of lengthening the stern of the boat and diminishing the area presented perpendicularly to a following sea. Many boats are still built with a large stern, inclined 15 to 30 degrees aft from the vertical. The cutters and launches of men-of-war are of this fashion, and the comfort of the stern sheets is preferred to a more contracted but safer model. In most harbors they do very well, but upon the open sea coast and out at sea, where it is necessary to use them occasionally, especially in war times, they are wet and dangerous. A cutter was filled and the crew lost upon Georgetown, S. C., Bar during the war. In running through the breakers a following sea just lapped over the stern and filled her.

I had to take a cutter off shore through the surf just north of Georgetown to escape gobbling by a troop of cavalry. We pointed her bow out and passed the first roller easily, the second rushed under the boat, lifted her high up, passed inward and let her down so heavily that the water rushed over the stern and quarters and filled her to the seats. Only great energy and superhuman exertions prevented a serious disaster.

I made a cruise among the islands of Penobscot Bay in a launch well loaded with camp equipage and six persons. We did very well in Eggemogin Reach and the thoroughfare, but in going around the coast of Mt. Desert to enter Southwest Harbor, we uncovered our flank and let the long swell of the open sea have full swing at us. It was a lazy swell or I would not be writing to you. The movement alarmed me, and when we cleared a spar buoy and gave sheet to the mainsail, our only sail, and the wind and sea were dead astern, I felt we were in great danger. As a sea rolled under and let us down in the hollow, the boat rose so sluggishly to the next one that it came just within one inch of going over the square stern and swamping us. That meant in that place the drowning of three ladies and gentlemen. I was thankful when we got out of that, and I never will be caught in a square-sterned open boat in heavy seaway again.

I am surprised that many seaside sailboats are built upon this same pernicious model, and I am more surprised that naval constructors do not improve the small craft as well as the large.

I think the midshipman in the ghost story is given too much credit in modeling. I am sure boat construction is not taught at the Naval Academy, and the author of "The Cruise" made him do what he thought he ought to, and not what he had been taught to do in the service.

Whale boats have the stern similar to the bow, so do pinkey fishing vessels in a measure, and all the surf-boats I have ever seen. A following sea lifts them out of danger, and a head sea rolling under cannot rush over the stern, because there is so much resistance to downward movement—sinking or settling—under the counter.

It is especially necessary to pay attention to this principle in small cruisers, which occasionally venture out to sea in passing from harbor to harbor, and, it seems to me, the greater the sheer and the longer and shallower the stern, the safer and more comfortable a boat would be.

Mr. E. L. Williams, of South Boston, is designing me a small cruiser, and I am glad to see the stern is drawn out till it looks like a wedge.

Boat designing is a fine art, and its devotees are specialists, and there are lots of us who have "been to sea" who don't know as much as the builder of Columbus' old Pinta. W. H. WINSLOW.

PITTSBURGH, PA.

NEW JERSEY Y. C.

THE annual meeting of the New Jersey Y. C., held at their club house, foot of Tenth street, Hoboken, last Thursday evening, Commodore Longstreet presiding, was largely attended. The retiring officers submitted their reports, which were listened to with attention. The Treasurer, Mr. Chas. I. Rogers, in his report showed the expenditures that had been made and the amounts received for dues and from the regattas in detail, reporting the regatta fund to amount to nearly $200, with a balance over and above all liabilities of nearly $500. Ex-Com. Dilworth, Chairman of the Board of Trustees, reported the improvements made and to be made about the club house and grounds, and touched on the convenience of new ferry from Fourteenth street, New York, which lands just above the club house, the completion of which is expected about June 1.

Ex-Com. Dilworth notified the club that he would move at the next meeting an amendment to Sec. 9 of Chap. VII., of the by-laws, allowing cabin sloops to carry in all races of the club mainsail, jib, working gafftopsail and jibtopsail, and in addition a staysail to cutters, and restricting catamarans to the use of jib and mainsail only.

Mr. Gartland notified the club that he would move at the next meeting an amendment to Sec. 15 of Chap. VII. of the by-laws, making the time limit eight hours instead of six in all races of the club.

This is a move in the right direction, and we think that eventually the time limit will be done away with altogether, as it rarely happens that a postponed race is successful, besides necessitating extra expense and trouble.

Mr. Samuel A. Besson was elected a member, and Messrs. H. W. Sagendorf, and James A. Reed, and Martin W. B. Gresson, owners of the catamaran Nemesis, were proposed.

Thursday, June 9, 1885, was fixed as the day on which the fourteenth annual race will be sailed. An accurate 20-mile course has been measured, *i. e.*, starting and finishing at Bedloes' Island, to Buoy 13, and then to Red Can Buoy off Coney Island Point, leaving both to port, keeping to westward of buoy on Robbins Reef going and coming, with an allowance of two minutes to the foot mean measurement for larger classes. The outer mark for the small class will be Fort Lafayette, as heretofore, with an allowance of a minute and a half to the foot, while the catamarans will have as an outer mark the S. W. Spit (Buoy 8½), with an allowance of one minute to the foot.

Several new catamarans will participate in the race of June 9, and this will be quite a feature. The Regatta Committee were instructed to procure a suitable steamboat for use of the judges and guests of the club, for which an appropriation was made. The following gentlemen were elected officers for the year: Commodore, John H. Longstreet, catamaran Duplex; Vice-Commodore, Rudolph F. Rabe, yacht Minnehaha; Recording Secretary, William S. Dilworth; Corresponding Secretary, George E. Gartland; Financial Secretary, John D. Goetschius; Treasurer, Charles I. Rogers; Measurer, Henry F. Ogden; Regatta Committee, Edward W. Ketcham, chairman; William H. Dilworth and Theodore Reyndels; Trustees, William H. Dilworth, chairman, Theophilus Butts, Edward W. Ketcham, John H. Longstreet and Edwin A. Stevens.

After some other miscellaneous business had been transacted, the meeting adjourned.

LAUNCH OF THE CORA.—The new steam yacht Cora was successfully launched at Poillon's yard on March 25 in the presence of a number of spectators. Her dimensions were given lately in the FOREST AND STREAM. A full description must be deferred until next week.

A NEW FIVE-TONNER FOR CANADA.—Mr. W. Evans Paton, the English yacht designer, has in hand a design for a five-ton cutter of modern type to go to Canada.

NEW YORK Y. C.—A meeting of the club was held on March at the club house. No business of moment was transacted.

BEDS AND STOVES FOR SMALL YACHTS.—For all small yachts folding bed places are the most convenient, for if this arrangement is not made in yachts which are too small to have standing berths, the bedding occupies space often wanted for other matters. There are two special methods by which this desideratum may be attained, either by a wood-framed or an iron-framed sleeping place: the former is very neat and nice, and embellishes the cabin, but is rather expensive, the latter useful and cheap. I referred to these folding bed-places last week, and the following method is by a wooden frame, as I have seen it arranged in two yachts owned by a friend. As the woodwork of the cabin fittings were mahogany, the bed frames were also of the same wood. An outer frame was fixed to the sides of the cabin, and its lower limit was just above the level of the sofa cushions. The bed framework was hinged at the lower edge at each side of the case frame, in which it folded up and down as required. The bed was always kept made ready for use, and the bedding retained in place by strong straps of broad webbing buckled tightly across it. The bed frame was retained in place by a snap-latch catching in the case frame when the bed was not in use, and the under side of the mattress was covered by morocco leather of the same quality as the cushions. When the bed frame was folded back against the cabin side, the under side, as a matter of course, formed a back cushion to the settee or sofa. The above arrangement is a very neat one, and thoroughly comfortable, and could be just as effectively carried out in pitch pine or other wood. The least expensive method would be to have a galvanized iron framework, to fold against the cabin side, of a convenient width to lie on, and to fold down on the sofa cushions. The frame must be set off by its hinged supports sufficiently to allow of the bed when made, folding snugly and fairly back against the cabin sides, and the whole might then be covered by a curtain of cretonne, suspended close up under the deck and reaching down to the settee level. If made about six inches longer it might be tucked up under the back edge of the sofa cushion, which would thus keep the curtain in place. The bed should not come nearer than six inches to the deck, to leave room for a shelf running fore and aft. As the cabin in "John's" little vessel is only 4ft. in height, net racks would be useless, for objects placed therein would prevent the bed folding back snugly against the cabin sides. Hammocks are not nearly as convenient as folding bed frames on either of the above plans....The position where the stove would be most out of the way in a yacht of 9ft. beam would apparently be on one side of the mast, and the passage from the pantry being on one side, the stove might be on the other. No part of the stove should be nearer than 5in. to any woodwork, except the ashpan in which it stands, and it is best there should be an inch space between the bottom of this and the floor. The woodwork as near as 5in. should be protected by galvanized sheet-iron, which must not be laid on the surface to be protected, but be set off at least an inch, the air space between rendering the thickness of the iron effective, which would not save the burning of the wood if the iron were laid flat on the wood, with no air between. At the distance of 4in. I have known sheet lead covering wood melted, and a vessel set on fire more than once.—J. C WILCOCKS (Plymouth) *in London Field.*

FUSIBLE PLUGS IN BOILERS.—The question of fusible plugs in marine boilers has been settled by a ruling of the Board of Supervising Inspectors, who have changed the old rule which in some cases could not be enforced. The new rule reads: "The plug may be inserted in one of the tubes at least 12 diameters above the lower tube sheet, and at a distance not less than 2in. below the lower gauge cock. Same plug may be inserted in the top tube sheet, when in the opinion of the local inspector that may be desirable."

CHICAGO Y. C.—The coming season promises to be an active one on Lake Michigan, especially with the Chicago Y. C. Several regattas will be held, besides a cruise to Milwaukee. A movement is on foot to erect a union club house for all the clubs of Chicago—yachting, canoeing, bicycling, etc. It is proposed to build a large house in which each club shall have its separate quarters, with a library, reading room, etc., to be used in common.

CHESAPEAKE BAY Y. C.—A club under this name has been organized at Oxford, Md., the officers being as follows: Commodore, William O'Sullivan Dimpfel, schooner Gaetina; Vice-Commodore, J. S. Morris, yawl Cora; Rear-Commodore, Colonel Samuel Witherill, yawl Willie; Secretary and Treasurer, Charles H. Gibson; Regatta Committee, William O'Sullivan Dimpfel, J. G. Morris and Charles H. Gibson.

CRUISING.—The Yosemite arrived at St. Thomas from Trinidad on March 13, and sailed on March 14 for Port Rico. She left Savannah on March 27 for New York. The Gitana and Mohegan arrived at Charleston, S. C., from Fernandina, Hamilton, Bermuda, on March 18. The Atalanta arrived in New York from her cruise on March 25. The Rhada, J. M. Seymour, arrived at Fortress Monroe on the 27th.

OUTSIDE BALLAST.—Daphne, Mr. J. R. Maxwell's new sloop, will "lug" three tons of lead on her keel, a good beginning for a Bay Ridge centerboard sloop.

YACHTING NOTES.—The steam yacht Day Dream, once the property of Mr. Aspinwall, was lately sold at auction in New Orleans, for $800. She has been used for some time as a mail boat, and later in the pilot service, as well as by the National Board of Health. She was built at Greenpoint in 1871, and is 109ft. waterline....Maggie, Mr. Warren's 15-tonner, now laid up at Lawlor's yard, East Boston, has been sold to Mr. W. A. W. Stewart, S. C. Y. C., owner of the schooner Nokomis....Kelpie, Mr. J. C. Winslow, is having a new deck and her cabin is being refitted....Espirito, R. B. Hartshorne, will have a new cockpit....Mr. A. H. Buck's little cutter will be named Dart....Mr. Howe's new sloop, building by Mumm, is to be christened Ariadne....Ileen, cutter, is now laid up opposite Fall River, Mass....Heedless, cutter, is laid up at Warren, R. I., and Waif is at Bristol, near Herreshoff's yard....The yawl Consuelo and keel catboat Julia are housed at Herreshoff's....The famous racing cutter Samoena will come out this season as a yawl....The Regina, sloop, will have a new mast and bowsprit at Mumm's....The catboat building at Mattapoisett for Mr. Thos. Parsons, will be 23ft. 9in. over all, 23ft. waterline, 11ft. 6in. beam, 3ft. 8in. depth, and 3ft. draft. She will be named Myth....The new keel sloop now building by Wallin & Gorman, is for Dr. Loring, owner of the Mignonette....Most of the yachts are in commission at San Francisco.... The old Elia, once a yacht, and later a trader, has been refitted as a sloop, and will be used as a yacht this season.... Ariel has had her topmast shortened nearly 8ft....J. Kidd & Co., of Marcus Hook, Pa., the builders of the Gaviota, are now building a steam yacht 100ft. on deck, 93ft. waterline, 15ft. 6in. beam, and 10ft. depth, for Mr. Betz, of Philadelphia....The Surf, cutter, is in commission, and will start on a cruise to the eastward this week.

ROWING AND SAILING SONGS.—Under the title of "Ruder und Segel Lieder," the publishers of the *Wassersport* have lately issued an excellent collection of German songs, compiled for oarsmen and sailors. The words are mostly new and appropriate, but set to old and familiar airs, among the latter being the song "Tramp, Tramp, Tramp," so popular here during our war. The book also contains a selection of the best of the German drinking and folk songs, both with the original words, and others suited specially for oarsmen and sailors.

A NEW CUTTER FOR BOSTON.—Besides Mr. Warren's 47-tonner now nearly ready, a steel cutter, 45ft. waterline, is now building at the Culzean Works for Mr. J. M. Forbes. She is from a design of Mr. G. L. Watson's. Her keel will be cast in Boston, the mould being sent out on shipboard, with the boat.

HUMPHREYS' HOMEOPATHIC VETERINARY SPECIFICS

For the Cure of all diseases of

Horses, Cattle, Sheep

DOGS, HOGS, POULTRY.

Used successfully for 20 years by **Farmers, Stockbreeders, Horse R.R., &c.**

Endorsed & used by the U.S. Governm't.

Pamphlets & Charts sent free.

Send for Illustrated Catalogue, stating kind of goods wanted.

Reads like a romance from beginning to end.—SPRINGFIELD REPUBLICAN.

Old Saint Augustine.

BY CHARLES B. REYNOLDS (FOREST AND STREAM).

THE famous Florida town's three centuries have been crowded with romantic incidents; and a story of wonderful interest is this, with its Huguenots and Spaniards, Franciscan Fathers, English Sea Kings, Boucaniers, Minorcans, Liberty Boys, and Seminoles. It is told vividly, in the briefest possible compass, with strict historical accuracy, and with an enthusiasm that is manifest from the very first page to the last. Among the illustrations are copies of some of the very rare drawings by Jacques Le Moyne, the French artist, who so narrowly escaped massacre by the Spaniards in Florida, three hundred years ago. Another very rare engraving is the plan of the city in British times. The *artotypes* (or photographs in permanent ink) are among the most beautiful book illustrations of the day. They are made from negatives taken expressly for "Old St. Augustine," and are: Fort Marion (four views), the Matanzas Fort, the City Gateway, the Cathedral, the old Palm-tree, Garden Overlooking Plaza, and two very characteristic St. Augustine Houses. Cloth, pp. 144, 8vo. Price, $1.50. **Forest and Stream Publishing Co.**

Argus is thoroughly trained for field work; has an excellent nose and great endurance. The following are his bench show winnings: 1st prize in Toronto, puppy class, 1880; 2d prize, London, 1881; 1st prize, Cleveland, also special for best Gordon setter exhibited, 1882, 1st prize, champion, Ottawa, 1883; 1st prize, champion, Chicago, 1883; 1st prize, Montreal, and special for best Gordon setter F, 1883; 1st, champion, London, also special for best Gordon setter dog in show, and special for best Gordon setter dog or bitch, 1883.

Argus has been awarded prizes under the following judges:—John Davidson, Major J. M. Taylor, Harry Malcolm, James Watson, W. J. Munson.

Stud Fee, $25.00.

STUD FOX-TERRIER
Champion Raby Tyrant,
(K.C.S.B. 11,179.)
Pupped October, 1880. Weight 16½ pounds.

Raby Tyrant is a white dog, with an even marked rich black and tan head. He is a thoroughly game and stylish terrier, possessing a beautifully shaped long punishing head, with perfect drop ears, small eye, rare neck and shoulders, deep chest, well ribbed and muscular quarters, short, straight legs, excellent feet, great bone and substance, with an exceptionally hard and dense coat.

Raby Tyrant is without doubt one of the most successful terriers of the present day. He has been exhibited 67 times, 33 different judges having adjudicated upon him, and has won 47. First 10 cups and specials; 12 second and 2 third prizes. His breeding is undeniable, combining as he does the choicest and most valuable blood that can be obtained. At the stud Raby Tyrant is proving himself eminently successful.

Fee, $15.00.

JOHN E. THAYER, Hillside Kennels, Lancaster, Mass.

Stud Dogs Proper.

ANSWERS TO CORRESPONDENTS.

REMOVE THE SUPERINTENDENT.

THERE is reason to believe that the failure of the Yellowstone Park bill to become a law at the last session of Congress was not the evil that it was at first supposed to be.

We have already stated that in amending the bill as regards the boundary of the reservation on the north and east side, the five-mile clause of the original Vest bill was only in part stricken out. The wording of the amendment was meaningless, as we have said, but any possible interpretation would have come off from the Park five miles more than was intended.

It is hinted by those who should be well informed, that this failure to wholly strike out the five-mile clause did not occur through inadvertence as was supposed, but was intentional. The reason alleged for this is that on the East Fork of the Yellowstone there is a fine body of timber which certain parties desired to get possession of, and which could only be secured by some scheme which would throw this tract outside the reservation. It is known that C. F. Hobart, who was notorious in connection with the Yellowstone Park Improvement Company, has been in Washington all winter looking after the interests of this broken down concern, and this lends a strong color of probability to the statement that a lobby has been at work against the protection of the Park.

The cutting off of this five miles from the east side of the Park would not only have exposed this great body of timber to the depredations of Hobart and his gang, but would also have thrown open to the public a range where a great amount of game winters. We have reason to believe that large numbers of elk were slaughtered last autumn on the eastern border of the Park, the meat being transported to the Clark's Fork mines, where it was sold. For the protection of this game the eastern boundary of this Park should be moved still further to the eastward.

So far as extending the Park goes, nothing can now be done until the next session of Congress; but it is important that the Superintendent, under present conditions, should be a man thoroughly in earnest in his endeavors to do the best he can for the reservation, and so wholly in sympathy with those who are anxious that the Park shall be protected. The present Superintendent is not such a man, and we would respectfully ask Secretary Lamar to remove him from his office, and appoint in his place some one who will do a Superintendent's work.

We make this request for the following reasons:

1. The Superintendent left the reservation late in December last, and has since spent most of his time in Washington, where it is believed that he has been lobbying for the Improvement Company. It is certain that his relations with Hobart have been very close, and that they lived at the same house, took their meals at the same hotel, and were constantly together. The conclusion that they were working for the same ends is inevitable. There is nothing in common between the proper guardianship of the Park and the aims of the Improvement Company. A man who is devoted to the interests of one must be opposed to the other.

2. He has arranged matters in the Park so that it is impossible for the Assistant Superintendents to look after the game, or the natural curiosities.

Although through the winter there have been half a dozen Assistant Superintendents at Hot Springs, all the horses except three have been sent out of the Park. Two of those which remain are the Government team for the use of the Superintendent, who has given special directions that no one be allowed to use them during his absence. This leaves one horse for the use of the Assistants, who are, therefore, unable to go more than half a day's journey from the Mammoth Hot Springs. If they had two riding horses and a pack animal, two of them could go off together and be gone a week, and thus find out what is going on in the reservation. As it is they can do nothing.

3. Besides thus neglecting his duty and impeding his assistants in their efforts to do theirs, we charge that he is pecuniarily interested with the Hobarts in various projects which depend for their success on the reduction of the size of the reservation, and that he has already laid claim to a portion of the public domain within the Park. He is endeavoring to secure for his own benefit a portion of the reservation which he was appointed to protect. About the middle of February, when it seemed altogether probable that the Vest bill would pass, and so that a portion of the reservation would be thrown open to public settlement, a dispatch was received at Livingston stating that the amended Vest bill had passed.

At once there was a rush to take up claims which it was supposed might be valuable, and following that excitement there appeared on certain papers filed in the Land Office at Bozeman, to take up 1,400 acres of supposed coal land located on Mt. Evarts, the name of Superintendent R. E. Carpenter in connection with that of C. F. Hobart. The same persons have also, it is stated, laid claim to a water right on Gardener's River, within the present Park, covering 5,000 miners inches. These claim notices were put up the last of February or the first of March, but were all torn down after the fourth of that month.

In view of these facts the conclusion is inevitable that Superintendent Carpenter is not using his office for the purpose for which he was appointed, and we respectfully submit that he is thus not a fit person longer to hold this responsible position. There are other matters in which his conduct is open to criticism, to which we shall refer hereafter.

He ought to be removed without delay.

NETTING DUCKS ON LONG ISLAND.—The article on this subject which appeared in our last issue was the chief topic of conversation on the Shinnecock shores this week. Speaking of it, Captain Gilbert A. Penny said: "I have carefully read what FOREST AND STREAM says concerning Senator Otis's bill to amend Chapter 534 of the Laws of 1879. I have also read the bill, and that part of it relative to fowl-netting I consider the most important measure ever introduced for the preservation of wildfowl in Shinnecock Bay. It should meet with favor and have the support of the entire Legislature. It is, however, equally important that the bill should be altered so as to except the months of May, June, July, August and September. The reason for this alteration is this: There are no wild ducks here during the months I have named. Some of our summer fish, notably the kingfish, are what are termed 'bottom fish;' that is, they swim and feed near the bottom. To take them it is proposed to use nets without corks. To use nets extending from the surface of the water to the bottom, in waters of considerable depth, would necessitate a large and needless expense, and to forbid the use of bottom nets during the above-named months cannot serve any purpose for which the bill is introduced. Having had an experience of over twenty-five years in the fishing and fowling interests of Long Island, and also having suggested the measure introduced by Senator Otis in order to save from utter extermination the wildfowl which visit our bays—which must ensue by catching them in nets—I urge the removal of every reasonable objection in the bill, so that it may pass and duck-netting may be stopped."

NATIONAL GUN ASSOCIATION.—The Handbook of the National Gun Association has been issued, and gives in a compact shape all about the body. There is a history of it, its by-laws, the trap-shooting rules, and the tournament programmes, with reports of what has already been done at the Chicago and New Orleans shoots. The book is convenient and accurate, and should be in the hands of every marksman in the country. F. G. Bishop, Secretary, P. O. Box 1,292, Cincinnati, will supply those wishing the book. Its price has been fixed at ten cents.

ARMY PRACTICE.—General Orders No. 25, dated March 12, contains the full statistics of the direct firing of the regular army for the year 1884. The figures show on the face a great improvement, not only in the percentage classified, but in percentage of scores. The number of marksmen in the army is returned at 7,081 against 4,834 for the preceding year. The number in the first class is almost doubled, while the third class group is reduced from 12,307 to 7,443. The division of the Missouri ranks those of the Atlantic and Pacific in order, and among the departments that of Dakota remains at the head of the list. The showing all through is a very commendable one.

LEASING TROUT STREAMS.—In another column will be found some extracts giving both sides of the question of leasing trout streams to clubs. The question has arisen in Sullivan and Ulster counties, New York, and is a legitimate one to discuss. Either property owners have the right to lease to whom they please, or they have not, and the courts may be called upon to decide in this matter. We very much regret to see that there is a disposition on the part of some to transcend the bounds of legitimate argument and descend to blackguardism. An individual who signs himself R. E. Best, writes a long article to the Kingston *Freeman*, in which he calls the club members "migratory vagabonds," and speaks of their "drunken orgies," their "obscene songs," and "barrels of rum," and alludes to them as "thugs, pirates and gamblers." Knowing the high character of the gentlemen composing the Neversink Club, the Balsam Lake Club and the Willewemoc Club, most of whom are personal acquaintances, we regard the article written to the *Freeman* as a most vile slander, and the only indecent thing yet developed in this connection.

OBITUARY NOTES.—The remains of B. B. Hotchkiss, the inventor of machine guns, were buried at Sharon, Conn., on March 31. The pallbearers were General T. V. Benet, Chief of the Ordnance Department at Washington; Major C. J. McGowan, of New York; Colonel B. G. Baylor, United States Army; Colonel S. Crispin, United States Army; Colonel S. C. Lyford, United States Army; J. H. Graham, Marcus Hawley, S. R. Ingraham, C. C. Dawson, C. D. Leet, W. Van Vranken and J. B. Dench, of Bridgeport. Mr. Hotchkiss was fifty-nine years of age.

Ex-Judge Frank Sherman Smith, of this city, died on April 2 after a long illness. He was a comparatively young man, and when appointed a police justice was but twenty-four years old. He was well known in the city and exceedingly popular. Mr. Smith was an enthusiastic sportsman. He excelled in all sports—with the gun, the rod, and the tiller, and in the saddle. He was one of the founders of the New York C. C., and for years was prominent in all kinds of athletics.

Marcus A. Hardy, of Newport, R. I., died at Cambridge, Mass., on April 4. Mr. Hardy went to Newport as one of the early machinists at the torpedo station, and subsequently engaged in the invention of torpedoes and their appliances. He had lately been engaged with a firm who have been successfully experimenting with dynamite shells to be forced from cannon. He was an expert in his business, and his services were always in demand.

Henry D. Green, of Portland, Ore., died suddenly at the Fifth Avenue Hotel, on April 5. His residence at Portland is in the midst of a twelve-acre park, said to be the finest private grounds west of the Alleghenies. When a young man he was fond of hunting, and bought a little piece of land with a hut on it, some distance out of the Portland of that day, as a headquarters for his hunting trips. The price paid was $1,200. The same lot, unimproved, is still owned by him, and now stands in the very heart of Portland. Last year he was offered $200,000 for it.

THROUGH TWO-OCEAN PASS.

XII.—UP PACIFIC CREEK.

THE next morning a pale and watery looking sun appeared in the sky, and after several hours spent in endeavoring to dry out the various articles of camp furniture soaked by yesterday's storm, we packed up and started. The day was rather an unlucky one for me, a series of accidents depriving me of my horse and my fishing rod.

About two miles from camp Mr. Hague and I came to a little gulch twelve or fifteen feet deep, and with very steep banks, where the trails down into the stream bed were all bad, being narrow, steep and slippery. The Pinto hesitated about going down anywhere, and putting his nose between his forelegs refused to budge until I had loosened the end of my lariat, and hit him with it once or twice. Then he started and half sliding, half walking, went down one bank, trotted through the brook and up the trail on the other side. This was steep, and on the ground where it came out on the level again, were two or three charred sticks of timber, such as are strewn over the ground everywhere on these burned hills. As the horse stepped over these I felt his leg strike against something, and at once he began to pitch. He had made but a jump or two when I saw that he was fast to something under his belly, which he was carrying with him, and I supposed that possibly a stick had become entangled in the cinch or the latigo strap, and that in a moment he would buck himself free and stop. I tossed my rifle to one side and sat him comfortably enough as he bucked himself along the edge of the ravine, but suddenly he turned and pitched down the almost vertical bluff, which was about twelve feet high. This was rather more than I had bargained for, and I saw that I must have a fall, for the bank was so steep that I must either go over his head, or in striving to keep my seat must lean so far back that the grip of my legs would be wholly loosened. I chose the latter alternative, and, as I expected, went sailing through the air, and came down in a bunch of willows. From these I at once extricated myself and ran to catch the horse. He had only gone about twenty steps after getting rid of his burden, and stood there by the water's edge with arched back and lowered head, and as I grasped his bridle I made up my mind that he was a dead horse, for he seemed to have a great stake driven clear into his bowels. It was not quite so bad as that, however, though sufficiently alarming as it was. He had a slight cut in the belly, and then this great snag had entered between the hindlegs, well back, and ranging upward and backward in the median line, had passed just under the skin to within about three inches of the tail, where it protruded for an inch or two. The stick was about three feet long, an inch and a half in diameter at its smaller end, and three or four at its larger. I got the saddle off the poor beast as quickly as possible, and in a few moments the train came up, and while I held the Pinto, Stuart and Saddlemeyer prepared to extract the stick. I was at first afraid that they would have to cast him, but a better way was devised. Stuart got a long, stout pole and passed it under the horse's belly, from one side to the other, and the projecting extremity of the snag was then firmly lashed to it. Then the two men, one standing on each side of the horse, pushed down on the pole. The horse backed and kicked a little, and the stick came away much more easily than would have been thought possible. The wound bled but little, and copious applications of ice cold water at once checked any tendency to hemorrhage. Pinto was turned loose and immediately began to feed. The next day he was much less sore and stiff than would have been expected. The wound suppurated freely from the first, and he improved steadily.

By this accident I was, as one of the men remarked, promoted "to the quarterdeck of a mule," and proceeded to catch and saddle up Little Nell, the tiniest of our animals. So far as comfort in riding goes, a mule is quite as pleasant an animal as a horse. They have ordinarily a smooth, easy, springy gate which is very agreeable, but on the other hand, they are usually nervous and easily frightened, and are of such a sociable disposition, that they often protest loudly and discordantly against being separated from their companions.

A few miles above where all this took place, the valley of Pacific Creek becomes wider, and at length spreads out into a broad level plain, somewhat wet and marshy, and much overgrown with willows. Although trying to keep to the dryer portions of the flat we came to one bad slough, which though it was only about four feet wide, caused us some trouble. We were looking for a place where it could be crossed, and Stuart, having tried it at one or two points, had at length passed over without much difficulty. A pack mule just behind him, however, sank so deep in the mud and water that it was thought best not to let the others follow, and Stuart, by shouting and waving his arms, was trying to drive them back. The unlucky Hell was in the lead, and was determined that she would cross, if not at that place, why then somewhere else. So she turned aside, and a moment later stepped into the slough, where she sank up to her shoulders, and at once fell over on her side. There was, of course, danger that she might get her head under water and drown, and in a very few seconds some one had hold of her jaquimo stem and was holding her up, while others were trying to turn her over so that she could use her legs to some advantage. The slough was narrow, however, and the pack and mule were pretty firmly wedged in; besides, she was so far below us that it was hard to lift or pull on her, and nothing that could be done would induce her to make the slightest effort to help herself. At length we were obliged to cut the lash rope, take off the pack and aparejo, and then, passing one rope about the mule's neck and another below her quarters, lift her partly up on the bank, after which, by means of energetic whipping with willow switches and rope ends, she was pursuaded to make a little effort, and came out easily enough.

Just above this bottom, from the tops of some low hills over which we passed, we had a superb view down the valley of Pacific Creek, of the jagged, saw-tooth pinnacles of the Tetons. They were white with snow, and so, much more beautiful than when bare, but not nearly so stern, severe and impressive. In this valley was seen quite a lot of elk sign, much of it very fresh.

All of the country through which we had passed, since leaving Jackson's Lake, is remarkable for the extensive evidences of glacial action everywhere seen. The great terraces along Snake River have already been spoken of, and the whole valley of Pacific Creek and those of its tributaries are full of quartzite boulders highly glaciated. They are all finely smoothed and rounded, and are often very highly polished. The high bluffs on either side of the creek are wholly formed of glacial gravels, and are remarkably similar in appearance to the foothill gravels of California. It is thus no wonder that the region has been extensively prospected for fine gold.

All appearance of a trail had long since faded out, but we still kept on up the creek picking our way along where the traveling was easiest. At length, owing to the narrowing of the valley and the sharp bending of the stream to the north, we left the bottom and took to the hills, climbing the steep ridges and ascending during the afternoon perhaps a thousand feet, and after proceeding for a few miles along the ridges descended again over a very steep mountain side to the stream bed.

I always enjoy looking back and seeing a train come down a steep hillside or along a narrow and perhaps difficult path. Each animal moves so cautiously and deliberately, and exercises such care in planting each step that it is interesting to watch their progress.

It was about half-past 5 and growing dark when we made camp in the narrow valley of the stream. Some snow already lay on the ground, and just as we reached the valley it began to fall again very rapidly. Everything was as wet as could be, and the prospects for a comfortable camp were not bright. Nevertheless every one bustled around and helped at the work, and while Stuart and Saddlemeyer were unpacking the mules we collected and split wood, built the fire, brought water, and did all that was possible to advance the work of the camp. I have never been in the field with any set of men that were more willing and cheerful, and generally more disposed to make the best of adverse surroundings, than my companions of last summer. Many hands make light work, and it was not long before we were comfortably housed, and a little later enjoying a good dinner beneath the sheltering manta, which well kept off the snow.

About 9 o'clock it cleared off, the stars came out, and when I turned in a warm south wind was blowing, and only a few fleecy clouds appeared in the sky. On the whole the outlook seemed excellent for a bright, pleasant morrow. But about daylight the next morning it began to snow again. By the time we had turned out four or five inches lay on the ground, and the great white flakes were still falling heavily. There was no hope of making a march that day. It almost looked as if winter had really set in, and as if the best thing we could do would be to get down out of the mountains as speedily as possible. The hoped-for extension of the trip to the eastward across the Shoshonee Range could scarcely be carried out. We had at present an abundance of provisions, but if the snow should fall so heavily as to greatly delay us, it might be that we would run short.

A more wintry landscape than the one before us could scarcely be imagined. The camp was situated at the lower end of a little flat not more than a quarter of a mile long by fifty yards broad. On either side the mountains rose a thousand feet almost vertically, and above and below the level ground where the tents stood were deep cañons. The mountain sides were strewn with great rocks and down timber, among which grew a few spruces, now all heavily weighted down with snow. Even the dead trees bore their loads, for there was no wind, and the snow was wet and clung to the dead branches in great tufts. Everywhere the ground was white, and only here and there could be seen the dark foliage of some evergreen, or the vertical face of some black mass of rock against which the snow did not fall. This rock is a dark volcanic conglomerate or breccia made up of what appears to be a hard clay with numerous worn fragments of rhyolite scattered through it. It weathers into many curious and fantastic shapes, one of which, but a few yards from camp, was very striking. This was an extremely regular truncated cone of black rock which stood in the midst of a little pool in the creek bed. It was about fifteen feet high, and from its top grew a little pine tree.

It was interesting to watch the herd on the flat and along the lower hills. Until they became hungry they seemed wretched enough, and stood about with drooping heads, their draggled tails toward the storm, seeking, behind the scattered evergreen trees, what protection they could from the snow. As soon as they felt the need of food, however, they scattered out over the flat and began to paw away the snow and browse upon the nutritious grass beneath it, and then, even though the snow did lie on their backs an inch or two deep, and cling to their manes and tails, and tip their ears with queer little white tufts, which gave to the mules a particularly absurd appearance, they seemed contented enough.

Sitting all day about the fire with no more engrossing employment than occasionally to shovel the snow from the path which led from the fire to our tent, I amused myself by watching the birds, which seemed to seek shelter from the storm in this narrow mountain valley. During the day four species of hawks were seen, the sharpshin, marsh, sparrow and pigeon hawks, but none of them paused near us, all apparently being occupied in hunting. A kingfisher sounded his harsh rattle along the stream, and alighting on a dead limb near camp, erected his crest and bowed his salutation to the first white men he had seen here for many years. The little Oregon snowbirds were very numerous and remained about camp all day, foraging busily over every bit of ground which was kept bare by the shelter of a pine or an overhanging rock. These and a few song sparrows were the most sociable birds we had near us, for they hunted along by the side of our very wood pile. A few red crossbills, who were preparing to migrate, rested for a few moments in the trees above the tents, and their clear whistle fell cheerily to us through the snowy air. I felt sorry for a poor little thrush which seemed utterly miserable, he was so wet and cold. He had taken up his position beneath a spreading pine close to the camp, and was trying hard to pick up a dinner without venturing forth over the snow. He would hop a little way, pick once or twice, shiver and then shake his draggled plumage, and then hop on a little further. Now and then an Arctic bluebird was to be seen flying low over the snow and making a bright spot of color against the universal whiteness.

Several times little dippers (*Cinclus mexicanus*) were seen along the stream—curious little drab-colored birds, progressing with an odd bobbing motion along the water's edge, or taking short flights from one almost submerged rock to the next. The dipper is abundant in all these mountain streams and is a bird but little known to those who travel along them. Its habits lead the casual observer to conclude that it is a sandpiper or snipe, and they thus assign it a position in the ornithic class as far as possible from the one it really occupies. Its aquatic habits are unique among the group to which it belongs, and the blunder so common is thus a very natural one. It is really one of the *Oscines* or singing birds, and its closest relationships among North American birds are the *Turdidæ* or thrush family.

Its range is the mountains of Western America, from Alaska to Mexico, and it only insists on clear streams among the mountains. On such brooks and rivers as fulfil these conditions the dipper is found in abundance—though it is not a particularly sociable bird, and seems rather to prefer to be alone—and its cheerful song and remarkable habits render it a pleasing feature alike of the dark cañons and of the open sunlit glens. One feels a ludicrous sensation of astonishment when first observing this species. It is not very surprising to see a bird sitting upon the water or flying above it, dive beneath its surface, but it is really startling to see one calmly walk down a shelving rock or a smooth beach into the water, and keep on without any apparent attempt at swimming or diving, until it has disappeared. It wholly upsets one's ideas of specific gravity, for we are accustomed to think that birds and mammals will naturally float, and that to dive or disappear beneath the water requires some apparent effort. It is not so with the dipper, however. He marches deliberately into the turbulent water, which engulfs him and usually sweeps him several feet down the stream before he bobs up serenely to the surface, and either takes wing or sculls himself ashore. It must not be supposed that he always enters the water in this way. Quite as often he dives from the wing or from the surface of the stream, but perhaps the method which he likes best is to plunge from the top of a high rock or a log a foot or two above the current, and then, after his battle with the torrent, return to the same perch, from which at intervals he trills his simple though very sweet song. His method of progression under water is like that of most, if not all, diving birds, by means of the wings. His feet are no better adapted for swimming than those of a robin, and although he gets along capitally when sculling about the edges of the mountain holes, they would be of little service to him under water except sometimes as anchors. He flies under the water therefore with nearly open wings, and gets about very actively. His plumage is dense and compact, and is moreover well protected by a coat of oil, which he often renews from the large oil sack with which he is provided. So the dipper never gets wet, and we may conclude never takes cold, although he passes the winter about the open places of mountain torrents as far north as Alaska. His food, which he secures from the bottom of the stream, consists mainly of aquatic insects, and although his first cousin who inhabits Northern Europe has been accused of feeding on the spawn of trout and salmon, there is not a particle of evidence to sustain the grave charge.

The dipper dives into the water and gets to the bottom as soon as possible, and by means of rapid wing beats and holding on to the stones and gravel with his feet resists the constant tendency to shoot up through the water to the air above. He vigorously turns over the stones and sticks, and secures the water insects and aquatic larvæ which are found

in such situations, and then when he requires breath comes to the surface again. He presents a queer appearance when at the bottom, where he seems to be tumbling about in the most curious and erratic way, now for a moment stationary, and again being swept away by the force of the stream. No doubt he makes a good living, for he always seems busy, contented and cheerful.

The dipper seems to be satisfied with his own company for the greater part of the year, but during the breeding season he perforce seeks a mate, and these two build their nest close to the water's edge, under a bank or the roots of a tree, and often amid the spray of some brawling cascade. The structure is as curious in its way as its architects. It is lined with twigs or fine, dry grass, and completely covered on the outside by an arched roof of fine green moss, which is kept fresh and living by the moisture of its surroundings, or sometimes perhaps by the birds themselves, who, it is said, after emerging from the water, fly to the roof of the nest and, alighting there, vigorously shake the drops from their feathers over the mossy covering.

With such interesting birds to watch, it may be imagined that a part of the morning passed quickly enough; but at length the dippers flew away up the stream, and as no others came, the attractions of the fire drew me back once beneath the sheltering manta.

A little later Stuart went fishing, and he having caught a two-pound trout, I took my rod to set it up. But I had no sooner drawn it from its sole-leather case than I saw that my fishing for the trip was over. The good rod that had served me for so many years, and had traveled with me for so many thousand miles, was broken into a dozen pieces. It had been packed the day before on Star, and he had caught it against the low branches of a pine. The pine was strong and so was Star, and as neither would yield, the rod had been utterly smashed. I did not take it from its bag, for I could feel its condition, and sadly put it away, not to be opened until I had reached the East again.

It was rather a wretched day. Huddled together under the manta, the members of the party sat about the fire, which sent out a good deal of warmth and much more smoke. The snow, which fell almost without intermission, eddied under our shelter and fell softly hissing on the fire, and that which lodged on our roof, melted by the heat of the fire, leaked through the depressions and trickled down upon us, necessitating constant changes of position and ever-renewed attempts to tighten the canvas so that the moisture should run off. The gusts of wind sent the smoke whirling about in all directions, and made sitting by the fire almost as uncomfortable as remaining outside, for the pungent smoke of the pine wood was very painful to the eyes. And yet there was to it all an extremely comic side. Every one looked so very miserable that it was quite amusing to watch them, and each one was appreciative enough to take in the humorous side of the situation and cheerful enough to make a joke even of what was most doleful. So we sat about the fire and whittled and smoked, and recalled other snowy camps and other experiences still more disagreeable, making the time pass as well as possible.

In the afternoon Stewart took the gun and walked out into the hills, but returned an hour or two later without having seen any game. He reported that the stream forked half a mile above the camp, and that there was a low pass in the cañon wall there where we could easily climb to the hills to follow the south fork, which seemed the one to be taken. Then there was more sitting about the fire, more whittling, more smoking, and about dark we had supper and soon afterward we were glad enough to turn in.

The Sportsman Tourist.

ROUGHING IT IN THE NATIONAL PARK.

III.

COMING into camp, I felt fatigued and disappointed, but thoroughly convinced that hunting the Rocky Mountain sheep is not very agreeable sport to a tenderfoot. Determining to try again, we rode next morning to the mouth of the cañon, but no sheep were to be seen, for it had snowed in the night and the animals did not come down to water. Frank, who had his shotgun along, did the only shooting, killing a number of grouse on our way home. Frank was in favor of leaving the sheep to try our luck on elk. I persuaded him to remain one more day and try them for the last time. So Thursday Ryan and I left camp rather late in a different direction. We hunted up a creek which ran back of the main cañon, but found no sheep, though noticing great many signs of them. About noon a terrible snow storm set in, which impeded our travel greatly, and obliged us to lead our horses, as the old Indian trail we had to follow out of the gulch was soon covered with snow; but carefully feeling our way, we reached camp late in the afternoon, where we remained for the rest of the day, as the snow was coming down in great big flakes. Thus finished our unsuccessful hunt for Rocky Mountain sheep.

Friday, Oct. 3, we pulled up sticks, and retracing our steps, left the cañon, but could not make more than fifteen miles because the road was snowed up and in bad condition. As we were moving along slowly on the bank of the river, I killed quite a number of ducks, and had also a flying shot at an antelope. On our way back we met quite a number of hunters and trappers, who must have had better luck, as their outfits were well stocked with elk, black and white-tail deer, bear and beaver hides.

Saturday, the 4th, we crossed the Madison and camped near the South Fork in a terrible snowstorm. Having arrived in the elk country, we saddled our ponies early the next morning to look for the game. We found several old tracks, also freshly-made bear tracks, and came very near mistaking a large porcupine which was feeding on pine cones in a tree for black bear cub. We spared his life. In the afternoon I had a good chance at a splendid large buck antelope, but being a little hasty, and forgetting that my hair-trigger was set, the rifle went off prematurely and missed the game.

Monday, Oct. 6, Ryan and I started for the timbered mountains. The snow was from four to six inches deep, and locomotion was difficult; but soon finding a fresh trail, we followed it carefully and cautiously, through jungles and windfalls, up hills and down ravines, now a mile through a heavily timbered wilderness, down into a thicket of dense evergreens. Closely eyeing every spot and advancing silently I suddenly heard a shrill, rasping whistle. It was the first time I ever heard that sound, but I knew it at once to be the whistle of a bull elk. Suddenly there was a tremendous commotion in the thicket. We had come upon the band lying down, and not more than fifteen or twenty rods ahead a bull and two cows were dashing through the thicket. Two rifles cracked simultaneously, and the elk, making one tremendous leap, fell dead in his track. It was a splendid two-year-old bull, with a fine pair of antlers. But for the dense cover we would have bagged one or both of the cows; but as we were not after meat nor hides, we thought it sport enough, and took to camp the head with its noble pair of antlers and as much meat as we could convey on our horses.

Oct. 7, parting with our guide and companion Ryan, we moved to Henry's Lake, eight miles. This lake is most picturesque, and is noted especially for its floating islands. On our way to the store, on the head of the lake, we saw several bands of antelope. Frank killed some grouse, which were very abundant, and I bagged some mallard and teal duck, the lake being covered with many waterfowl. We soon found a cozy spot for camp, and after a savory and delicious supper turned into our blankets.

Oct. 8 we hunted the foothills for antelope; struck several bands, and shot away a lot of cartridges, as we had to do all our shooting at long range, but with no damage. If our time had permitted I could have remained at this most lovely spot for weeks. This lake is situated in a charming valley surrounded by snow-capped mountains, while in the distance loom the Tetons, like grim sentinels keeping watch and ward. We left this enchanting spot next day, following the Shoshone or Snake River most of the time, and had fine sport duck-shooting, mostly mallards, which came very apropos as a change of elk meat in our larder.

Friday we had a long, dreary drive through a monotonous sage prairie, and dallying at sage hen shooting, we did not make Sheridan Station, and were obliged to camp on the bleak prairie; we were fortunate to camp near a little creek of water, but had to burn sage brush for fuel.

Saturday we started about 10 A. M., and kept on jogging through the bleak sage brush. We amused ourselves shooting sage hens, sometimes right from the wagon, and as we crossed several creeks, which also gave us fine sport at ducks. That night we camped quite late at Indian Creek, and next day, Oct. 12, left the prairie and arrived by noon at Beaver Cañon. This is a railroad town on the Utah and Northern division of the U. P. R., and also the western entrance to the Park. Here we received news from our Idaho friend, who urged us to come by all means. On Oct. 14 we started for Idaho, and hastened on until we met our friend at Junction Bar. Our party now consisted of Billy H., Tom, Charles H. and my humble self, on horseback, while my old companions, F. and Bill, who drove the team, followed in the wagon, and completed our caravan. Our route passed along the South Boise for seven or eight miles, sometimes through beautiful meadow lands, sometimes climbing, on our sure-footed bronchos, over short trails, until crossing once more the river we came into a grove of resinous pine, and not far from the river, at a deserted hunters' or miners' cabin, we halted and made camp.

Having finished camp duties, plans were made for the morrow, Bill H. being made captain, as he knew the country best. He proposed that we should begin with hunting the mountain goat. The *Aplocerus montanus* or white goat of the Rocky Mountains (its popular name is an incorrect one) is no goat, and strictly speaking does not inhabit the Rocky Mountains, for its home is entirely confined to the more or less detached mountain chains that occupy the Pacific slope of the main system of the Rocky Mountains. It is only found in Western Montana, the northernmost portion of Idaho and Oregon, in Washington Territory and British Columbia.
